A health menace almost beyond description exists on the county's East Side, along the lake.

It stems from the city of Euclid's sewage outlets, which are pouring thousands of gallons of completely untreated sewage into the already polluted lake hour after hour, day after day, week after week.

A sickening stench pervades the entire area, constant reminder of the terrible price in health risk the suburb is paying for all the years of delay in meeting the need for a new sewage plant.

A need that was recognized almost 20 years ago.

This is not to blame Euclid officials entirely. Many factors, including the prolonged Hilltop sewer line controversy, played a part.

But the point is that the years slipped by, each year the problem growing worse and worse.

Now, to Euclid's credit, it is doing something to eliminate the problem. A $5 million plant is underway, but at what a terrible price beyond dollars.

While the work is going on, while pipes are being installed, the old sewage plant has to be shut down 60 percent of the time at a very lenient estimate.

The result is that raw waste from Euclid, Wickliffe, and Willowick homes, thousands upon thousands of homes, is pouring directly into the lake, is carried up and down the easterly lake front.

And this situation will go on until late next year—almost 18 months.

Swimming? Out of the question. Boating? Who can stand to sail or dock boats in a mess like that?

The Euclid lakefront is so polluted, some residents say, that if a man took a bucket of that polluted water and set it down in Public Square he'd be arrested for creating a health menace.

Euclid's Mayor Sims knows of the menace and pledges to see what can be done to minimize this health hazard.

If there is any single thing that can be done to alleviate this mess, to safeguard the health of many people, it is worth every effort.

Address by Charles H. Silver, President of Beth Israel Hospital, New York City

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Charles H. Silver, president of Beth Israel Hospital in New York City, at the cornerstone laying ceremonies for its new residence for nurses last September 28, 1958:

ADDRESS BY CHARLES H. SILVER, PRESIDENT, BETH ISRAEL HOSPITAL, AT CORNERSTONE LAYING CEREMONIES FOR ITS NEW RESIDENCE FOR NURSES, SEPTEMBER 28, 1958

On the wall of one of the buildings that comprise Beth Israel Hospital there are some words that constitute our credo. This is how our credo begins:

"I know of no phase of human endeavor which is nobler in purpose than the healing of the sick and the alleviation of suffering.

"I know of no institution that serves a community with such utter unselfishness and such great effectiveness as a modern hospital."

When the cornerstone of the structure in which those phrases appear was laid in June of 1952, and I knew that it would be named for me, I felt a surge of pride, and gratification that I thought could never come again to any man in his lifetime. Now, a little more than 6 years later, I know that I was wrong. Today, I feel that this hospital is at the threshold of a great fulfillment, the realization of its founders' dreams and a monument to the vision, determination, and courage of every man and woman on our board of trustees. This is their triumph * * * and I salute our trustees as this new building starts to rise. It will stand as a tribute, in stone and steel, to their dedication in developing Beth Israel into the great, new medical center of the East Side, second to none in our metropolis.

The announcements tell us that we have gathered to lay the cornerstone of a residence for nurses. Actually, it is much more than that. This will be part of our splendid school of nursing, and the living accommodations it will offer to our students will be on a par with the finest available in any college or university in the country.

Its exciting architecture, its comforts and dramatic design, are an invitation to attract more young women to choose a career in nursing. The nationwide shortage of nurses is critical. Here is a profession whose mission to humanity approaches the divine * * * whose rewards cannot be measured in material compensation alone.

The building to be erected here will enable us to take a long step forward in meeting the personal needs of our student nurses.

Many of us, as we saw this edifice take shape on the drawing boards, have called our new project a multipurpose building. In a very practical sense, that is just what it is * * * for the lower three floors will house complete operating suites, an integrated X-ray department, recovery rooms and auxiliary services. These facilities will increase the capacity of our main hospital by about a hundred patients' beds.

So you see, it is, indeed, a building of many purposes. And yet, it has, basically, just one purpose—the same one for which Beth Israel was founded and has grown from strength to strength for almost three-quarters of a century.

Above all—and to all—Beth Israel is an island of compassion in the midst of a teaming melting pot of more than eight million souls. It stands as a symbol of man's concern for the welfare of his fellow men. It is an arsenal of unending research and ceaseless care in which the advances of science and the heritage of tradition meet to ease the tensions of a troubled society. For these are times of momentous decision when justice and mercy seem to be forgotten virtues in many places.

Well, here is a place where these things still matter. Here is a hospital where our aim is not the betterment of our balance sheet, but the betterment of humanity. An endless procession of ailing men, women, and children from all walks of life, from all races, colors, and creeds, come to us for help—and they do not come in vain.

For this is our dedicated purpose: To grow with a growing New York—to serve the needs of today and plan for the needs of tomorrow. And as we lay the cornerstone for which we have gathered this afternoon, we lay the cornerstone of other afternoons in the future when we will build, and build again to fulfill our mission to relieve pain, to prevent suffering, to prolong life.

The importance of our talk is attested by the vast throng who have come to join in these ceremonies. These are our friends and neighbors, our workers, our volunteers, our doctors, our nurses, our technicians, our administrative personnel * * * all members of the Beth Israel family, all devoted to the ideal of service which is the true cornerstone of our hospital.

I speak of them as the Beth Israel family, and I speak of such notables, whose presence honors us on this occasion, as my dear and cherished friend, that revered humanitarian and great American, Bernard Baruch.

I speak of that outstanding champion of human rights, statesman and inspired leader of his people, Carlos P. Romulo; that beloved Governor of our sovereign State of New York, Averell Harriman; our distinguished, crusading Senator, Jack Javits; the best friend of Beth Israel, and every institution of public welfare in the city he serves so faithfully, our Mayor, Bob Wagner;

that devoted servant of his country and his State, Nelson D. Rockefeller; the public-spirited president of the Borough of Manhattan, Hulan Jack.

These men and women, and many more that time will not permit me to name, have filled this platform with the foremost figures in the civic and professional life of our city, State, and Nation. They, and the many foundations and benefactors—including our Federal Government—have made this great moment possible.

Finally, let me acknowledge our heartfelt gratitude to the Federation of Jewish Philanthropies of New York of which Beth Israel is proud to be a charter member. Without the constant and generous assistance of the federation, the work of this hospital could not continue.

When I realize that federation is responsible for the support of 116 welfare agencies in our city, I am deeply aware of how much we all owe to the tireless efforts of its president, trustees, and hard-working personnel.

The doctors and nurses, in whose name we will dedicate this building when its doors open next year, fulfill the final words of that credo from which I quoted at the beginning of my talk:

"I know of no personal relationship that is more genuine and tender than that which exists between the patients in a hospital and the men and women in white who function within its walls. This, our credo for more than half a century will endure long after those who now serve Beth Israel have passed on."

Let me close by saying, on this memorable day, that I rejoice in having been able to give more than 30 years of my life in constant service to this hospital. If I tell you that they were the best years of my life, it is only true that they were the best because I gave them, with love and devotion, to Beth Israel.

Hon. Louis B. Heller

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

Mr. KEOGH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following remarks made at the induction ceremonies of our former colleague, Hon. Louis B. Heller, who was inducted as a justice of the city court of New York at the Central Courts Building, Brooklyn, on January 6, 1959. Hon. Nathan R. Sobel of the county court of Kings County presided at the ceremonies:

Judge SOBEL. May I invite the newly elected justice of the city court, the Honorable Louis B. Heller, to enter the courtroom.

(Judge Heller enters. Applause.)

Judge SOBEL. May I introduce Rabbi Baumol, Judge Heller's rabbi, who will deliver the invocation.

(Rabbi Baumol delivers invocation.)

Judge SOBEL. Judge Heller has requested that these proceedings be kept as informal as possible. We have had requests from many of his dear friends and associates in the courts, as well as the legislature and Congress, to speak. We have explained to them that we shall curtail the speechmaking and make their presence known so that they may briefly congratulate the newly elected justice.

Before calling on the speakers, I should like to introduce to you Mrs. Ruth Heller, the judge's charming wife, who has so understandingly cooperated with him in his work over the years.

(Presentation of flowers by the officers of the court.)

Judge SOBEL. I should like also to introduce his very lovely daughter, Marcia.

His son Bobby, who was present at the formal swearing-in last week, returned yesterday to Bucknell University, and the judge has just whispered in my ear that he is cramming, as we all used to do, for his final exams.

I should like to introduce for a bow his lifelong partner and associate in the practice of law, his devoted brother Harry, who has been by his side during many trying years.

There are so many of Louis Heller's old friends here, even his childhood and boyhood friends, that I must, without selecting any particular one or group, mention that included in the group, sitting in the audience, are 22 members of the class of June 1922, of Boys High School. This is a class which has great historical significance to Boys High because it was the only class in the history of this country, I think, which captured all of the State scholarships, all of the Cornell scholarships, and all of the Harvard scholarships, and, indeed, all of the other scholarships offered throughout the country, all in one class, in one school, and in one particular year.

We had a great many geniuses among them, geniuses in the medical profession who have proved themselves, in business, in the other professions, and, of course, least of all are the geniuses who ascended the Bench. I see present one of them, Judge Keogh of the Supreme Court, and Judge DiGiovanna of the Supreme Court, also a member of the class, and, of course, Judge Starke and Judge Schor are present here, and a great many members of the legislature, and least of all, myself.

My friendship with Louis goes back even much before the time we attended high school. We knew each other when we attended elementary school.

The following addressed the meeting:

Francis Verilli, Esq., the president of the Brooklyn Bar Association.

Albert Gondelman, Esq., chairman of the city court committee of the Brooklyn Bar Association.

Judge Joseph A. Solovei, who presented a scroll on behalf of the Kings County Criminal Bar Association, which reads as follows:

"The Kings County Criminal Bar Association presents this plaque to Hon. Louis B. Heller, justice of the city court of the city of New York, for his distinguished services as a lawyer and judge, his warm-hearted concern for his fellow man and counsel to the bench and bar."

Gilbert S. Rosenthal, Esq., president of the Association of Lawyers of the Criminal Courts of Manhattan, also presented a scroll, which reads as follows:

"The Association of Lawyers of the Criminal Courts of Manhattan extend to Judge Louis B. Heller the heartiest congratulations and best wishes on his appointment to a higher court. For many years Judge Heller served the city and State of New York with pride and distinction. His untiring efforts, wise counsel and vast experience have done much to further the cause of justice. We, who practice in the criminal courts, indeed regret to see him go but are happy that his new appointment reflects a job well done. May he continue his dedicated work for many years in the best of health."

Morris Himmelfarb, Esq., representing the Queens County Criminal Bar Association.

Judge Heller, as you know, has held many public offices. I know you recall that he served for more than 10 years on the executive committee of the Democratic Party of Kings County.

I should like to introduce for a bow at this time the Honorable Joseph T. Sharkey, majority leader of the city council and chairman of the executive committee of the Democratic Party of Kings County.

I should also like to note the presence of Judge Heller's former associates of this committee; the Honorable James V. Mangano, general clerk of the supreme court of Kings County, who had the distinction of opening the ceremonies on yesterday commemorating the dedication of the new supreme court building; Hon. John Cashmore, borough president of Brooklyn and former chairman of the Kings County Democratic organization; Hon. Jack Weinberg; Hon. Harry M. Mortimer; Hon. Ross J. DiLorenzo; Dr. Joshua H. Friedman; Hon. Frank A. Nolan, commissioner or borough works; Hon. Joseph B. Whitty, county clerk; Hon. Frank A. Cunningham, Jr., chief clerk of the appellate term; Hon. Harry Morr, deputy fire commissioner; Hon. James M. Power, commissioner of the board of elections; Hon. Albert M. Leavitt, chief clerk of the surrogates court, Kings County; Hon. Vincent P. Carney, former motor vehicle commissioner; Councilman Edward Vogel; Assemblyman Stanley Steingut; Hon. John A. Valente, deputy markets commissioner; and Hon. Alexander G. Hesterberg, tax commissioner—all State committeemen associated with Judge Heller in many of his activities.

I can see many coleaders present, but I must be pardoned if I do not call out their names, and in lieu thereof I shall read the following telegram by Victoria Rapps, chairman of the coleaders executive committee.

"On behalf of the Democratic Coleaders of Kings County, I congratulate you and I wish for you and your family good health, and many happy years in judicial life."

I shall also read an excerpt from a message from a former associate of Judge Heller in the legislature, the Honorable Robert F. Wagner, Mayor of the city of New York. He says:

"Regret exceedingly that official business makes it impossible for me to be with you on the occasion of your induction as a justice of the city court. I am pleased to join with all of your friends in congratulating you for you have done so much to help make our city a better place in which to live."

Present in spirit is the lifelong friend of Judge Heller, the president of the city council, Hon. Abe Stark. I shall read only part of his message.

"Your constructive record in Congress and on the bench naturally endow you for this new responsibility. I am confident that the city court will be enriched by your demonstrated talent in the realm of judicial affairs."

As you are all aware, the legislature has convened this morning for its first session of the year 1959. Present, however, are a great many members of the legislature who are taking early trains to Albany. They insisted on staying for these ceremonies. I regret that I am unable to call on all of them, but I should like to have the senior delegate from Brooklyn, the Honorable Bernard Austin, speak for the members of the assembly.

(Assemblyman Austin spoke briefly.)

Judge SOBEL. I should also like to have Senator William Rosenblatt speak for the members of the senate.

(Senator Rosenblatt spoke briefly.)

Judge SOBEL. The attorney general of the State of New York, the Honorable Louis Lefkowitz, is detained in Albany, and has sent the following message:

"It has been my privilige to be a friend of Louis Heller for many, many years. Blessed with innate wisdom and unexcelled integrity, Louis not only has gained an enviable record in public service but by his sincerity and consideration of others, he has earned the regard and love of all with

whom he has come into contact. I am confident that Louis Heller will add immeasurably to the city court's proud record of achievement."

As all of you know, Louis has served for several terms with great distinction in the House of Representatives. As you have no doubt read in the newspapers, the House is organizing this morning and since there is a controversial matter before it concerning the increase in the membership of the powerful House Rules Committee, many of his former colleagues who had planned to be here have been unable to attend.

I have too many messages to read, hence permit me to read excerpts from only a few and then mention the names of his colleagues, whose messages I hold in my hand.

From the Honorable SAM RAYBURN, Speaker of the House:

"I want to congratulate you as you begin a splendid career as city court justice and extend to you my kindest wishes for a long life of useful service to your people."

From Hon. JOHN W. MCCORMACK, Massachusetts, the majority leader:

"Dear Louis, I regret very much official business in Washington prevents my being with you and your many friends when you are sworn in. While I have missed you here I extend to you my hearty congratulations and very best wishes for every happiness and success in your new position and field of great responsibility."

From Hon. CARL ALBERT, Oklahoma, Democratic whip:

"It is really marvelous to know that such a good friend is getting along so well. We certainly miss you in Washington. Come to see us."

Now, from the Senate side, may I read the following excerpts:

From the Honorable JACOB K. JAVITS, senior Senator from New York:

"My warmest congratulations on this auspicious occasion. Your new appointment reflects the great pride and confidence of your colleagues and associates in your ability and the integrity of your actions. Please accept my every good wish for success."

From the Honorable KENNETH KEATING, newly elected and now junior Senator from New York:

"Warmest greetings as you begin your new duties as city court justice. I know you will bring dignity and judgment to your new post and I wish you every success and happiness in the years ahead."

From a very warm and dear friend of Lou's, the Honorable JOHN F. KENNEDY, Senator from Massachusetts:

"Warmest congratulations on the occasion of your taking over your new position as court justice. I am delighted that you have received this important judicial recognition and that you'll continue to serve the New York community with eminence. With every good wish."

From the Honorable MIKE MANSFIELD, Montana, majority whip of the Senate, and a member of the powerful Foreign Affairs Committee:

"Dear Louis, congratulations. I know that New York will be well repaid on the basis of your ability, integrity and understanding in the position you are assuming. On behalf of your many friends in both Houses, as well as my own, I wish to extend to you good luck and success in the years ahead. You have been a great public servant and your contributions to the public good will be your monument in life. With best personal wishes, I am, sincerely yours."

And this telegram is a must. It is from the Honorable STEPHEN M. YOUNG, who formerly served in the House with Louis, and last November upset all predictions by becoming the junior Senator from the great State of Ohio:

"Lou Heller is a truly great public servant and a real friend to any of us. As a former colleague of his in the Congress of the United States, I congratulate the people of New York on his induction as justice of your courts. I extend to him my sincere personal greetings and regards with the full knowledge that this is but a continuation of a great career in public service."

Other Members of the House of Representatives who served with Judge Heller and who sent messages are: Hon. JOHN J. ROONEY, Hon. ABE MULTER, Hon. ISIDORE DOLLINGER, Hon. JOHN B. BENNETT, Hon. HEBERT ZELENKO, Hon. OREN HARRIS, Hon. PETER W. RODINO, Jr., Hon. PAUL A. FINO, Hon. LESTER HOLTZMAN, and Hon. EUGENE KEOGH.

Only yesterday I received a telephone call from the dean of the Kings County delegation in the House. He is, of course, the Honorable EMANUEL CELLER, chairman of the Committee on the Judiciary. Congressman CELLER is a close and dear personal friend of Judge Heller and, indeed, of all of us. We, in Brooklyn, are particularly proud of our Congressman, because we feel he has made the greatest contribution to the welfare of the people of the United States in the many years he has served as chairman of that powerful committee. We particularly emphasize his magnificent achievement in the field of antitrust and antimonopoly legislation.

Congressman CELLER phoned in a warm message. He asked me to state that he has been made very happy, Judge Heller, because your ambitions are being realized. He is certain that you will bring to bear upon your work in the city court the fine qualities you exemplified in the Congress of the United States.

Seated at the bench next to Louis is the chief justice of the city court, the Honorable Peter A. Quinn, who has had a distinguished career in the legislature and in Congress, and who now graces one of the finest courts of our city. Both have been colleagues but now Peter is going to be Lou's chief, and a finer chief Lou knows he could never have. He will soon address you.

Present are almost all of the justices of the court of special sessions. They all desire to say a few words. However, the limitations of time make it impossible for us to complete these proceedings and yet hear from all of them.

Seated with us on the bench is the president-justice of the court of special sessions, the Honorable Irving Ben Cooper, a very dear friend of Lou's. And also our very dear friend, the Honorable Vincent Impellitteri, a member of the court and the former mayor of the city of New York. We want to express our appreciation to Justices Cannella, Galloway, Cawse, Gassman, Rossbach, Acquavella, Silver, Loscalzo, Byrne, Dunaif, Ringel, and Thompson, who traveled from the outlying boroughs to visit with Judge Heller this morning.

I should also like to note the presence of former Justice Louis I. Kaplan, now the commissioner of investigation of the city of New York.

Also present are his new colleagues of the city court of Kings County, Justices Sabbatino, Feidem, Wecht, and Low, as well as many of Judge Heller's new associates of this court from the other counties.

I also note the presence of many judges of the domestic relations court, including Judges Lorence, Marchisio, Kaplan, Ruisi, Ramsgate, and Pagnucco.

And from the municipal court, all friends of Lou's, Judges Alter, Williams, Berry, Rinaldi, Simon, Andreozzi, Johnson, Pearlman, and Damiani.

And from the magistrates court, I must salute Judges Chapman, Solomon, Potter, Maglio, Rader, Tolleris, Gray, Schanzer, Fagan, Serper, Ohringer, Malbin, Livoti, Wallach, Glowa, and Cullen.

I am acting as chairman on this occasion only by sufferance. We had expected that Chief Judge Conway's duties would permit him to attend and preside over these ceremonies. Unfortunately, this was not to be, but I have here a very warm telegram from the chief judge to the new justice. It reads:

"I send you every good wish for health and happiness in your further service to the people of our city as city court justice."

The District Attorney's Association is holding its annual convention in California, a much more pleasant, and I am sure, warmer place than Brooklyn is today. District Attorney Silver has sent his chief assistant, the Honorable Kenneth McCabe, who will address you later.

The Honorable Frank Hogan, who is also on vacation, has deputized one of his chief assistants, the Honorable Anthony Leibler, who will also address you.

Frank O'Connor, the district attorney of Queens County, phoned in a warm message just a few minutes ago.

Most of the justices of the supreme court from Kings County are with us. Mr. Justice Anthony DiGiovanni, the chairman of the board of justices, will speak on their behalf.

But I cannot permit this occasion to pass without asking Mr. Justice J. Vincent Keogh, a life-long friend and classmate of both Judge Heller and myself, to stand up and take a bow.

I should like to have Mr. Justice Arthur Klein, of New York County, a colleague of Judge Heller in Congress, to stand up and take a bow.

It is also my privilege to introduce the Honorable Ferdinand Pecora, former justice of the supreme court of New York County. [Applause.] I know your applause would be even more resounding, if that were possible, if you knew that Judge Pecora is celebrating today his 77th birthday. You will soon hear from him.

I should also like to note the presence of the surrogate of Kings County, the Honorable Maxmillian Moss, who will speak, and also the Honorable Samuel DiFalco, surrogate of New York County, who asks leave to return to a motion calendar which was scheduled for early this morning. [Applause.]

Present also with us on this occasion is the Honorable Henry Ughetta, justice of the appellate division of the second department, who brings with him the greetings and good wishes of all of his associates in this department, and who, I am sure, will want to say a few words.

Similar messages have been sent by the Honorable George J. Beldock, a lifelong friend of Lou's, and now a justice of the appellate division of the supreme court. Also from the Honorable Leo F. Rayfiel, judge of the United States District Court, Eastern District of New York, who served in the legislature with our distinguished guest. And another from the Honorable David N. Edelstein, a judge of the United States District Court of the Southern District of New York. And I hold in my hand a very warm message from the lovable John MacCrate, a former justice of the appellate division.

This completes the list of public officials present here with us today within my immediate view. I am sure I have been unable to spot them all in this crowded courtroom, but I hope that those whom I haven't mentioned will forgive me.

Present also are many of Louis' very old friends from his childhood, boyhood, and schooldays. It is obviously impossible for me to mention all of them. I must, however, note the presence in the courtroom of one of his dearest friends and his guiding mentor through all the years of his public life. I should like the commissioner of jur-

ors from the eastern division of New York, the Honorable "Moish" Solomon, to take a bow.

Lou wishes me to state that he has received a very warm message from one whom he holds in very high esteem, but for the fact that he is out of the State he would have been here with us. I refer to Mr. Morris Forgash, president of the United States Freight Co.

And from some other friends, Jerry Wurf, regional director, State, County & Municipal Employees; the Honorable Charles R. Howell, commissioner of the department of banking and insurance of the State of New Jersey; and Arnold E. Feldman, attorney-adviser at the U.S. Military Academy, West Point, N.Y.

I should like to introduce also for a bow, some very, very dear friends of the new justice: First, the Honorable Meier Steinbrink, former justice of the supreme court; also Al Kevelson, Eddie Zeltner, of the Mirror; Harold Harris of the Journal; Geane Toomey of the Telegram-Sun; and Al Turk of the Journal-American.

I have hundred telegrams, letters, and messages in my hand that I cannot possibly wade through now, hence I will order that they may be made part of the official record and turned over to the judge.

As you know, we have used Judge Barshay's courtroom, which is the largest in this building, and Lou and I wish to thank him for his generosity. Unfortunately, he is home ill, otherwise he would have been present.

And, of course, I cannot forget my own colleagues who are present, Judges Marasco and Starkey.

And also from the court of general sessions, Lou's former colleague, Judge Culkin. Also Judges Geller and Schweitzer.

My next duty is to convey a message from Mrs. Heller. She has asked me to invite each and every one of you to participate in a collation in the courtroom of the new justice of the city court on the 10th floor at the conclusion of these proceedings. I hope eoch and every one of you will accept that most cordial invitation.

(The ceremonies were brought to an abrupt end by the sudden illness and death of Assemblyman Bernard Austin.)

Public Backs Ike on Hold-the-Line

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. ARENDS. Mr. Speaker, the Gallup Poll of last weekend clearly sets forth how interested the vast majority of our citizens are in having Uncle Sam live within his income.

People want a balanced budget. They want cutbacks in spending and not more taxes. They want a real fight waged against inflation. Let us give the people what they want and are entitled to.

The Gallup Poll as it appeared last weekend follows:

[From the Washington Post and Times Herald, Jan. 31, 1959]

PUBLIC BACKS IKE ON HOLD-THE-LINE

(By George Gallup)

PRINCETON, N.J., January 30.—In the clash between President Eisenhower and congressional Democrats over the budget, the President holds a great initial advantage in public support for his philosophy of holding the line.

Just what may happen to this advantage, however, will depend on how well and how hard the Democrats sell their philosophy that an expanding economy requires more Federal aid even if it means deficit spending to accomplish this.

The important political significance is that the public still thinks in strictly orthodox terms regarding the budget, or like a family, the Government shouldn't spend more than it takes in.

Behind this overwhelming vote is a feeling on the part of many voters that operating in the red during the next year or two will result in serious inflation and have a generally harmful effect on the Nation's economy.

Some political observers have felt that if prices continue up between now and 1960, the Republicans will have a readymade issue in blaming the Democrats and their policy of deficit spending for rising prices.

Democrats challenging the President, therefore, have yet to convince voters of their economic philosophy; namely, that increased spending is needed to make certain of national growth and progress to keep pace with Russia.

Some key questions and results in the Gallup poll's nationwide study of the public's attitude toward the budget:

Do you see any connection between an unbalanced budget and the prices of things you buy?

	Percent
Prices will rise	56
Prices will drop	1
See no connection	43

Do you see any connection between an unbalanced budget and the value of the dollar?

Inflation:	Percent
Value of dollar decreases	58
Value of dollar increases	1
Sees no connection	41

If the time should come when Government income cannot pay for all the things in the budget, which would you favor—cutting back on certain things or increasing taxes?

	Percent
Favor cutting back	72
Favor increasing taxes	15
No opinion	13

When voters who favored cutting back under these circumstances were asked what they would like to see pared, two areas of the budget were mentioned most often.

The No. 1 item which voters would like to cut back on is Government operations—salaries, personnel, and other expenses incurred in the day-to-day operation of the Federal Government.

The next most frequently mentioned was foreign aid.

A Look at Psychiatry

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. O'NEILL. Mr. Speaker, it is a privilege and an honor for me, both as a Roman Catholic and as a native of the Boston area, to be able to insert into the RECORD at this time the lecture delivered last night at the Catholic University of America by his eminence, Richard Cardinal Cushing, our beloved archbishop of Boston. I am sure that my colleagues in the House will be interested in his topic, and I commend to their attention the following words which Cardinal Cushing has to offer:

A LOOK AT PSYCHIATRY

(By Richard Cardinal Cushing, Guild of Catholic Psychiatrists at the Catholic University of America)

Anyone who attempts to discuss the field of psychiatry within the space of a half hour must do so with many misgivings. Psychiatry is a broad and complex field of study with roots that are historically deep. It is also a comparatively new branch of medicine and is still in its infancy. The ever-increasing amount of literature, the development of different systematic approaches, and the current advance in therapeutic procedures give testimony to the vigorous growth and development of this science which deals with the causes and treatment of mental disorders.

When, however, one untrained in this field attempts within a limited space of time, to take a look at and, in a sense, appraise the field of psychiatry, misgivings arise not only in his own mind, but also, I suspect, in the minds of his audience. I believe, therefore, that my approach to this subject may well precipitate in your minds such questions as: "Are we in for another attack on psychiatry? Will there be a reinforcement of the position, taken by some, that there actually exists a fundamental opposition and a necessary hostility between the church and psychiatry?"

Let it be said from the start that in discussing the topic, "A Look at Psychiatry," I profess that I look on psychiatry and psychiatrists with interest, respect, and admiration for their work, even though these sentiments are at times tempered with a legitimate concern.

I might add that I not only look at but I also look to psychiatry as an important collaborator with the church in its concern for men's minds and souls.

The church's interest in and respect for psychiatry dates back to the early history of medical psychology. This history has been one of ideas, originally incomplete and often naive; of dedicated men and women; of movements born of man's love and concern for his less fortunate brethren. To be sure, there has been much bias evident in the retelling of this history as ideas and events were viewed out of their context. Yet one who reads this history cannot overlook the interest of the church in psychiatry or fail to see the tradition, early established by the church, of founding hosiptals and infirmaries for the care of the insane, crude though some of these may have originally been. One thinks in this connection of the infirmary at Monte Cassino which played a great role as a source of medical knowledge in the sixth century. One recalls the Hotel Dieu at Lyons, France, in the same century and at Paris in the seventh century, the monastery of the Alexian Brothers at Cologne also in the sixth century which cared for mentally sick men, and the colony at Gheel, in Belgium, which was founded as a religious work, and whose tradition of care and rehabilitation of the mentally ill is still carried on, influencing therapeutic and rehabilitation methods down to our own day. This is the place where St. Dymphna, the patron saint of the insane, was martyred.

But we need not go back to historic times to validate the interest and respect of the church for psychiatry. We find abundant testimony today in the establishment of psychiatric wards in many of our hospitals, the use of psychiatric services in our hospitals,

the use of psychiatric services in our child-caring institutions and youth-guidance centers. Psychiatrists are found on the staffs of our clinics, in our schools and institutions for exceptional children.

Our diocesan charity offices throughout the United States regularly make use of the services of psychiatrists and refer cases to them. Under church-related auspices, institutes and workships on pastoral care and psychiatry are conducted yearly at several Catholic universities where the clergy and psychiatrists come together to learn from each other while working on a mental health problem that calls for mutual understanding and cooperation. Orientation courses in psychiatry and abnormal psychology are becoming common in our theological seminaries and are implemented by practical field work done by seminarians in mental institutions.

Full-time Catholic chaplains are regularly assigned to mental hospitals and, currently, in the archdiocese of Boston, we are building chapels for the Catholic patients in the mental hospitals owned and staffed by the State of Massachusetts.

These facts are overlooked by many who have been swayed by ill-considered statements of uninformed people, not excluding some members of both the clergy and the psychiatric profession that the church takes a negative and somewhat unfriendly view of psychiatry. It is true that there have been few formal statements of either approval or disapproval of psychiatry by the church, but there exists ample evidence in such activities as these to which I have referred that she respects the science and is anxious to cooperate with it.

Surely it should not be difficult to understand why the church, as the healer of sick souls, should have high regard for psychiatry, the healer of sick minds. Is it not in accord with true religious principles and the charity of Christ to do everything we can to heal the sick mind while we care for the troubled soul? In the fulfillment of this apostolate, religion and psychiatry must frequently complement each other.

This recognition and the complete and wholehearted respect for the field of psychiatry which it should entail is, however, tempered by a legitimate concern regarding the ideas on the nature of man, ideas, which of course, are basic to the practice of psychiatry.

Psychiatry is concerned with human nature and human behavior; the church is concerned with human nature and human behavior. When, therefore, she meet those psychiatrists who deny the existence of the spiritual, whose concepts on the nature of man, on his purpose and destiny in life, on what morality means and what in the concrete is morally good and what morally bad behavior, are diametrically opposed to her own, it is not to be expected that she will agree with their proposals and methods.

It is not the science of psychiatry but the concepts and such psychotherapeutic techniques of individual psychiatrists as rest upon a materialistic interpretation of life that have called forth a warning on psychiatric procedures and make necessary a careful examination before accepting or rejecting them.

Our late holy father, Pope Pius XII, sounded this warning with great clarity, scientific objectivity and Christian charity when he addressed the Fifth International Congress of Psychotherapy and Clinical Psychology held in Rome on April 13, 1953, and again on April 10, 1958, when he spoke to the 13th Congress of the International Association of Applied Psychology.

You have read, I am sure, these two pronouncements and recognize the moral principles upon which the warning of the late holy father is based. Predicated upon principles of sound philosophy and morality, as they are, the precautions which his holiness warned were necessary, will not only contribute significantly to the general acceptance and prestige of the field of psychiatry but will also insure the mental, moral, and religious well-being of patients.

The theme of both addresses by Pope Pius is the compelling necessity of accepting the teaching of the church on the nature of man—teaching as old as the church herself—that man is a unity of body and soul, made in the image of God and destined through his own free choice to eternal union with Him. To quote his holiness, "What constitutes man is principally his soul, the substantial form of his nature."

It is clear, then, that the spirit of materialism, atheism, and determinism which colored certain psychoanalytic theories in their origin and whose influence can still be found in the present psychotherapeutic procedures of some psychiatrists cannot fail to be a matter of concern to not only the Catholic religion but all religions. Add to this pervading spirit a pansexual emphasis and an orientation toward man which in rejecting his spiritual aspects and reducing him to the level of the brute characterizes his natural tendency toward God and religion as a compulsive neurosis and an illusion. Can we, then, wonder at suspicions that have been aroused in God-fearing men?

Nevertheless, even while warning against these false premises held by many psychiatrists, the holy father spoke in a spirit of great friendliness toward the profession of psychiatry itself, as is clear from his concluding words:

"Be assured that the church follows your research and your medical practice with warm interest and best wishes. You work on a terrain that is very difficult. Your activity, however, is capable of achieving precious results for medicine, for the knowledge of the soul in general, for the religious dispositions of man and for their development. May Providence and divine grace light your path. In pledge thereof we impart to you with fatherly good will our apostolic blessing."

With the words of the holy father in mind, let us consider to what extent psychiatry can be an aid in the pastoral work of the clergy. Let me look, too, not at psychiatry. Mutual understanding between psychiatrists and the priests, while important, is not enough. Mutual cooperation and a sharing of knowledge is needed, for in these days mental illness ranks as our major national health problem. Religion and psychiatry can and must join forces in helping mankind in what is so frequently called our current age of anxiety. In fact, it may well be that on this common ground of human anxiety that we can find a focal point for the best cooperation between the psychiatrist and the priest. For anxiety in my experience is at the heart of most mental disturbances and appears to be the basic core of neuroses. Both the clergy and psychiatrists encounter people who are burdened with anxieties in varying degrees and concerning many things. We must help these people not only in the negative sense of controlling their anxieties, but in the positive sense of preventing abnormal anxiety reactions. We must help the individual attain vigorous sound intelligent cheerful mental health. For this we need not only a psychiatric and a psychological approach to the problem; we need, above all, a religious approach.

Anxiety is likely to develop when there is a threat to some value or values which the individual considers essential to his existence as a personality. The understanding of anxiety, therefore, cannot be separated from the problem of values, for in the values which the individual lives by is the key for the treatment of his anxiety. What particular events or stresses will constitute a threat to a person depends on what particular values he considers important to his existence, status, or prestige as an individual personality. For any given individual these may hinge upon health, wealth, economic and social prestige, or whatever else he believes is worthwhile in life.

What of the values which many people today are overlooking or have allowed to grow dim, and which, nevertheless, are essential to their existence as personalities? What of the many values which must not be threatened or lost in the contemporary crises of modern life? We know that these values transcend all other values and can be realized when all other values fail. They are the eternal values which flow from the fact of Almighty God's love for us and our eternal salvation. It is toward the attainment of these values that we must direct men in order that they may be better persons not only religiously, but psychologically as well. "Seek ye first the Kingdom of Heaven."

Much of the anxiety of our time is due to the circumstance that people, by being solicitous about the wrong things, in an immaturity which is at once psychological and religious, have identified their happiness with the wrong values. "Do not lay up for yourselves treasures on earth, where rust and moth consume and where thieves break in and steal; but lay up for yourselves treasures in heaven, where neither rust nor moth consumes, nor thieves break in and steal. For where thy treasure is there also thy heart will be."

It is through a reorientation on the lasting and eternal values that mankind can obtain insight and find wisdom to met the anxieties that must come into our everyday lives. Such an orientation enables a man to meet anxiety, not in a negative, neurotic nervous manner, but with courage and confidence. It is through courage and striving rather than through evasions and withdrawals in meeting the day-to-day anxieties as they arise that we can prevent normal anxiety from becoming pathological.

Yet problems and anxieties cannot be met in a positive and constructive way unless courage and fortitude be coupled with faith in the protecting providence of God. The person who achieves acceptance of real values and attacks his problems in the light of this acceptance has, generally speaking, banished mental anguish and is returning to health. He discovers his place in life and realizes that he has a work to do. The shilly-shally of anxiety gives way to the expansion of the creative force of a stable personality. The meaning of life itself becomes clarified, and the science of psychiatry, under God, has achieved a victory. For, whatever may have been alleged in the past to be the chief psychological factor in the development of mental problems, there is a growing consensus of opinion today that it is an anxiety concerning the meaning of life. In short, we must recognize the relationship between mental illness and one's philosophy of life, and all psychiatric treatment must take into account as a basic consideration the philosophy of life in the light of truth.

Contingent upon acceptance of the true meaning of life is the setting of goals, in order to avoid mental conflicts. I speak now not of the great goal of life, union with our Heavenly Father, for recognition of this is inseparable from knowledge of the true meaning of life. I am thinking of the minor goals of everyday living, goals which should be in accord with the great goal of life, but whose importance can be lost sight of just because so often they seem to be so insignificant. But the are never insignificant. Happiness and peace of mind and soul are found in the possession of definite purpose. Wholesome interests develop realistic goals and in reaching for them the personality matures and finds true happiness in cooperating with his neighbor in daily work, in service to

others, in charity, and love. Psychiatrists and psychologists remind us constantly of the importance of goals. The church knows that no goal is ultimately realistic unless in it there is a place for Almighty God.

Psychiatrists speak of what they call an internal goal of actualization in the personality, the ideal toward which the personality tends and they call this the ego-ideal or the self-ideal. This ideal is the goal or pattern of realization which every person sets for himself, they tell us, the concrete image of what one proposes to make of himself. It is the goal of every person's striving and, whether distorted or not, whether articulated or not, some degree of knowledge exists in every person showing him the relationship of what he truly is to what he wants to be. We are told that this ideal of self, may well be the core of integration in any personality.

Here, as perhaps at no other point, religion and psychiatry join hands. "Be ye perfect, as your Heavenly Father is perfect." While it is true that a person's ideal of self is influenced by many factors—biological, psychological, social, or cultural—yet a complete understanding of any ideal requires a recognition of its religious and spiritual components. For this tendency toward the realization of a self-ideal, which is found in some manner in all men, exists in a type of life—a psychic life—which can know and aspire to realities which transcend the limits of the material world. Man can incorporate his aspirations toward a better self into desires to be more like his Creator. In religion alone have all men received in the mystery of the incarnation a concrete model of what his ideal of personality should be: The imitation of Christ, as Christ lived our kind of life on the shores of Galilee. The most perfect man was St. Francis of Assisi.

Religion and psychiatry have, indeed, many points of contact within the totality of the human personality. They can be for each other—they must be for each other—important auxiliaries in the understanding and care of men's minds and souls. This does not mean that the priest should try to play the role of the psychiatrist; nor that the psychiatrist should attempt to take over the work of the priest. It does mean that each can find common ground for mutual understanding and cooperation in the work of alleviating human sufferings and in the salvation of souls.

There is much evidence today that religion and psychiatry are drawing together to face these problems. The establishment in 1955 of the National Academy of Religion and Mental Health with the explicit purpose of bringing together psychiatrists and clergymen to work on problems of mental hygiene is a more recent instance of the trend toward closer and better relationships. It is natural that this should occur. For mental hygiene is but a new name for some very old ways of dealing with life's problems. There is a close parallel between a philosophy of life and what we call mental hygiene; therefore, religion, which plays so important a role in the former, cannot be overlooked in the latter.

As psychiatrist, you can do much good for the souls of men if, mindful of your own moral and religious responsibilities, you are aware of the part that religion can and should play in the lives of your patients.

May God bless you in your important work.

May He help you to see the divine in all persons for whom you labor.

May He foster your scientific insights as you strive to develop your theories and perfect your techniques.

May He give wisdom and prudence to your counsels, so that as trustees of human values, you may be ever concerned with those that are divine.

May He assist you in your therapies so that they may be the means by which each person whom you treat may come to find, through you, the ultimate source of his health, happiness, and security, Almighty God, Himself.

Wisconsin's Capital Has a Two-Party Press

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

Mr. REUSS. Mr. Speaker, it was 10 years ago that the two newspapers in Madison, Wis.—the Capital Times and the Wisconsin State Journal—formed Madison Newspapers, Inc. This action enabled the newspapers to have efficient, combined business operations, while continuing to have separate editorial and news departments.

Thus Wisconsin's capital city remains one of the all-too-few cities in the United States having two newspapers and, even more rare, having a vigorous two-party press.

The following article, setting forth the story of Madison Newspapers, Inc., and its importance to the people of Wisconsin, is from the Capital Times of Monday, February 2, 1959:

TEN YEARS OLD—TWO-NEWSPAPER PLAN IS SUCCESS; IS BIG ASSET TO MADISON

Madison Newspapers, Inc., a corporate device which has given to this community two militant daily newspapers in the best tradition of a two-party press under a representative form of government, has reached the 10th anniversary of its birth.

Thus, Madison today is still the only city in Wisconsin, outside of Milwaukee, which has two daily newspapers expounding and fighting for the political, civic, and business philosophies that should prevail under a two-party government.

The newspaper situation which now prevails in Madison is succinctly described in the 1958 Year Book of Editor & Publisher, the newspaper fraternity's publication. This statement follows:

"Madison Newspapers, Inc., is publisher and owner of the Capital Times and Wisconsin State Journal. The editorial and news contents of the respective newspapers are provided under contract by the Capital Times Co. and Wisconsin State Journal Co., and are editorially independent and competitive. Madison Newspapers, Inc., operates the business, circulation, mechanical, distribution, and all other departments. Officers and personnel of Madison Newspapers, Inc., are Don Anderson, chairman of the board; William T. Evjue, president; E. G. Lockwood, treasurer and general manager; Martin Wolman, business manager and secretary; W. H. Scrivner, advertising manager; John M. Canny, circulation manager; and Howard McCaffery, assistant circulation manager."

When the Second World War ended in 1947, newspapers all over the United States found themselves in precarious positions. Printing equipment—presses, linotypes, stereotyping machinery—was badly worn. Buildings were too small and expansion was needed. Print paper skyrocketed from $50 a ton in 1940 to $135 in 1956. Union labor scales were soaring skyward.

What to do? This was the question facing the two Madison newspapers. Not less than $1,500,000 would be needed to buy new presses for both papers and to pay for expansion additions to the buildings of the two papers. This expenditure was prohibitive.

The came negotiations and the suggestion that the local publishers should bring the two papers under one roof—one paper should remain in the evening field and one should publish in the morning field. Under this plan one new press and pressroom would be required for both papers. This meant a saving of $1 million over a two-paper operation. Other big savings were made by having the business office staffs under one roof as outlined in Editor & Publisher above.

This is a sketchy outline of what was done to insure that Madison would be a two-newspaper city—an asset that every city 25,000 or more should have to guarantee a two-party press under a two-party government. It is idle to talk about a two-party government where there is a one-party press.

In 1952 and 1956, 90 percent of the total daily newspaper circulation in the United States supported Eisenhower. It was during one of these campaigns that Adlai Stevenson, Democratic candidate for President, made his famous statement that we are living under the American system of two-party government, but we live under a one-party press.

The Capital Times has frequently pointed out that the following metropolitan cities in the United States did not have a single newspaper that supported Stevenson for President:

Boston, Baltimore, Philadelphia, Pittsburgh, Cincinnati, Cleveland, Detroit, Indianapolis, Chicago, Minneapolis, St. Paul, Des Moines, Kansas City, Denver, Salt Lake City, Seattle, Portland, San Francisco, Los Angeles, Tucson, Tulsa, and other cities.

Here is something for the American citizen to think about. The city of Chicago now has only two ownerships of newspapers—the multimillionaire Tribune and American owned by the McCormick estate and the Chicago Sun-Times and Daily News owned by the Marshall Field interests. In New Orleans, every newspaper being published in that city is under one ownership. This has been the trend all over the United States.

Two newspapers under one roof is the type of operation adopted in scores of cities over the United States to guarantee that there will be a two-party press. Here are some of the cities in the United States now operating under the same type of ownership and operation carried on in Madison:

Springfield, Ill.; Fort Wayne, Ind.; Shreveport, La.; Evansville, Ind.; Tulsa, Okla. (Richard Lloyd Jones, formerly owner of the State Journal is the owner of the Tulsa Tribune); Birmingham, Ala.; Cheyenne, Wyo.; El Paso, Tex.; Nashville, Tenn.; Albuquerque, N. Mex.; Amarillo, Tex.; Charleston, W. Va.; Bristol, Tenn.; Tucson, Ariz.; Davenport, Iowa; Lincoln, Nebr., and many other cities.

Here in Wisconsin, however, Madison is the only city in Wisconsin, outside Milwaukee, that has two newspapers. The hyphenated names of Wisconsin newspapers shows how the dominant newspaper in each of the following cities gobbled up the weekly newspaper and came up with the following hyphenated names:

The Appleton Post-Crescent, the Baraboo News-Republic, Green Bay Press-Gazette, Marinette Eagle-Star, Marshfield News-Herald, Racine Journal-Times, Wausau Record-Herald, LaCrosse Leader-Press, Chippewa Falls Herald-Telegram, Fond du Lac Commonwealth-Reporter.

All of these newspapers have been in the pocket of the Republican Party for years. Today we see what it means to reduce every outstanding city in Wisconsin to a one-newspaper level. Eventually these newspapers all gravitate toward alinement with the forces

of special privilege and private interest in government.

The biggest asset to point out on the 10th anniversary of Madison Newspapers, Inc., is that a corporate device was used here to bring about a situation under which Madison would have the benefit of two newspapers fighting for different issues and principles so vital in a representative form of government.

Madison is fortunate in being the one city in Wisconsin, outside Milwaukee, which has two newspapers representing both sides of all questions under our representative form of government.

In the first decade of its existence, Madison has demonstrated that it is possible for American citizens to have newspaper setups under which all matters vital to the welfare of the American people can be presented to the people. This can only be done by newspapers operating under a setup such as Madison Newspapers, Inc., here.

The Capital Times is glad to be a partner in this guarantee of a two-newspaper operation here in the city of Madison.

German Embargo of American Coal

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. CELLER. Mr. Speaker, suddenly, on January 23, 1959, Germany unilaterally and in violation of her coal and steel treaty with other European nations, placed a tariff of $4.76 a ton on foreign coal. This practically was an embargo and was aimed at the United States, which normally ships over 16 million tons of coal per year to Germany. Not only was this action in violation of Germany's Coal and Steel Community treaty, but I suggest that it was in violation of another treaty, the General Agreement on Tariffs and Trade—GATT—of which the United States is a member, forbidding bilateral or group agreements by members of GATT without the unanimous consent of all nations concerned. So sudden was Germany's unilateral action that even our State Department, which had been negotiating with the Bonn government since last September, was taken by surprise. The other day when our Government made a last minute request for a 60-day delay in the German action, it was brushed aside and the rash decision of the German Government was rushed through the Bundestag for formal approval.

Where does this leave American mining and shipping interests? Many American miners will be forced out of work because this huge hike in German coal duties will make prohibitive the importation of American coal to Germany. The $4.76 per ton will raise the price of American coal far above Ruhr coal. This hike, as I noted, came like a bolt from the blue. No warning, no advance notice, and no way of cushioning the blow. American coal miners in Virginia, West Virginia, Pennsylvania, Ohio, Tennessee, and other States will be faced with continued idleness. Already West Virginia, which supplies more than 50 percent of the Nation's annual output of coal, has the highest percent of its labor force unemployed. Starvation and want stalk its hills and that situation will be exacerbated by the rigors of the cold winter. Based on 1957 figures, Germany's action involves a loss of 500,000 days' work to coal miners.

American shippers have contracts to purchase this coal as mined, and have in turn chartered ships for transportation and are under obligation to deliver coal to German importers. Germany's action will make these contracts virtually impossible of performance. These people are well on their way to suffering immeasurable damages. Charter fees run into the millions. Damages in other respects are inordinate. More than 30 million tons of U.S. coal still are on order. With a $4.76-a-ton tariff staring them in the face—a tariff which, by action of the Bonn government was made retroactive to January 1 of this year—many American exporters face bankruptcy. Thus coal in transit is affected.

The Bonn government seeks to justify this drastic action on the grounds that it is an economic move designed to rescue the Ruhr coal industry from its year-old doldrums. This is somewhat hard to believe when it is remembered that Germany was in real need of American coal in 1957 in order to maintain at that time its strong domestic economy. The facts indicate that her move is not based on economic need; rather it is political. Having fully recovered from World War II, Germany is once again becoming industrially aggressive and is seeking to change the whole distribution of coal in Europe. And being the dominant power of the nations which comprise the European Coal and Steel Community, she can force her arbitrary action upon her weaker neighbors. I seriously question the right of Germany to impose these drastic tariff duties. It is morally indefensible.

Be that as it may, in the absence of diplomatic negotiations, which appear at this time to be inadequate, what remedies do American producers and shippers have? Germany's action, though arbitrary, is not a case in law which could be classified as a "force majeure" or confiscation, so that businessmen who suffer, may recoup damages from the government. It may be that they could sue the individual German importers of coal; but this would take much time and involve insurmountable difficulties.

Meanwhile, what?

It seems anomalous at a time when the United States is responding to the requests to rescue West Germany, particularly as to the status of Berlin, that the Bonn government would so heedlessly injure American shippers and producers. It certainly does not make for pleasant or cordial relations between the United States and the West German Government. On the contrary, it shows a country willing to accept advantages and display no gratitude. Nay, more, it is symbolic of utter apathy on the part of West German rulers as to the interest of American citizens who are or will have to continue to ship coal to Germany.

I have been a friend to Germany, but this latest maneuver has tinctured that friendship.

It is incumbent on West Germany forthwith to come forward with some remedy, otherwise there will be agitation in and out of Congress to retaliate. Raising duties without rhyme or reason will bring in its trail ever increasing American duties against German manufactured goods. The thrust will be given where it hurts Germany the most.

Tour Reveals Coal Camp Poverty

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. MOORE. Mr. Speaker, my esteemed colleague [Mr. SLACK], the gentleman who represents the Sixth West Virginia District, has dramatically emphasized the distressed economic plight of West Virginia through the medium of a tour of coal mining areas in his district.

He was accompanied on his trip by a reporter for the Charleston Gazette and a series of articles has ensued. With accompanying pictures, the newspaper accounts underline the depression in our coal counties.

He has found in his district, as I have found in my own First District coal mining communities, a dreary story of lengthy unemployment, of mines that have been worked out, and of unemployment benefit credits long since exhausted.

The story, too, includes the thread of tables bare except for Government handouts of surplus commodities. There are hungry children and men and women in my State of West Virginia. Something must be worked out immediately in the way of a works program or something of similar nature to alleviate the want and depressed economic condition which presently exists.

Statistics show that West Virginia has been one of the States hardest hit by the business recession and while other areas of the Nation are now showing recovery, very, very little of the same has been noted in West Virginia.

With consent of the House, I would like to insert an article from the Gazette, a newspaper for which I have great respect, which was printed in its edition of February 2, with further assurances that I will submit for all to see future articles written on this most pressing problem in West Virginia:

TOUR REVEALS COAL CAMP POVERTY

(By John G. Morgan)

HIGHCOAL.—"All of them have been cut off, their unemployment checks are running out, and they're up against it."

That's what Representative JOHN M. SLACK, Jr. heard on his way up the creek to this ghostly mining camp in Boone County.

The report was quickly confirmed. Here in little old mining shacks, the heads of large families told the new Congressman from the Sixth District:

"I don't know how I'm going to make it. I've been everywhere and I haven't been able to find nothing."

"This is the first time I've ever been in a place like this. I've looked this country over for a job, everywhere."

"We get molligrub (surplus food), but we run out of some things before the end of the month."

"We usually have gravy and oats for breakfast."

"An egg? When was the last time I eat an egg? I just don't know."

"We look across at the hills for entertainment."

As if all of that wasn't trouble enough, SLACK also heard:

"No colored fellows are working in the mines. We don't get the same treatment as the white man, not since 1952."

"They won't hire no colored fellows."

Highcoal, about 45 miles from Charleston, was the first stop on SLACK'S 1-day tour of the coal fields in Boone and Kanawha Counties. He decided to make the trip because he is:

1. Irked by the Eisenhower tendency to spread the impression that the Nation has fully recovered from the recession.

2. Further irked by the fact that the budget bill presented to Congress makes no provision for relief of economically distressed areas.

3. Fearful that Congress may take no action on the dozen distressed-area bills now before it.

By his visit to the coal fields, SLACK hopes to accomplish at least three things:

1. Find dramatic proof of economic conditions in the distressed areas.

2. Present that proof to Congress for action.

3. Join with other Congressmen representing similar areas in an effort to expedite the action.

"It is my intention to make improvement of the economic situation in my district the first order of business," SLACK declared.

"A first-hand look is necessary to get the facts."

The dramatic approach is SLACK'S last resort. He adopted it after discovering that few people in Washington are mindful of West Virginia's unemployment statistics.

Among such statistics is the glaring fact that nearly 80,000 coal miners lost their jobs in West Virginia during the last 11 years, including 20,000 within the past year. That leaves approximately 46,000 still working in the mines.

In district 17 of the United Mine Workers it is estimated that about 60 or 70 of 200 mining communities are deserted or partially deserted as a result of mine shutdowns and layoffs. The district includes parts of four counties represented by SLACK—Kanawha, Boone, Logan and Raleigh. It covers other areas in southern West Virginia and two counties in Kentucky.

While the economic recession obviously has had its effect on coal mining, leaders of the industry point out that mechanization has had more to do with the decline in employment.

Production declined sharply last year, but the estimated total of 113 million tons was about the same as in 1954 when 18,000 more men were employed in the industry.

SLACK wants to tell the Nation that West Virginia's unemployment problem is peculiar and pressing.

It's peculiar because unemployment in West Virginia's leading industry is persisting in the face of general economic recovery. It's pressing because the miners and their families are beginning to get hungry and desperate.

On the trip to the coal fields, SLACK took with him R. R. (Big Chew) Humphreys, secretary-treasurer of district 17; a photographer and a reporter.

The Congressman drove the car through the town of Marmet and then followed U.S. 119 across Lens Creek Mountain.

As the hills rolled by in their cloak of wintry brown, the gloomy aspects of the mission were brightened somewhat by Big Chew's vivid stories of earlier, more dangerous days in the mines. A fondness for tobacco while working underground earned him his nickname, he said.

At Racine, SLACK took West Virginia 3 through the towns of Comfort and Seth. At Sylvester he picked up Johnny Protan, who is the constable for Sherman District in Boone County, an amateur fight promoter and coal miner.

Protan has an unusual understanding of the problems of miners in the local area. Some of the younger ones fight for him.

As SLACK drove up Seng Creek toward this mining camp, it was Protan who said:

"All of them have been cut off, their unemployment checks are running out, and they're up against it."

Dr. Shaeffer Continues Efforts for Improved Wildlife Habitat

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

Mr. McGOVERN. Mr. Speaker, one of the Nation's most effective and persistent champions of proper wildlife preservation and management is Dr. J. H. Shaeffer of Parker, S. Dak. He has attracted nationwide acclaim for his efforts to preserve wetland areas necessary for the production of waterfowl in the prairie pothole areas of the Dakotas and Minnesota. Dr. Shaeffer recently appeared before a combined meeting of the Senate and House Committees on Game, Fish, and Parks of the South Dakota Legislature with additional recommendations. I include at this point in the RECORD a summary of the doctor's remarks as reported in the Sioux Falls Argus-Leader, February 1, 1959:

STATE NEEDS MORE WETLANDS—DR. SHAEFFER OUTLINES PROGRAM FOR PRODUCTION OF DUCKS

PARKER, S. Dak.—Ducks are not getting a decent break in South Dakota.

That's the opinion of Dr. J. H. Shaeffer, Parker, regional director of the National Wildlife Federation and chairman of the North and South Dakota Emergency Conservation Committee.

He is asking the South Dakota Legislature to assist in a program that will restore the State's waterfowl production to its former levels and to restore the State's waterfowl hunting.

Here is his review of conditions which led to 1958 being the worst duck-hunting season in the memory of man and his solution to the problem:

The 1939 legislature passed legislation providing for the acquisition of duck habitat and public-shooting grounds.

Then in 1941, the legislature set aside $5 of each nonresident pheasant hunting license fee to finance land acquisition.

"That measure," he explained, "has produced $2,184,455 for the acquisition of duck habitat and public-shooting lands."

To date, approximately 150,000 acres of land are owned or controlled by the department.

Fifty-two thousand of these acres form Custer State Park.

Nine other State parks, 58 State recreation areas and 43 roadside parks account for another 17,000 acres.

Another 25,000 acres comprise the multiple-use lands along Federal reservoirs.

"But only 13,991 acres are classified by the department as potholes and marshes," a point which Shaeffer emphasizes as showing that ducks are not getting a decent break in South Dakota.

While the game, fish, and parks department has acquired approximately 137,000 acres of other lands, subsidized drainage has destroyed 121,285 actual surface waters acres of duck habitat since 1954.

This destruction represents the loss of the Nation's finest duck-producing areas and the loss of the best duck-shooting areas in South Dakota.

How has this influenced South Dakota duck production and duck hunting?

South Dakota formerly produced 1,500,000 ducks a year. The production in 1958 is estimated at less than 300,000.

In 1952, when we lost 14,591 actual acres of potholes and marshes by subsidized drainage, we still had a breeding population of 1,002,000 ducks.

With subsidized drainage continuing, by 1954 the estimated breeding population had declined to 826,000.

"And by 1955, the estimated breeding population was down to 360,000.

"This represents an 80 percent decline in South Dakota duck production since 1944," Shaeffer explained.

Then he compared the loss of duck habitat to hunting conditions.

"The State has shown a population increase during a 10-year period.

"At the same time, improved highways and faster transportation has made available duck areas more accessible to all hunters.

"But during the 10-year period, 1946–56, South Dakota has 40 percent fewer duck hunters going afield according to the sale of Federal duck stamps.

The drought, he said, has further aggravated the waterfowl situation when it is realized that in 1958 the Sioux Falls area received 9.39 inches below normal rainfall; Watertown area 8.84 below normal, and Aberdeen 6.69 inches below normal.

Many areas not drained are now dry because of drought.

"The South Dakota Game, Fish, and Parks Department has been very negligent in acquiring potholes and marshes.

"Minnesota in 1958 alone acquired 17,417 acres of wildlife lands of which 90 percent is potholes and marshes.

"Since 1951, Minnesota has acquired 57,456 acres of duck habitat in 62 counties.

"Minnesota in 1 year acquired more potholes and marshes than the South Dakota department has acquired in its entire history."

The solution is a definite program for acquisition of wetlands and marshes in South Dakota.

"This can be accomplished by increasing the nonresident pheasant license fee from $20 to $25 and earmarking the $5 raise for wetland acquisition and development.

"Approximately 40,000 nonresident pheasant hunters would provide $200,000 annually and this sum would total $1 million within 5 years.

"These funds should definitely be earmarked for acquisition and development of potholes and marshes.

"And it would be wise to further earmark these funds providing 90 percent for acquisition and 10 percent for development.

"It is very possible that South Dakota could again produce a million ducks annually at the end of a 10-year period if members of the present legislature would recognize these facts of the current waterfowl situation.

"They in this session can provide funds for acquisition and development of wetlands by raising the nonresident pheasant license $5 and provide a definite program of restoring the dwindling supply of ducks and at the same time restore the State's waterfowl hunting," Shaeffer concluded.

Hon. Charles H. Silver Dedicates Alfred E. Smith Elementary School

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. TELLER. Mr. Speaker, the address by the Honorable Charles H. Silver, president of New York City's Board of Education and a prominent New Yorker, which Mr. Silver made on the occasion of the dedication of Alfred E. Smith Elementary School, deserves our attention. The address follows:

ADDRESS BY HON. CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION, AT DEDICATION OF ALFRED E. SMITH ELEMENTARY SCHOOL, DECEMBER 2, 1958

It is a high point in one's life to do what I am doing now: To dedicate a school building to the memory of an old and dear friend. Alfred E. Smith was my friend. Vivid in my mind are the many occasions when we walked together on Fifth Avenue chatting like old comrades and discussing the state of the world. In my mind's ear, I can still hear his warm, vital voice full of commonsense and homely wit. He had an uncommon talent for getting at the nub of any matter he discussed quickly and without fuss.

Al Smith's life is in a classic American mold. His is the celebrated story of the self-made man, up from the streets of New York to the seat of power and prestige. It is the heartening saga of the open society, in which people of humble background can aspire to, and often attain, lofty positions. The Al Smith story is the Lincoln legend of our times. Instead of the log cabin, there is the humble tenement; for the crossroad general store, there is the street corner; for the remote schoolhouse, there is the neighborhood school. The Al Smith story is in essence the American dream—a society in which the poor can become rich, the downtrodden can attain the highest level of dignity, a society in which no one is in any final way handicapped by class, color, or place of origin.

But if Al Smith is a reminder of what is profoundly good and true in our democracy, he also stirs some troubled chords in the American consciousness. He symbolizes the unfinished business of American democracy. Though Al Smith's life is a thrilling success story, it reached its noblest height in a moment of apparent failure. But the failure was not that of the Happy Warrior. It was instead the moral infirmity of American society. We all know the grim story of 1928—the far-sighted statesman, the talented administrator defeated as presidential candidate because he was a member of a minority religious faith. We all know the bitterness that this naturally caused and his rise above this to an even greater stature in his last years.

Al Smith poses a challenge to us today: How far have we progressed from the bigotry which stained the America of Al Smith? Are we ready now to fulfill the promise of America in all particulars, for all its citizens? These are questions which must occupy us from now on.

But let us turn to happier thoughts. Al Smith himself would approve of that for he was a man of robust humor and zest for life. As I look upon this handsome building, I know that the gallant spirit of Al Smith is pleased by it. Though a self-educated man, he was a steadfast friend of free public education. He knew its value, he knew its enduring contribution to American democracy. He recognized, in all modesty, that few could educate themselves as he did. He above all people knew the complexity of the job which confronted the ordinary citizen who had to thread his way through a maze of issues and make bewildering choices of political parties and candidates.

Al Smith, I dare say, would take a view of the current controversy about school buildings which would be both amused and indignant. A man who learned the value of the dollar the hard way, he was also unafraid to spend money in the public interest. He knew well that there are no shortcuts to good education. As Governor of the State of New York, he pioneered in public housing, in creating belts of greenery in the large cities, in public works of all kinds. He was also a man of sensitive artistic appreciations. He understood that education should take place in the most attractive setting possible and that a mural on the wall is as much an educational device as a textbook, a gym where the body is trained as important as a classroom. Inexpensive education comes dear, for it can exist only at the expense of our children. Al Smith would say: "Let us save if we must, but not on our most precious resource, our children."

The open society which Al Smith exemplified is never an accomplished fact; it is, instead, a continuous process, a recurring challenge.

People believe in Al Smith because he believed in them and he never feared their actions as long as they knew the facts. We in the board of education follow this principle. We have built, here, a school for your children, and our faith in you and the splendid faculty and administrators gives us our belief in this school's future—it is your children's future. We have provided a setting for the parent-teacher-community team that spells success for the adult of tomorrow. We in the board of education welcome your participation with us on that team. This is so appropriate here because that is the way Al Smith would have seen it. The question we must ask ourselves searchingly today and always is: Do the Al Smiths of our time, regardless of color or creed, have the opportunity to rise in the social and economic escalator of our society? What part does education play in making that rise possible?

Since education is the only way to open up opportunity for our children, there can be no school too good for our children. Our goal is clear: The best education for all the children of our city. In doing this we are being loyal to the memory of that great American, Al Smith, and to the highest ideals of democracy.

Tribute to American Indian

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the poem entitled "Tribute to American Indian," which was written by the late Riley Thompson, of Cloquet, Minn., be printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

TRIBUTE TO AMERICAN INDIAN

(Dedicated to Minnesota State Centennial, 1858–1958)

Once a proud and noble Indian race,
Endowed with nature's freedom reigned:
Tradition of our past century since has flown
Thus to our forefathers; they well known,
Told how they greeted him who found us:
The great discoverer of America, Columbus.
Reigning this glorious land of painted scene,
A proud and noble race roamed serene.
Resisted tide of emigration, in conquest sought,
Avenging cruel and bitter wrongs they fought.
From his savage bosom, the medicine-man's song:
He sang nature's own lyrics, the day long.
Weird chants through his reed of cane he reign,
Blowing into potherb, cedar twigs, and herbs in vain.
Driving evils from medicine, pestilence, fever, cast
Sickness from his people, to future vast.
In his savage heart, he worshiped in token,
Not idols, his handicraft made of stones broken.
Nor images made of glittering gold,
Like ancient Romans and Egyptians behold.
The "Great Spirit" was his guide and master
From skies above, the land of here-after.
A race passing slowly to happy hunting grounds,
Going there forgotten in hallowed mounds.
Like unto green leaves, of summer to decay,
For swift autumn wind to blow away.
From branches leaving but bare twigs to endure,
Gathered into melancholy clusters in obscure.
Dying un-resenting, obedient to wind begin,
Toward their winter's snowy grave within.
Beside gleaming campfires, aged Chieftains told.
The listening youthful, our Indian history unfold.
They told of treaties vowed, and broken to defy,
Our noble race, with sacred promise and pacify.
How bitter hatred sprang and flourished; war began
In strife and blood-shed resisted time and again.
To beating of tom-toms and rattling of shell,
The noisy chorus began with whoops and yell.
By warriors, at twilight circling camp-fire flame
With tomahawks, gesture in anger war-dance fame.
Shouting loudly echoed, war-cry in bitter wrath,
Faced terroring shot and powder on the war-path.

Dying with camp-fires, never begging mercy or plea,
Ever fighting, never fear death's warning on knee.
To weapons of White Father's armor the foe,
Chieftains told of bitter fate, poor conquered Lo.
The strife ended with battle fray at peace,
Hear no-longer Indian war-whoops now cease.
Hearts filled with bitter hatred exist not anymore;
Wounds that bled many ages are healed as before.
Thus the noble Red-man, now immersed in woes,
Vanquished in bitterness: "Today the world knows"
Now the Indian-sun, sinking with drooped head in sorrow,
Without silvered rays are not bright with tomorrow.
Sinking slowly with grief-stained face to grave
Soon be forgotten; his history never forgave.
To his memory, erect a monument inscribed his acclaim,
Write a sonnet, with pathetic rhyme of exclaim.
With soft music as tuneful lay of brooklets onward,
Rippling in moon-light rays, and sun ever seaward.
Erect an image of a warrior, to his likeness an antique,
War-bonnet on head, decked with eagle feathers meek.
With war-paint his face, tints of many colors by plan,
From nature's rude designs, his ancestral clan.
Lean beside him his bow un-strung, in token the past,
His savage ways and customs; our Chieftains cast
The mighty tomahawk, place in hand useless aside,
Strap across his shoulders, quiver filled arrows his pride,
In token of reluctance his history, write big letters bold,
Let not time blot, tribute to American Indian, behold.

—By RILEY THOMPSON.

Urban Renewal Legislation

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a letter I received from Honorable John B. Hynes, mayor of the city of Boston, Mass., relating to urban renewal legislation, together with copy of my reply to him:

CITY OF BOSTON,
OFFICE OF THE MAYOR,
January 30, 1959.

Hon. JOHN W. MCCORMACK,
House Office Building, Washington, D.C.

MY DEAR CONGRESSMAN: Urban renewal legislation is pending before the Senate Committee on Banking and Currency. Both of the mayors organizations, the U.S. Conference of Mayors, and the American Municipal Association, are heartily in favor of a bill which would provide for a 10-year urban renewal program with the Federal Government appropriating $600 million each year and the local communities providing the usual one-third or even a 20 percent share.

As you know, the administration bill is for $250 million a year for 3 years and $200 million for the following 3 years. This simply will not do the job that must be done. In addition, the requirement in the administration bill that cities share on a matching 50–50 basis will be the death knell to the urban renewal program, for cities simply cannot contribute that much to this most necessary program.

The U.S. Conference of Mayors, and through its president, Hon. Norris Poulson, mayor of Los Angeles, has placed its case before the committee on January 26. I am in accord with everything that Mayor Poulson said at that time because it reflects the unanimous opinion of the mayors throughout the country.

I will appreciate if you will keep your eye on this legislation and help wherever you can. I know that you are interested in the continuation of urban renewal on a sensible scale and in a sensible manner and I know also that you hardly need to be asked to help.

With best wishes, I am
Respectfully

JOHN HYNES, *Mayor.*

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 4, 1959.

Hon. JOHN B. HYNES,
City Hall, Boston, Mass.

DEAR JOHN: I am in receipt of your letter of January 30 and in reply will say that the President's recommendation in relation to urban renewal legislation is completely inadequate.

I am having your letter inserted in the CONGRESSIONAL RECORD.

With kindest regards,
Sincerely yours,

JOHN W. MCCORMACK.

Excise Tax Cut Could Save Jobs

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. CHAMBERLAIN. Mr. Speaker, it is cheering when the newsmen of the country understand clearly that specific legislation is important to the whole country, and transmit that information to the readers in their editorials.

I submit herewith for inclusion in the RECORD an article which appeared in the January 28 edition of the Flint (Mich.) Journal. This piece gives an excellent summary of why the bill to repeal the 10 percent excise tax on automobiles is important to the economy of the whole Nation.

I welcome this opportunity to again put before my colleagues the vital importance of removing the excise tax as a measure helpful in spurring sales and restoring jobs to many Americans.

The article follows:

EXCISE TAX CUT COULD SAVE JOBS

The announcement that 2,250 Buick and Fisher 1 workers are being laid off is the kind of news that none of us like to hear.

Expressions of sympathy don't pay the grocery bills of those workers and their families. What we need is the kind of economic climate which will spur the sales of automobiles and restore those unfortunates to the factory payrolls.

One measure which could stimulate sales is now before Congress. Representative CHARLES E. CHAMBERLAIN, Sixth District Republican, has introduced a bill to repeal the 10 percent excise tax on cars.

A similar attempt to cancel the automotive excise tax was defeated last year because of the opposition of the Eisenhower administration, which argued that the Federal Government could not afford the loss of revenue.

The Treasury Department probably will oppose Representative CHAMBERLAIN's new bill because the need for revenue is great, particularly in view of the probability that Congress will vote more spending than the administration considers sound.

However, there is a definite possibility repeal of the excise tax would result in more tax revenue, not less.

Individuals who are laid off from their jobs are not earning and therefore are not paying income taxes. They become an expense to local, State and Federal governments through unemployment compensation or direct relief.

In addition, lower sales reduce the profits of automotive manufacturers. The corporations profits tax, as a result, will not bring in as much revenue as it would if car manufacturers could maintain high production.

It is impossible to prove that abandonment of the excise tax on cars would mean an increase in tax revenue. It is impossible to prove that it wouldn't. At least it is worthy of consideration.

If manufacturers did not have to pay a Federal excise tax, which averages about $180 per vehicle, the price of cars could be reduced. Lower price tags probably would mean more buyers for new automobiles, and possible return to work of those who are being laid off.

Elimination, or substantial reduction, of the excise tax could be most helpful in spurring sales and, of most importance, restoring those laid off to their jobs.

The administration and Congress should give it a try.

Alaska: Wildlife Reservoir

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. REUSS. Mr. Speaker, the vast new State of Alaska has tremendous wildlife and waterfowl resources which must not be allowed to disappear. Both the Federal Government and the State of Alaska have a heavy responsibility to preserve and protect these resources.

R. G. Lynch, conservation writer for the Milwaukee Journal, made an extended visit to Alaska last year. In the following article from the Journal, Mr. Lynch discusses Alaska's resources and the nature of the conservation task ahead:

ALASKA: WILDLIFE RESERVOIR—UNITED STATES HAS CHANCE TO AVOID MISTAKES OF PAST IN TEEMING AREAS OF ITS VAST NEW STATE

(By R. G. Lynch)

Many a man, and perhaps a few nations, would like to turn back the clock and do something over again, without mistakes now

realized. In a sense, the United States has this chance in Alaska.

A century ago, Congress turned over 65 million acres of wetlands to the States. Now the Nation is trying to buy back some marshes for ducks and geese.

Settlers in the Great Plains plowed up 14 million acres of prairie sod that the Nation is trying to get back into grass to keep the soil from blowing away.

Farming and overgrazing have left but few remnants of virgin prairie, and in the east and the Lake States only islands of primeval forest have survived logging operations.

PRESERVE KEY AREAS

Scientists, conservationists, and sportsmen are determined that these things shall not happen in Alaska. They are supporting efforts of the Fish and Wildlife Service to preserve key areas for public ownership and management.

These proposed wildlife areas are expected to become an issue in the present Congress, when Alaska tries to gain control of its fish and wildlife, which was withheld in the Statehood Act because commercial fisheries interests dominated the Territorial administration.

Alaska is big game country probably surpassed only by Africa. The Alaska brown bear, largest land carnivore, is found nowhere else. The new State has several varieties of grizzly bear, an animal dangerously near extinction elsewhere. It has mountain sheep and goats, moose, caribou, deer, and polar bear, as well as small herds of musk oxen and bison, established by game managers.

BIG ARCTIC RANGE

Secretary of the Interior Fred A. Seaton, late in 1957, temporarily withdrew 14,000 square miles from the public domain for an arctic game range, abutting Canada. It has grizzly and polar bears, Dall sheep, caribou, and many small animals, including the wolverine, another creature near extinction. It is an important nesting ground for waterfowl.

Severe winters and summer insects make this arctic shelf unattractive to man, but the area adjoins oil and gas fields, so Seaton wants it kept open for leases for petroleum and mining operations.

Development would proceed as in the Kenai moose range, where oil companies drill under regulations which protect wildlife. The land would remain public.

BIG WATERFOWL SITE

The delta of the Yukon and Kuskokwim Rivers is one of the world's greatest waterfowl breeding places—20,000 square miles of marshy tundra with thousands of small ponds. The Pacific flyway gets 20 percent of its flocks from here.

Since 1947, the Fish and Wildlife Service has been trying to get this waterfowl factory protected and meanwhile has cut its request to 2,900 square miles. A few Eskimos use the area. Other settlement is unlikely. Because of petroleum possibilities, a game management area is proposed, rather than a refuge, so that leasing may be permitted.

Southward, across Bristol Bay, there is a waterfowl crossroads at the tip of the Alaskan Peninsula. Millions of geese, brant, and ducks concentrate here to fatten up before continuing flights. The Wildlife Service wants 500 square miles of land and 183 of water around Izembek Bay, where berries on the upland and eel grass in the tidal flats provide food for the tremendous flocks.

PROTECT WALRUS, BEAR

Alaska has other urgent problems for the attention of Congress. A marine mammals act will be introduced to provide some protection for walrus and polar bear.

With the demand for carved ivory, hunters kill walruses just for their tusks and leave the carcasses to rot. The animal is a source of meat and skins for boatmaking. Its depletion would work a hardship on the natives.

Glenn Orton, a Federal game agent, with whom the writer made some flights out of Fairbanks last summer, had just made a walrus survey. Along the coast from Unalakleet on the Bering Sea to Point Barrow on the Arctic Ocean, 69 carcasses were counted. Heads or tusks had been removed from all but six, which probably got away from hunters before dying.

The polar bear was safe from too much hunting until the airplane enabled man to seek it on the ice pack at sea.

Now it is feared that the kill of both walrus and polar bear exceeds their reproduction. Since both range beyond the 3-mile limit, a treaty may be necessary to provide international protection.

National Defense Student Loan Program

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. LINDSAY. Mr. Speaker, I rise to comment upon a program which has significance for the young people of this Nation and for the strength of the Nation itself. I refer to the national defense student loan program authorized by Public Law 864, enacted by the 85th Congress in its closing days and signed into law by the President on September 2.

The national defense student loan program provides for the establishment, at institutions of higher education throughout the Nation, of loan funds from which needy students may borrow funds for the completion of their education at low interest rates and on generous repayment terms. Its objective is to encourage needy students to continue their educational pursuits, an objective contemplated in several features of this act. The Congress is authorized to appropriate $295 million for this purpose during the next 4 years. The assistance and encouragement that this program can and will offer to needy young people throughout the country is immense. It should do much to reduce the waste of talent which has resulted from the failure of able but needy students to continue with their educational plans.

President Eisenhower signed the National Defense Education Act into law on September 2, 1958. I have followed the progress that has been made by the Department of Health, Education, and Welfare in implementing this program. I believe that the Secretary of the Department of Health, Education, and Welfare, Dr. Arthur S. Fleming, and the U.S. Commissioner of Education, Dr. Lawrence G. Derthick, are to be complimented upon the prompt and sound manner in which they have undertaken the implementation of all programs authorized by the National Defense Education Act. This is a new era of departmental responsibility and they have measured up to the challenge. They are to be complimented upon the appointment of Dr. Homer D. Babbidge, Jr., to head the administration of those programs affecting American higher education. It has been my pleasure to work with Dr. Babbidge in various capacities over the years, and I am confident that he will lend able and imaginative leadership to the administration of these programs.

It is a particular source of pride to me that officials of the Department of Health, Education, and Welfare have selected to administer the national defense student loan program a resident of the State of New York, and a prominent official of the State university of New York, Mr. Peter P. Muirhead. Mr. Muirhead has for many years served as director of the New York State regents scholarship and examination program. He served as executive secretary of the New York Higher Education Assistant Corporation, which was responsible for the establishment of New York State's successful student loan program. Mr. Muirhead is a man of experience and wisdom, and in entrusting to him the responsibility for the administration of this program, the Department has ensured that the program will be administered soundly and well. Mr. Muirhead's appointment to this post was made possible only through the cooperation of Dr. James S. Allen, Jr., Commissioner of Education for the State of New York. Dr. Allen's willingness to lend to the Department of Health, Education, and Welfare a key member of his own staff is a splendid example of effective Federal-State Cooperation. It is an example of the constructive concept of partnership which has been stressed so much by the President and other administration leaders, as the key to effective progress in the field of education.

Mr. Speaker, the national defense student loan program authorized by the 85th Congress is a well conceived program. It is secure in the hands of able educators and administrators. I am confident that it will do much for the young people of our Nation, and therefore for the Nation as a whole.

Mr. Speaker, I have one concern regarding the effective implementation of this program; and this has to do with the amounts of money available for this purpose. As I indicated earlier, the act authorizes the appropriation of sums up to $295 million during the next 4 years. For this, the first year of the loan program, a total of $47½ million is authorized. The respective Appropriations Committees of the House and the Senate, under pressure to act on an appropriations request during the closing hours of the 85th Congress, effected an interim, or stop-gap, appropriation for this purpose of only $6 million. This was done with the clear understanding that the Appropriations Committees would reconsider at the earliest opportunity a supplemental request for this and other purposes. I trust and hope that this body will see to it that the additional funds in substantial quantity are made available at the earliest possible opportunity.

Let me suggest the importance of prompt action on a supplemental request for the purposes of the National Defense Education Act. Taking the student loan program by itself, let me indicate how inadequate a figure of $6 million is.

The most recent figures show that 92 institutions in the State of New York have applied for funds under the loan program, and these institutions represent more than 167,000 full-time students. The total amount requested by New York State schools is approximately $7 million. In my home city of New York alone, 28 institutions, representing more than 71,000 full-time students, have applied for Federal funds under this program. Under the State allotment formula embodied in this act, the State of New York would be entitled to only $623,442. If the initial stopgap appropriation of $6 million were not increased this sum would not begin to meet the needs of New York City institutions alone. This sum would not meet one-tenth of the current student loan needs of institutions of higher education in the State of New York. Failure to provide additional funds under this program, therefore, would work a hardship upon the young people of the State of New York and upon the institutions which they are attending. I urge, Mr. Speaker, that the leadership of this body give prompt and positive attention to this critical need.

I am confident that President Eisenhower will forward to the Congress a request for supplementary funds with which to implement the national defense student loan program. I know that Secretary Flemming and Commissioner Derthick are well aware of the urgent need for additional funds for this purpose. Certainly the colleges and universities of the Nation know how pitifully inadequate $6 million is for this purpose. The young people of the Nation and their parents have made perfectly clear how urgently they need this assistance. It now rests squarely upon this Congress to respond promptly and positively to a need identified and endorsed by the entire Nation.

School Money Without Strings

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

Mr. PELLY. Mr. Speaker, during the past few years Federal grants-in-aid have developed rapidly until now, in a substantial degree, they help to support many major State government services. In Federal aid programs, the Congress has intended as much as possible to remove from such grants Federal direction, control, and interference, but it is obvious that through establishment of Federal standards it is not possible to eliminate Federal Bureaucratic dictation and intervention.

What has happened is that to meet enormous and ever-increasing expenditures the Federal Government has tapped the most lucrative sources of tax revenue, leaving State and municipal governments little other than real property taxes and sales excises from which to meet their needs unless these State and municipal governments duplicate Federal taxation including individual and corporation income taxes, admission taxes, beverage taxes, as well as tobacco, gift, luxury, transportation, and communication taxes, to name a few.

The Federal Government developed the grants-in-aid type of appropriations to provide incentives to State and local governments to meet local needs. In all fairness, Mr. Speaker, it should be pointed out that the purposes of these aid programs are certainly for the most part meritorious. Of course, it is neither economical nor efficient to withdraw huge sums from the taxpayers of each State and then have a portion of such funds trickle piecemeal back to the States. However, the real argument against Federal grants is of course the Federal strings and the compulsory requirements imposed by law and regulation of Federal administering bureaus.

In my State of Washington, like in many other States, the State legislature is presently struggling with the problem of obtaining funds to meet adequately the responsibilities of State government under our constitution, including the needs of education. The government has requested $135 million in new taxes for public services as well as for a deficiency appropriation of $25.5 million to cover overspending in public welfare and to help lower the current State deficit estimated at about $80 million.

The Governor in his budget chopped off about $12 million from the current State school fund estimate recommended to the legislature by our State superintendent of public instruction. The State school directors association had recommended $40 million above the Governor's figure.

For educational construction funds our State is planning to issue $30 million in bonds, but all the while we are told the State is running out of borrowing power.

The harrowed Governor in a dilemma has expressed an opinion that Federal aid to education is the answer.

I have opposed Federal aid to education, Mr. Speaker, but nevertheless I deemed it my responsibility to confer with our Washington State superintendent of public instruction, Lloyd Andrews, who is widely recognized as courageous politically and at the same time dedicated to the cause of public education and conversant with its financial needs.

Thus, I sent Mr. Andrews a copy of the Murray-Metcalf bill because it seemed to represent the type of legislation which will get the nod from the congressional committees having jurisdiction over education.

As I expected, Mr. Andrews wrote me opposing the bill and, may I add, I strongly share his criticism in that as presently written this bill sets forth limitations and definitions of the States' education programs, and places authority for administration in the Office of the U.S. Commissioner of Education. For example, section 4, subsection (b), spells out specifically that this money shall be used for school construction and teachers' salaries.

I agree with Washington State's superintendent of public instruction in his position as stated to me that the general operation and maintenance of our public schools must be treated as a whole, and not in this manner, or to quote Mr. Andrews' own words, "We would have to abdicate our local and State jurisdiction over educational process."

In the Murray-Metcalf bill, furthermore, as Mr. Andrews pointed out, section 5 by inference sets forth priorities for school buildings, removing from the State the latitude of determining its own needs. Also in section 6, the U.S. Commissioner determines the purposes for teachers' salaries.

Mr. Speaker, I share my State superintendent's concern of such encroachment on State and local responsibility by control of the Central Government But I likewise have a deep interest in education and recognize adequate money must be provided to our local school authorities to enable them to provide classrooms and decently paid teachers for our expanding school population.

Therefore, I am introducing a no-strings-attached alternative bill to pay back some of their own money to the respective States and Hawaii for educational purposes free from any Federal controls. My bill would authorize an appropriation equal to 2 percent of all Federal income taxes collected in each State and Hawaii for education in the common or public schools. That is all. No standards or specifications of any sort are stipulated. The purposes for which these funds would be spent would be entirely up to each State and its legislature providing it was for education.

In other words, if some of our local school districts' financial affairs are critical, and I am convinced such is the case, let us give the local and State authorities help but refrain from dictating how they must solve their problems.

Under my bill, the handling of funds will not be in any way, shape, or form through the Federal Department of Health, Education, and Welfare. The only Federal responsibility will be the calculation of amounts to be returned to each State and then the transfer of funds by check from the Secretary of the Treasury. The amount would be automatically geared to the national income for each year. There would be no bureaucratic power or expense involved.

The accompanying table of the approximate Federal income tax collections by State or Territory for fiscal 1957 shows the estimated amount of income taxes. Also shown is 2 percent of each amount, which gives an idea of how much each State could expect to receive.

Estimated Federal income tax collections, by State or Territory, fiscal year 1957

[In millions]

State or Territory	Estimated Federal income tax collections	Estimated yearly payment to each State or Territory
Alabama	$394	$7.9
Arizona	170	3.4
Arkansas	143	2.9
California	5,134	102.7
Colorado	697	13.9
Connecticut	1,079	21.6
Delaware	702	14
Florida	820	16.4
Georgia	602	12
Idaho	105	2.1
Illinois	5,081	101.6
Indiana	1,275	25.5
Iowa	465	9.3
Kansas	404	8
Kentucky	456	9.1
Louisiana	510	10.2
Maine	156	3.1
Maryland (plus District of Columbia)	1,368	27.3
Massachusetts	1,710	34.2
Michigan	4,104	82
Minnesota	939	18.8
Mississippi	129	2.6
Missouri	1,385	27.7
Montana	109	2.1
Nebraska	298	6.0
Nevada	77	1.5
New Hampshire	119	2.4
New Jersey	1,798	36
New Mexico	113	2.3
New York	11,985	239.7
North Carolina	671	13.4
North Dakota	62	1.2
Ohio	4,547	90.9
Oklahoma	514	10.3
Oregon	419	8.4
Pennsylvania	4,271	85.4
Rhode Island	259	5.2
South Carolina	219	4.4
South Dakota	59	1.2
Tennessee	476	9.5
Texas	2,016	40.3
Utah	150	3
Vermont	60	1.2
Virginia	695	13.9
Washington	728	14.6
West Virginia	274	5.5
Wisconsin	1,124	22.5
Wyoming	49	1
Alaska	29	.6
Hawaii	128	2.6
Puerto Rico	1	.02
Total	[1] 59,078	1,181.6

[1] The difference between this total of $59,078,000,000 and the total figure of $60,560,000,000 as reported by the Internal Revenue Service is due to: (1) A difference in the old-age, survivors, and disability insurance contributions' data estimated by the IRS for the entire United States, and the Department of Health, Education, and Welfare estimates thereof, which had to be used in compiling this report; and (2) other adjustments made by the IRS to its State data in deriving its total figures—1 such adjustment is a $797,000,000 adjustment for undistributed depositary receipts.

Sources: 1957 Annual Report of the Commissioner of Internal Revenue and Social Security Bulletin, March 1958.

As a matter of interest I am also showing the figures from the budget of the United States Government for fiscal 1960 to indicate other amounts allocated to education in the form of grants.

Selected Federal grants for education

Program	Appropriations	
	Fiscal 1958	Fiscal 1959
1. Vocational education	$33,750,000	$33,750,000
Permanent authorization	7,138,000	7,138,000
2. Land-grant colleges	2,502,000	2,502,000
Permanent authorization	2,550,000	2,550,000
3. Grants for library services	5,000,000	6,000,000
4. Federal-impacted areas assistance for—		
School construction	98,650,000	50,800,000
Maintenance and operation	127,000,000	130,000,000

Selected Federal grants for education—Con.

Program	Appropriations	
	Fiscal 1958	Fiscal 1959
5. Program and financing, Office of Education	$7,186,000	$8,786,000
6. President's Committee on Education Beyond the High School	50,000	(1)
7. National Defense Education Act of 1958		40,000,000
8. National school lunch program	99,872,340	[2]145,000,000
Total	383,698,340	426,526,000

[1] No longer operating.
[2] Estimated.

Finally, Mr. Speaker, let me urge consideration of a no-strings-attached type of bill instead of opening the door to a program that will only end with a Federal bureaucrat, so to speak, sitting on and dictating to, so to speak, every school board in America. Let us not take away the management of our schools from the parents and local communities and school boards.

Report of Recent Attacks Against the FBI

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 4, 1959

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the November 1, 1958, issue of Firing Line, published by the American Legion, containing a statement by Commander Moore of the American Legion, and referring to the FBI and its Director, Mr. J. Edgar Hoover.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPORT ON RECENT ATTACKS AGAINST THE FBI

Recently, a series of apparently unrelated attacks, with the obvious intent to smear J. Edgar Hoover and discredit the Federal Bureau of Investigation were initiated. Instigator of the initial attack was Cyrus Stephen Eaton, aged, multimillionaire industrialist, on May 4, 1958 American Broadcasting Company television program financed by the Ford Foundation's Fund for the Republic. That episode was exposed in the July 1, 1958 issue of the Firing Line. In a statement released on October 27, 1958, National Commander Preston J. Moore stated that the national convention in September 1958 commended both the FBI and Director J. Edgar Hoover. He found it difficult to attribute any purpose to these attacks other than a desire to destroy this Federal law enforcement agency and its leader as an effective deterrent to undetected, unopposed Communist subversion in this country."

Commander Moore declared "that a deliberate 'smear Hoover and the FBI' campaign, similar to the Communist Party's unsuccessful efforts of 1940, has been launched is no mere supposition. The entire October issue of Rights magazine, the official publication of the Emergency Civil Liberties Committee, branded by the Internal Security Subcommittee of the United States Senate Judiciary Committee as a Communist-front organization, is devoted to an article (postponed by exposure) 'The FBI and Your Freedom.' It is, of course, a biased one-sided attack on the FBI, distinguished only by its omission of any reference to communism's denial of human dignity or humanitarianism. Coincidentally, or so the timing suggests, a recent issue of the Nation magazine featured an article by Fred J. Cook, attempting to discredit the FBI. Some reviewers have evaluated this piece as 60 pages of distortion, half-truths and innuendoes."

"Finally, and most significantly, former FBI agents have been approached recently by reporters of the New York Post seeking derogatory material on J. Edgar Hoover. These reporters have extended their 'beat' to Paris, France, in what is obviously a far-flung and must be a discouraging attempt to do a character-assassination job on Mr. Hoover. Evidently, the initial failure of this mission resulted in the New York Post stepping up its major effort in 'Operation Gumshoe' back in the States. Apparently forgetting, at least momentarily, that they were supposed to obtain information, not reveal it, reporters for the paper disclosed to unquestionably reliable New York sources that the Post plans to assign reporters to Washington, D.C., and other cities to skulk around restaurants and other public places in the hope of digging up information that could be used against Hoover and the FBI." Commander Moore believes "that our people should reaffirm their faith in Hoover and the FBI" and hopes "that the American press which, with a few tragic exceptions, is commendably patriotic, will continue to give J. Edgar Hoover and the FBI their necessary and persuasive editorial vote of confidence."

Hero of the Cook article in the Nation is none other than the aforementioned Cyrus S. Eaton, recently returned from a visit to the Soviet Union and Austria. Based on an article published in Pravda, Soviet Communist Party organ, the New York World Telegram of September 8, 1958, quoted Eaton as stating that Soviet Premier Nikita S. Khrushchev's "directness, sense of humor and sincere aspiration for peace throughout the world would find a response" in the United States. The New York Herald Tribune, European edition of September 25, 1958, reflected that Khrushchev interrupted his vacation and returned to Moscow "for a session with the American industrialist Cyrus Eaton" and to conduct a Communist Party meeting. According to Eaton, the fundamental reason for world tension and distrust of Russia is "based on the misconception of the people of the United States about the Soviet Union, its people, resources and present government." He further stated, "I am confident that in Khrushchev we have a man with whom we could deal." (See Cleveland Plain Dealer, October 8, 1958, p. 1.)

Eaton believed Communist China should be recognized and admitted to the United Nations and "we should start doing business with them." The credulity and abysmal ignorance of Eaton in damning Hoover and praising Khrushchev appears difficult to understand. Eaton obviously never read the Senate Internal Security Subcommittee report on "The Soviet Empire: Prison House of Nations and Races." Senator EASTLAND in his release of July 7, 1958, summarized the modus operandi whereby the Soviet, through trained agitators, exploiting national and racial feelings and duping nations into severing protective ties, renders them defenseless. Like a ripe plum they fall into the waiting arms of the Soviet, either as a subordinate republic or as a satellite state.

Many of the questions raised by reporters of the New York Post parallel the smears of the Nation. James A. Wechsler, editor of the Post, testifying before the Permanent Subcommittee on Investigations of the Senate Committee on Government Operations on April 24, 1953, stated he joined the Young Communist League in the spring of 1934 and left the subversive organization at the end of 1937. In the fall of 1937, after returning from an European trip which included Russia, he wrote articles for the Nation and became its full-time editor early in 1938. He resigned from the Nation in May 1940, to become assistant labor editor of PM. The reason for Wechsler's antipathy to Mr. Hoover and the FBI is not known, but an article in the New York Journal American of August 9, 1952, stated:

"It is true that Wechsler now howls he is a stanch anti-Communist, but like his Americans for Democratic Action (ADA), he protests much but seldom acts. Both Wechsler and the ADA—which houses a selection of leftwingers—spend more time time lambasting the Smith Act, the McCarran committee (Senate Internal Security Subcommittee), Senator McCarthy and Louis Budenz then they do in direct frontal thrusts at Stalin's local boys. Wechsler also has a peeve at the FBI and he has tried to rack up this Federal Bureau time and again. Fortunately, J. Edgar Hoover's lads are sturdy souls and they continue their pursuit of Remington and other riders of the subversive circuit who gallop as heroes across the pages of the New York Post.

The California Senate Factfinding Committee on Un-American Activities made the following statements on pages 621 and 622 of its 1949 report: "The Nation and the New Republic have long records as liberal publications. They cannot be described as Communist, but they are so infiltrated with the Communist Party policy that they serve the interest of the Communists and confuse liberals on many issues, much more than do some of the Communist publications." Concerning the attack by the aforementioned subversive Emergency Civil Liberties Committee, Carey McWilliams, an executive committeeman of its national council is editor of the Nation. His record of affiliation with subversive organizations is extensive. (See Firing Line, Oct. 15, 1958 and House Committee on Un-American Activities (HUAC), "Operation Abolition," 1957, pp. 8 and 9.)

NEW VOICES OF SOVIET IMPERIALISM

During the last several months, the international Communist movement has made noticeable strides in attempting to further indoctrinate its own members and propagandize the non-Communist world through the circulation of new Marxist periodicals. The most important of these was the publication in September 1958 of World Marxist Review: Problems of Peace and Socialism, the theoretical and information journal of Communist Workers' Parties. Prior to the appearance of World Marxist Review, the worldwide Communist revolutionary conspiracy has been without a published directive since the expedient dissolution of For A Lasting Peace, For a People's Democracy in April 1956. The latter periodical was the official weekly organ of the Information Bureau of the Communist and Workers' Parties (Cominform), successor of the Soviet dominated Communist International (Comintern).

World Marxist Review is published monthly in 14 foreign languages and distributed by the Press Circulation Agency, Sadova 6, Prague, Czechoslovakia. English language editions are published in both Canada and in Great Britain. The Canadian edition is issued by a dummy setup called Progress Books of 924 King Street West, Toronto 3, Ontario. According to a recent catalog, Progress Books also operates under the name of Progress Subscription Service which specializes in the distribution of numerous periodicals from the Soviet Union and Communist China. It also advertises subscriptions for three subversive periodicals published in the United States; namely, Mainstream, National Guardian and Political Affairs. (See HUAC, "Guide to Subversive Organizations and Publications," 1957, pp. 104–106; and "National Republic," October 1958, p. 33.)

On page 96 of the October 1958 issue of World Marxist Review, the Communist journal claims it is a magazine dealing with a wide range of questions of Marxist-Leninist theory, problems of Socialist and Communist construction, the struggles of the working class and the national-liberation movements. It provides a tribune for the exchange of experiences and opinions in the international labor movement. Its contributors include leading figures of the Communist and workers' movement, as well as scholars, writers, representatives of democratic opinion. In translating this deceptive Communist jargon to understandable English, the above means that the Soviet Union is utilizing World Marxist Review as another tool for dictation and control over its subservient Communist Party apparatuses throughout the world. The masthead of World Marxist Review carries the Soviet revolutionary slogan, "Workers of all countries, unite."

The October issue also contained an article on pages 80 and 81 entitled "Consolidating the Ranks of the Communist Party of the United States" (CPUSA) reflecting the party has become a stronger and more militant conspiratorial organization. World Marxist Review stated: "Recent developments in the CPUSA indicate an important move in the direction of consolidating its ranks and improving its work among the masses. During the past few years the Communist Party was forced to conduct a serious struggle against the revisionists and splitters who sought to disrupt and destroy it. The undermining activities of the (John) Gates revisionist group gravely injured the party. However, the hopes of the enemies of the working class were not fated to be realized. The sound elements in the party leadership, supported by the organizations chiefly in the industrial areas, fought hard to preserve and consolidate the party. The first gains are now evident. Facts show that the CPUSA is surmounting the numerous obstacles and exposing the opportunities of all hues. It is making better headway along the road mapped out by the 16th national convention." For a complete report on this convention held in New York City from February 9 to 12, 1957, readers may wish to consult the March 15, 1957, Firing Line. According to both the October 5 and 12, 1958, editions of the Worker, the CPUSA solicited its membership to subscribe to World Marxist Review.

The September 1958 issue of Party Affairs, the official publication of the national committee of the CPUSA, disclosed startling revelations pertaining to the growth of local party periodicals. Party Affairs stated: "Within the past year, a number of party organizations have begun to publish community or party bulletins. The New York State committee has resumed publication of Party Voice, which had not appeared for some time. The Queens (New York) County committee issues a four-page monthly bulletin, the Comet, of which 1,500 copies are mailed each month to party and nonparty readers, including a number of prominent figures in the community.

"An unusually lively and well-written paper is the two-page Searchlight issued by the Erie County (Buffalo) Communist Party. This paper, of which some 3,000 are distributed monthly, covers a wide variety of subjects. A different type of publication is Moving Forward, a mimeographed monthly bulletin issued by the Communist Party of Missouri. Now in its second year, it is addressed primarily to party members, though it is distributed more widely as well. Moving Forward is not a one-man job, but is put out by a party group assigned to this task, which involves as many as a dozen people in the writing and technical work."

"The Southern California District (CPUSA) issues a four-page tabloid, the Southern California Party Forum, which is addressed to the party membership. The Illinois district (CPUSA) is planning to issue a State party bulletin soon." In summarizing the article, Party Affairs declared that "these bulletins are an important means of reaching the party membership or the community. Their appearance is a welcome sign of growing party activity." Generally, the subject content of the aforementioned local party periodicals included the following: "ending H-bomb tests," "school segregation," "CPUSA ideological questions," "labor struggles," "news and announcements of party activities," and "statements by leading bodies and correspondence from (CPUSA) clubs and sections."

Our November 1, 1957 Firing Line reported that Party Affairs is an internal bulletin of the CPUSA which commenced publication in August 1957. Restricted to members of the CPUSA, Party Affairs is now printed by the subversive Prompt Press and is distributed from the party's national office located on the third floor of 23 West 26th Street, New York City.

An item of interest: Dr. Victor A. Kovda, of the Soviet Union has been named to head the Department of Natural Sciences of UNESCO. (See the New York Times, October 17, 1958, p. C–3.)

New Price Tags for Government Managers

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 22, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article, written by Carl W. Robinson, which appeared in the September-October 1958 issue of the Harvard Business Review.

As the article points out, lower-level Government positions are usually paid competitively; but top-management jobs are frequently underpaid. Yet, in Government as well as industry, the caliber of management personnel determines the effectiveness of the total operation. We need good managers in Government positions if we are to get maximum return from our tax dollars.

NEW PRICE TAGS FOR GOVERNMENT MANAGERS

(By Carl W. Robinson)

An acute shortage of qualified top Government personnel has developed in this country. It affects every area of governmental jurisdiction, from the municipal level to the Federal. And it affects taxpayers—both corporate and private—for it is beginning to cut seriously into governmental efficiency.

No thinking citizen will deny that the effectiveness of an organization depends upon the skill and ability of a small number of key managers and professional personnel in strategic positions. In business the

stockholders have usually accepted this principle, but in government the voters and elected officials have been slower to respond to it. Only in a few enlightened communities have conscientious citizens joined with public officials in efforts to put the principle into practice.

All this has created a problem, as a study by the Harvard Business School Club of Washington demonstrates. In a 3-year survey of 8,500 businessmen who have held government jobs at the Federal level, the club found that the main reason for dissatisfaction with Washington jobs was loss of pay due to the lower salaries in Government service. The report states in summary that the business community has a "frightening lack of interest" in offering its best brains for Federal jobs.[1] (Working for Government at the State and local levels also has this drawback, besides lacking the glamour which is frequently attached to the life and limelight of Washington.)

TOP-LEVEL SHORTAGE

The conditions which are precipitating this growing shortage of capable executives and professional personnel in Government seem to be clear. In the race to win and hold professional and managerial talent since World War II, business has outbid Government by maintaining a more realistic balance between salaries in the upper and lower brackets. As long as management is able to show improved profits, stock holders raise few complaints about higher salaries and special forms of supplemental compensation for key executives.

In Government, however, it has been more difficult to face a mass electorate with demands for salaries of $20,000 or more, despite the fact that the responsibilities of many of the officials are comparable in both magnitude and complexity to those of business. It has been especially difficult to overcome this obstacle because no accepted basis has existed for comparing top level jobs in Government positions of comparable responsibility in business.

DEMANDS FOR ACTION

Three developments have started a more realistic appraisal of the shortage of top personnel in Government.

The first is the mounting demand from citizens' groups for a higher level of efficiency in Government operations. It comes from such organizations as local community clubs and the League of Women Voters, and from growing numbers of businessmen and professional people who are taking a more active interest in Government problems at all levels. This demand is forcing some realization on the elected official, who is dependent upon the vote of the public, that it is increasingly necessary to have specially trained and widely experienced managers for the vast and complicated departments of Government if he is to produce the record of outstanding performance needed to wage a successful campaign for reelection.

The second development stems from the fact that some well-known top business leaders have undertaken key responsibilities in Government. When respected and highly paid men such as Charles E. Wilson, George M. Humphrey, W. Randolph Burgess, Sinclair Weeks, and Robert Cutler accepted positions of key responsibility in Washington, they highlighted the recent trend for business executives to accept a new degree of responsibility for service to the community. Even more important, they focused attention on the fact that Government is the country's biggest business, and that it calls for the best of managerial skill if it is to operate efficiently and economically. As a result, a growing and highly influential segment of the electorate is beginning to know and respect the magnitude and complexity of Government operations.

But the development which is most likely to precipitate action in supporting reasonable Government executive salaries is the creation and use, in the last few years, of a practical method for evaluating and comparing the scope and responsibility of top-level jobs in Government and industry. Its continued use over a period of years by a growing number of Government units should help to keep Government salaries in a more realistic relation to business salaries. If this is achieved, one of the serious roadblocks in attracting and retaining high-caliber professional and management in Government service will be removed.

GROWING RESPONSIBILITIES

If there is any question about the need for putting Government executives and professional leaders on a salary scale more comparable to those in industry, look at what has been happening to management responsibilities in Government in recent years.

Population explosion

In the last 20 to 30 years sheer increase in size has made the managerial requirements more difficult in many Government jurisdictions. Between 1940 and 1957, the population of the United States increased by 40 million; and this rate of increase is expected to continue for the next few decades and possibly to accelerate. Individual States have experienced particularly spectacular gains. California's population, for example, increased by more than 3,675,000 between 1940 and 1950. But the most dramatic changes have come in cities and towns of the country, with population in many cases spilling across village, township, and county lines and thereby creating a maze of problems for public utility, transportation, school, and public health authorities.

Increased complexity

Another vital factor is the new range of governmental services which the public demands, bringing with it an alarming increase in the tax burden and in the magnitude and complexity of Government administration. The problem is especially acute at the State level:

Income, sales, and other taxes are now a major administrative problem of many of the States and larger cities.

Pension systems have developed within local governing units, and must be administered.

States now have their own labor laws, local programs for the aged, laws regulating public utilities, and, recently, a growing number of State planning and development commissions.

Large programs of urban renewal are often planned by the States in cooperation with city government.

Total State budgets have tripled since 1942. State borrowing amounted to only $170 million in 1942. Today it exceeds $2.2 billion.

Squeeze on executive manpower

The overall problem is further complicated by the executive manpower squeeze which every businessman has run into for the last 5 years and which will continue into the 1960's. This squeeze was precipitated by the rapid expansion of our economy. It will continue and be aggravated by the shortage of young men entering the country's labor force (the result of the low birth rate of the 1930's). It has intensified the bidding for competent young executive talent, and has increased the bargaining power of older executives who are needed to carry on until the shortage has passed.

The inevitable result is that government, with its low salaries for managerial jobs and its reluctance until now to stand up for adequate salary boosts at the top, is being bypassed by ambitious young talent and is losing some of its key people to business.

BELATED RECOGNITION

Many observers, when viewing government's growth in size and complexity, might feel that it is getting too large too rapidly. They would agree, however, that this growth is controlled best by competent executives—men of proven ability who usually can be attracted and retained in government only by salaries that are in reasonable relation to those found in business.

Executives who have analyzed the managerial problems of both business and government are increasingly convinced that the executive requirements for effective public administrators are as exacting as those for executives in private business. Sound management of a public works or highway construction program for a large State, county, or city, for instance, calls for engineering and executive skills comparable to those of the management of a large private construction firm. Likewise, directing a statewide public or mental health program in this age of stress, mass emergencies, and the peculiar needs of an aging population calls for an unusual combination of professional management and public relations talents.

The main difference up to now is that industry has recognized the size and importance of the management job and has paid as much as was necessary to get and hold an executive or professional expert capable of handling the job efficiently. So, in fact, have the labor unions, the country's leading trade associations, and the big private foundations.

Thoughtful citizens are belatedly realizing that government, the biggest service organization of all, has not adequately recognized the need for high-level management skill and ability in top positions, and has not provided a level of compensation which will attract sufficient numbers of executives of this caliber to government positions.

EXHIBIT I.—*Levels of Government employees*

	Percent of total employees	Percent of total payroll
Lower level (clerical, manual, and lower technical positions)	75-90	65-85
Middle level (supervisory, technical, professional, and middle-management positions)	7-22	11-33
Upper level (top-management positions)	0.5-2	1.5-5

COST OF IMPROVEMENT

The potential cost of inadequate managerial talent in the executive jobs of government is appalling. By contrast, the cost of adjusting the salaries in upper-echelon positions of government to a level that will attract and hold managerial talent in government is small.

Varying needs

For the purpose of illustration and comparison, government workers can be divided into three broadly defined levels, as exhibit 1 shows. Among lower-level workers there is generally little or no salary differential between those in government and those in industry. Since the lower echelons usually account for 75 percent to 90 percent of the total number of employees, it is easy to understand the concern for their interests on the part of elected officials. As a result of that and also of the ease with which their jobs can be compared with similar jobs in private industry, the salaries of lower-level government workers have stayed generally in line with, and sometimes ahead of, the com-

[1] Businessmen in Government (Washington, May 1958); available from Division of Research, Harvard Business School, Boston 63, Massachusetts.

pensation of their private industry counterparts.

As exhibit 1 also indicates, the middle salary area usually accounts for no more than 7 percent to 22 percent of the total employed personnel, and 11 percent to 33 percent of the total payroll dollars. But these averages, while they reflect the personnel and payroll distribution of a wide range of governmental organizations, can present an exaggerated picture to the taxpayer of the cost of a major salary adjustment for the key technical, supervisory, professional, and middle management positions of a city, county, or State. What is overlooked is that the lower positions of the middle level are generally in reasonable adjustment. It is the upper-middle jobs that are usually underpaid.

Because only a partial salary revision is necessary, the cost of making middle management compensation in government comparable to that in industry is lower than many people would expect. For example:

In one of the large counties of eastern New York the total cost to the community of increases which brought the salaries of all key positions in the middle level into a much improved relation with those of private business was only 1 percent of the total payroll. This was true even though several large individual salary increases were called for.

In one of the metropolitan counties in the Great Lakes area a similar adjustment of combined middle-level and upper-level administrative salaries raised the overall payroll budget a bare 1 percent.

These low percentages should not lead us to overlook the importance of the positions involved. The performance of the jobholders affects the efficiency not only of middle management but also of top personnel. We are dealing here with a wide variety of key men—specialists ranging from engineers connected with highway programs to medical and psychiatric specialists connected with public and mental health services, and from lawyers connected with the attorney general's office to accountants attached to the revenue, tax, or budget departments.

It is in the upper categroy that Government salaries most often fall notably below the levels which prevail in industry. The number of positions involved is small, and usually accounts for fewer than 1 percent of the total employees. Their salaries often account for no more than 2 percent of the total payroll. Yet it is this group, with its requirements for top-management skills, that should provide the catalytic force necessary to ensure a sound return on the taxpayer's dollar. The benefits from possible improvement of management are almost without limit, and the total cost is negligible because of the size of the group. For example:

In a county adjacent to a metropolitan area on the eastern seaboard, total annual payrolls amount to $15,300,000. The 15 people who fall into top echelon positions receive $238,290, or only 1.6 percent of the total. A 10 percent upward adjustment of salaries for this small group would add less than $25,000, or 0.00163 percent of the total payroll. A more substantial adjustment would still add only an inconsequential cost to the taxpayer.

REVISING SALARY LEVELS

Even if we agree on the importance of raising upper-level salaries, we still have a problem: How can a satisfactory compensation scale for Government posts be determined?

Difficulties to overcome

Experts in the field of compensation have explored the feasibility of measuring the relative value of Government positions with a point-factor evaluation system similar to most all governmental salary and classification studies to date.

one used successfully for many years in industry. Such a system has been developed and, after application in a variety of governmental organizations throughout the country, has proved consistently reliable and effective.

Nevertheless, a serious shortcoming has characterized most Government salary and classification studies. In virtually every project of this sort, a sincere effort has been made to conduct the survey of prevailing salaries on a basis that would insure accurate comparison of as nearly identical jobs as possible. To this end, the surveys have generally included business as well as Government jurisdictions. But while adequate amounts of comparable salary data have been available from business in the lower-level classifications, little or no direct salary comparisons have been possible in the upper levels.

[Exhibit 2 omitted in RECORD.]

Exhibit 2 helps to illustrate both the problem and a new technique that has been developed to cope with it. It shows statistical trend lines of the relation of salaries to job values; this relation is used to analyze and compare salary levels from data gathered in comparative salary surveys. For jobs of about 90 evaluation points or less the chart is very useful, but for jobs above 90 evaluation points it is not possible to make comparison with positions in business. Examining the curves in more detail:

Line A was developed from data gathered in Government jurisdiction only. It rises steadily as job value increases, but the rate of increase falls off at the upper end of the line (reflecting the inadequate salaries of top-level men).

Line B was developed from data gathered in private business concerns. Its rate of increase does not fall off as it rises, but it covers only the lower three-quarters of the range of jobs. Data were not available for the top quarter because of lack of directly comparable business positions.

Line C, developed from both Government and business data gathered in a survey, tapers off, then coincides with the Government line in the upper section, since no private business data were used at this level.

A salary structure developed from this data would, therefore, fail to consider private business salaries in the higher levels. This is precisely what has occurred in al-

The reason for this condition is easily understood. In the gatherings of comparable salary data on a straight job-to-job basis there is adequate comparative business information at the lower levels, but little at the middle levels and almost none at the upper levels. A typist does similar work whether it is for a bank, for the office of the sheriff, or for the department of highways. It is therefore easy to establish a basis for comparison. The same is true for a photostat operator, who performs similar functions whether he is employed in a job print shop or in the county courthouse. And a janitor cleans the same way whether he is working in a city hall or in the State capitol.

But when the salary analyst is dealing with senior psychologists on an agency staff, or the warden of the penitentiary, or the sheriff, or the director of the division of sanitation for a State or county, it is difficult to find directly comparable positions in private industry. And the problem is even more difficult in the top echelons where the director of a State mental hospital, or a county attorney, or a county health commissioner must be compared with positions in private industry.

New approach

To meet the problem of the lack of comparable top-level private business salary data, we need a new approach. A suitable one has, I believe, now been developed. By careful factor rating and point evaluation of the jobs of business executives on the same point-evaluation scale used for Government positions, business jobs can be compared with governmental executive positions in terms of relative value, scope, responsibilities, and requirements, even though they differ in specific duties.

To illustrate, exhibit 3 presents four actual cases of evaluation of relatively comparable jobs in industry and Government, showing the close similarity in job values. The relative values of these jobs were calculated by using the factors employed in a typical evaluation plan. The jobs compared are similar though not identical. The evaluations, developed in terms of factors common to all of the jobs studied, are quite accurate and make possible the inclusion of business salary data in trend line computations.

EXHIBIT III.—*Evaluation of comparable jobs in industry and government*

	Special knowledge	Experience	Scope and complexity	Initiative and creativity	Contact	Working conditions	Judgment	Supervision	Total points	Salary range
EXAMPLE 1										
Industry: Market research executive	14	20	17	16	9	2	12	8	98	$8,900-$12,800
Government: Head of planning department	14	18	17	13	10	4	12	6	94	8,560- 11,000
EXAMPLE 2										
Industry: Plant maintenance engineer	14	20	17	10	10	5	16	14	106	10,600- 15,800
Government: Director of facilities and services	14	24	17	10	10	3	12	14	104	9,660- 12,420
EXAMPLE 3										
Industry: General attorney	20	24	17	10	12	1	16	6	106	10,500- 15,800
Government: Deputy county attorney	20	20	17	10	12	1	16	9	105	9,660- 12,420
EXAMPLE 4										
Industry: Corporate construction executive	14	22	17	13	15	6	16	12	112	10,900- 18,900
Government: Deputy commissioner of public works	14	22	17	13	12	6	16	14	114	10,800- 13,880

Extending information

The new approach to salary comparison in Government salary surveys now makes it possible to utilize a long-neglected wealth of business executive salary information in setting professional and managerial salaries within Government. The American Management Association, the Dartnell Corp., and the National Industrial Conference Board, for example, all publish, more or less regularly, good basic surveys of a cross section of management salaries according to reasonably detailed job descriptions.

Of course, precise or perfect comparisons between top-level business and Government positions will not be possible, even with the new approach and the added data. But it will be possible to make fair, reasonable, and statistically supportable projections; it will be possible to develop equitable differences between the salaries for top men in Government and their subordinates. When selected business jobs are carefully analyzed against the Government jobs under study, a number can usually be found which correspond closely enough to permit useful comparison with factor-rating and point-evaluation methods.

Thus, we can extend the all business trend line in exhibit 2 through the level of the upper executive positions; similarly, we can develop the composite of business and Government data line to include the data for top-level business jobs. This eliminates the tapering off of the composite trend line and provides a sound and statistically supportable basis for explaining to legislators and the public the end for raising top executive and professional salaries to their proper levels.

CONCLUSION

A drive for better organization and for a higher degree of efficiency in Government operations is under way in this country. It had its impetus from the original Hoover Commission in the late 1940's. By 1953 more than 30 States had undertaken, with varying degrees of enthusiasm, to review and reorganize their administrative structures.

If this job is to be carried out promptly and efficiently, however, executives and professional leaders with a high caliber of skill and devotion to their jobs are required. In today's competitive market for this kind of key personnel in the upper brackets, most governmental units are at a salary disadvantage. Yet, without excellent personnel, the demands of the electorate for more and better services cannot be met.

Elected officials, until recently, have shied away from the problem of the higher-level salary groups. In the first place, a relatively small number of potential voters is involved. Further, until recently, few political leaders have had any encouragement from any segment of the public to go after salary increases for top officials, no matter how much more exacting their duties have become, or how much more necessary it is for them to invest in specialized education, or how critically their decisions may influence the economical use of the taxpayer's money.

Fortunately, studies like that of the Harvard Business School Club of Washington are throwing a new light on the problem, and are making it more acceptable politically for elective officials to campaign for a level of salaries which will attract to Government the kind of management talent that can do the job the public is beginning to demand.

With the development of a sound technique for comparing executive salaries with those in industry, one very important obstacle to a realistic handling of top-level Government salaries has been removed. Our elected officials can now face the issues with greater assurance of public understanding and acceptance.

Congressman Daniel B. Brewster Honored

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. FALLON. Mr. Speaker, signal honor has just come to one of the members of the Maryland congressional delegation, Congressman DANIEL B. BREWSTER, in the award to him of the annual distinguished service award of the Baltimore Junior Association of Commerce.

This coveted award is made only after the most careful consideration of the activities and accomplishments of the young men of our city and of its environs. The JAC is so constituted that only those who manifest exceptional abilities and who bid fair to continued greater success can be the recipient of the award. Screening committees and executive action of its officers make certain that the ultimate choice is one who richly deserves the acclaim and the stamp of approval of this organization.

Congressman BREWSTER is the unanimous choice as the metropolitan area's outstanding young man of 1958. In the relatively short period in which he has held public office and been active in private pursuits, he has displayed unusual capabilities, unquestioned integrity, and an attractive personality. He has won the favor of those both in Baltimore County, where he resides, and in Baltimore City, where he is also active, through intelligent effort, zeal for the public good, and courageous action in emergency situations. In order that his colleagues in the House of Representatives and the public generally will have knowledge of the facts supporting this award to him, I ask unanimous consent to have the account of the award published in the Baltimore Sun printed at this point of my remarks.

BREWSTER GETS J.A.C. AWARD

Representative BREWSTER, Democrat, of Maryland, yesterday was given the annual Distinguished Service Award of the Baltimore Junior Association of Commerce.

Alan H. Stocksdale, president of the organization, gave the freshman Congressman a plaque, citing him as the metropolitan area's outstanding young man of 1958.

The presentation was made at a luncheon meeting at the Park Plaza Hotel.

COMMENDED FOR ACHIEVEMENTS

A succession of speakers commended Mr. BREWSTER for his achievements, which they said "have transcended the city-county boundary."

Former State Senator John Grason Turnbull, Democrat, Baltimore County, Mr. BREWSTER's partner in a law firm, declared his feeling on the occasion was that of "a very, very proud older brother."

"As Dan's career goes on and upward," he told the J.A.C. members, "you can look back with pride at having given one of the earliest recognitions of his contributions and abilities."

EXAMPLE CITED

Mr. Turnbull said Mr. BREWSTER "has never been one of provincial or parochial interests." To illustrate, he cited the young lawmaker's work on the Maryland Port Authority bill and his support of a municipal court bill for Baltimore City when he was a member of the State legislature.

He said Mr. BREWSTER also has been active on behalf of local charities, including the Cancer Fund and a campaign to raise money to support the Timonium State Fair.

"He's not the kind of fellow who says I'll take the job, but you get somebody else to do the work," Mr. Turnbull stated.

COMPARED WITH PRESIDENTS

The Reverend Vincent J. Beatty, S.J., president of Loyola College, compared Mr. BREWSTER's accomplishments with those of Presidents Jefferson and Madison, who, he said, also achieved fame at an early age.

The college president stated he was sorry not to be able to report that Mr. BREWSTER was a Loyola graduate, but he added the school is a training ground for future J.A.C. award winners.

D'ALESANDRO SPEAKS

Mayor D'Alesandro, a third speaker on the program, declared, "Maryland needs more men like DAN BREWSTER. He has the qualifications to be a great statesman."

Other guests at the luncheon included the members of the committee which selected Mr. BREWSTER for the award: Martin B. Kohn, president of the Association of Commerce, chairman; the Reverend Monsignor David I. Dorsch, director of the Associated Catholic Charities; C. T. Crossfield, vice president of the Commercial Credit Co., and Judge John T. Tucker, of the Baltimore supreme bench.

Textile Tariffs

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial from the Camden Chronicle of January 29, 1959, commenting on a statement by one of our leading textile industrialists. We think this is significant and worthy of the attention of the American public and of the Congress:

TEXTILE TARIFFS

For those who keep telling us that prosperity is just around the corner for the ailing textile industry, Textile Industrialist Leon Lowenstein had a disturbing warning this week.

Speaking before a congressional delegation from both Carolinas, the manufacturer warned that American mills cannot compete with foreign labor paid slave wages.

His words ought to carry much weight with our elected officials, our industrialists, and our workers. If his statements are correct, and we assume that they are, then some revision in the reciprocal trade agreements should be made.

Mr. Lowenstein said the State Department had been sold on a point of view which could ruin the textile industry: (1) That the whole picture of foreign aid and trade was more important than the textile industry, and (2) that the industry has enough ingenuity to take care of itself.

He called these two ideas fallacies and predicted that unless some changes were made in the law to help solve the import

problem, many plants would drop down to 5- and 6-day weeks, some would curtail activities to 3 days, and some marginal plants might have to shut down entirely.

Cheraw is greatly affected by the fortunes of the textile industry. Our dependence upon it for employment and retail trade has increased in direct proportion to the decline of agriculture.

Once a primarily free trade area, the Carolinas now must, in enlightened self-interest, move more into the protectionist field. While we favor foreign trade agreements, we do want to see our local industries and their workers protected, too.

Summary of Poll for Meeting of Federal Water Pollution Control Advisory Board

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a summary of a poll taken by Mr. Milton P. Adams, executive secretary of the Michigan Water Resources Commission, as a part of his duties both in the Michigan Water Resources Commission and as a member of the Federal Water Pollution Control Advisory Board, to which he is appointed by the President.

The Federal Water Pollution Act, Public Law 660 of the 84th Congress, provides for grants from the Federal Government to the States and municipalities for control of pollution in streams and waters of this country.

Mr. Adams polled all of the States including Alaska, the Interstate Commission on the Potomac River Basin, the New England Interstate Water Pollution Control Commission, the Ohio River Valley Water Sanitation Commission and the Interstate Commission on the Delaware River.

The results are significant. Agencies concerned with control of pollution overwhelmingly favored retention of Federal construction grants by some 48½ to 2½, a half vote representing a statement showing that there are good points and some bad points.

Even more significant was the vote of 48 to 2 against future sewage disposal construction grants to become an exclusive State function financed out of proceeds of the State excise tax on local telephone services as recommended by the Joint Federal State Action Committee.

Equally significant was the vote of 49½ to 3½ in favor of continuance of the Federal program for grants to States and interstate agencies as provided in Section 5 of Public Law 660 of the 84th Congress.

In order that all may understand the views of State agencies and interstate agencies controlled with water pollution I insert into the Appendix of the RECORD at this point the results of the poll with the hope that it will help to make available the full $45 million in grants to States as authorized in Public Law 660:

SUMMARY OF RESULTS OF POLL FOR DECEMBER 1958 MEETING OF FEDERAL WATER POLLUTION CONTROL ADVISORY BOARD

MUNICIPAL SEWAGE DISPOSAL CONSTRUCTION GRANTS

1. Are current Federal allocations resulting in stimulation of sewage plant construction within your jurisdiction? Yes, 43; no, 9.

2. Do you favor doubling the authorization of construction grant allocations through reintroduction and enactment of the Blatnik bill (H.R. 11714—85th Cong.) or its equivalent? Yes, 38; no, 13.

3. Do you favor elimination of further Federal construction grants by repeal of section 6, Public Law 660? Yes, 2½; no, 48½.

4. Do you favor repeal of section 6 with future sewage disposal construction grants to become an exclusive State function financed out of proceeds of a State excise tax on local phone services as per Joint Federal-State Action Committee recommendations? Yes, 2; no, 48.

5. If your answer to (4) is "Yes," do you think your legislature would enact such a tax in 1959? Yes, 1; no, 12.

6. If your answer to (5) is "Yes," do you think your legislature would appropriate from the proceeds of such a tax, funds in an amount equal to or greater than you are now receiving for sewage disposal construction grants? Yes, 1; no, 10.

OTHER MATTERS

7. Do you favor creation of a new position of Assistant Secretary of Water Pollution Control within the Department of Health, Education, and Welfare as per H.R. 13839 Blatnik—85th Congress, or its equivalent? Yes, 16; no, 28.

8. Do you favor continuance of Federal program grants to States and interstate agencies (sec. 5, Public Law 660)? Yes, 49½; no, 3½.

9. Are you satisfied with progress to date toward solution of interstate water pollution control problems in which the Public Health Service has participated? Yes, 44; no, 1.

10. Since industry cannot qualify for grants but its taxes assist in providing grants to cities, States and PHS, would you favor amendment of the internal revenue laws to permit industry an accelerated amortization rate for such capital investment as is necessary to meet State or interstate water pollution control objectives? Yes, 51; no, 3.

REPORTING STATES, TERRITORIES AND INTERSTATE AGENCIES

Region I: Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island.

Region II: New York, Pennsylvania, New Jersey, Delaware.

Region III: Maryland, Virginia, West Virginia, Kentucky, North Carolina, District of Columbia.

Region IV: Tennessee, South Carolina, Mississippi, Alabama, Georgia, Florida.

Region V: Wisconsin, Illinois, Indiana, Michigan, Ohio.

Region VI: North Dakota, South Dakota, Nebraska, Kansas, Minnesota, Iowa, Missouri.

Region VII: New Mexico, Texas, Oklahoma, Arkansas, Louisiana.

Region VIII: Montana, Idaho, Wyoming, Utah, Colorado.

Region IX: Washington, Oregon, California, Nevada, Arizona, Alaska, Hawaii.

Interstate agencies: Interstate Commission on the Potomac River Basin, New England Interstate Water Pollution Control Commission, Ohio River Valley Water Sanitation Commission, Interstate Commission on the Delaware River.

Possible Solutions for VHF–TV Problems

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. MOORE. Mr. Speaker, a native of my State, Mr. Frederick W. Ford, who is now Federal Communications Commissioner, appeared before the Radio and Television Executives Association of Houston, Tex., and delivered what I believe to be a timely and interesting analysis of problems involved in very high frequencies on television. It is essentially a rather technical paper, but it will be of interest to others, including those who operate and manage our television industry.

Commissioner Ford's address follows:

The communications industry is constantly faced with a set of problems that no one individual could possibly foresee or solve. The Federal Communications Commission seems to inherit a sizable share of these problems in one form or another. Tonight, I would like to review with you the problem which I consider the most pressing and perhaps the cause of many other difficult problems for you in the industry and for the Commission. I refer to the VHF–UHF TV problem. After I briefly discuss the history of the allocations of spectrum space to television, I will consider the possible courses of action which may be open to the Commission and some of the consequences of each.

There are four significant phases in the growth and development of television in the United States. I have divided these phases into the time period before July 1, 1941; July 1, 1941, to December 7, 1941; December 7, 1941, to May 25, 1945; and May 25, 1945, to the present.

For many years prior to July 1, 1941, scientists and engineers were devotedly engaged in the basic research and development, experimentation and, of lasting importance, the establishment of the technical characteristics of the TV system to be employed in the United States. These characteristics (525 lines, etc.) were promulgated as standards by the FCC on May 3, 1941, to be effective on July 1, 1941, and commercial TV in the United States was thereby established. It is difficult to see, by hindsight, any basic errors which emerged from this period. Indeed many of the benefits of television which we enjoy today stem from the pioneering done during this period.

The growth of commercial TV was restricted by the start of the war on December 7, 1941. The contribution which this brief second phase of development made to our present-day problems is nevertheless significant. The 18 channels then allocated were all VHF channels between 50 and 294 megacycles. The fact that TV began on VHF later became a controlling factor in deciding whether postwar TV was to be in the VHF or UHF spectrum.

The wartime restrictions on the availability of equipment and materials prevented the establishment of new TV stations and the war ended with six licensed commercial TV stations, all on frequencies below 84 megacycles, some 70 applications for additional stations in the pending filed, and an estimated 7,000 receivers in the hands of the public, most of which could tune only the frequencies below 90 megacycles.

Because it was apparent that the postwar uses of radio in the United States would

be substantially different and greater than the prewar uses, the Commission held its most comprehensive frequency allocation hearing in 1944, preliminary to determining the amount of spectrum space and the position in the spectrum for all services including television. Industry presented divergent views on the question of how much space should be provided for TV and its position in the radio spectrum. One group felt that the best place in the spectrum for TV as a service to the public was in the UHF spectrum, where much more space would be available than in the VHF spectrum. The principal advocates of UHF TV at that time were the Columbia Broadcasting System, Zenith Radio Corp., and the Cowles Broadcasting Co. whose arguments were summarized by the Commission in its report (January 15, 1945) in docket No. 6651 as follows:

"The demands of other services for frequency space below 3000 megacycles are so great that only a limited number of 6-megacycle channels can be assigned for television broadcasting (Craven Tr. 3494–95, 3500–03); that the advancement applicable to television made in the electronic art during the war cannot be fully utilized in 6-megacycle channels (Ream, Tr. 1761–2, 1773–4; Goldmark, Tr. 1871–5, 1939); and that the art has reached a point where a superior television broadcast system adapted for the use of ultra-high frequencies could be proven and made available to the public within possibly 1 or 2 years (Ream Tr. 1764–73, 1801–09, 1813–14, Craven, Tr. 3498–3500; 3509–11; Goldmark, Tr. 1911; Brown Tr. 3483)."

The opposing industry group relied upon prewar progress that had been made in TV as a broadcast service (all of which was on VHF and mostly below 84 megacycles) and contended, among other things, that the use of UHF TV would involve operating difficulties, the solution of which would require extensive research and experimentation and that many years might elapse before a UHF TV system could be established.

Faced with these conflicting views, the Commission decided in May 1945, to allocate 13 VHF TV channels (later reduced to 12) each 6 megacycles in width—and, in addition, a UHF TV band the limits of which presently are 470 and 890 megacycles, i.e., a total of seventy 6-megacycle UHF channels or 420 megacycles of UHF spectrum space. In taking this action, the Commission commented that it was "still of the opinion that there is insufficient spectrum space available below 300 megacycles to make possible a truly nationwide and competitive television system. Such a system, if it is to be developed, must find its lodging higher up in the spectrum where more space exists and where color pictures and superior monochrome pictures can be developed through the use of wider channels. In order to make possible this development of television, the Commission has made available the space between 480 and 920 megacycles for experimental television. The time which may elapse before a system can be developed to operate on wider channels on these ultra-high frequencies is primarily dependent upon the resourcefulness of the industry in solving the technical problems that will be encountered."

Thus on May 25, 1945, the third period ended and the fourth or present period began. The studies, conclusions and decisions of this third period—right or wrong—essentially delineated the allocations of spectrum space for TV which we have today.

Since May 1945, we have witnessed the phenomenal growth of VHF TV, most of which took place after 1952, and the relative failure to attain a nationwide competitive system of TV with sufficient channels and equitable service for all. The Sixth Report and Order (April 14, 1952) did not yield this result. Neither has the most recent decision of the Commission on June 25, 1956 to "undertake a thorough, searching analysis of the possibilities for improving and expanding the nationwide television system through the exclusive use of the UHF band throughout or in a major portion of the United States," resulted in any substantial amelioration of the problem to date.

Section 307(b) of the Communications Act of 1934, as amended, enjoins the Commission to make such distribution of frequencies and power among the several States and communities as to provide a fair, efficient, and equitable distribution of radio service to each of the same.

Over half of the UHF–TV stations which went on the air have ceased operation for financial reasons. The financial report of television stations to the Commission indicates that the UHF stations which are still operating are either barely breaking even or are losing money regularly when in competion in the same market with VHF stations. At the same time VHF stations are generally quite profitable. This disparity cannot long continue.

Great dissatisfaction has been expressed in the past few years with this second-class television system we have in which only about one-fourth of more than 2,000 possible commercial television stations are on the air. Consider for example the interest of the Congress in the several hearings which they have held trying to find out what, if anything, can be done to convert the vast amount of spectrum space reserved for television into a truly first-class nation-wide competitive television service, limited only by available spectrum space and competitive forces.

Since the adoption of the Sixth Report and Order there have been 401 VHF stations and 165 UHF authorized to go on the air. Of this number, 5 VHF and 89 UHF stations have ceased operation. Although about 90 percent of American homes can receive a signal, much less is known about what percentage of this number receive an acceptable signal, and what percentage of the homes in the United States have a choice of acceptable signals. These questions are answered in different ways by different people. I doubt that anyone has the correct answer. Too frequently, I fear, we tend to base our judgments on the fact that 50 percent of our population live in the top 25 TV markets of the United States and rough television justice for the rest is all we can hope for, but the Congress was not so callous when it wrote the Communications Act.

The plain hard truth is that UHF and VHF are not competitive in the same market, and, therefore, the spirit of equal treatment for all areas of the country has not yet been achieved.

I am frank to say that shortly after assuming my duties as a member of the Commission, I sought to understand this problem and devoted as much of my time as possible in trying to determine how to attack it. My interest has been in trying to find a solution which would cause the least dislocation to existing service and yet discharge our statutory responsibility. I have tried to approach this task with no preconceived idea of the ultimate solution. The only thing that has been clear to me is that the efforts made in the past to find an acceptable solution have not been productive. I am not able to propose one now. If we continue the present policies, however (which I assume are embodied in the sixth report and order, as amended from time to time) I believe the following results will be inevitable:

1. All or part of the allocation to UHF will be reallocated for nonbroadcasting services.

2. There will be a minimum of competition between local television outlets in many areas of the country.

3. Efforts to relieve monopoly situations and lack of a choice of stations will lead to shorter mileage separations between cochannel and adjacent channel stations, thus tending to degrade or eliminate service which the public now enjoys, particularly in rural areas.

4. Many communities will be denied local television outlets entirely.

Before considering the possible alternative courses of action open to the Commission it would be well to set up an ideal standard to which any of the alternatives may be compared.

1. The allocation of spectrum space should be in a continuous band, or as near to it as possible.

2. The ratio of the highest to the lowest order of frequency should be as low as possible. I am told that a ratio of not more than 3 to 1 would be desirable. (The lower the ratio the lower the cost and complexity of design of the television receivers.)

3. The allocated frequencies should exhibit as nearly similar propagation characteristics as possible.

4. The total number of channels should be adequate to provide a nationwide competitive television service with fair, efficient, and equitable distribution of service to all the States and communities.

With this ideal standard in mind, let us consider what I believe to be the six major alternative courses of action open to the Commission and consider some of the consequences of each.

The first course of action would be to make no change in the present allocations to television. This, in itself, is one solution, the consequences of which would be to compound the present difficulties already described and in my opinion ultimately lead to the demise of UHF.

The second course of action would be taken by a decision, as a matter of basic policy, to employ for the long-range future only the presently allocated 12 VHF–TV channels between 54 and 216 megacycles and revise the rules to accommodate as many stations as possible on these channels. It would follow that the spectrum space between 470 and 890 megacycles would eventually be allocated to services other than broadcasting. This would at least clarify the status of UHF–TV and clear up any questions about the economics, from a broadcaster's point of view, of trying to serve the public in the UHF–TV band. Whatever UHF–TV service we have now probably would be either discontinued or transefrred to VHF under such a policy, since the ever-increasing requirements for frequencies for all users of radio must in some way be satisfied.

While this course of action might increase the total number of stations, it is also possible that it would lead to less service to the public. This could occur through increased interference between stations which are closer together.

If we elect a third alternative and decide to employ the present VHF and UHF–TV channels on any type of deintermixture basis we can find any number of versions of how this might be done. The fact remains, however, that deintermixture has been the interim policy since 1956 and it has not had the result that was anticipated by the Commission at the time it was decided to deintermix. This is perhaps due to the fact that this alternative meets only the fourth criterion in our ideal standard. Admittedly, novel schemes for deintermixture have been put forth but not tried out. But it seems clear that any deintermixture scheme would leave us with two different TV services in this country. The choice of which system serves a particular community would be de-

termined by the geographical location of communities rather than by the normal standards of public interest, convenience, and necessity.

In July 1956, the United States Senate Committee on Interstate and Foreign Commerce stated that it "specifically approved the Commission's interim program of selective deintermixture, urging that this essential preliminary step be pursed as broadly and rapidly as possible." At that same time the committee characterized the Commission's deintermixture proposals as an interim measure pending the shift of all or a major part of TV to the UHF band and urged that the Commission move as rapidly as possible to the accomplishment of its stated objectives. The same report indicates that the "key to the Commission's long-range proposals for allocations is contained in its request for comments as to the feasibility of ultimately shifting all or a major portion of the TV broadcasting to the UHF band."

If the presently allocated VHF and UHF channels are effectively exploited by TV, the risks of losing spectrum space for TV will be avoided. The longer it takes to effectuate deintermixture, however, the greater the risk of losing all or part of the UHF-TV band. Any inroads into this band could operate to prevent using deintermixture as the formula for putting TV broadcasting on a nationwide competitive basis with a choice of service to the public.

A fourth alternative would be to augment the present 12 VHF channels with as many more channels as possible and abandon the allocation of 470 to 890 megacycles to TV. The impacts of such a scheme are quite significant. Since the frequencies below 54 megacycles are generally considered not too suitable for TV broadcasting and since the upper limit of channel 13 is 216 megacycles, we can roughly analyze the cost and time factors by examining the present non-TV uses of radio between 54 and 300 megacycles. The only frequency bands in this portion of the spectrum which are not now allocated to TV are: 72–76 megacycles; 88–174 megacycles; and 216–300 megacycles.

A method of getting one additional VHF channel would be to find a way to allocate the frequencies between 72 and 76 megacycles now allocated to the operationally fixed service to TV. If we could find a way to increase this band by 2 megacycles we could acquire one more TV channel. It has often been suggested that this could be done by moving channels 2, 3 and 4 downward by 2 megacycles, or by shifting channels 5 and 6 upward by 2 megacycles. If we elect the first alternative, the impact on non-TV uses of radio would be primarily on the amateur service which is allocated 50–54 megacycles. The amateur service would lose half of its existing band. Whether it would be practical for the amateur service to make use of the remaining amateur band 50–52 megacycles is conjectural. It is already difficult, in certain areas where TV channel 2 (54–60 megacycles) is employed, for some amateurs to use the frequencies immediately below 54 megacycles. Moreover, all existing TV receivers in the hands of the public would have to be adjusted to receive channels 2, 3 and 4 on their new frequencies because the video and audio carriers for each of these three channels would be shifted 2 megacycles downward. This adjustment would take time and money and on some widely-used types of receivers is not considered to be practical.

Moreover, provisions would have to be made in existing sets to receive the new channel. We would also have to relocate the point-to-point uses of radio now licensed by the FCC in the band 72–76 megacycles in areas remote from TV broadcasting stations on channels 4 and 5. Not only would replacement frequencies have to be found for these point-to-point users of radio but time would have to be allowed for their shift, at their own expense, to any new frequency band provided for them. If these replacement frequencies, for example, were between 470 and 890 megacycles (the present UHF band) then, in many cases, new equipment would have to be purchased and installed by these users at their own expense. Many of these licensees are local governments whose budgets for this purpose are not adequate.

Another difficulty to overcome in establishing a new TV channel between 70 and 76 megacycles is that on the frequency 75 megacycles a great many marker beacons serve aircraft. We could not actually put TV broadcast stations on the air on this new channel, 70–76 megacycles, in any particular area until the marker beacons on 75 megacycles in that area were removed.

In order to move the marker beacon frequency we must first have international agreement for transferring these markers to some other frequency, or of providing the function now obtained from the present markers by some other means in some other frequency band available to aviation. Studies of ways and means of accomplishing this have made it clear that it would take not only national actions by the United States but also coordination within the International Civil Aviation Organization (ICAO), an organization of governments to which the United States belongs. If international agreement to remove the markers from 75 megacycles could be reached, the negotiations would take a significant amount of time—months certainly, and more likely years. Thereafter, the actual transition itself would take several additional years.

It would be most difficult to estimate with any accuracy either the cost or the time factors involved in overcoming this one problem. The investment in ground transmitting equipment and airborne receiving equipment involves not only aviation within the United States but in many other countries as well. The cost to aviation to shift could not be estimated until it was known in exactly which frequency band and by what electronic technique this function would be performed as a result of the international agreements which would have to be reached.

Another way of using the frequencies between 72 and 76 megacycles for TV would be to move TV channels 5 and 6 upward by 2 megacycles. This would deprive FM broadcasting of 2 megacycles of space between 88 and 90 megacycles. FM broadcasting is presently allocated the frequencies between 88 and 108 megacycles and the FM band would thereby become 90–108 megacycles. Besides the cost and time factors involved in this 10-percent reduction of the spectrum space presently allocated to FM broadcasting, there would be a time and cost problem involved in adjusting those receivers susceptible of adjustment to receive TV channels 5 and 6 on audio and video frequencies 2 megacycles higher in the spectrum. Moreover, the removal of the 75 megacycles aviation marker would have to precede, any such implementation of the frequencies between 72 and 78 megacycles for TV broadcasting as previously explained.

Regardless of whether either of the two alternatives for employing the frequencies between 72 and 76 megacycles for TV broadcasting were adopted, the existing FM broadcasting band between 88 and 108 megacycles were adopted, the existing FM broadcasting could be allocated to TV provided some solution were found to provide for FM broadcasting a suitable band of frequencies and the time required to implement it. One, two, or three TV channels can be formed from the present FM broadcasting band between 88 and 108 megacycles. If, however, we are to take 6, 12, or 18 megacycles of space from FM for TV then we would surely have to consider the adequacy of the remaining spectrum space from the point of view of FM broadcasting.

When we examine this problem we find that FM has already undergone a major postwar removal from around 40 megacycles to its present position in the spectrum (88–108 megacycles). Delays in implementation and slow progress in the rendering of service to the public resulted from the 1945 shift in the FM allocation. A further move of FM broadcasting to some other portion of the spectrum (presumably between 470 and 890 megacycles) might very well cripple it, obscure its importance and cause years of delay in the reestablishment of this very fine aural broadcast service to the public.

The cost and time factors involved in such an FM transition would be tremendous. The cost factors could not be estimated with any accuracy until we knew the specific details of the frequency band to which FM were to be moved. The time factors would be geared intimately to the public's desire to junk or scrap existing equipment in favor of purchasing new and possibly initially more expensive receiving equipment for a new FM broadcasting band. All of this movement of FM to some other frequency band would have to precede any implementation of the frequencies between 88 and 108 megacycles by TV broadcasting. Furthermore, there would be some cost and time delays for the viewing public, because the existing TV receivers in the hands of the public would require adjustment to receive any new TV channels on any new frequencies that were allocated for TV.

Whether or not we added a new TV channel between channels 4 and 5, or obtained 1, 2, or 3 new TV channels between 88 and 108 megacycles, we would, in evaluating this plan, have to examine the remaining non-TV frequencies between 108 and 174 megacycles.

When we examine the frequencies between 108 and 132 megacycles, we find that these are intensively used by civil aviation throughout the world and that the band has been channeled by international agreement and is being employed in accordance with internationally agreed practices. Any move on the part of the United States to abandon the use of all or portions of this band by aviation in favor of TV would require agreement within the International Civil Aviation Organization (ICAO), and probably the International Telecommunication Union (ITU) as to a replacement band and an internationally agreed timetable to implement such a replacement band. It does not appear to be any incentive from the point of view of any other country to undertake such a move, or any basis for such countries to expend the tremendous sums of money necessary to implement such a scheme. Even assuming that international agreement could be reached on such a program, it would take some years to negotiate and still more years to implement.

The frequencies between 132 and 150.8 megacycles are now allocated to the U.S. Government services. Civil aviation is trying hard right now to obtain a part of this band between 132 and 136 megacycles as an extension to the present aviation band 108–132 megacycles. Our Government agencies have a significant interest in aviation communications, and it would appear that there must be some rather impressive reasons why the present Government uses have not so far been altered so as to provide for this requested expansion of aviation spectrum space.

If this proposed aviation expansion takes place, it would result in about a 25-percent reduction of the present Government allocations in the bands 132–144 and 148–150.8 megacycles (the band 144–148 megacycles is

allocated to the amateur service), thus increasing the difficulties inherent 'n the release of additional space to provide more TV channels.

On the other hand, if the proposed aviation expansion into the band 132–136 megacycles does not take place, the question would then be whether TV could make a superior claim to that now being pressed by aviation. If it could, there would be some imposing practical difficulties to overcome. For one thing, 4 megacycles would not suffice for a TV channel. If it were an "island" in the spectrum (that is not contiguous to other TV channels) then 10 or 12 megacycles might be required, as a practical matter, to avoid interference from narrow-band services in adjacent bands.

In studying this possibility of obtaining additional VHF TV channels between 132 and 150.8 megacycles we would have to develop new information not brought out in the 1956 conclusion of a special interdepartmental Government study. That conclusion announced in April 1956 was that "National security requirements and the needs of air navigation and air communications preclude the release for non-Government use of any of the very high frequencies now utilized by the Federal Government."

The non-TV frequencies between 150.8 and 162 megacycles are allocated for non-Government land mobile service, that is, police, fire, business radio, taxis, and a host of other vehicular uses. It is perhaps the most effectively exploited frequency band in the spectrum. If all or part of it were to be released to TV, the relocation impact would be tremendous. Most of the users of this band would find it most difficult to raise or to justify the money involved in moving to any new replacement band which might be provided. Again, if an isolated TV channel or "island" were established in this band, the actual spectrum space required for one TV channel would consume more like 10 megacycles of space and not merely the nominal 6 megacycles that is normally assumed for each TV channel.

The frequencies allocated for Government use between 162 and 174 megacycles also were the subject of study in the 1956 investigation, and any speculation about their availability for TV must likewise assume some change over the 1956 facts.

In summary, we see, on the one hand, that there is a possibility of 15 new additional TV channels in the present VHF band 54–216 megacycles. If all 15 of these potential channels could be allocated for TV, then we would have 27 channels in 1 block which would meet the first 3 criteria in our ideal standard with extensive studies required to determine whether the 27 channels would be sufficient for an adequate nationwide competitive television service.

In considering this alternative, we could, of course, study variations of it that would not require all of the spectrum space between 54 and 216 megacycles for TV. For example, we could decide to add only one channel, or perhaps five, which would still leave the same question as to the adequacy of the number of channels.

The fifth alternative course of action is the establishment of a single band of frequencies for TV which is large enough to provide a nationwide competitive service as low in the spectrum as feasible (for example, between 174 and 474 megacycles). Such a plan would meet the criteria of our ideal standard.

There are two important advantages that this alternative has over the 27-channel allocation of all frequencies between 54 and 216 megacycles to TV.

First, it is more feasible, that is, it has much less impact on other uses of radio. Second, the potential number of channels surely would be adequate to provide a nationwide competitive TV service.

These two advantages over the 27-channel allocation (54–216 megacycles) are sufficiently important to require careful consideration of all features of this possibility.

If we take 50 channels as the minimum for a nationwide competitive service, then we must find 300 megacycles of spectrum space (in one block if possible) somewhere in the spectrum where this is feasible.

If, because of the difficulties in converting all or part of the space between 88 and 174 megacycles to TV, we were to decide to make an allocation for TV entirely above 174 megacycles, it seems logical to consider that the existing TV allocation between 174 and 216 megacycles (channels 7–13) would form the lower portion of this new TV allocation. Adding 300 megacycles (the spectrum space required for 50 TV channels) to the frequency 174 megacycles makes the upper limit of the TV allocation 474 megacycles. If such an allocation could be established (174–474 megacycles exclusively for TV) it would reasonably well meet the criteria in our ideal standard.

The feasibility requirement in this plan assumes it would be easier, or more in the national interest, or both, to seek new TV frequencies above 216 megacycles rather than between 88 and 174 megacycles. In any event the feasibility would depend on the impact on other affected radio services. This impact would include cost and time factors. The same April 1956 report mentioned above bore on the possible release of frequencies between 216 and 300 megacycles for TV. Unless the facts which then were relevant have changed, we would find, for these frequencies, that the worldwide buildup of our international defense facilities in collaboration with friendly countries has intensified the reliance which must be placed for defense purposes on these frequencies.

So, to the extent the April 1956 study was valid, one of the first questions would be whether the international defense considerations today would make it more feasible, or less feasible, to release space between 216 and 300 megacycles for TV.

The 1956 study did not consider frequencies above 300 megacycles. Therefore, in thoroughly examining the possibility of allocating the band 174–474 megacycles for TV, a new, careful, and competent study would have to be made of the possibility of releasing frequencies up to 474 megacycles for TV.

We would need such a new study before we could decide whether this plan was feasible or desirable in the national interest. We would not need any study to know that appreciable time and cost factors would apply to the non-TV services in implementing such a plan. If it could be agreed, it would take time to negotiate with a considerable number of other countries, and much time and many dollars to implement.

Assuming it could be successfully negotiated with the other countries involved and that all of these countries would bear the costs incident to its implementation, we would have to justify these impacts in terms of superiority of the end result in comparison with each of the other available alternatives.

As to the sixth alternative—all TV in one UHF band 470–890 megacycles—there would be no adverse impact on other existing radio services and it would reasonably meet all the criteria in our ideal standard. The 12 channels of VHF spectrum space now allocated for TV could be effectively utilized by a number of radio services.

Most of the impacts on TV licensees and the general public of this plan have been carefully analyzed before. The report of the Television Allocations Study Organization will, I hope, furnish new light on the engineering capabilities of UHF.

There is one aspect of this plan that may not have received full attention, and that is the ability and willingness of the public to obtain the necessary receiving equipment for whatever frequencies are employed for TV.

We know that the 1945 decision on spectrum allocations for TV took into account some 7,000 receivers then in the hands of the public, the fact that these receivers generally were designed for reception of stations on frequencies below 90 megacycles, and the fact that the on-the-air TV stations at that time used frequencies below 84 megacycles.

The extent to which these factors were controlling in the 1945 decision is unimportant. The important fact is that the 1945 decision retained only 6 of the 18 prewar VHF TV channels intact. Nevertheless, the public and the industry rapidly adjusted to this situation in implementing the postwar VHF allocations of spectrum space for TV.

In deciding between the available alternatives, it may be worthwhile to note that there is relatively little difference, from the point of view of the public, between the 50 channel VHF plan (174–474 megacycles) and all UHF (470–890 megacycles), since the receiver conversion problem would be approximately the same for both. The 50-channel VHF plan would be costly and time consuming for the nonbroadcast users in this and friendly countries. The UHF (470–890 megacycles) would not.

All but alternatives 1 and 2 would entail serious disruptions because of necessary TV receiver conversion or replacement. In this respect, the alternatives which would extend the VHF range immediately beyond channel 13 are at a disadvantage in that there are no TV receivers which cover these frequency bands in existence or production. For an all-UHF system using the 70 channels now allocated there are now in the hands of owners some 8 or 9 million receivers which tune to some or all of the UHF channels, and in addition, there are all-channel sets in commercial production. It is of course obvious that use by TV of any part or all of the spectrum now allocated to TV would avoid the tremendous dislocation of other Government and non-Government services vital to safety or the national defense.

I would like to make it clear that in the event of changes in the present structure, if any changes are possible at this late date, the conversion period should be sufficiently long to permit appropriate amortization of sets in the hands of the public and investments in television broadcasting plants by broadcasters.

In an industry as dynamic and ever changing as radio this analysis may be outdated tomorrow, but in preparing this material, I have gained a new understanding of this problem, and I hope contributed something to your understanding of it.

I cannot predict what course of action the Commission will follow. I can tell you that we are all vitally concerned with this problem, and for the past several months have had a number of technical studies underway. We all hope these studies will contribute to the sum total of knowledge, and materially assist us in arriving at an appropriate solution. In this way, perhaps, we can chart a course which will eventually result in a truly first-class nationwide competitive television service with a fair and equitable distribution of television service to all our people.

A Look at the Draft

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mrs. GREEN of Oregon. Mr. Speaker, in the Washington Post of today's

date, there appears an editorial concerning what I feel to be the most momentous legislation presently before the Congress. This editorial urges careful consideration of the proposal set forth by our distinguished colleague, the gentleman from Iowa [Mr. WOLF], as an alternative to a simple 4-year extension of the draft. The Post's editorial position is especially appealing, Mr. Speaker, because it does not attempt to prejudge the merit or lack of merit of the draft system on the basis of the inadequate evidence presently available. Rather than an unqualified 4-year extension, or an unqualified termination of the draft, this editorial supports Mr. WOLF's proposal for a limited extension, coupled with a searching examination of the Nation's military manpower needs. I believe this position is well calculated to avoid both the alleged perils of an abrupt cessation of draft authority, and a repetition of our previous uncritical acceptance of the draft as a permanent part of our Nation's peacetime defense policy.

Under leave to extend my remarks in the RECORD, I include the editorial as follows:

A LOOK AT THE DRAFT

Before Congress automatically adopts a long-term extension of the military conscription law, it ought to take a careful and critical look at the way in which the draft has been operating. When draft calls take only a small fraction of the total number of eligible young men and the great majority avoid military service, a very serious question of fairness arises. John Graham notes in a study for the Fund for the Republic that "because of either disability or fatherhood, more than 60 percent of all non-prior servicemen" were being deferred in early 1957 and "there is no reason to believe the picture has changed since then, or will change in the future."

Actually, the Army is the only one of the military services using the draft. It calls approximately 8,000 a month, of whom fewer than 7,000 are inducted for the 2-year period. Some 90,000 young men each year take advantage of the plan for 6 months of active training and 5½ years of Reserve or National Guard service; and of course there are many thousands of others who volunteer for service in the Army, Navy, Air Force, and Marines. All in all, however, the burdens and obligations are distributed very unequally among the 1.2 million young men who come of military age each year. Some have their education, career or family plans disrupted while many others make no national sacrifice at all.

The House Armed Services Committee has reported a simple 4-year extension of the draft beyond June 30. There is something to be said for using such means to avoid harangue over new plans for additional deferments and special-interest concessions. But there is a great deal more to be said, in our opinion, for the approach of Representative WOLF of Iowa. Mr. WOLF's bill would provide for a 2-year draft extension, but a concurrent resolution would require an intensive study by a joint congressional committee of military manpower procedures and alternative methods of meeting the needs.

This newspaper has long supported both the draft and the concept of national service. It does not share the views of those who feel that the country's youth is being stereotyped or "prussianized"; indeed, it believes that most young men benefit in one way or another from their military service. But it recognizes also that there is now no chance of fulfillment of the universal military training plan which Congress approved 8 years ago. With the changing character of war, UMT probably has been outmoded; moreover, it would be extremely costly.

Now, the Army makes somes compelling arguments, in which it is supported by the other services, that a draft law is necessary on the books whether or not it is fully utilized. A recent study shows that the Air Force and Navy benefit notably in the caliber of their volunteer enlistees because of the draft; and the Army obtains higher-quality men than might otherwise be the case.

Furthermore, the contention that there will be no more Koreas is highly dubious. It is impossible to predict the exact needs of limited war. If the Reserves and National Guard are worth anything, their requirements cannot be overlooked. The assertion that higher rates of pay for the lower ranks would attract an all-volunteer force rather begs the question of national obligation. Does the United States really want to abandon the concept that each young man owes some service to his countrymen? What would be the effect of higher pay scales in the countries where American forces are stationed abroad? And what would be the result in NATO, which is having trouble maintaining its strength, of an American decision to end the draft?

Plainly such questions demand thoughtful consideration, and we think there is strong reason for Congress to extend the draft temporarily. But the country also needs to determine whether the draft is the best way of meeting the problem—and whether, alternatively, if there is value in the concept of national service, it ought to be expanded beyond military conscription to include an overseas technical service corps, a scientific corps, a civil defense corps, a conservation corps, and the like. It is a delusion to think that there is an easy or even a wholly satisfactory answer. Surely, however, while Congress is attending to the immediate need, it ought to provide for conscientious, unemotional examination of the possibility of some less wasteful and more equitable method than mere indefinite reliance upon the draft.

Bishop-Elect, the Reverend John W. Comber, From Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. LANE. Mr. Speaker, American missionaries of all faiths have inspired us with their courage and their devotion to God. And we in turn can learn much from the wisdom they acquired during their service in far-off lands.

A man who was born and raised in my home city has become superior general of the Catholic Foreign Mission Society, more familiarly known as the Maryknoll Fathers.

An additional honor came to him on January 28, 1959, when he was named titular bishop of Foratiana by Pope John XXIII.

Bishop-elect John W. Comber is the beloved leader of 1,200 missionaries, including the society's second superior general, the Most Reverend James E. Walsh, who has been imprisoned on false charges by the Chinese Reds.

As a mark of our respect for the honor conferred on Bishop-elect Comber, and under unanimous consent to extend my remarks in the RECORD, I include the following account that appeared in the February 2, 1959, issue of the New York Herald Tribune.

MARYKNOLL BISHOP-ELECT WAS JAILED BY JAPANESE

(By Jo-Ann Price)

MARYKNOLL, N.Y., January 31.—The New York area's newest Roman Catholic bishop-elect, the Rev. John W. Comber, superior general of the Catholic Foreign Mission Society (Maryknoll Fathers), is a short white-haired priest who, like a number of his clergymen, has served a term of imprisonment.

On the day after Pearl Harbor, Father Comber and about 25 Maryknollers were clapped into internment in Fushun, Manchuria, by the Japanese, with a large group of Protestant and Catholic missionaries.

They were treated well, Father Comber said today in an interview. But the experience, which ended when he was repatriated aboard the Swedish liner Gripsholm 2 years later, provided him with many valuable lessons on the subject of prison.

The new bishop-elect was named titular bishop of Foratiana last Wednesday by Pope John XXIII. He will be consecrated on April 9. He has been superior of the Maryknoll Fathers since 1956. He is the fourth superior general of the society, which was organized in 1911.

HEADS RELIGIOUS SOCIETY

Father Comber is 52. He heads a religious society of 1,200 American missioners in Korea, Japan, Hong Kong, Formosa, Philippines, Hawaii, Mexico, Guatemala, Chile, Peru, Bolivia and Tanganyika. Since it was established in this country in 1911, it has built up a large honor roll of men who have died for their faith, he noted.

They include men like Bishop Patrick J. Byrne of Washington, who perished in 1950 after the death march and ill treatment by the Communists in North Korea, and Bishop Francis X. Ford, of Brooklyn who died in a Communist prison in Canton in 1952.

Between 1946 and 1951, a total of 180 Maryknollers were expelled from Red China. Between 25 and 30 of these were subject to arrest and imprisonment. Even now, the society's second superior general, the Most Reverend James E. Walsh, is believed to be a prisoner in Shanghai, Father Comber said.

Father Comber spoke with considerable caution on the subject of reported consecrations of Chinese bishops in the Communist-sponsored and schismatic national Catholic Church of China. He observed that "there can be no true bishops with jurisdiction, since jurisdiction comes from unity with the Holy See."

PRELATES RESIST REDS

A recent report reaching Maryknoll headquarters here said that Communist efforts to promote an independent church had met with opposition from most Chinese prelates. Many Chinese clergy have been jailed for defiance of their Communist rulers, it said.

On the credit side of the missionary ledger, Father Comber said that during 1958, more than 82,000 converts were baptized among the 10 million persons within the areas served by the Maryknoll Fathers. Everywhere, he said, "our missions are working under peaceful conditions."

While members of the society regard the present mission situation with optimism, he said, "we also have to look to the time when the church in mission lands must stand on its own." Every missioner "must think of the development of a native clergy" so the church may flourish after the last

foreign clergyman has departed from a country.

For his personal motto as a bishop, Father Comber, a native of Lawrence, Mass., has selected the classic missionary motto, "Going, teach ye all nations." It has inspired him through his years of service in Manchuria, from 1931 to 1943, and subsequently in Peru and Chile.

Purchase of Foreign-Made Turbine Generators by the REA

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. DENT. Mr. Speaker, I was not surprised, although I must confess I was, like the rest of my hometown, puzzled at the action of the REA in the purchase of foreign-made turbine generators.

This in the face of a chronic unemployment of about 4 million American workers.

This, too, in the face of the cry for more aid from this country from practically every nation on the face of the earth.

I have said before, and I now repeat it is time to review our position in world trade and aid.

It is time we look after our own interest with a little more pride and zeal. I repeat again the wise admonition of President Theodore Roosevelt when he said:

> There is room for only one soul loyalty and that loyalty is to the American people.

I submit for the RECORD the wire of protest from Mayor A. B. Elias of the city of Jeannette and my protest to the REA:

JEANNETTE, PA., *February 3, 1959.*
Congressman JOHN H. DENT,
House Office Building, Washington, D.C.:

We in Jeanette are very much puzzled by last Friday's action of the REA in Washington. Contract for two large turbine generators for the Medina Electric Cooperative in Hondo, Tex., was awarded to Brown Boveri of Switzerland after the user had indicated our local Elliott Co. as the supplier. Loss of this business will seriously affect employment at the local plant which is already low, and our relief rolls, as you know, are already high.

A. B. ELIAS,
Mayor, City of Jeannette.

FEBRUARY 4, 1959.

Mr. DAVID HILL,
Administrator, REA, Washington, D.C.:

Pursuant to my telephone conversation, I herewith officially and vigorously protest the awarding turbine generator contract the Medina Electric Corp. to Switzerland. The Elliott Co. in Jeannette, Pa., seriously affected by this decision. Entire community considered serious labor surplus area and every man-hour payroll denied means that much more in local taxes, local loss of business, and local relief rolls. This matter goes deeper than a mere acquiring of machinery and seriously affects the economic and moral fiber of our way of life. Governments by their taxing powers are rapidly destroying the competitive quality of American manufacturers and the unrestrictive right grants competition for country to bid on American requirements, especially in nontaxpaying corporations and Government purchasing sets an example that can be and is in some quarters, destructive and devastating to our economic well-being. I request a delay in the granting of this contract and that the work be given to American working men and American plants.

Sincerely,

JOHN H. DENT,
Member of Congress.

Extension of the Draft

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mrs. GREEN of Oregon. Mr. Speaker, I have today received in my office several telegrams from prominent citizens in my State of Oregon, protesting the passage, under the terms of the committee's report, of the draft extension bill, H.R. 2260. Two of these telegrams are simply the expressions of individual citizens, many of whom are known as thoughtful students of the problems posed by the international scene. The third telegram quotes in full the resolution on draft extension adopted by the Oregon Methodist Church in its annual conference on June 20, 1958. These telegrams present what I consider to be very persuasive arguments for supporting a much more severely limited extension of the draft than that proposed in H.R. 2260. I ask unanimous consent that these telegrams be printed in full.

PORTLAND, OREG., *February 4, 1959.*
Congresswoman EDITH GREEN,
House Office Building,
Washington, D.C.:

Alarmed with hasty maneuvers to steamroller draft extension through House. After 19 years, 4 more years of draft must not be fastened on us from high pressure tactics and public apathy. Urge you speak out against H.R. 2260 when it reaches House floor.

Fern Gage, Roy Gage, Albert Querin, Mildred Querin, Hideo Hashimoto, Howard Richards, Esther Richards, Rev. Mack Caldwell, Pauline Doran, Rev. Raymond Walker, Eldon Helm, Fred Breckon, Lillian Breckon, Robert Hungerford, Mary Hungerford, John Wallen, Manvel Schauffler, Howard Willits, Christine Willits, Helen Juergens, Wilton Hartzler, Bernhard Fedde.

Resolution adopted by annual conference of Oregon Methodist church, June 20, 1958, in regard to draft extension is as follows: "Peacetime conscription; we affirm the oft-stated position of the general conference that compulsory peacetime military training is contrary to the best American traditions and disregards the Christian hope for security through positive policies. We urge the abolition of peacetime conscription."

Official Board of Parkrose Heights Methodist Church meeting February 3, 1959, voted unanimously to adopt this resolution also.

Rev. DAVID POINDEXTER.

PORTLAND, OREG., *February 4, 1959.*
Congresswoman EDITH GREEN,
House of Representatives,
Washington, D.C.

We, voters of Clackamas County, Oreg., are disturbed over rushing draft extension through House. Are they trying to pass it before public can know and protest it? We oppose H.R. 2260.

Essie Hildreth, Mable West, Erna Kingsley, Katharine Talbott, Helen Millham, Mercy Holland, Edith Glassen, A. J. Prideaux, Mabel Downs, Herbert Hildreth, Nora Rumbaugh, Elvira Raven, Martha Wedemeyer, Elsie Greile, Alta Edgar, Edith Bork.

End Rocket-Missile Confusion

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of February 4, 1959:

END ROCKET-MISSILE CONFUSION

America's aerospace position and programs in recent days have taken on a startling tinge of uncertainty and confusion. This is a condition that should be cleared up.

These programs relate, particularly from the standpoint of national defense, to intercontinental ballistic missiles. Our military and civilian authorities admit that Soviet Russia has made such gains in developing these vital weapons that we would need many months, perhaps years, to catch up.

A similar situation prevails regarding rocket vehicles for space exploration. There, again, Russia is said to be 3 years, maybe 5 or more, ahead of us.

Why? And what are our leaders, our scientists, doing about it? Indefinite answers we are getting on this score are not reassuring.

Gen. Thomas D. White, Air Force Chief of Staff, told the House Space Committee yesterday that the nation which maintains mastery of aerospace will hold the means for survival—that "The decisive weapons of the future will be aerospace weapons."

This we can well believe. It points up the necessity for more determined and more effective rocket and missile research and development than current information indicates is in prospect.

But Dr. T. Keith Glennan, head of the National Aeronautics and Space Administration, fends off the idea, given more or less political emphasis by some Democratic critics, that greatly increased amounts of money are needed to make real progress. Yet he told a House committee that "urgently sustained * * * time, money and effort * * * for years to come" are required. And, even so, he said, it will be 18 months to 2 years before the United States could send forth as big a space payload as the Russians have already launched into space.

A few days ago Dr. Wernher von Braun, of the Army Ballistic Missile Agency, testified the United States is 12 to 20 months behind Soviet rocket and space technology. At the same time he and other witnesses declared Russia could now pinpoint a city in the United States with a ballistic missile fired more than 5,000 miles away.

If the Soviet Union continued at its present pace, Dr. von Braun said, it would require 5 years for us to catch up, and then only if the United States went ahead faster than present plans permit.

At the same time Defense Secretary McElroy, defending the administration's defense budget provision—$41 billion—insists the United States is prepared to meet the threat it faces today and that the United States will be practically even with Russia in war-ready ICBM's by the end of this year.

The paramount question—as to rockets or ballistic missiles—Is the progress fast enough?

In Russia Marshal Malinowsky boasts that the West's—he means our—nuclear weapons are outdated by Soviet long-range missiles of great accuracy. That touches on our once-powerful bombers, capable of delivering nuclear bombs against Russian targets—if they can get to them.

There have been official decisions not to try to match Soviet output missile for missile. That may be wise, or it may not be. Aside from such questions the preponderant one is the plain lag in rocket and missile development, including such powerful propellants as the Russians, it is admitted, have produced and we have not.

The problem of America's new defenses, in outer space and here on earth, is the tremendously important one. In these projects uncertainty and confusion have no place. They should be eliminated, without further loss of time.

Cuban Woman Writes About Terror of Batista—Defends War Trials

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks, I enclose a story from the Cheraw Chronicle, of January 29, 1959, about the Cuban situation. Since we have been so concerned, I thought it best to bring to the attention of the Congress this grassroots report which appeared in a letter to a member of the staff of one of the newspapers in my district.

CUBAN WOMAN WRITES ABOUT TERROR OF BATISTA; DEFENDS WAR TRIALS

A young Cuban woman who was a frequent visitor to Chesterfield County a couple of years ago has written a letter in defense of the Cuban war trials to Mrs. S. Gordon Brown, associate editor of the Cheraw Chronicle.

Miss Gilsa Aguero, a foreign student at Wingate College, told of the persecution under Batista's dictatorial regime. She said her letter, parts of which are reprinted below, was the first in nearly 6 years that she could send out of Cuba free of censorship.

Miss Aguero became a friend of Mrs. Ruth Horton, foreign student advisor, at Wingate and through Mrs. Horton, met Mrs. Brown. The student and the editor cultivated their friendship through correspondence, but this is the first account of the historic events in Cuba that Miss Aguero has been able to give:

"DEAR MRS. BROWN: What a nice surprise I had last month when I received your letter and a few days later the Christmas gift which you sent.

"It is so nice for you to remember me. I am sorry that both times before, when you wrote me, the letters were returned. I am writing down my correct home address and perhaps now you will be able to come visit me in Havana.

"We didn't have too much of a Christmas, but I, as well as all the Cuban people, had the most marvelous New Year, for we received the wonderful gift of 'Freedom,' about which we have been dreaming for so long. After almost 7 years of dictatorship, murders and finally civil war, we have reached a new period of peace, justice, and liberty. At last we should realize the well-being and progress that Cuba deserves.

"We know that normalcy will return right away under the leadership of the new revolutionary government and that we shall attain and safeguard those revolutionary ideals so well defended by Fidel Castro, his men, and so many of our people who have suffered the horrors of tyranny. The chief sufferers have been the university students who died defending a cause and their idealism which they valued above all else.

"Cuba is proud to know the tremendous effort made at the beginning by a handful of simple men facing incredible hardships, suffering, and danger. Thanks to their efforts Cuba has returned to the fold of democratic, sovereign nations.

"I recall when all this began at Havana University 5 years ago with the student boycotts and strikes. Our 200-year-old university was closed as the students began to plot against the dictatorship of Batista.

"We are filled with gratitude and appreciation for the discipline, discretion, sacrifice, and honor shown by the men of the revolutionary army. They have given the finest example of Cuban courage, citizenship, and patriotism. It is amazing that a group, beginning with 12 men and 1 determined leader, could win for a nation its freedom fighting against an organized army.

"Back in March 1952, Batista and his group of army officers threw out the constitutional government 2 months before general elections and started his dictatorship, which signaled the start of tyranny, killing, terror, censorship, and destruction of all our constitutional guarantees and civil liberties.

"Batista and his henchmen filled the jails and cemeteries with innocent people, murdered children and hit and abused women. For 82 months our country went through the worst kind of torture, crimes, and violation of human rights that compared with the German and Japanese tortures of World War II.

"It was even a crime to be young, for the young opposed the dictator, and for this reason, more than 20,000 young people, usually between the ages of 15 and 26, were killed. In the last 2 months Batista directed that our towns and cities be machinegunned and bombed with 500-pound bombs, including the use of napalm bombs, furnished him by the United States, and planes, tanks, and all kinds of arms sent to him by England and the Dominican Republic.

"Thanks to God that is all over now. What the entire Cuban people want is justice for all the crimes committed against them and their country. I have read that for this (executions), we are being criticized in the United States, but I for one, same as all the population, believe that the revolutionary government has as much right to exterminate the war criminals here as did the Allies in World War II to condemn the Nazi leaders at the Nuremberg trials. The trials are according to codes based on the Nuremberg trials, during which time your country sentenced to death or prison German war criminals.

"Anybody who did not see what was really happening in Cuba from 1952 until last month might not understand this, but we who suffered know. Batista and his military clique did not hesitate to imprison, detain, torture or murder our relatives, friends, acquaintances, or anyone and everyone who they thought opposed them or who they feared might help the rebels.

"This is the first time in years that we can express in letters our real opinions without the fear that regime would open the mail.

"Sincerely,

"GILSO AGUERO."

Poison in Your Water—No. 7

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DINGELL. Mr. Speaker, the Chicago News of January 13, 1958, had an interesting article on sewage and pollution in the State of Illinois.

In an article under the byline of Mr. Jack Mabley the lead sentence is, "It looks to me as though the rivers and streams of suburban Cook County are destined to become open sewers." This is a situation that plagues not only Cook County but hundreds and thousands of communities throughout the United States. The article is as follows:

SEWAGE GOES STREAMING BY—STRATTON HIT FOR POLLUTION

(By Jack Mabley)

"It looks to me as though the rivers and streams of suburban Cook County are destined to become open sewers."

Burton Atwood, chairman of the Cook County Clean Streams Committee, and national secretary of the Izaak Walton League, makes this prediction in his annual report to the comittee.

The committee is fighting to keep the rivers and streams in Cook County unpolluted. Right now it seems to be a standoff. They've kept things from getting worse, but they aren't any better, either.

The lovely streams that meander through the forest preserves, the rivers that course through suburban towns and open country, and eventually pour into the Chicago River, are loaded with oil, garbage, sewage, and industrial waste.

The Clean Streams Committee tries to chase down the source of the pollution, but when they catch one, another may spring up.

They're getting little help from the State.

ATWOOD BLUNTLY BLAMES STRATTON

Mr. Atwood, like most conservationists a blunt man, says, "The record in Illinois should make Governor Stratton hang his head in shame.

"The Izaak Walton League has often cited the Illinois program of water pollution control as outstandingly successful.

"But the deterioration of the Illinois Sanitary Water Board during Governor Stratton's administration is today the outstanding example of the failure of State control.

"This deterioration is due to the loss of the experienced engineers who built the reputation of the Illinois Sanitary Water Board, due to an unrealistic salary scale."

Mayor Daley has, or had, visions of gondolas paddling up and down the Chicago River.

It is difficult to picture the gondoliers picking their way through the filth.

Factories dump oil and waste into the rivers. Restaurants dump their garbage and empty their toilets into the streams. Trailer camps operating without licenses have been fouling streams.

AND THE MESS IS GETTING WORSE

The mess is getting worse because of actions such as that of a large subdivision next to Des Plaines which is planning to dump its combined storm and sanitary sewage into Weller Creek, which goes into the Des Plaines River, which flows mostly through forest preserves.

Atwood thinks 1958 will determine whether the fight to control stream pollution will be won or lost.

The law entitles citizens to reasonably clean water in streams that enter their communities. Protection of public health is a major factor. Atwood believes in the rights to clean streams for fishing, swimming, picnicking, camping, hiking, and plain enjoyment of nature.

I'm a little sensitive because my dog likes to swim in the west fork of the North Branch of the Chicago River, while the kids run along the bank trying to keep him from drowning.

It was only recently I learned that two trailer camps and a restaurant a mile upstream have been illegally dumping their sewage into the water.

GI Joe and Honest John

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times magazine of February 1, 1959, written by Mr. Hanson W. Baldwin, noted military editor of the New York Times:

GI JOE AND HONEST JOHN—MISSILES AND PLASTIC FOXHOLES ARE TRANSFORMING THE FACE OF WAR, BUT AS ALWAYS, DESPITE CHANGES, THE FOOT SOLDIER IS NECESSARY TO HOLD THE GROUND

(By Hanson W. Baldwin)

The slim, long shape of Nike rises above the sagebrush and mesquite of west Texas and missiles soar over the vast arid ranges where the drumming hoofbeats of the horse cavalry once stirred the desert dust. At Fort Bliss, where the lean, tough "yellow-legs" tamed the West's wild frontier, the Army of today is reaching into the frontier of the sky to develop the tactics of tomorrow.* * *

In the highlands of Arizona, at Fort Huachuca, the thin notes of the bugle wail their sweet lament as in the days when Geronimo, the Apache, was the enemy. But today Huachuca is an electronic proving ground where the Signal Corps tests the instruments for tomorrow's secret, silent war, radar sentries, television spies, infrared detectors, electronic jamming devices to make enemy shell fuses detonate prematurely, new communications systems and mobile computers that will lighten the command burdens of some future Patton.

At Fort Rucker in Alabama, the cavalry of the past has sprouted wings. This is the Army Aviation Center, home of the flier who hedgehops across rivers or swamps or mountains to reconnoiter and to move men and supplies—to "git thar," as in the days of Forrest, "fustest with the mostest."

And at Fort Benning, Ga., long the home of infantry, "Queen of Battle," the foot-slogger of yesterday—with new arms and new equipment—is still the pediment of tomorrow's Army. He may ride to war in an armored personnel carrier, skim the battlefield in an aerial jeep, receive his commands from a helmet radio and protect himself with plastic foxhole covers, but he is still the service that holds or dominates the good earth.

The Army's posts and forts today present to one who has long known the heritage of their history a strange and exciting mixture of past, present and future—yesterday's traditions and some of yesterday's ancient architecture; today's cramped Wherry housing built in wholesale lots and today's military generation groping into tomorrow's unknown dawn, and the fantastic battlefield dreams and tactical aspirations, the futuristic weapons and equipment of the Army of 1965–70, shaped and tailored for the atomic age.

What will this Army be like, so far as men can envision it now? What will be its purpose? What of its tactics and its equipment and its men?

The strategic purpose of the Army of tomorrow is still the same as that of the armies of Alexander the Great, of Hannibal, of Grant and Lee. To dominate and occupy the earth upon which man lives is, and will remain, the fundamental mission of the ground forces.

But in the age of missiles and atoms, victory—of a sort—could conceivably be won through the air by long-range nuclear bombardment. In such a general, unlimited war ground forces would have a secondary role. How secondary is a subject of debate.

Some strategists believe that even in an unlimited nuclear interchange ground forces would be essential—for martial rule in what remained of the warring countries, to fight a broken-backed conflict once the main atomic punches had been exchanged, or to pick up the pieces at the finale in a world gutted and in chaos. Such a war might end, as they foresee it, as wars began, with battles between small groups of men, lightly armed with rifles, bayonets, clubs, and stones.

But the army of tomorrow—though it claims an essential role even in the apocalyptic vision of all-out conflict—believes that its primary mission will be in limited conflicts. Gen. Maxwell D. Taylor, Army Chief of Staff, has pointed out that there has been a total of 17 limited war situations in the 13 years since 1945 (other counts make the total 20), and that by striking a statistical time-manpower balance, one finds that they have averaged about 2½ years in duration and nearly 600,000 men [have been] engaged.

If future history follows past experience, there will be more limited wars. Indeed, the rate of occurrence may increase, since Soviet leaders have always shown a willingness to take chances * * *.

From this conviction that wars are still likely even in the atomic age, and that they probably will be less than all-out conflicts, has stemmed the Army's creation of STRAC, the Strategic Army Corps of three divisions, its objective instant readiness for transportation by air or sea to any part of the world. STRAC is envisioned as a mobile fire brigade, always ready for combat, prepared to put out small conflagrations before they become big ones.

But this is easier stated than accomplished. A nonaggressive nation never knows where it must fight. The defense never chooses the time or place of attack. Nor can the Army know how limited a war may be, whether or not it will develop into an unlimited one, whether atomic weapons will be used, what kind of terrain it may have to dominate, the climate its soldiers will have to endure.

In short, the future role of STRAC—indeed, the primary mission of the Army of tomorrow—is to be prepared to fight any kind of war anywhere, with or without nuclear weapons; to confirm ultimate victory by the physical presence of "GI Joe" on the disputed soil. But the mere statement of this mission, comprehensive though it is, slights the tremendous problems—greater than in all the past—that face the Army of tomorrow.

Though the Army's strategic mission has not changed, the technological revolution in warfare has altered the weapons and eqiupment with which it fights so fundamentally as to shake its whole structure, tactics, and organization.

The revolution, first of all, is in fire power and range. One moderate-sized tactical nuclear weapon will yield as much explosive force as 21,600 105-millimeter shells; one weapon might wipe out a whole battalion—or even a division. Yet all kinds of tactical nuclear weapons are now available for land forces' use—nuclear shells fired by 280-millimeter cannon and 8-inch howitzers; large warheads for Redstone (200-mile) missiles; medium-sized warheads for the Corporal (90-mile) missile; small warheads for the Honest John field-artillery rocket (range: 20,000 yards) and for the Nike-Hercules antiaircraft missiles.

The Army already is developing its second-generation missiles; the solid-fueled Sergeant missile will replace the Corporal; the Pershing, the Redstone. And nuclear weapons are becoming even smaller and more portable; soon there may be 5-inch nuclear shells, and portable Davy Crockett "nukes" for the infantryman.

Nuclear weapons have tremendously extended the killing radius of a ground force; they incorporate in one weapon the destructive blast of a gigantic artillery shell, and the denial effects of mustard gas. For radioactivity is now a factor every commander must reckon with: his own weapons, as well as the enemy's, may create, with each burst, downwind elliptical patterns 70 to 80 miles long where the silent killer will prohibit—or at least limit—battlefield movement.

The revolution in firepower is not confined to nuclear arms. Tomorrow's rifles and small arms, though far lighter and simpler than those they supersede, will be capable of spewing out far more lead—and rounds that count—than the M–1 of World War II. The new M–14 rifle, now going into production, can be fired fully automatic—40 rounds in 45 seconds—with less kick, or recoil, than its predecessors. Its companion, the M–60 machinegun, is far lighter than its predecessors and its barrel, when heated from rapid fire of 100 rounds a minute for 10 minutes, can be changed in 4 seconds—just a twist of the wrist. Yet the end is not yet.

Luminous sights for night firing, light little rifles with plastic stocks and simple parts, high-velocity .22-caliber rifles that will lighten by one-third the infantryman's ammunition load, and a rifle that fires two bullets in tandem—thus increasing materially the chances of a hit for each shot fired—are under study. There are even liquid-propellent small arms in the offing.

Missiles are supplementing, and in some cases replacing, artillery. There is an anti-tank missile, controlled by trailing wire unreeled in flight, with a shaped charge powerful enough to penetrate the armor of any tank. There is LaCrosse, a robot that attacks field fortifications. There is even a napalm missile and the Lobber, a supply missile.

There are new recoilless 120-millimeter rifles, and improved bazookas. But the old

reliable gun tubes which made artillery the king of World War II still provide the principal punch for limited war, and new ones—a 175-millimeter piece, and a so-called moritzer (marrying the characteristics of mortar and howitzer) are under development. New antitank and antipersonnel mines now have directional capabilities and wide dispersion. One, detonated at the proper time, can wipe out a well-dispersed patrol.

Chemicals—gases that are tasteless, odorless, colorless but toxic, persistent and lethal—could add to the hazard of tomorrow's battlefield. Against some of them, and against biological agents—the unknown, undiscussed weapon—the safest protection would be a completely enclosing rubberized suit with its own self-contained air supply.

To the revolution in firepower and the revolution in range must be added the revolution in speed, and in mobility. Just as the internal combustion engine and the machinegun doomed the horse in war, so the armored personnel carrier, weird cross-country vehicles, transport aircraft, helicopters, vertical takeoff aircaft, flying jeeps, and platfoms are superseding the jeep of World War II.

The long-distance airlift (as in the Lebanon crisis) has reduced appreciably the Army reflex time; ground forces can react to an enemy's aggression—even half a world away—far faster than in the past. Tomorrow, tactical mobility on the battlefield itself will be keyed to a light, aluminum personnel carrier which can ford or swim rivers and move overland on tracks; to the Mechanical Mule, a tiny, four-wheeled vehicle which can carry loads heavier than its own weight, and to gadgets that can skim over the battlefield and land on a dime.

Flying cranes—powerful jet-driven helicopters—will be the load carriers and the aerial scouts. Armed with machineguns and rockets, they will lay down suppression fire and, as "Skycav," move small bodies of troops to the enemy's rear or flanks. For the infantryman himself, it now seems possible that terrain-skimming jeeps or individual flying platforms, perhaps utilizing ducted fans, may transform the mile-an-hour mudslogger into a man with seven-league boots.

For heavy load and supply missions behind the front, vehicles with huge wheels will drag supply pallets or rolling rubber containers of gasoline across the earth—waddling cross-country over uneven ground like prehistoric monsters. For the Arctic, the Sno-Train—with 6-foot rubber-tired wheels 48 inches wide—will supplant the sleds and wannigans of today.

These—and other vehicles—may be run by atomic power or by universal engines capable of burning gasoline, diesel oil, or nearly anything but wood.

To link this hard-hitting, long-ranging, fast-moving Army together and to supply its commanders information about the enemy, there are new miracles in electronics: radar to spot enemy mortars, invisible eyes that can report walking men 4,000 yards away, television and infrared detectors to gather and transmit information about the battlefield and calculating machines and digital computers—their data presented on fluorescent screens.

Automation is coming to the Army—and with it, jibes GI Joe, will come the Army's greatest blessing: the machines will do the thinking and supersede the generals.

The revision of military organization has always followed the development of new weapons. The development of battlefield nuclear weapons forced the abandonment of big triangular (three-regiment) division with which the Army fought World War II. But the new pentomic (five-sided) division, which is the basis of today's army, has been created before most of the weapons with which it is to be equipped have been produced.

Many of the weapons and equipment described above are still merely gleams in the designers' eyes, or exist only in prototype forms. At the same time, the multiplication of weapons and weapons systems—the old ones must be retained to fight nonnuclear wars, the new ones are essential for any atomic battlefield—presents a problem of amoebalike growth.

How do you keep a division—the tactical unit of any army—small (and it must be small if it is to be mobile, and it must be mobile if it is to live on any future battlefield) when it needs so many different weapons to meet an incalculable number of situations?

Today's answer—the pentomic division—is no more than a compromise. The fighting heart of the division is its five battle groups, with both conventional and nuclear support, but the structure already has been radically changed since its inception 3½ years ago. Its capability to fight nonnuclear battles has just been sharply increased by strengthening its conventional artillery support.

But the pentomic division still faces a number of what the Army calls "incompatibles"—the geatest of them the incompatibility of nuclear and conventional war. It cannot retain its tactical, or battlefield, mobility (which requires such bulky items as tanks, armored personnel carriers, light planes and helicopters) and at the same time attain strategic mobility (portability by air across oceans and continents). Its communications and electronics equipment—there is now one radio transmitter for every 10.3 men in the division—already is so plentiful that electronic interference from its own equipment is an ever-present problem. It calculating machines and its weapons are so increasingly complex that the problem of maintaining them under field conditions sometimes seems insurmountable.

The tactical organization of the Army of tomorrow is therefore still a matter of trial and error. The trend is toward small mobile units (considerably smaller than present battle groups), quickly responsive to command, armed with light but very powerful weapons.

The tactics of tomorrow's Army will be dictated by necessity—necessity bred from the technological revolution in war. Battlefield nuclear weapons—whether used or not—enforce their own rules. A ground army can hope to survive only by widespread dispersion, operation in small groups, the use of cover and constant movement.

Tomorrow's ground battlefield—if there is one—will be a far cry in its dimensions from those limited areas overseen by Napoleon, astride his horse, where the destinies of nations were decided. In the age of the plane and rocket, airborne troops and guerrilla armies, the concept of the line is gone forever. A front may extend the depth of a whole nation. Under such conditions, victory would go to that force which—as in the days of Jackson's foot cavalry—was able to marry most closely the principles of mobility, firepower, and flexibility. The principles are the same, but the difficulty of applying them has increased by quantum jumps.

What about the men? Clearly, if tomorrow's soldier is to be master of the machine and not a creature of chaos he will require higher intelligence, better training, greater toughness and more initiative by far than all past GI Joes. More—much, much more—will depend upon the few.

The Army recognizes the importance of man as the hub of the battle, even though there are weaknesses and omissions in its preparations for the unknown battlefields of speculation. The criticism so often voiced between past wars that "the generals are preparing for the last war" is certainly not valid today; indeed, the criticism should be reversed. The futuristic weapons, the revolutionary organization and tactics of tomorrow's army, as envisaged today, are geared perhaps too much to some future battlefield, not enough to yesterday's.

Today's Army, for instance stresses but slightly guerrilla tactics, or defense against the terrorist underground and irregular forces that have cost so much British and French blood and treasure in the postwar years. Today's Army views the skies as tomorrow's strategic and tactical answer to its mobility needs, yet the enormous supply problems of aerial movement are unresolved.

The Army of tomorrow is not backward looking; it has leaped into a whole new era of warfare since World War II. But one suspects that in some future time, if the chips are down, the fantastic dreams of electronic, automated armies may—sooner or later under the stress of battle—bend and break beneath the sheer weight of complexity and incompatibles. Then GI Joe with the will to win as his oldest-newest weapon—GI Joe, bearded, bloody but unbowed—will still slog through the mud to victory.

U.S. Foreign Aid

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

Mr. ABBITT. Mr. Speaker, once again the administration is preparing to ask Congress for a vast foreign aid appropriation and once more we will be bombarded with propaganda in support of continued spending abroad.

In line with this there has recently been prepared in the Legislative Reference Service of the Library of Congress a very enlightening report, showing, among other things, that this country has extended aid to foreign countries in the last 18 years totaling more than $120 billion.

This is significant, it seems to me, in view of the fact that this represents nearly one-half of the total national debt of some $282 billion. Of course, there is a good deal more involved, but at the time of the first large expenditure for foreign assistance, in 1940, our national debt was approximately $40 billion. Today the interest on the debt amounts to more than $8 billion annually, and a large part of this interest is paid on money which has been sent to foreign shores for military and economic assistance.

While a good part of this total—$49,223,859,000—was for lend-lease during World War II, the fact remains that the overwhelming part of it was for aid since the war. The report shows that from July 1, 1945, through June 30, 1958, a total of $71,551,940,000 has been spent in foreign aid, including $55,017,837,000 in direct grants—which we will never get back—and $16,534,103,000 was in utilized credits and loans.

Mr. Herman L. Ficker, of the International Finance and Trade Unit of the Economics Division of the Library of

Congress, has gone into considerable detail in explaining the various aspects of the foreign assistance program, and I would like to insert at this point in the RECORD his entire report—feeling that it should be of interest to every American:

U.S. FOREIGN AID

RECAPITULATION AND EXPLANATORY NOTES

Summary totals

During the period July 1, 1940, through June 30, 1958, the United States extended gross utilized aid totaling $120,775,799,000 to foreign governments and international organizations as follows:

War period, July 1, 1940–June 30, 1945

Gross grants—Lend-lease (table I)	$46,728,287,000
Gross grants—all other (table II)	1,400,010,000
Utilized credits and loans (table III)	1,095,562,000
Total	49,223,859,000

Postwar period, July 1, 1945–June 30, 1958

Gross grants (table V)	$55,017,837,000
Utilized credits and loans (table VI)	16,534,103,000
Total	71,551,940,000

(Gross grants were reduced by $2,256,854,000 consisting of prior grants converted to credits. This total was added to utilized credits in table VI.)

Not included in the overall total of aid are U.S. capital investments of $3,420,000,000—in the International Bank, $635,000,000; International Monetary Fund, $2,750,000,000; International Finance Corporation, $35 million.

Although these investments constitute an additional measure taken by the U.S. Government to promote foreign economic development, they do not result in immediate equivalent aid to foreign countries.

Availabilities of aid on July 1, 1958

Foreign grant and credit authorizations available during fiscal year 1957 approximated $14.8 billions. Total utilizations during the year amounted to $5.4 billions in grants and credits. The Office of Business Economics of the U.S. Department of Commerce estimated that, as of July 1, 1958, foreign grants and credits available and still to be furnished from prior authorizations amount to approximately $9.5 billions. This did not mean that these carryover funds consisted of cash available for disbursement. These funds were substantially committed in long-range contracts under which goods and services had not yet been delivered. The availabilities by category comprised:

	Billions
Grants of military supplies and services	$3.4
Other economic grants	2.1
Credits and loans	3.9

In addition to these carryover funds, the 85th Congress, 2d session, provided $6.1 billions in new appropriations for foreign aid:

	Billions
Export-Import Bank Act amendment, Public Law 85–424	$2.0
Mutual Security, Public Laws 85–477 and 85–583	3.3
Estimated available proceeds of additional sales under amendment to Agricultural Trade Development and Assistance Act, Public Law 85–931	.8

Thus the carryover funds of $9.5 billions plus new funds of $6.1 billions provided an estimated availability of $15.6 billions for foreign aid during fiscal year 1959.

This approximate total may be disbursed under the following three main categories:

	Billions
Grants of military supplies and services	$4.9
Other economic grants	3.5
Credits and loans	7.1

Postwar military aid

The breakdown of military aid by country is not given as such information is classified for security reasons. A partial country list is given at the end of table V comprising postwar grants. Regional totals of military aid are given at the end of table V as military supplies and services by the U.S. Defense Department and other agencies as well as multilateral construction program contributions. Cumulative military disbursements during the postwar period are stated for the following regions:

Asia and Pacific	$4,590,297,000
Europe	12,889,192,000
Near East, Africa, and south Asia	2,740,317,000
Other areas and overlapping programs	225,440,000
Total	20,445,246,000

It should be clearly understood that any total for postwar aid by the United States to any foreign country compiled from these tables will consist of economic grants and loans only. Military totals will not be included so that final aid totals are only a partial representation of disbursements.

Definitions

Grants are transfers for which no repayment is generally expected, but might involve an obligation on the part of the receiver to extend aid to the United States or other countries to achieve a common objective.

Credits are loan disbursements or transfers under agreements for specific repayments over a period of years, usually with interest. In some instances aid has been given under grants with the understanding that a decision as to repayment would be made at a later date. When such a decision for repayment is made a credit is established. As a rule such credits are not deducted from the grants recorded in previous periods. Only after the agreement for repayment is signed, an adjustment is made from grants to credits.

Credits to individual countries may include loans to private entities; e.g., loans to Canada represent credits extended solely to private interests.

The measure of foreign grants and credits generally is in terms of goods delivered or shipped by the U.S. Government, services rendered by the U.S. Government, or cash disbursed by the U.S. Government to or for the account of a foreign government or entity.

Reverse grants and returns on grants comprise: (1) Reverse lend-lease received in the immediate postwar years; (2) the return of military equipment loans, usually aircraft and watercraft; (3) the return of civilian supplies; (4) the return of military naval ships as well as lend-lease merchant ships; (5) the cash war-account settlements for lend-lease and other grants; (6) and finally, the foreign currency funds resulting from military aid collections, usually for administrative expenses, as well as the counterpart funds resulting from economic and technical assistance.

At the end of the war period such reverse grants, reciprocal lend-lease, and returns on grants amounted to $7,872,637,000.

During the postwar period ending June 30, 1958, such returns totaled $1,805,343,000.

Utilizations of credits and loans are given for the total war and postwar periods in table VIII. During this time the United States authorized net credits and loans including conversions from prior grants for an aggregate of $20,481,987,000. On June 30, 1958 the unutilized total amounted to $2,692,682,000. This would be available as lines of credit to be drawn down during fiscal year 1959 or until such time as the authorizations expired.

Direct utilizations since 1940 amounted to $17,302,055,000 and an additional $487,250,000 were lent through agent banks by the Export-Import Bank.

Since 1945 such utilizations including reconversions have amounted to $16,534,103,000.

Repayments of loans or principal collected by the respective U.S. Government agencies on the credits extended, the loans, sales, commodity programs and prior grants converted into credits have amounted to $5,595,364,000 since 1940. The major portion, or $5,153,859,000, has been collected during the postwar period since 1945.

During fiscal year 1957 utilizations of credits amounted to $440,282,000 and collections were $639,574,000. This trend was reversed during fiscal year 1958 when utilizations totaled $1,226,736,000 and collections $614,769,000.

Outstanding on June 30, 1958, or utilizations unrepaid, amounted to $12,179,482,000. Repayment prospects are excellent if forecasts are made according to the past history of collections. During the past 18 years principal charged off as uncollectible has amounted to less than one-tenth of 1 percent of the total lent or credit utilized.

Welfare data included under postwar grant aid comprise government grants of agricultural food surpluses distributed overseas by private American welfare agencies, churches or international agencies such as CARE. These agencies undertook the free distribution of such surpluses as part of their oversea missionary commitments.

NOTES

1. In this table mutual security aid does not include military supplies and services, either through the Defense Department or other agencies. It comprises only assistance rendered under economic and technical programs from the mutual security appropriations.

2. Military assistance data are generally not available by country and are stated at the end of this table under military supplies and services in "Unspecified countries." A Defense Department release of Oct. 7, 1958, gave some totals (in millions of dollars) as follows for the period: Belgium, 1,069; Luxembourg, 7; Denmark, 385; France, 3,708; Greece, 678; Italy, 1,592; Netherlands, 968; Norway, 547; Portugal, 238; Spain, 239; Turkey, 1,222; United Kingdom, 693.

3. The military equipment loan to Canada is noted as "Repaid." The transfer represented the loan and return of aircraft under the program announced by the U.S. Department of Defense, Aug. 15, 1952.

European Coal and Steel Community	100,000	100,000	2,900	97,100
United Nations headquarters loan	65,000	65,000	11,000	54,000

NOTES

1. Apparent discrepancies are due to rounding of totals.
2. Asterisks denote those countries where some principal has been charged off as uncollectible. For period July 1, 1940 to June 30, 1958, this total amounted to $14,458,000 out of total utilizations of $17,302,055,000 or less than 1/10 of 1 percent.
3. On June 30, 1958 the total unutilized from the net authorizations amounted to $2,692,682,000 or the difference between net authorizations and utilizations. This total represents lines of credit still available till such time as the time limit expires or the authorizations are terminated.

Kennedy Realistic; Ike's Courageous

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include the following column "An Editor's Notebook," by John S. Knight, from the Salt Lake Tribune of February 1, published in Salt Lake City, Utah. It is a forthright presentation of the differences between the administration labor reform bill and the labor reform bill cosponsored in the other body by Senators KENNEDY and ERVIN. It is a challenge to us in the Congress to act honestly and fearlessly in the correction of established union abuses:

AN EDITOR'S NOTEBOOK—KENNEDY REALISTIC, IKE'S COURAGEOUS

(By John S. Knight)

Views on the news:

President Dwight D. Eisenhower's proposed labor reform legislation seeks to correct the worst of the union abuses exposed by the Senate Rackets Committee.

It is a better bill than the one introduced by Senator JOHN F. KENNEDY, Democrat, of Massachusetts, because it comes to grips with the evils of "blackmail" picketing and secondary boycotts.

Senator KENNEDY thinks the President has gone "too far."

The Eisenhower recommendations would require amendment of the Taft-Hartley Act and Senator KENNEDY doubts that the Congress will approve of these changes.

The young gentleman from Massachusetts hangs his reasoning on the premise that "for 12 or 13 years, we have tried to do too much and accomplished nothing."

He believes that a more moderate bill, similar to the Kennedy-Ives legislation which passed the Senate with only one dissenting vote in the last session and then "got lost" in the House, can be enacted this year.

The Senator wants to settle for the attainable, rather than lose with the impossible.

Kennedy's position is understandable because he is a candidate for the presidency and the AFL–CIO prefers his bill.

I am not implying, as do his critics, a lack of courage on the Senator's part.

But he is a practical man and a skilled politician.

If KENNEDY, with the help of responsible labor leaders, can achieve a measure of reform, his reputation for statesmanship will have been enhanced without inviting labor's opposition.

And, as everyone knows, a thumbs-down verdict by labor in a Democratic convention means that an aspiring candidate has had it.

The Eisenhower recommendations appeal to me because they go to the heart of the problem.

Secondary boycotts and blackmail picketing are tools of unscrupulous strong boys in labor.

Although existing law forbids union pressures on an employer by persuading or coercing other businessmen not to deal with him, the law is consistently and flagrantly flouted.

Unions either advise their members to act as individuals or threaten employers with labor trouble if they don't boycott the company in disfavor with the union.

The President's bill is designed to stop these strongarm tactics.

It also would prevent, by court injunction if necessary, picketing by a union which does not represent a majority of the employees in a picketed company.

This crude and undemocratic method of organizing a shop or small business is contrary to our concept of freedom and makes a mockery of individual rights.

The administration bill would put an end to this tyranny.

The new Kennedy-Ervin legislation ignores its existence.

While it seems unlikely that a prolabor Congress dominated by the opposition party will give much heed to the President's recommendations, the administration's position is both right and courageous.

If more of our Senators and Representatives in Congress would stop fawning on labor and assert a greater degree of independence, they might be agreeably surprised to find a grateful public giving them enthusiastic support.

It is inconceivable to me how any Federal lawmaker who can distinguish between right and wrong is able to condone the rotten conditions that exist in certain segments of the labor movement.

Here is your opportunity, gentlemen, to crack down on the rough stuff and perform a real service for your country.

But I am not holding my breath until you do.

Honored by Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, at noon today I was highly honored with the presentation of a badge from the Boy Scouts of America for the celebration of the 49th anniversary of the Boy Scouts of America during Boy Scout Week, February 7 through 13. It is with genuine pride and honor that I shall wear this badge of the Boy Scouts of America which carries with it so much meaning and significance in the finest character-building organization for boys in the entire world.

The Boy Scouts of America have made monumental contributions in the building of sound, dependable character in the future young men of our country. In this fine work of moulding honorable character, the Boy Scouts are responsible for tomorrow's national leadership. Among the Boy Scouts in the Halls of the Capitol today and who will be here during Boy Scout Week, surely may be a future President of the United States and certainly those who will hold great positions of responsibility in the direction and affairs of our country in the years to come.

I was presented with this honorable badge of the Boy Scouts of America by a Boy Scout who not only excellently represented the Boy Scouts of America but also made an excellent presentation. Although young in years, Paul Murphy, Jr., who presented me with this honorable badge, is one who might inspire all of America to courage and fineness. Possessing an attractive personality, being very courteous and thoughtful, Paul is also extremely able. A student of the Russian language, already he is able to speak some of this very difficult language. In addition, he has many other accomplishments, but above all he has

the courage to overcome all difficulties and burdens with which he may be faced. This is indeed a real test of character.

Following is the quoted text of the presentation speech of Paul Murphy, Jr.:

I am Cub Scout Paul Murphy, Jr. During Boy Scout Week, February 7 through 13, the Boy Scouts of America celebrate their 49th anniversary. I have the honor to represent the Boy Scouts of America in making this presentation to you, Mrs. ROGERS. We would like you to join in the 49th celebration of Boy Scout Week by wearing this badge during Boy Scout Week.

At this point, Paul Murphy pinned the Boy Scout badge on my jacket lapel.

In conclusion, I extend my thanks and sincere and genuine appreciation to Paul Murphy, Jr., and through him to the Boy Scouts of America. I assure them I shall be honored to wear this badge during Boy Scout Week in America, February 7 through 13.

Reds Now Have Power Balance

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Drew Pearson which appeared in the Washington Post and Times Herald on February 4, 1959:

REDS NOW HAVE POWER BALANCE

(By Drew Pearson)

If you analyze carefully Secretary of Defense McElroy's statement that the United States will not attempt to match the production of Russia's dread, long-range intercontinental ballistic missile, it amounts to the most depressing, defeatist admission made by a public official since the United States became a world power. In effect it's an official admission that the United States is willing to accept the status of second-class power.

This is especially so when coupled with Nikita Khrushchev's confident harangue before the Communist Party Congress, comparing Russia's 8.6 percent annual increase in industrial production with the American increase of 2 percent.

These facts may have been new to the American people, but they are not new to the men inside the National Defense Advisory Council, nor to some of the newspapermen who have been accused of being Cassandras.

For weeks experts in the State Department and Pentagon, whose job it is to study what makes Moscow tick, have been warning that the balance of power was shifting. The emergence of Russia as the world's No. 1 missile power now puts a final period after that shift.

WHAT IT MEANS TO UNITED STATES

Here, in simple language, is what that shift means to the American people and the peace of the world:

1. Balance of power yesterday was with the United States. For the past 15 years, Russia knew that any aggressive action by it meant the risk of heavy and effective retaliatory action by the United States. It knew we had the power to retaliate and it did not want to risk that retaliation.

Time after time the Kremlin took exploratory steps to test the United States, then backed down. In 1946, the Red army was on the northern border of Iran ready to march in, when the United States threatened action.

In 1949–50 it tested American readiness to retaliate in the Berlin airlift. We had the balance of power. Again Moscow retreated.

During the Korean war—another probing operation—Russia supplied planes, men, and materiel, but was careful not to risk any headon showdown with the United States.

During the Suez crisis the Kremlin sent blunt warnings to the West, but kept out. Again, when the United States landed troops in Lebanon last summer, Moscow wrote notes and made speeches but scrupulously avoided any military test.

The balance of power up until then was with the United States.

2. The balance of power today is on the side of Russia. It began to swing last year. The swing became evident with Khrushchev's statement to Senator HUBERT HUMPHREY regarding his latest long-range ballistic missile, which went unchallenged by Eisenhower. And with Secretary McElroy's recent admission that we would not try to match Russian ICBM's, the shift of power became categoric and definite.

This brings out from the diplomatic shadows the unpleasant reason why Russia is so tough regarding Berlin, why Mikoyan offered no compromises in the Russian position. Moscow knows that it has the balance of power.

It knows that a new Berlin airlift would not be effective. The American Air Force is now smaller than the Russian. Three Russian radio jamming stations could prevent American navigation into Berlin in bad weather. It knows that if American tanks attempt to open up the highways into Berlin, the strength of the American Army's 17 divisions is no match for the Red army's 175 divisions. The balance of power has shifted.

EFFECT ON ASIA

The balance of power affects not merely Berlin. It is likely to affect the entire neutral or pro-West perimeter of Russia.

In the Asian countries surrounding the Soviet-bloc countries, one thing and one thing only has kept Moscow and Peiping from moving in—fear of American striking power.

Pakistan, Burma, Thailand, Indonesia, the Malays have been relatively free of Soviet threats. They are relatively defenseless. Their chief protection is the force of public opinion backed up by the power of the United States.

The Kremlin's hope was gradually to put its own pro-Communist governments in power. In many of these countries, however, strongly anti-Communist governments have recently taken over, in some cases dictatorships. This anti-Communist trend may well tempt the Kremlin to use strong-arm tactics.

It now has the balance of power.

Progress in High Fidelity

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. PHILBIN. Mr. Speaker, like other Members of the House, I have been gratified of late to observe the marked progress which our Nation is making in the field of electronics. Components of the electronic industry are located in my own district, and I have had a special opportunity to observe the rapid changes and advances which are taking place in this great industry which so well serves the American people and our armed services. There are many facets to the marvels of electronic development which are currently transforming and vastly improving our communication systems, our sound reproduction media and automatic quidance and control systems and truly revolutionizing our industrial methods, weapon systems, and in fact, the reproduction instrumentalities that we use so frequently in our homes and in our daily lives.

I was very much impressed recently with the progress in the electronic field evidenced by demonstrations and exhibits presented as a prelude to the High Fidelity Festival being held in Washington this weak. The initial event of the program last Saturday night in which the Washington National Symphony Orchestra participated before a large audience was a most convincing testimony of the great advances made in recent years in the electronic reproduction of sound.

Some 2,500 music lovers thought they were hearing trumpeter Lloyd Geisler during the solo portion of Purcell's "Trumpet Voluntary." Actually, he was simply going through the motions of playing while the audience was listening to a recording he had made on tape earlier in the day. Reproducing this recording for the audience were high-fidelity amplifiers and speakers such as are found in many homes today for the faithful reproduction of recorded sound.

To complete the illusion, a second rendition of the Purcell composition was given. This time the orchestra on stage remained silent while trumpeter Geisler played to the accompaniment of a recording made by the National Symphony earlier.

This demonstration of the new great advances made in sound reproduction, which is called stereophonic sound, was the opening event of the 4-day International High Fidelity Music Festival, which begins this Thursday, February 5, at the Hotel Shoreham.

An exhibition area, comprising some 50 rooms, has been set aside at the Shoreham where more than 250 different items of high-fidelity equipment for the home will be shown, including phonograph records, amplifiers, speakers, radio tuners, tape recorders, turntables, and other music reproduction products.

This is not Washington's first high-fidelity music show. Last year's showing attracted some 16,000 visitors to the Shoreham. This year's music festival, however, marks the first time that a nationally known symphonic group participates actively in an exhibit of this kind.

Other cities such as Los Angeles, Chicago, and New York have very successful high fidelity shows, which attract thousands of visitors. This week's music festival in Washington, however, brings together our great National Symphony and the newest in sound reproducing equipment in an association which may be the start of a musical trend for other parts of the country.

I hope that some of my colleagues in the House will have the chance to visit the International High Fidelity Music Festival during this weekend at the Shoreham. An exciting experience is in store for them as it is for everyone who hears stereophonic sound for the first

time. At the same time, they may gain firsthand knowledge of woofers, tweeters, crossover networks and other equipment dear to the heart of the high fidelity devotee.

I would be remiss if I do not bring to the attention of my colleagues three exhibitors from Massachusetts: the H. H. Scott Co. of Maynard, which is in my district; High Fidelity magazine of Great Barrington; and Acoustic Research of Cambridge.

The H. H. Scott exhibit should be of particular interest because the products of this company are well and favorably known throughout the electronics industry. Acoustic Research has developed a new speaker system, which has attracted wide interest and much favorable comment in music circles. High Fidelity magazine pioneered in its field and has grown in influence and scope in the world of high fidelity.

Permit me to close with one word of warning: Music will never sound the same, especially from a small radio or old record player, once a convincing demonstration of stereophonic sound is experienced firsthand. We are in truth living in a fabulous world and I am very proud that my district and State through the growing electronics industry are contributing so much toward this impressive progress.

Conservation: A Way of Life

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. AVERY. Mr. Speaker, the following editorial appeared in the St. Marys (Kans.) Star. Mr. R. E. Robinson, Jr., is publisher and editor of the newspaper.

I cannot improve or add to the comments contained in this excellent editorial. I strongly recommend that every Member of Congress take the time to read this very fine editorial:

CONSERVATION: A WAY OF LIFE

A few short years ago this country was a virgin land over which Indians roamed, supported by a bounteous Nature. The population was too scant to make a dent in the resources which abounded here.

Then came the white man with his gun and his plow and the other appurtenances of civilization. Game was slaughtered—the buffalo, which had been counted in the millions, became almost extinct. Prairie land, which had supported life for countless years, was broken with the plow and delivered to the wind and rain. In the honeymoon years, conservation was unheard of. The early settlers couldn't imagine a time when the natural resources of these fruitful hills and prairies could so erode away that life could not exist upon them.

Fortunately, man awoke before the ruin became complete. Not too many years ago, too few in fact, some men realized that unless our resources were conserved, they soon would disappear forever. They saw that a human being could no longer act like a child in a candy shop, taking indiscriminately, without eventually having to face the consequences. And the consequences would be death.

Then, too, developed the idea that we, today, owe something to the generations which follow us. It isn't Christian or moral to dissipate the wealth of our country and turn over to our children a barren and denuded land.

The bounties of Nature are great but they are not without limit. Nature is like a woman. Treat her well, pamper her a little, and she will smile and produce. Mistreat her and she turns cold, ugly, and unproductive.

All of us have an interest in the conservation of the soil. Whether we are farmers or town dwellers, the food we eat and the clothes we wear depend largely on the productivity of the soil. It is with this in mind that we dedicate this issue of the Star to the interest of conservation. We hope that it will, in a small way, increase the interest in and enthusiasm for, the conservation of our natural resources.

Hood River Electric Cooperative Can See No Reason To Increase Electric Power Rates

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. ULLMAN. Mr. Speaker, I recently read with a great deal of interest a letter from Willard I. Johnson, manager of the Hood River Electric Cooperative, which was addressed to all electric consumers in the Hood River Valley in Oregon.

The letter is self-explanatory and provides a rather telling commentary on power development in the Pacific Northwest. I am hopeful that my colleagues will closely examine this correspondence and bear it in mind when next the House considers the authorization of a public power project.

The letter follows:

HOOD RIVER ELECTRIC COOPERATIVE,
Hood River, Oreg., January 20, 1959.

Subject: Request for rate increase filed by Pacific Power & Light Co. in selected areas of Oregon and Washington.

To All Electric Consumers in Hood River Valley:

Since the newspaper announcement regarding proposed rate increases of 15 percent in Oregon and 10 percent in Washington, we have been repeatedly asked if our rates would go up too. We see no reason to increase our rates; 1958 has been the best year in our history, in spite of the fact that labor, materials, and everything else we buy, except wholesale power, has gone up.

The reason is increased sales per customer. Our members are finding that electricity will do the job better, safer, and cheaper and are buying more and more. We have learned that low prices bring more sales and more sales bring lower prices. The two go hand in hand.

We get our labor from the same union, at the same price as does any other utility. The same is true of transformers, meters, poles and wire; but volume increases offset these items for us and should do likewise for any other utility.

This rate increase request is for a system-wide increase of 15 percent in Oregon with the exception of Hood River rural area. The Dalles, Springfield, part of Umatilla County, and Tillamook. In each area excepted, there is an active cooperative, PUD or municipal system in direct competition. It could be that Portland, Astoria, Albany, Hood River City, and others will bear the cost of this competition. It seems to us that the signers of the petition last June, which kept HREC lines out of Hood River City should reevaluate the wisdom of that signing. Their loyalty is now to be rewarded by a rate increase of 15 percent while their country neighbors will have no increase at all. HREC rates are now approximately 17 percent below Hood River City rates. Add 15 percent to this and you get 32 percent, nearly one-third more that the city customer will pay than does his country neighbor.

Outgoing PUC Commissioner Howard Morgan saw these and other discrepancies in the rate filing and ordered it suspended for not to exceed 6 months until the entire matter could be thoroughly studied. His successor will take final action on the matter and no one knows what the outcome will be.

Meanwhile, we take pride in pointing out to the people of Hood River Valley the direct and indirect benefits to them from the existing local cooperative. It is truly the yardstick in electric rates.

Very truly yours,
HOOD RIVER ELECTRIC COOPERATIVE,
WILLARD I. JOHNSON, *Manager.*

Berwick (Pa.) Plant of ACF Industries To Build Cars for Subway in U.S. Senate

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Wilkes-Barre Record of January 31, 1959:

BERWICK TO BUILD CARS FOR SUBWAY IN SENATE

After 45 years of shuttling U.S. Senators the 760 feet between their offices and the Capitol, the monorail cars of the Senate subway are being retired in favor of new two-rail trolley cars.

A spokesman for the Office of the Architect of the Capitol said four cars have been ordered from the American Car and Foundry Division of ACF Industries, Inc. They will be installed this summer after completion of the new Senate subway system between the Capitol and the Old and New Senate Buildings.

The new system, according to the spokesman, comprises two separate subways. The new line to the Old Senate Office Building is 650 feet long, with the line to the New Senate Office Building measuring 1,200 feet. Two new cars will be installed in each subway. The old monorail subway, a point of interest to tourists through the years, will continue in use as a utility tunnel.

Charles Venrick, vice president of railroad sales for the ACF Division, said the $363,180 Government contract covers four cars, an overhead conductor system and a power supply substation.

Mr. Venrick described the cars as four wheeled, with open tops and partly enclosed sides. Each car will seat 18 lawmakers or tourists 3 abreast in 6 seats. He said the cars will be made at the Berwick plant of ACF.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.

Appendix

Sam P. Harben, the Grand Old Man of the Texas Press

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. JOHNSON of Texas. Mr. President, the grand old man of the Texas press, Mr. Sam P. Harben, has recently retired as editor-publisher of the Richardson Echo, an outstanding weekly newspaper in north Texas. His illustrous 58-year career is notable for his many contributions to his community, his State and Nation.

I ask unanimous consent to have printed in the Appendix of the RECORD an article, from the Chronicle-Journal, on the retirement of Mr. Harben.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Floresville (Tex.) Chronicle-Journal, Jan. 30, 1959]

SAM P. HARBEN SETS SOME RECORDS; RETIRES AFTER 58 YEARS AS PUBLISHER

RICHARDSON.—Things are not the same here in the Richardson Echo office. Not for anybody. And especially for Sam P. Harben, the grand old man of the Texas press, who just retired after an illustrious career of contribution to his community during 58 years as a weekly newspaper editor-publisher.

All week long, Mr. Harben has been coming to his office as usual. Just sitting and reflecting. For him, there's no gaiety in being a guest of the world, even in restful retirement. But he sold out last week to his partner, O. A. Spotts, an associate with the printing-newspaper firm since 1929. And when you scan some of his achievements during his 80 years, it's easy to see why—out of harness—he feels like a country printer without a linegage.

Take this for instance:

In 1900 he founded the Echo in the back end of his drugstore.

He built the first telephone system in Richardson.

He was one of the founders of the Citizens State Bank.

He was one of the founders of the Texas Press Association.

He was secretary of that organization 32 years.

When I started out as a printer's devil back in Teague, I was beginning school, too. That's when I first heard of Mr. Harben. Even then, he was a power in the country press, always preaching the might of the grassroots minds. And its good influence in a free world.

Few men in Texas—perhaps none—have ever equaled the 58-year record of this man who loves to be called a country editor. He has been in business longer than any other Richardson merchant, helped found the Rotary Club here, and has an almost perfect attendance record. Since 1895, when he first picked up his "stick" and started handspiking type for patent medicine ads in the Rockdale Messenger, this pioneering printer has been a builder.

When he sold his first 150 subscriptions to the Echo back in 1900, Richardson had 6 businesses and 113 residents. But he stayed and stayed, and has never missed an issue of his paper.

Said Maurine Cook, one of his reporters: "He deserves time now to just take it easy and feel his time has not been spent in vain, but has been of service to his home and country. He has fought (with all the tools he had) for the preserving of the freedom of the press as a part of the American way of life, an invaluable contribution to the people of a free country." (The Dallas Times Herald).

News of Sam Harben's retirement naturally will bring sorrow and joy alike to the countless hundreds of friends of this beloved country newspaperman, who spent over half a century in the profession. Some sorrow, because those of us who have known and loved him through the years, well know what it meant for him "to drop the traces." It brings joy to us all, to know that if ever there was a member of the fourth estate who is entitled to retire and enjoy the evening of life without the humdrum of press days, busy workadays, and all that goes with the life of a country publisher and printer, that man is Sam P. Harben. He has made a great contribution to Texas journalism in general, and the Texas Press Association in particular, and in his long and active life as a Texan devoted to the upbuilding of his State. We shall always cherish the happy press conventions, hours in his home, and personal associations, with Sam Harben, our friend for nearly 50 years. All the joy and happiness to him in the days ahead and in this we know we are joined by scores of newspapermen throughout Texas and members of their families.

Rise in Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. WILEY. Mr. President, as a member of a subcommittee of the Judiciary Committee dealing with the problems of juvenile delinquency, I am increasingly concerned by the unfortunate rise in the number of delinquency cases.

In 1957, for example, these cases had reached an alltime high of 603,000; involving 520,000 of our youth. This is, indeed, a tragic situation.

We recognize, of course, that this epidemic of delinquency knows no boundaries. Large and small cities, as well as our rural communities, unhappily face an increasing problem in this field.

We also recognize that the problem of delinquency is not one that can be solved entirely at the Federal level. Rather, constructive efforts must be made by the State and local communities; and particularly the American home bears a basic responsibility in helping to assure that our young folks are trained and brought up to lead good, constructive lives.

We realize that, very often, the delinquency problem obscures the fact that the vast majority of our youth are participating in, and contributing to, worthwhile programs in their community. In this way, they are laying the groundwork for leadership in the Nation of tomorrow.

Nevertheless, we cannot ignore the startling and lamentable increase in the number of delinquency cases. Recently, the Department of Health, Education, and Welfare furnished my office with a report of the latest figures concerning the continued rise in juvenile delinquency. To give my colleagues the benefit of this data, I ask unanimous consent that this report be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HEW REPORT ON INCREASING JUVENILE DELINQUENCY

According to reports from juvenile courts to the Children's Bureau for the calendar year 1957, juvenile delinquency cases have continued to rise for the ninth consecutive year (1948–57). In 1957, these cases reached an alltime high of 603,000 cases involving 520,000 children. The increase in the number of these cases coming before juvenile courts was almost five times greater than the increase in the child population of juvenile court age (10 to 17) during these 9 years.

The continuing rise in juvenile delinquency extends throughout the Nation. It is not confined to any one group of States. Nor is it confined to any one geographic area. Rural and urban areas alike are confronted with this problem.

Not only the number of cases, but the proportion of children involved, has steadily risen. In 1948, about 12.6 out of every 1,000 children (10 to 17) came to the attention of juvenile courts for alleged juvenile delinquency. By 1957 this rate had mounted to 23.5 out of every 1,000 children—almost double the 1948 rate.

Even if juvenile delinquency remains fixed at the 1957 rate, the number of juvenile delinquency cases may be expected to increase by 140,000 in 1962, and by 205,000 cases in 1965, simply because of the known increase in the number of children aged 10 to 17 that will occur by these years.

A much greater number than come to the attention of juvenile courts—perhaps as much as 1.7 million children—are dealt with by the police for misbehavior. About three-quarters of these are not referred to juvenile courts but rather are handled directly by the police. In such cases the police officers take whatever steps they think might alter the delinquent behavior of the children. This means referring some of these boys and girls to social agencies for help.

Police arrests of children as reported by the Federal Bureau of Investigation also show increases in recent years, following closely the pattern evidenced by the juvenile court delinquency cases. The following table shows the percentage change from one year to the next in both series:

	Percent change from preceding year	
	Police arrests of children [1]	Juvenile delinquency court cases
1949	+4	+7
1950	+5	+3
1951	+8	+6
1952	(1)	+11
1953	+8	+13
1954	+2	+6
1955	+11	+9
1956	+17	+21
1957	+10	+16

[1] Police arrests of children up through 1951 are based on fingerprint arrest records; for 1952 and thereafter they were based on reports of all persons arrested whether fingerprinted or not and therefore are not comparable to the earlier data. Percentage changes are based on a varying number of cities participating each year—not on a comparable group throughout as in delinquency court cases.

The increases are not limited to the large congested urban areas as is so often supposed. On the contrary, the increases seem to be greater in the smaller and rural areas. For example, the FBI reports that the increase between 1956 and 1957 in arrests of persons under 18 years of age was 16 percent in cities under 25,000 population while it was only 8 percent in cities of 25,000 or more. Juvenile court statistics also show greater increases in rural and semiurban areas than in large urban areas. Even though increases have been somewhat greater in the smaller areas, juvenile delinquency is still primarily an urban problem. For it is in the large cities that most delinquency is concentrated.

The Texas Water Challenge

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. JOHNSON of Texas. Mr. President, there appeared in the Denver Post of January 28, 1959, a very interesting article, by Mr. Roscoe Fleming, entitled "The Texas Water Challenge." Mr. Fleming discussed the efforts made by Texans to control and utilize Texas' water resources, and spoke of our reclamation and flood control projects as "defensible in terms of that wholly conserved America that I am coming to think should be the Nation's most sought interior goal."

I ask unanimous consent that this fine article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TEXAS WATER CHALLENGE
(By Roscoe Fleming)

Texas may have ceded first place to Alaska in size, but she is challenging for first place in water utilization. She is undertaking the Nation's most ambitious water-development program outside of California's. The Texans voted a $200 million bond issue for this purpose, part to match Federal contributions, part to build State water projects that dovetail.

Adjusting for differences in wealth and population, Colorado to match this would have to appropriate at least $40 million. But as we all know, Colorado spends almost nothing in State funds on water.

Such a program will surely pay Texas, as it pays her to have the two leaders of the two Houses of Congress.

But that isn't the whole story. Senator LYNDON JOHNSON, who takes great personal pride in the Texas program, has steadily urged Texans to do more for themselves in this regard, even while he works for more Federal aid.

The results are really something. Texas has recently gotten a complete Federal-State survey of its water-project possibilities; and by special enactment of the 85th Congress, it now has the Nation's only Federal-State Commission devoted permanently to solving the water problems of a single State.

Texas therefore has a very fine chance to see full implementation of its water-salvage program, to be built over many years at a cost of much more than a billion dollars. When it is complete, Texas will have about as full use of its immense water resources as is possible for a State.

A yearly average of about 40 million acre-feet of fresh water flows unused into the Gulf of Mexico from a dozen river systems, most of which are wholly, or almost wholly, inside Texas.

The grand scheme is to interconnect these basins by a huge canal running southwestward from humid east Texas to the drier regions, and to pass the water along and redistribute it, until fullest possible use is attained.

This requires a degree of interbasin cooperation which, of course, has not yet been fully realized. But Texas has organized a board of water engineering to work on nothing but better water utilization. And as we say, the Texans have the fullest cooperation of Federal agencies.

They've done all right by themselves so far.

Nearly 500 of the individual contracts for droughtproofing individual farms and ranches under the special Great Plains program of 1956, or almost half the present total, are in Texas. About one-third of all the money obligated so far—or more than $2 million—has been obligated for Texas.

Texas already has some 18 projects qualified under the special Flood Prevention and Water Control Act of 1954–56, with an estimated total expenditure of about $34 million, of which about $13 million is Federal.

Its Harlingen (small projects) Act program was the first in the Nation to qualify under the law by which the Federal Government makes interest-free loans up to $5 million to local agencies. Texas also has two of the largest single projects under the Flood Control Act of 1944, which alone cover more than 13 million acres.

All this is in addition to the large flood control and navigation programs of the Corps of Engineers, of which Texas has about $400 million worth underway with another $190 million authorized.

None of these should we resent. All are defensible in terms of that wholly conserved America that I am coming to think should be the Nation's most sought interior goal—to match peace on earth as its exterior one.

The Texas example of aggressive local and State participation and spending to match Uncle's dollars might well commend itself to other States with huge water problems such as Colorado.

Pastoral Letter of Archbishop of Montreal

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. PROXMIRE. Mr. President, the evil that is unemployment has been discussed many times in this body. Many of the measures which will come before us in the weeks ahead properly must be weighed in part in the light of their effect on the Nation's unemployment. The problem of unemployment remains among the most urgent of our time.

His Eminence, Paul Emile Cardinal Leger of Montreal, in a pastoral letter in January, takes up the same problem in the great nation to our north; describes the effects of unemployment in the powerful terms of a man of deep thought and deep feeling; and offers some fresh approaches to the question.

Highlights and background of his letter were contained in an article carried January 20 by the N.C.W.C. News Service. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARDINAL CALLS FOR UNITED EFFORTS TO CUT UNEMPLOYMENT; ANNOUNCES SPECIAL COLLECTIONS

MONTREAL, January 20.—His Eminence Paul Emile Cardinal Leger has called for management, labor, and the state to combine forces against the scourge of unemployment.

The archbishop of Montreal announced in a lengthy pastoral letter that a special collection would be taken up monthly in archdiocesan churches to finance construction projects aimed at relieving the surplus of workers.

The cardinal also urged the formation of commissions of labor and management representatives to propose solutions to unemployment, then to be aided by the state in carrying them out.

In Montreal there are about 80,000 persons unemployed. Canada's jobless were estimated to total about 440,000 on December 13, according to the most recent survey of the Canadian Bureau of Statistics and the Labor Department. This was a hike of about 79,000 over November.

The cardinal said his pastoral was prompted by the thousands suffering, materially and morally, and placed in social conditions which render difficult a life in conformity with Christian principles.

"How can we reconcile the paradoxical picture of thousands of citizens without work in a country which is immensely rich and in full development?" he asked.

"Who would dare to pretend, faced with such a situation, that unemployment is normal and constitutes at the most a necessary evil? Such a pretension would be as little in accord with morality as it is with present-day knowledge," he asserted.

"The Christian cannot remain indifferent before a situation which engenders such sorrowful consequences. Beyond the statistics and figures, he must recognize men, women, and children and aged reduced to poverty and exposed to the terrible temptations of despair.

"Deprived of all the moral advantages assured by work, the unemployed get the impression of being useless or being superfluous in society," the cardinal continued.

"This situation upsets the family and compromises its harmony. The father is humiliated by not being able to acquit himself of his responsibilities for his family; he feels himself impaired and sinking. Discouragement can take hold of him and idleness exposes him to all sorts of temptations. Crime which increases considerably during times of unemployment underlines further the gravity of this evil," the cardinal stated.

Lippmann Clears Up Some of the Confusion in the Missile Argument

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. ENGLE. Mr. President, once again Mr. Walter Lippmann has made an objective and penetrating analysis of a confusing controversy. In his column in this morning's Washington Post, entitled "McElroy's Troubles," he puts his finger clearly on the basic issue in the present controversy over whether or not we are ahead or behind the Soviets in the missile program. He points out that this is an issue that cannot be settled definitively because neither side of the argument knows precisely what the Soviets have. Mr. Lippmann correctly states that the basic error of the administration is equating the national security to a balanced budget at the existing level of taxes. This casts suspicion on military estimates because the real measuring stick of the military estimates is not the national security but what we can afford in terms of the budget level the President has selected. I agree with him that Congress should make it clear in no uncertain terms that the national security has the first priority.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Feb. 5, 1959]

MCELROY'S TROUBLES

(By Walter Lippmann)

In the swirling controversy over the Eisenhower-McElroy budget the inquiring bystander must, I believe, accept the fact that the basic issue is not one which can be settled definitively. There is a race of armaments. But who is ahead now, and who will be ahead 2 years from now is not something that can be measured quantitatively, even if there existed perfect intelligence with exact and complete knowledge of the quantity and quality of all the weapons on both sides. What statesmen really have to estimate is what is likely to be the judgment of other statesmen about the existing balance of power. In making these judgments they have to listen to the calculations of the experts in various specialities. But they must be able to make the necessary discount in these expert calculations, remembering that they are essentially about war games and not about the whole reality.

For these calculations are invariably theoretical abstractions—what for example, would happen if there were a war in which one side had X number of missiles and the other had X plus Y missiles?

At bottom the argument between the administration and Senator SYMINGTON is whether the balance of power should be calculated in terms of intercontinental missiles or whether it shall be judged in terms of the whole complex of armaments and of the international political situation.

My point in all this is not to say that Mr. McElroy and the administration are right. I think they are very wrong. But I do not think they are deliberately misleading the country. What they have done is to argue their case so badly that they are losing the confidence of the public.

The fatal error lies in the decision of the President to make the paramount issue of the present time a Federal budget balanced at the existing level of taxes, along with a promise of a reduction of taxes before the next presidential election. We are approaching one of the great climaxes of the cold war and the President's decision about the paramountcy of the budget reflects a failure to understand the nature of the cold war.

It makes suspect all the military estimates in the budget. For it is no part of the law of the land, or of that moral law which the President frequently invokes, that the existing tax structure cannot be raised and should be lowered. To insist on such a dogma about taxes is to tell the people and the world that national defense is not the first but only the secondary consideration in this Government.

From this it follows inevitably that Secretary McElroy's assurances about our overall strength are quite unconvincing. For nobody is prepared to believe that by a wonderfully lucky coincidence the money needed for national defense is just the amount of money we can afford to spend if the budget is to be balanced without raising taxes.

This initial error about the budget has forced Mr. McElroy into making the disastrous announcement that the United States has withdrawn from the missiles race. He may well be right that with fewer missiles there will still be an overall balance of power. But it is not good for the Russians and it is bad for our allies to be allowed to think that the richest nation on earth is unwilling to pay what it costs to stay in that part of the race of armaments which has the most horrible prospects. Secretary McElroy's announcement is a most lamentable way to prepare for the impending negotiations which Secretary Dulles is now dealing with in Europe.

What should be done about it? It should be said in no uncertain terms that defense has the first priority. If the President will not say it, perhaps Congress itself should say it by resolution. There should then be a substantial increase in the military appropriations, an increase sufficient to put us back into the missiles race. Then an increase of taxes should be voted in order to balance this larger budget.

I am aware that the extra money invested in making more of the existing missiles may be "wasted"—wasted in the sense that these missiles will soon be obsolete and good only for the junk pile. But the race of armaments is in the same sense inherently wasteful since the objective is to make weapons which will never be used and will soon be obsolete.

Nevertheless we are in a race of armaments. It would be a great day for mankind if it could be ended. But if the race is to be ended, this will be done only if and when we are able to reach general political settlements with the Communist powers. The race of armaments cannot be ended or suspended merely because we wish to balance the budget without raising taxes or because it would be good politics to reduce taxes before the next election.

Committee Chairmanships

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. PROXMIRE. Mr. President, my remarks on the floor of the Senate Monday regarding the obvious weakness in adherence to strict seniority in committee chairmanships has prompted a considerable and encouraging response from many parts of our nation. I have also received an interesting and generally favorable reaction from some of my Senate colleagues.

Letters and wires, according to the present count, are running about 50 to 1 in favor of my position on Seniority Rules. I intend to go into this matter in some detail in the future. I am delighted with the favorable response.

I ask unanimous consent to have printed in the Appendix of the RECORD two typical responses to the position I have taken. One is a letter from Maryland; the other, a wire from Cleveland.

There being on objection, the letter and telegram were ordered to be printed in the RECORD, as follows:

SILVER SPRING, MD., *February 4, 1959.*

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PROXMIRE: I have read with great interest and care your statement on the floor on February 2, 1959, relative to the designation of committee chairmen. Although I am not one of your constituents—indeed, I have not had the pleasure of meeting you—I should like to express my deep appreciation for your very accurate, courageous, and exceedingly timely statement.

May I recommend that you ask the Legislative Reference Service of the Library of Congress to prepare and publish an historical analysis of the selection of committee members and committee chairmen in the Senate? I have the decided impression that the seniority system is of relatively recent origin. I recall from reading history that frequently outstanding Senators were selected as committee chairmen in their first term as late as the end of the 19th century. It seems to me that the information which the Legislative Reference Service might bring together would be of great value in the educational phase of what I hope you will undertake as a long-range attack on the unfortunate and almost completely indefensible seniority system to which you directed your remarks on Monday.

SOUTH BEND, IND., *February 4, 1959.*

Hon. WILLIAM PROXMIRE,
Senate Office Building,
Washington, D.C.:

Congratulations on your effort to change Senate procedures resulting in Dixiecrats always heading important committees. In this effort you are ably representing all of us.

FRANK HENSON,
Cleveland, Ohio.

Wisconsin Conservation Expert—Age 11

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. WILEY. Mr. President, over the years, Wisconsin has developed an outstanding construetive conservation record. The program has included soil and water conservation projects, reforestation, development of watersheds, and a wide variety of other constructive activities for protecting and improving our natural resources.

Recently, the University of Wisconsin sponsored a Farm and Home Week. During the week, special programs were held at the university to cover such subjects as: Utilization of basic natural resources wisely; farm and home management; research and its impact on agriculture; special meetings on product marketing; social problems; homemaking; and a variety of other topics of interest.

During the activities, there were of course, a number of addresses delivered by authorities in various fields. Interestingly, a fine report on conservation was presented by an 11-year-old farm boy, George Gullickson. A prizewinner in a statewide speaking contest, George gave a report of soil conservation and preservation, including the planting of 1,000 pine trees, that won the warm applause, and the hearts, of the crowds attending Farm and Home Week.

A recent issue of the Milwaukee Journal carried an article about this young man's achievements—illustrative of the importance of instilling early in the youth respect for, and the necessity for, conservation of our natural resources.

I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Jan. 30, 1959]

CONSERVATION EXPERT, ONLY 11, BEST OF ALL—CHEERS FOR FARM BOY FROM POLK COUNTY ARE THE LOUDEST AT UW PROGRAM

(By Lewis C. French)

MADISON, WIS.—A pint-sized Polk County farm boy, just 11 years old, Thursday made the best speech of the whole University of Wisconsin farm and home week program.

Reading his dime store notebook manuscript, little George Gullickson, who comes from crossroads Cushing in the sand-blown country near Bass Lake, told a simple but challenging story of soil, water, and timber conservation. An overflow crowd cheered so loudly that it almost lifted the rafters of Great Hall in the Memorial Union.

There had been a dozen speeches on the need for faster and more scientific work to protect natural resources. D. A. Williams, the administrator of the soil conservation service, and professors with a long list of degrees spoke on the problems of anchoring enough of the eroding topsoil so that this Nation could continue to be the land of abundance.

HE STRIDES BOLDLY

The soil conservation district supervisors and others endured all this and more. Then, near the end of the program, the youth from Polk County, a prizewinner in a statewide speaking contest, got his chance.

He told how the early colonists found rich soil and grew cotton and tobacco until the land ran out of fertility and eroded down to red clay. Then they moved West, raiding new country rich in pine and forests and clean water—always new land. Then the new land gave out and there was no more.

"Little by little there was less of that rich soil, there was less of the wildlife, less of the fish, less of the clean water. And then settlers began to wake up," said this sixth grade farm boy. "Erosion was a silent thief stealing our topsoil."

BISON DESTROYED

He gave an account of the ruthless destruction of the bison and other wildlife.

Then George Gullickson took his spellbound audience right up to Polk County, where storms of flinty sand cut down crops, where drought blistered crops that farmers needed to buy socks and shoes for their families.

"There was a continued loss of that rich and dark blanket of soil your dad and mine need to raise crops for the cows, the pigs, and chickens," said this lad.

Then he told how in 3 years he and his twin sisters, Marion and Marilyn, a year older than he, planted 1,000 pine trees on rough land near a quarry on their farm. And how even now the Norways are higher than his head.

TREES PLANTED

And he told how the county and the town of Sterling took 9,996 acres to plant 600,000 trees.

"Now the township has not had to make a tax assessment for township purposes for years," said George. "The forest paid the township costs."

He told of seeing muddy roads with topsoil slopped down from the slopes and the gullies. "Do not do this to our country. Leave a heritage of abundance, soil, clean water, and timber," he said.

The throng got up and cheered and after the Polk County champion got his $50 bond prize they broke out in a second round of applause.

Airport Aid

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. SPARKMAN. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an editorial from the St. Louis Post-Dispatch of recent date entitled "Airport Aid Is Needed."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIRPORT AID IS NEEDED

In mustering its forces to oppose the resubmitted bill calling for a billion-dollar airport construction program, the administration is putting economy ahead of the country's best economic interests and national defense. This measure, which was pocket-vetoed last September 2, would grant the States a total of $575 million in matching money for airports during the next 5 years.

Mr. Eisenhower believes that a transitional program, in which $200 million would be allocated during the next 4 years, is sufficient. With the jet and turbojet airliners just beginning to come in, and major airports all over the country needing to be extended and strengthened, is it wise to withdraw Federal aid at this moment?

Only a few airports are now equipped to handle the jet airliners safely and efficiently. The air lines, committed for more than $2 billion of jet planes and under severe restrictions that keep them from fare increases, have no ready cash surpluses. Some cities and States are also financially unable to make the swift improvements needed.

The military value alone of the new jet airliners more than compensates for the Federal aid that would be granted. Under emergency conditions the civil reserve air fleets could provide more than 9 billion tonmiles of airlift annually. It is estimated by the Air Transport Association that this reserve air fleet would represent a billion-dollar saving to the taxpayer in military planes that otherwise would be necessary.

Missouri and St. Louis share in this vital problem. Just last October the Federal Airport Use Panel, after long study, reported that the St. Louis metropolitan area should provide at least one additional all-weather civilian airport.

Under the new bill sponsored by Senator MONRONEY, of Oklahoma, and Representative HARRIS, of Arkansas, Missouri would be eligible to receive $1,736,412 in Federal airport aid. In rank according to the amount of money the States would be eligible to receive, Missouri stands ninth. Texas is first, California second and Illinois fifth.

The airport aid bill is desirable and necessary. We hope Congress adopts it by a wide enough margin to override a second veto.

Inflation

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Chicago Daily News of February 2, 1959. It deals with the subject of inflation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CUT FEDERAL SPENDING—INFLATION CAN BE LICKED, EXPERTS AGREE, BUT CONGRESS AND THE EXECUTIVE MUST QUIT PLAYING POLITICS

President Eisenhower has declared a "relentless war" against inflation.

In his economic report to Congress January 20 he warned that U.S. economic health is jeopardized by spiraling wages and prices.

But can inflation be stopped?

And if it can, then how?

The joint congressional economic committee, under Senator DOUGLAS, Democrat, of Illinois, has undertaken still another inquiry to get the answers.

But the fact is, inflation can be stopped. And the Senate finance committee, headed by Senator HARRY F. BYRD, Democrat, of Virginia, already has all the necessary formulas for stopping it.

They came from 71 of the keenest brains in the country—industrialists and bankers, economists, and professors.

The 71 men gave their expert views on curbing inflation early last year in answers to a questionnaire sent out by the Byrd committee.

These formulas were printed in a 758-page report.

The economic experts quoted made clear that they believe no formula can whip inflation until Congress and the executive branch stop playing politics and do the job.

President Eisenhower has named a seven-man Cabinet committee headed by Vice President NIXON to plan a battle against inflation.

Its continuing job, according to the White House, will be to study how to maintain reasonable price stability.

HERE'S THE WAY TO DO IT

What is the single, most important step necessary to curb inflation? The 71 experts answer with 1 voice: "Cut Government spending."

The prescriptions are there in abundance for Congress to act on to rescue the dollar.

Stop the ballooning of Government spending by turning a deaf ear to pressure groups that demand more and more and more.

Strip labor of its monopoly control over wages.

Make corporations consider the Nation's good when they establish their price and production policies.

Revise the tax laws to put a premium on thrift rather than on waste.

Restrict consumer credit when it threatens to get out of hand.

Some of the recommendations, their sponsors admit, would be painful on segments of the economy—segments with votes—but they are urged nevertheless for the good of the whole Nation.

GOVERNMENT ADDS MOST TO INFLATION

On the need for economy, Gerhard Colm of the National Planning Association said:

"In 1957 the total expenditures of governments (Federal, State and local) in the United States amounted to $114.1 billion."

This mammoth sum, representing 26 percent of all the goods and services produced in the country, is said to be the biggest single source of inflation, even in years when the budget is balanced.

But wouldn't it be just as inflationary if the same money were left in the hands of taxpayers and spent by them?

No, said Arthur F. Burns, former Chairman of the President's Council of Economic Advisers. His reasons:

Government officials, not given to bargain hunting, are less efficient shoppers.

A high proportion of their buying is on a cost-plus basis, that is, the contractor gets his percentage profit regardless of how high he lets his costs soar.

Government contracts are required by law to include provisions on minimum wages and other labor standards (which, no matter how desirable, increase costs).

Frank E. Jerome, a Seattle bank president, added that if the same money were left in the hands of the taxpayers, part of it would be saved—and savings are deflationary.

Carl E. Allen, president of the Federal Reserve Bank of Chicago, recommended this approach to Government belt tightening.

He said officials should ask themselves not "Is this something we would like to have?" but "Is this something we can do without?"

WANTS SERVICES ON LOCAL LEVEL

Pressing for action on a favorite proposal of President Eisenhower, Ralph J. Cordiner, president of General Electric Co., urged:

"Transfer as many Government services as possible from the Federal to the State and local levels.

"The construction of schools, highways, and public buildings by the Federal Government adds to the inflationary potential of the public debt."

The reasons for this are technical. Local governments finance their projects by long-term bonds, the sale of which takes money out of circulation and thus is deflationary.

(Much of the Federal debt is financed by short-term obligations which, sold to banks, become a reserve for expanding credit. This is inflationary.)

Recommended for immediate action by Frederick W. Ecker, president of the Metropolitan Life Insurance Co.:

1. Put into effect the economies called for by the Hoover Commissions, which would save many millions.

(Of the 1947 Hoover Commission recommendations, 72 percent have been adopted by the Government; of the 1953 ideas, only 53 percent are in effect.)

2. Enact the McClellan bill, which calls for a joint, expertly staffed, budgetary watchdog committee in Congress.

3. Give the President the power of "item veto" in appropriations bills, a power that 40 State Governors now have.

(When a pork-barrel bill now comes before the President, he must reject or accept it all—the good projects and the wasteful. Item veto would allow him to reject the worst features without killing the whole bill.)

Ecker added, "Unwarranted increases in social security benefits add to inflationary forces."

One expert after another shook a finger at farm price support policies, which are inflationary in a double way.

First, farm product prices are kept at an artificially high level, and secondly the Government spends billions annually to keep them there.

HOW TO MANAGE HUGE U.S. DEBT

In other Government fiscal recommendations, the economists and industrialists were in general agreement on how the gigantic Federal debt should be managed so as to cause the least inflationary harm.

The principle behind their ideas, though long known to economists, frequently has been violated by Treasury action.

Frederick L. Deming, president of the Federal Reserve bank of St. Louis, stated the principle:

"Sale of long-term securities and retirement of short-term issues during inflation would tend to reduce liquidity and hence inhibit bank loan expansion."

Other sources urged that Treasury securities "should be placed as far possible in the hands of investors other than banks."

The idea here is not too complex for general understanding.

When a private investor buys a bond, the money passes out of circulation. When a bank gets it, the bond is used as a base for new loans and the money is spent over and over again.

When more money circulates in the economy and the things available for purchase by the public remain static, prices of course go up. This is the basis of "classical" inflation.

The chief arm of the Government in regulating the supply of currency in circulation is the board of governors of the Federal Reserve System.

The Fed, as it is called, was widely—if not unanimously—praised in the reports to the Senate committee for wisdom in the way it has used these monetary controls.

But several economic specialists said that it can't do a fully effective job because its powers reach only into a fraction of the banking system—the banks that are Federal Reserve members.

Howard Ellis, professor of economics at the University of California, urged that all commercial banks, members or not, be brought under the credit-limiting powers of the Fed.

Others went further and recommended that the controls be extended to cover nonbank lending institutions—such as savings and loan associations and installment finance companies—which have grown phenomenally in recent years.

H.R. 1012, Liberalizing the Railroad Retirement and Railroad Unemployment Insurance Acts, Should Be Approved Immediately

---

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1959

Mr. VAN ZANDT. Mr. Speaker, yesterday I appeared before the House Committee on Interstate and Foreign Commerce in support of proposed amendments to the Railroad Retirement and Railroad Unemployment Insurance Acts, including my own bills, H.R. 1370 and H.R. 1373.

My statement follows:

STATEMENT OF REPRESENTATIVE JAMES E. VAN ZANDT, 20TH DISTRICT OF PENNSYLVANIA, BEFORE THE HOUSE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, FEBRUARY 3, 1959, IN SUPPORT OF AMENDMENTS TO THE RAILROAD RETIREMENT AND RAILROAD UNEMPLOYMENT INSURANCE ACTS

Mr Chairman, I deeply appreciate the opportunity to appear before you and the members of this committee in support of bills I have introduced to amend the Railroad Retirement and the Railroad Unemployment Insurance Acts.

The legislation has been introduced by me in previous Congresses and has the support of many individuals and groups among the railroad population of my congressional district in Pennsylvania and of the Nation.

The bills are as follows: H.R. 970 provides retirement on full annuity at age 60 or after serving 30 years, and further provides that such annuity shall be not less than one-half of the individual's average monthly compensation for the 5 years of highest earnings, and so forth.

H.R. 971 provides that an annuitant be permitted to continue to perform compensated service for the outside employer by whom he was last employed before his annuity began to accrue. H.R. 971 covers the situation where an employee about to retire is required to resign a clerical position with a church, civic, fraternal, or social organization.

H.R. 972 repeals the prohibition against the payment of both earned social security benefits and spouse benefits under the Railroad Retirement Act. At the present time a spouse entitled to earned social security benefits is penalized by deductions from the amount payable as spouse benefits under the Railroad Retirement Act.

H.R. 1374 is a bill to provide a 20-percent increase in all widows' annuities. In this connection, the 1956 amendments to the Railroad Retirement Act granting an increase of approximately 10 percent did not include all persons receiving retirement benefits, with the result many widows were denied the increase.

Mr. Chairman, H.R. 1370 and H.R. 1373 represent my version of the Harris bill, H.R. 1012, with H.R. 1370 providing for an across-the-board increase of 10 percent in railroad retirement benefits and H.R. 1373 amending the Railroad Unemployment Insurance Act by providing an increase from 130 to 195 the maximum number of days of unemployment within a year for which unemployment benefits may be paid. The bill also liberalizes other provisions of the Railroad Unemployment Insurance Act and is identical to those provisions of the Harris

bill, H.R. 1012, that affect the Railroad Unemployment Insurance Act.

I want to go on record at this point of expressing my support of H.R. 1012 because I think it is a step in the right direction in recognizing the urgent need for amending the Railroad Retirement and Railroad Unemployment Insurance Acts. I should like to comment on H.R. 1012 and mention briefly some of its principal provisions.

In amending the Railroad Retirement Act, H.R. 1012 will provide:

1. A 10-percent increase of all monthly benefits effective January 1, 1958.

2. Female employees with less than 30 years of service or the spouse of a retired employee will be able to obtain retirement benefits at age 62 on a reduced annuity. This option is already in effect under the social security system.

3. Maximum creditable compensation for determining benefits and earnings subject to taxation would be increased from $350 to $400 a month for the purpose of broadening the tax base to secure the additional revenue needed to pay the cost of the proposed amendments and to liquidate almost entirely the present actuarial deficit in the railroad retirement fund of $213 million.

4. With the taxable base of earnings broadened to $400 a month or $4,800 annually, the tax rate on employers and employees will increase January 1, 1959, from 6¼ to 6¾ percent. On January 1, 1962, the tax will increase to 7¼ percent each.

In the field of railroad unemployment insurance benefits, H.R. 1012 would provide:

1. An increase in daily benefit rates of 50 cents to $1.70 a day higher than present rates.

2. A new schedule of rates ranging from a minimum daily benefit of $4.50 for annual compensation of $500 to $699.99 to a maximum benefit rate of $10.20 for annual compensation of $4,000 or more.

3. Unemployment benefit periods would be extended for employees with 10 or more years' service by 65 to 130 days, depending upon length of service beyond the 130-day maximum provided in the present law.

4. To finance the cost of additional benefits and to take care of the current deficiency, the tax base after 1958 would be increased from $350 to $400 and the tax rate would be increased so that it would range from a minimum of 1½ percent to a maximum of 3½ percent contingent upon the balance in the railroad unemployment insurance account. Minimum annual earnings needed to qualify for benefits would be increased from the present $400 to $500.

Mr. Chairman, as we all know, the 2d session of the 85th Congress increased social security benefits 7 percent effective January 1, 1959. In addition, for those unemployed whose insurance benefits terminated during 1958, an extension of 13 weeks was granted them.

Therefore, should H.R. 1012 become a law, the 10-percent increase in railroad retirement benefits provided for would become effective January 1, 1959, and for those unemployed railroaders whose unemployment insurance benefits terminated in June 1958, they would be eligible for benefits from 65 to 130 additional days, dependent upon length of service.

The bill actually gives to retired and unemployed railroaders the same treatment accorded persons retired under the Social Security Act or unemployed under the State unemployment compensation laws.

Mr. Chairman, I should like to dwell briefly on the situation facing retired and unemployed railroaders in my congressional district.

First, from a population standpoint I represent one of the largest railroad districts in the Nation. Therefore, I know the full impact of the cost of living on retired railroaders as well as the hardships of unemployment that exist in the railroad industry.

As an example of unemployment conditions in the railroad industry and the urgent need of extending the benefits period for railroad unemployment insurance benefits, I wish to call attention to the fact that in the 3 counties comprising my congressional district a total of 2,101 employees have already exhausted their eligibility for railroad unemployment insurance benefits.

At the present time 1,048 employees are receiving unemployment insurance benefits, and, of this number, 861 will exhaust their right before the new benefit year begins on July 1, 1959. At that time it is estimated by the Railroad Retirement Board that a total of 1,681 employees in my congressional district will be unable to qualify for railroad unemployment insurance benefits in the new benefit year because they did not earn sufficient wages during the calendar year 1958 to qualify for such benefits.

Mr. Chairman, in reviewing my efforts during my congressional career to give adequate service to constituents affected by the Railroad Retirement and Railroad Unemployment Insurance Act, I have been greatly aided by the members and employees of the Railroad Retirement Board not only at the Chicago headquarters but also at district and regional offices in Altoona, Pa., and Cleveland, Ohio, as well as the liaison representative assigned to the Washington office of the Railroad Retirement Board.

In December of last year I visited the headquarters office of the Railroad Retirement Board in Chicago to discuss with the chief executive officer cases of my constituents that came under the provisions of the Railroad Retirement and Railroad Unemployment Insurance Acts, and also to obtain an evaluation of the actuarial condition of the railroad retirement fund and the effect on the fund of legislation that has been suggested to me for introduction in this Congress.

While in Chicago, I also met with members of the Board and some of the staff. I was not only impressed by the way the information I requested was readily made available to me, but I was also impressed by the keen sense of interest and responsibility those Government employees had in administering the provisions of both acts and their consciousness of the existing inflationary trend.

The Board is also well aware of the economic changes that are going on in the railroad industry and of the possible effect of such changes on operations of the Railroad Retirement Board. With this in mind, they are continually reviewing operations to keep expenses at a productive minimum.

I learned that even before the request of the Bureau of the Budget was received requesting that a 2 percent reduction be made in personnel expenditures for 1959, steps had been taken to hold employment levels well below budget limitations so that there was no problem in adhering to the request.

It was pointed out to me that although the retirement load of the Board has increased greatly since the inception of that program in 1937 and will continue to increase for some years in the future, every effort is being made to find new ways of performing necessary services to prevent an increase in the present employment levels of the Board and if possible to reduce the level of employment.

This is already reflected by the fact that there were 87 fewer persons employed on January 1, 1959 as compared with January 1, 1958, even though the work volume was substantially increased.

It is a pleasuer to conclude my testimony by paying this well-deserved tribute to the members and employees of the Railroad Retirement Board for the efficient manner in which the administration of the Railroad Retirement and Railroad Unemployment Insurance Acts is accomplished and at a minimum of expense .

Such economy of operation is appreciated as efforts are made to find means of wiping out the deficiencies in both the retirement and unemployment compensation funds and to finance the cost of the much-needed amendments to existing laws contained in H.R. 1012.

Mr. Chairman, H.R. 1012 is needed and needed badly. It is the fervent wish of my constituents who will benefit from its enactment that it will become a law at the earliest possible date.

As I stated previously, the Harris bill, H.R. 1012, contains in one package the provisions of my bills, H.R. 1370 and H.R. 1373, and I sincerely hope the legislation will be enacted as quickly as possible and that at a later date the committee will consider the other bills I have introduced to amend the Railroad Retirement Act.

Providing Additional Funds for Direct Loans to Veterans

SPEECH

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 2256) to amend chapter 37 of title 38, United States Code, to provide additional funds for direct loans, to remove certain requirements with respect to the rate of interest on guaranteed loans; and for other purposes.

Mr. SAYLOR. Mr. Chairman, the purpose of this amendment is very simple. At the present time the Administrator of Veterans' Affairs allocates each regional office four times a year sums of money to be used for the direct-loan program. From time to time some of those mortgages are sold. The money that is received from the sale of those mortgages then goes back to the Veterans' Administration and is redistributed from the central office proportionately to all the district offices, not in the area where the mortgages were originally placed, only a small portion of it goes back into that area.

The purpose of this amendment is to see to it that if in any area you have people in the Veterans' Administration who have enough energy to get out and sell their mortgages they will have the money realized from the sale of their mortgages to reinvest with veterans' mortgages in the same area. That is the purpose of the amendment. It was rather technical to have it drafted, and I can say to the members of this committee that had the staff had the amendment ready it would have been adopted by the committee at its regular meeting.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the distinguished lady from Massachusetts.

Mrs. ROGERS of Massachusetts. I understand the Veterans' Administration would be very glad to have this amendment adopted.

Mr. SAYLOR. The Veterans' Administration would be very delighted to have this amendment adopted.

Mr. TEAGUE of Texas. I have no objection to the amendment, Mr. Chairman.

Shorter Workweek Urged by General Electric and Westinghouse Workers

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting letter received from Mr. Albert J. Fitzgerald, general president, United Electrical, Radio, and Machine Workers of America, in New York, urging Congress to adopt legislation establishing a shorter workweek, and to investigate the relationship between the rising rate of corporation profit and the increasing number of the unemployed:

UNITED ELECTRICAL, RADIO, AND MACHINE WORKERS OF AMERICA,
New York, N.Y., February 3, 1959.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR MR. LANE: On January 31, 1959, a meeting of UE delegates, employees of the General Electric and Westinghouse companies, voted to ask Congress to adopt legislation establishing a shorter workweek, and to investigate the relationship between the rising rate of corporation profit and the increasing number of the unemployed.

We, like the huge majority of all Americans, must depend for jobs upon employment by a corporation. In recent years the General Electric and Westinghouse Electric companies have discarded by layoff 60 to 70,000 of their employees. Thousands of these employees have long years of service. These companies have embarked on a policy of systematic layoff of employees and abandonment of whole plants and communities as a means of pushing profits to record-breaking levels.

The corporations are wholly free to employ workers or to lay them off. They take the profit that they have made from the work of thousands of employees in one community to build a new, modern plant, employing hundreds in another, and completely abandon both workers and community which made the new plant possible. This enormous and unrestrained economic power over the lives of our citizens is exercised without consideration of humanity or social responsibilities. The corporations disclaim responsibility for the plight of their discarded employees and the blighted towns they abandon.

The General Electric Co. and Westinghouse Co. have abandoned or are about to close plants in Pennsylvania, New York, New Jersey, Indiana, Massachusetts, and elsewhere. In other established plants in these same areas, where thousands of workers have been laid off in past months, the companies are continuing layoffs.

While this is going on both corporations are announcing higher profits on drastically reduced employment.

Vice President Jack S. Parker, of the General Electric Co. declared in September: "We see business picking up pretty generally, but through economies we have made, our employment level won't get back as high as it was at the peak."

Mr. Parker's economies are jobless GE workers and blighted communities. This Union, the UE, has addressed itself seriously to the problem of returning tens of thousands of General Electric and Westinghouse workers to their jobs. In collective bargaining negotiations, this past fall, with both corporations the union proposed a 2-year program to shorten the work week to 35 hours without reduction in weekly earnings. This would have returned some 50,000 General Electric and Westinghouse workers to gainful employment. The seriousness of the proposal by the union is marked by the fact that the General Electric and Westinghouse workers offered to apply two annual wage increases contractually due them toward the cost of instituting the shorter work week. This offer by General Electric and Westinghouse workers would have covered approximately half the cost of the program. No other program for returning the jobless to work was offered by either company.

To date neither company has given the slightest indication that either recognizes its responsibility to the workers and communities which its present policies are destroying. Two days after the proposal for saving jobs had been made, the General Electric Co. publicly announced its total rejection.

The problem placed before you largely in terms of the plight of General Electric and Westinghouse workers is one that affects every industrial worker in the Nation.

Today, with gross national production virtually back to its prerecession level, only 30 percent of the decline in non-farm employment has been recovered since the low point last April. Unemployment today consistently under-estimated by the Department of Commerce stands near 7 million if proper allowance is made for those on short time and short earnings and the million new workers who annually come into the labor market.

We believe that Congress should direct its most serious attention to the problem of grave continuing unemployment, a labor problem that far transcends in importance other labor matters that are currently receiving far more attention from Government.

Congress can and should give leadership to the American people in helping solve the problem of unemployment. We ask specifically for:

1. Legislation to reduce the length of the standard work week to not more than 35 hours a week. This should be done in a way that will not simply re-distribute the present inadequate share of the national income among the employed and unemployed workers of America.

2. Congress should conduct open hearings and an investigation into the matter of the rising rate of profit in relation to the constantly increasing number of the unemployed.

We submit that this is a minimum course necessary not only from the most profound humane and social considerations, but an absolute necessity for the economic health of the Nation.

We call to your attention a few reported facts drawn at random out of many hundreds which compel the same conclusion:

The U.S. Treasury Department currently estimates that 1959 corporation profits will set a new record of $47 to $48 billion. This is far higher than the 1956 peak of $45½ billion in a year of relatively full employment. Federal Reserve Board and private business analysts foresee 1959 corporation profits as high as $50 billion.

The magazine Business Week of January 3, 1959 declares: "The only question seems to be how much more abundant the gravy will be."

Fortune Magazine reports: "Man-hour productivity has resumed a dramatic climb. * * * The spurt in productivity also affects the outlook for employment * * * profits margins are widening as output advances faster than man-hours."

Business Week writes:

"Rising productivity is having a two-fold impact on the economy: it's reducing labor unit costs and, with companies doing a bigger volume of business, is already boosting profits.

"It's slowing the rehiring of laid off workers, creating fewer job openings for new entrants to the labor force and keeping unemployment at higher levels than during earlier post-war recoveries."

The Wall Street Journal says: "New plants pay off in soaring output with less manpower. Today's 11.9 million workers turn out 35 percent more than 12.7 million did in 1948."

The New York Herald Tribune says: "About six hundred thousand jobs disappeared during the 1953–54 recession and another 1 million are due to vanish during the current down-turn. That means that almost one out of every seven factory production workers will have been chopped from the country's industrial payrolls."

We believe that the fact of continuing unemployment with high levels of production and profit show that the shorter work week is overdue. As the corporate employers of America reject responsibility for the economic welfare of the American people, responsibility for immediate and constructive action clearly lies with Congress. We sincerely hope that Congress will rise to the occasion and act in this most serious crisis.

Respectfully yours,
ALBERT J. FITZGERALD,
General President.

Abraham Lincoln's Message to Congress Concerning Labor, December 3, 1861

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very timely article which appeared in Steel Labor, the voice of the United Steelworkers of America, published in Indianapolis, Ind., issue for February 1959:

Labor is prior to and independent of capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed.

Labor is the superior of capital and deserves much the higher consideration. Capital has its rights, which are as worthy of protection as any rights, nor is it denied that there is, and probably always will be, a relation between labor and capital, producing mutual benefits.

The prudent, penniless beginner in the world labors for wages a while, saves a surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him.

This is the just, and generous, and prosperous system, which opens the way to all, gives hope to all, and consequent energy, and progress, and improvement of conditions to all.

No men living are more worthy to be trusted than those who toil up from poverty—none less inclined to take or touch aught which they have not honestly earned.

Let them beware of surrendering a political power which they already possess, and which, if surrendered, will be surely used to close the door of advancement against such as they, and to fix new disabilities and burdens upon them, till all of liberty shall be lost.

The struggle of today is not altogether for today; it is for a vast future also. With a reliance on Providence, all the more firm and earnest, let us proceed in the great task which events have devolved upon us. (Abraham Lincoln in his message to the Congress, Dec. 3, 1861.)

Shall We Repeat the Mistakes of the 1920's?

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. UDALL. Mr. Speaker, many of us have constituents who, by their insight and capacity for creative thought, from time to time impel us toward solutions of major national problems. One of my constituents who has a well-earned position in this category is Louis W. Douglas, a former Member of this body, who is presently chairman of the board of Mutual Life Insurance Co. of New York, and, not so long ago, was our Ambassador to the United Kingdom.

In a speech to the Life Managers Association of Greater New York last month, Mr. Douglas discussed the problem of preserving stability in the foreign exchange market. His thesis was that if we are to achieve orderliness and stability in our own financial markets over the long run we must in turn allow others to earn dollars which will enable them to discharge their obligations to the American Government and its business concerns. Drawing on the lessons of the 1920's, Mr. Douglas asserted that unless there is a free flow of international commerce—combined with stabilizing factors such as our foreign-aid program—other countries will not have the capacity to discharge their debts, and that the distortion of the world exchange structure will ultimately bring chaos and economic disaster everywhere.

I would suggest that Mr. Douglas' observations should be weighed carefully by those who formulate our international economic policies, and I commend his speech, which I include under unanimous consent, to our colleagues.

The speech follows:

I appreciate very much indeed the cordial invitation you have extended to me to be with you this evening. It is not at all clear that you will feel toward your officers the same sense of gratitude that I feel toward them.

If we review objectively the course of history over the last half century, I think we must conclude that the period is one of the most revolutionary in modern times. The changes in the structure of society, within the frontiers of each nation state, we can identify without exaggeration as being fantastic in both magnitude and character. Within the orbit of international affairs the environment has changed no less strikingly. Never in such a short span of time has the international order of things been so completely uprooted. Never in such a short span of time has there been such a migration to the East and to the West of the centers of power. Never in such a short span of time has there developed such a sharp philosophical chasm between two such large segments of the world. Never in such a short span of time, between the two, have the amenities of diplomatic conduct been so profoundly debased, if indeed there are any amenities left at all. And never in such a short span of time have the international monetary and financial system and the international movement of commerce in the channels of trade undergone such revolutionary modifications.

It is in connection with the effect, on our vital national interest, of these changes that I should like to speak tonight.

I am confident that, within the limited period of time at our disposal, what I say will be an oversimplification of the matter; but I am equally confident that it is a subject which touches the lives of each one of our countrymen—whether he be butcher, baker or candlestick maker; whether he be engaged in the business of insurance, the manufacture of automobiles, of mining nonferrous metals, of extending credit, of healing the infirmities of the ill, or indeed of any other useful occupation.

One of the greatest difficulties of relatively conservative-minded men and women—indeed, of all people—is to accommodate their intellectual processes and their judgments of policies and measures, both private and public, to the changes that have occurred in this, the most revolutionary period of history since the disintegration of the holy Roman Empire. Far too frequently, the person with the conservative bent of mind continues to think and act as though this own conception of things were a true reflection of his environment, and as though forces that have been created during this revolutionary period—so intensified and aggravated by two great wars and their aftermath—did not exist at all. The problem of the conservative is to identify these novel forces that are operating, try to direct them and to control them in order to preserve the best and, indeed, the fundamental principles upon which American society rests. Such, for example, as the right of the individual to save and to expend, to invest, to make a profit or sustain a loss, to enjoy the basic human privileges of speaking one's mind, of seeking redress, of worshiping the God of one's own choice, of owning property, of preserving the rights of minorities, indeed of all the basic concepts that are embedded in our Constitution.

An example of the sort of problem to which the conservative should attempt to adjust his mind finds its image in the general view held by many people that it is the function of government to intervene in economic affairs in order to attempt to arrest or modify the exaggerated movements of the business cycle. Whether over long periods of time government successfully can achieve this objective without creating problems far greater than the ones governments undertake to solve is a matter which only the years and experience will adequately test. But any government which asserts that it is not a public responsibility to try to prevent the appearance of wide-scale unemployment will shortly lose the enthusiasm and the confidence of its supporters. The problem is not, therefore, how to avoid doing what people expect governments to do, but rather by the enactment of what measures and the employment of what devices governments will attempt to reach the objective.

Dr. Arthur Burns has spoken pointedly and wisely about this question.

There are many other examples about which the conservative should adjust his intellectual processes which could be cited if he is to preserve some measure of influence in the development of public policies. It is within the context of a society much modified over the last 50 years by violent pressures of change and revolution that many matters could be discussed with you tonight. There is, for example, the question of taxation and the volume of public expenditure; the weight of the former upon the individual and the country's institutions; and the vast enlargement of the area of economic activity into which the latter has insinuated government authority. There is the long-term problem of inflation and the highly contradictory series of public policies which necessarily limit the power of the Federal Reserve System to control it. There are many questions of international affairs, especially with the apparent advent of another Berlin crisis, which should not have come upon us as a surprise. But it is of the international monetary system, the wide changes that have occurred in the commercial relationship of our own country with the rest of the world and the consequent extremely fragile stability of the international financial system that on balance it would seem to me more interesting and more of a novelty to speak about.

It is perhaps not obvious to the person in Keokuk, Iowa, in Elgin, Ariz., or Memphis, Tenn., or even to many in the heart of the financial district of New York that their economic welfare and the internal health of our country are profoundly influenced by variations in the value of foreign currencies, particularly of world currencies against the dollar.

I should, at this point, draw the distinction between a hard currency and a world currency. The Swiss franc, the Canadian dollar, and perhaps one or two other currencies can well be labeled as hard currencies, but the volume of world trade will not be substantially influenced and historically has not been much affected by a fluctuation in the value of these currencies against our own dollar, despite the large trading account we enjoy with Canada. Sterling, on the other hand, which enjoys at the moment a tenuous strength, and in which more than 50 percent of the total international commercial transactions are conducted, cannot be identified as a hard currency. Yet should there be a deterioration in the value of sterling expressed in terms of dollars, the volume of world trade would shrink, prices would be adversely affected, our internal structure of values would be undermined, and the vitality of our internal economic affairs would be subjected to enervating influences. The historical evidence on this particular point is unimpeachable. The strength and vigor of our internal economic system are affected favorably or unfavorably as the stability and orderliness of sterling in relation to the dollar are preserved or undermined. It is perhaps well to be reminded of the experience which commenced in 1929, and which lasted until the threat of war and wartime activities reduced to a manageable figure the permanent and massive body of our unemployed that was one of the unique phenomena of the thirties. The depression which started in 1929 with the stock market collapse, intense though it was, was manageable until in September of 1931, the British were forced to abandon gold payments, and sterling depreciated against the dollar. Within 6 months of this historic milestone, unemployment rose by over 5 million—it almost doubled—the price of commodities went tumbling down, the stock market plummeted downwardly a greater percentage than had been its fall during the entire preceding 2 years. All values began to wither. The volume of world trade shrunk; and the foundation was laid for the banking crisis and credit demoralization which we experienced in the early months of 1933 when unem-

ployment rose to the alarming figure of over 14 million.

I refer to this historical experience to punctuate the frequently demonstrated—but unhappily not widely understood—relationship between our own internal economic welfare, the vitality and the strength of our industrial activity and the maintenance of a sound world currency. Why, you may well ask, did this catastrophic financial debacle occur? The answer to this question is to be discovered in the far-reaching changes that occurred in the position of the United States vis-a-vis the rest of the world in commerce and finance as a result of World War I. Before this violent disturbance, in what had been the general tranquillity of human life throughout almost a century of experience, we had been a debtor nation. Since the close of the Civil War, with but two brief intervals, we had been adopting a progressively protectionist policy. Provided we owed sterling and French francs to investors from Britain and France and other European countries, the question of stability of international exchange rates was never critical, so long as the great creditor, Britain, pursued a policy of free trade. We could exclude imports. We could protect many of our industries—as indeed we did—because our problem was not how to permit others to earn dollars to service their debts to us or to produce a return on our equity investments abroad, but rather how to obtain foreign currencies in order that we might discharge our debts to others and that others might earn a return on their equity investment in our own country. We, for example, needed sterling and francs. The British and the French did not need dollars.

But World War I completely reversed the position. We emerged from this first great world conflict since the Napoleonic wars as a great creditor nation. Moreover, our industrial system had gathered weight and strength and vitality which were to make it one of the most impressive economic systems in modern history. Accordingly, we developed, throughout the period of the twenties, a surplus of the trade account which, combined with our position as a great creditor, made it imperative that we allow others to earn dollars in order to service their debts to us and to redress their adverse balance of trade and thus preserve stability in foreign exchange markets.

At the very time when, in our own interest, this became imperative for us to do, we followed precisely the opposite course. We reversed the tendency toward lower tariffs established under the provisions of the Underwood Tariff Act. We enacted the emergency tariff legislation of 1921, and supplemented it with the Fordney-McComber Tariff Act which provided for the highest protective barricade American industry had ever had before in our history.

The fundamental weakness in the exchange position, which was caused by the policies we pursued and by the inflexibilities that had developed in the internal economies of other countries, was for many years concealed by the large volume of capital invested by us on private account, principally in South America and central Europe, throughout the decade of the twenties. But despite this large export of capital by private investors in foreign countries, gold flowed almost continuously throughout the 10-year period in a westerly direction to the United States. It was only through this westward movement of gold that the imbalance in international accounts could be redressed. It was this westward current of gold which was to make sterling so vulnerable when at last the illusion of the 1920's vanished and the starke naked fragility of the situation became apparent. When the stock market broke in the fall of 1929, the exportation of dollars on private account as well as public account came to an abrupt halt. The fundamental weakness in the exchange position then began to become sharply silhouetted. But we stubbornly clung to the same policy. The Smoot-Hawley Act further restricted imports and further restricted the ability of others to earn the dollars necessary to service their debts to us. The migration of gold westward continued at an accelerated rate; the termination of the loans that had been made to central Europe created a crisis which forced the Credit Anstalt suddenly to withdraw its short-term balances from the Bank of England. The gold reserve of the sterling area evaporated, and by September 1931 Britain had no option but to discontinue gold payments. Sterling fell sharply against the dollar.

The international monetary machinery lay in ruins, international trade withered and shrunk as it had not shrunk since Waterloo. The depression was upon us with an intensity heretofore unexperienced throughout the course of more than a century.

Now our position—not necessarily for today but for long term—is even graver than it was in the twenties, and our surplus on trade account, after all the subtractions are made on account of foreign aid, is probably the largest of any country in modern history. Others must, therefore, earn more dollars than was ever necessary in the twenties if orderliness in the exchange markets is to be preserved, and if we are to avoid the consequences of a deterioration in the value of sterling against the dollar. And yet the paradox of the situation is that, despite what moderate downward adjustments have been made in our impediments to imports, our public policy prevents others from earning the dollars that, in our interest, it is so essential that they earn.

It would, I suggest, create internal difficulties of great intensity were we to reduce too suddenly our protectionist policy.

How then, if we will not, in the immediate future, allow others to earn dollars in order to maintain orderliness in the exchange markets, can there be achieved the orderliness and stability which are so important to the lives of our countrymen?

If we won't permit others to perform services for us, and to import enough to collect dollars from us and thereby to lay a solid foundation for confidence in exchange rates, then we must, on public account, export the dollars that we will not allow others to make. Instead of calling the program which, heretofore, since the close of the war has been called foreign aid, it should, in fact, be called a device to preserve stability in international exchange rates—for this is now the basic purpose of the exportation of dollars.

This problem of preserving stability in the foreign exchange markets would be with us if the Soviet and ourselves and the Communist world and ourselves were living in complete amity. This problem would still be with us if there were no chasms that divided the world into two parts. This problem of exchange stability would still be with us were there no international threat whatsoever to our security.

I recognize that there has been an outflow of gold during the course of the last 12 months, but this has been in large measure a product of the difference in interest rates and the more favorable terms of trade which the decline in the price of basic raw materials has established for the United Kingdom. It is in some measure, too, the product of perfectly normal, natural, temporary deviations from the long-term trend.

I recognize also that the volume of American exports has fallen more than has the volume of foreign imports. But even after making all the adjustments, the brute fact still remains that there is a very large and ominues deficit in the balance of payments. If this deficit continues and is not made up, either by an improbably large and permanent volume of imports, or by a corresponding export of dollars, we can expect a period of exchange disequilibrium and confusion at some time in the future. This deterioration of other currencies, and particularly of sterling against the dollar, is apt to produce here at home a serious economic convulsion not unlike the one that was produced in the early thirties when the same sort of deterioration occurred for much the same reasons.

It would be deceptive to deny that there have been some infirmities in the administration of the foreign aid program, or to deny that frequently it has failed to make friends. But even the validity of these criticisms—if they are valid—of foreign aid does not destroy the case, or lessen the need for the exportation of dollars necessary to preserve a stability of exchange rates. Our own national interests require it.

An alternative solution to the problem would be to become free trade and to eliminate foreign aid. This course is philosophically logical, and it is logically philosophical. But to expect that this will happen within any reasonably limited period of time is, to quote Adam Smith, to expect Utopia. Moreover, if it were done too suddenly it would cause serious dislocations here at home. It is perhaps cynical to argue that, because large segments of our private economy are being subsidized through tariff quotas and other restrictions on imports, they should receive a double subsidy by insinuating dollars on public account, and therefore from the taxpayers, into the channels of foreign trade which the tariff and other restrictions on imports and services prevent others from earning. But this, for a creditor nation, is the cost of protectionism. The alternative—a shakeout in exchange rates which could, during a period of deflation, rock us on our economic foundation—is far more alarming and distressing picture to contemplate.

There are, of course, other aspects of the problem of the exportation of dollars. We do live in a perilous world. We are under the potential threat of external attack with the most frightful lethal weapon. We do, therefore, need allies that are strong in an economic sense and that can muster some military might. It is not debatable that the Communist world is attempting to capture the more primitive and undeveloped parts of the world and to imbed them within their own Communist dominion. On these scores the American dollars are necessary. But I have deliberately divided the problem up into segments tonight and have tried to confine the major weight of the case to the economic situations that touch vitally our internal national economic welfare. I have so divided the whole problem and have dealt with the economic considerations, because others have dealt so adequately with other aspects of the problem. I have done so, also, because administrative officers and legislators, in their highly commendable efforts to save dollars, may strike at one of the very items in the budget which might, in a certain economic environment, cause this country the greatest pain and suffering, and which might upset our position in the world, diminish our prestige, and even cause a lamentable weakening of our North Atlantic Treaty Alliance, if indeed it might not shatter it to bits. This would be a frightful catastrophe, for the North Atlantic Treaty Alliance is the heart, the bone and the sinew of our national security and the foreign policy of most of our Western allies.

There are a number of factors such, for example, as the progress of others toward making their currencies convertible, the extent to which we, in fact, reduce our impediment to the flow of international trade and investment, and the effectiveness of measures taken here and elsewhere to restrain and check the powerful inflationary forces that

have been pressing prices upward. All these and several others might form a realistic basis for dtermining the amount of dollars that the Congress should authorize to achieve exchange equilibrium.

I can do no more than to plead for a reexamination by everyone of his own conception of reality and of the environment in which he lives. For, as a great historian has put it, "There are times when we can never meet the future with sufficient elasticity of mind, especially if we are locked in the contemporary systems of thought."

This is one of those times.

Legislation To Create a Coal Research and Development Commission Will Prove a Boon to the Nation's Coal Industry and Should Receive Favorable Consideration by the 86th Congress

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. VAN ZANDT. Mr. Speaker, on January 7 I introduced H.R. 1179 which would create a Coal Research and Development Commission as an independent agency. A number of other Members of this House on both sides of the aisle have introduced like proposals. It is our hope that this legislation can be acted upon expeditiously and that the coal research body can be put into operation soon.

This legislation is identical to bills which were introduced in the 85th Congress. In the Senate the bill was passed and sent to the House. In this body the legislation was approved by the House Interior and Insular Affairs Committee, but was caught in the rush of legislation during the final days of the session.

The creation of the independent Coal Research and Development Commission is the only type of coal research legislation which has met with the approval of both management and labor in the coal industry. When a subcommittee of the House Interior Committee, of which the present chairman of the committee was a member, hearings were held on this type of research agency. In addition to witnesses representing the coal operators and the United Mine Workers of America, the committee heard advocates for the legislation from the railroads, the mine machinery suppliers, industrial consumers, Governors and other officials of coal-producing states, and representatives of coal communities. All were in agreement that the type of research agency as proposed in this legislation would be a boon to the coal industry.

As a member of the Joint Atomic Energy Committee, I have personal knowledge of the vast sums of money which have been and are now being spent on the experimentation of an atomic reactor designed to procduce commercial power. Certainly if we can afford to spend such astronomical sums on a source of energy which is now in the experimental stage, we can well devote a small percentage of that amount to further research developments of a fuel that has been the principal source of our economic power in every emergency that this country has faced.

I sincerely hope that for the benefit of the thousands of unemployed mine workers and railroad workers in my district that we can have early committee action on the various legislative proposals to establish the much-needed and essential Coal Research and Development Commission.

Army Cheeseparing

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent news article which was published in the Baltimore Sun of January 25, 1959. It is entitled "Army Cheeseparing," and was written by Mr. Mark S. Watson.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARMY CHEESEPARING

(By Mark S. Watson)

ENLISTMENT OF 30-CENT-A-MONTH KOREANS RESORTED TO FOR THRIFT

WASHINGTON, January 24.—Newer members of the Senate Armed Services Committee have learned with surprise that in order to keep combat divisions in the Far East at required strength, the Army has filled them, to a very considerable degree, with Korean personnel.

The exact percentage is not considered properly publishable, but it is more than is generally suspected.

This is one of the means by which the Army is forced to adjust itself to the administration's economy program of the past 2 years, still underway in the limited authorizations of funds both to buy needed new equipment and to keep major combat forces at or near true combat strength.

TWO KOREAN DIVISIONS

Without the Katusas (Koreans attached to U.S. Army) the two divisions in Korea would be very far below requirements.

The Koreans are well regarded by Americans who have served as Katusa officers, they are thoroughly integrated with the American soldiers in their units, and are given identical responsibilities.

There is one important difference, which is the reason for their being in the United States divisions; they are a financial bargain if there ever was one.

An American soldier gets $78 a month for his first four months, thereafter $83, and then $85.80. His Korean companion gets from 15 cents to 30 cents a month—and even if some day he should get to be Korea's Chief of Staff or Defense Minister he would get but $40 a month. The Korean private's main benefit is not in cash but in receipt of full Army subsistence.

ONLY ONE REVELATION

If this is the most dramatic revelation to date in the testimony of Gen. Maxwell D. Taylor, Army Chief of Staff, before the new Senate committee that has been holding its first hearings this week, it still is but one item. Other economies in which the Army is engaged, in order to stay within the administration's allowance of men and dollars include the following:

1. New weapons: General Taylor lately stated that any genuine modernization of the Army (both the President and the Defense Secretary have stressed modernization, in principle) would require annual appropriations of $3 billion a year for 5 years. This would be made up of $1,400 million a year purely to cope with the processes of mere wearing out and absolute obsolescence of equipment (10 percent a year for the $14 billion inventory) and $1,600 million a year for actually new-model equipment, comparable to that with which Russia is renovating its own Army resources.

TO DEVELOP TANK

The new defense budget allows Army procurement totaling $1,190 million for mere replacement, plus $180 million for admitted modernization.

This permits, among other things, a small start on the new light rifle and machinegun; development of the very important new M–60 tank, marking our belated embarkation on diesel power with its great increase in range, reliability, noninflammability; a new antitank ammunition with much greater power; field adaption kits permitting swifter and more efficient interchange of nuclear and conventional warheads for three types of weapons; and a start on the "Davey Crockett," a revolutionary bazooka type, permitting use of tactical atomic projectiles by two very mobile soldiers.

The essential fact is that the prescribed total for both mere replacement and actual modernization in these important items is actually less than Taylor's recommendation for replacement alone.

NEW MONEY NEEDED

2. Ammunition: Taylor pointed out that normal training activities call for about $200 million a year in ammunition of all types. Up to now this has been met largely by drawing down stocks accumulated during the Korea war but we must now put new money into ammunition to forestall depletion of certain critical categories, and also to procure certain new types.

It is standard and proper practice to use for field training the older stocks of ammunition from the shelf—but also to replace it, as called for, by newer stocks. The latter step has not been taken. Accordingly, in such critical areas as shells for medium artillery, it appears, the economy-bedeviled Army now is approaching the very condition of which an extremely rigideous congressional committee complained fiercely only a few years ago when the post-1945 economies had left the Nation short of shells gravely needed in Korea.

What the present congressional committees will do about the present between-wars situation will be worth watching.

TWO DIVISIONS WEAK

3. Personnel: General Taylor explained the necessary reduction of the much-admired Strategic Army Corps from four to three divisions, plus corps troops. STRAC is supposedly ready to go. But two of the four divisions are so far under strength that they are simply not ready. That is why one is dropped altogether, to help build up the other to a combat-ready state.

Now ordered because of personnel econmies to reduce from the present 15 to 14 divisions, the Army must keep its 8 oversea divisions at or near full strength (that in Hawaii is shy 1 combat group and the 2 in Korea, as noted, are at strength only because of Katusas).

DISCRETION ON CUTS

Subtracting 8 from 14 leaves 6 divisions, of which STRAC has 3. The remaining three, politely called STRAC reinforcement, are in plainer terms training organizations which are not remotely close to combat readiness.

4. Reserves: Upon this latter—the ordered reduction of both National Guard and Army Reserves by 10 percent, despite congressional refusal to permit it last year—General Taylor spoke most discreetly.

But on this issue is expected some of the fiercest of all congressional opposition to the President's economy package. Both guard and Reserves have made clear their indignation and both have ardent friends in Senate and House committees. The battle on this score therefore is expected to be noisier than on all other counts.

A hint came today when Maj. Gen. William H. Harrison, Jr., president of the National Guard Association, described the administration's new budget as pennywise and security foolish. He added that in 1957 the Defense Department spent more on publicity to build up the Army Reserve that it will save in the coming fiscal year by cutting it down.

Federal Tax, Spending Policy Biggest Danger Facing United States

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. ABBITT. Mr. Speaker, from reports in the press, it is becoming obvious that once again the American people are beginning to express themselves as opposed to vast public spending, and despite the claims of some of the liberal forces I feel that the vast majority of the American people do not want their Government to continue a program of deficit spending nor are they willing to raise taxes in order to finance such public welfare measures.

Among those in my section who are most concerned about this is Mr. A. Robbins, Jr., editor of the Hopewell News, at Hopewell, Va. Mr. Robbins has been warning for years that deficit spending and nonessential expenditures would bring great danger to America and he is continuing his advocacy of sound fiscal practices.

I wish to include herein in my remarks a splendid editorial which appeared in his paper on Monday, February 2, 1959, in which he calls attention to the great dangers which face us unless the present trend is curbed.

I commend his editorial to the Members of the House:

FEDERAL TAX, SPENDING POLICY BIGGEST DANGER FACING UNITED STATES

Local persons attending the chamber of commerce banquet could feel they were almost getting a peek at this past week's headlines as Russian boss Nikita Khrushchev in a jovial mood Tuesday told a cheering Communist Party congress that it was Soviet economic power which would win the cold war and not a bomb.

The Hopewell audience on Friday heard T. Coleman Andrews, former Director of the Internal Revenue Bureau, say that while a hydrogen bomb might be the way to start the world all over again, that he personally was not afraid of the bomb, but of economic ruin brought on by our Federal Government tax and spend policies and our inflationary race of wages and prices.

This Federal spending and tax policy is not only being watched with glee by Russian leaders, but is being abetted in any way possible by Communists within our own borders.

We find ourselves in agreement with Mr. Andrews on many points, but particularly when he says we, the American people, have lost the capacity for indignation which stood our forefathers so well as they carved out this Nation.

We are afraid that too many people both in and out of Government no longer take the Communist menace from within seriously enough. But, as Mr. Andrews added his voice by saying that, in daily living, it is hard to tell who is a Communist, he assured his audience they were all around us and it was up to us to check the false ideologies they have brought into our American way of life.

We are afraid that voices of men who know, like Mr. Andrews, and even that strong voice of J. Edgar Hoover, Director of the FBI, are not being listened to enough, either by Government in Washington or by the voters.

FIRST LINE

There is no overlooking the voice of Russia in the fact that economic battle is the first line of offense. Read his words and see what he thinks of our economic future.

In announcing a new 7-year plan, Khrushchev said, "The 7-year plan is a decisive stage in the economic competition of socialism and capitalism. This plan will greatly influence the entire international situation and prove a new triumph of Marxism-Leninism. Our successes in the fulfillment of the plan will attract to the side of socialism millions of adherents. They will lead the strengthening of the forces of peace and the weakening of the forces of war."

In plain, simple words the top Red leader is saying to the world that Russian economy will grow so strong and the capitalist world so weak there will no longer be a cold war, for Russia will dominate the world.

MUST BE CHECKED

Words will not make it so, but we cannot overlook the growth recorded in Russia nor the warning signs of inflation, overtaxation, overcentralization by our Federal Government; all are signs that many sound-thinking persons feel will bring economic ruin if not checked and checked soon.

Some of the examples cited by Mr. Andrews in his speech here more than bear repeating as examples of what the American people pay attention to and insist that their Congressmen do the same.

Among the examples cited by Mr. Andrews included the paying of $30 million to teach farmers how to get greater egg production and then spending $36 million to buy up the surplus egg production.

Or the TVA project in Tennessee. Mr. Andrews reminded his audience that this grab for public power to ruin private power had been sold on the basis of better navigation and flood control. But after it was completed there were 100 recorded trips up that river in 10 years and more good farm land was covered up than could ever be flooded by a natural disaster in 500 years. And the TVA boys aren't through yet, they are after additional steam plants to pave the way for the extinction of private power.

NOBLEST BATTLE

On the matter of the growing centralization of Federal power, Mr. Andrews told a story of what he calls the noblest battle ever carried on. It concerns the battle between a small farmer in Michigan, Stanley Yankus, who did not have an acreage allotment but raised enough to feed his chickens. He was arrested and fined more than $4,000, but he put up a long battle against the fine and for his rights as an American citizen. But finally he was forced to give up, "an awful indictment of you and me," according to Mr. Andrews. In giving up he said that he can't fight all of those who want something for nothing.

In putting security first, which is well on its way to being proved false, Mr. Andrews warned, the old America is dead and we are headed for security and slavery for everybody.

Inflation and Federal spending will lead us down the road to economic ruin before 1975, if they are not checked in the opinion of Mr. Andrews and he cited some figures that should have an eyeopening effect. These were the comparison of salaries in 1939 against 1957 and what will be needed in 1975, if inflation continues only at the present pace and there are no new taxes. Neither possibility which seems likely, as Mr. Andrews sees it. He pointed out that the value of the dollar has dropped to 50 cents and doubling wages is no answer because that throws him in a higher tax bracket. The figures shown below are the salaries needed to match that made in 1939.

1939	1957	1975
$2,000	$4,800	$10,538
5,000	13,000	33,240
10,000	30,097	92,141
20,000	83,000	383,748

To match a $50,000 income in 1957, by 1975 if things continue on their present road it will take nearly a million dollars.

But in a way those figures are worthless, according to Mr. Andrews' views for we will never reach that point in one piece but will have an economic collapse first.

Mr. Andrews is right, Congress could save the day, but first the American people must see the light and insist on less Government, more self-reliance and gain back their capacity for indignation over the wastefulness of the tax dollar and the lack of concern over the Communist subversion of many of the ideals on which America was founded.

If we don't wake up Mr. Khrushchev may have a point when he predicted this week that Russia would catch up with and outstrip the United States in 12 years and take over first place in the world.

We don't happen to think Mr. Khrushchev can live up to all his big words in the time alloted, but there is much to think about in the fact that the Reds feel their big weapon is economics.

It is time for us to take our medicine in the matter of forcing prices up and then trying to catch up with wage increases. Even if this is possible, it can't be done with the current tax policy of the Federal Government. It is time for the American people to call upon a halt to the growth of this Government in the fields of private endeavor where it has no place being.

Or Mr. Andrews put it, "We have got to have the courage to take the medicine needed to stem this tide and give America back to us."

Hon. Michael V. DiSalle's State of the State Message

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. VANIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I

commend to my colleagues the following "State of the State" message delivered last week by the Honorable Michael V. DiSalle, Governor of the State of Ohio, before the 103d general assembly.

From all indications, in a few short weeks Governor DiSalle has demonstrated a capacity for imaginative and dynamic leadership which will be a welcome change to the people of Ohio. Ohioans everywhere wish Governor DiSalle every success in dealing with the knotty and weighty problems which face his administration in the months ahead.

I am confident that the citizens of Ohio will have reason to be proud of the record which Governor DiSalle will make during his term of office.

The message follows:

STATE OF THE STATE MESSAGE BY GOV. MICHAEL V. DISALLE BEFORE THE 103D GENERAL ASSEMBLY OF OHIO

The State of Ohio has been fortunate in the fact that enlightened citizen interest has produced over the years many capable public officials and I believe that it has had, over the period of time, a responsible type of leadership in its legislative halls.

Twenty-two years ago, as I stood before this rostrum being sworn in as a member of the legislature, I looked forward with great anticipation to the session and what might be its accomplishments as far as the well-being of the citizens of this State was concerned.

At that time the legislature was overwhelmingly Democratic. Frank Ubile was the speaker. Jacob Davis, of Pike County, was the majority floor leader, later to be replaced by Bishop Kilpatrick, still a member of this house. Bill McCulloch was the minority floor leader, and the late Harry McGregor was his whip. On the senate side, Paul Yoder was presiding as Lieutenant Governor, with Keith Lawrence acting as majority leader, and the late Vern Metcalf as the minority leader. Only two of these men have left this life. The rest are active, respected citizens in various walks of life, but with only two of them still active in public affairs.

There are not many people still around who would be able to name the leadership of that particular assembly, but yet, in their own way, they fashioned a program that served the needs of that particular day. The Republican minority was then so hopelessly outnumbered that many of us from time to time felt it necessary, in the interest of militancy and complete discussion, to join with them in giving voice to an essential of democracy—free and open debate of the issues.

Today, in this assembly, the lines are more closely drawn so there will be very little need of closing party lines for the purpose of opening up the debate. But as was the case in 1937, it remains vital today that the leadership of both the majority and minority parties employ ability and responsibility. I am certain that on those occasions which affect the welfare of the State and its future, that partisanship will be disregarded and that each of us, in his or her own way, will contribute constructively to building a better State, a better hope, and greater opportunities for our fellow Ohioans.

In the course of this message, it may be necessary from time to time to refer to the past. I do so only in the sense of making comparisons and drawing upon those experiences for the purpose of attempting to demonstrate improvements which will contribute to a better type of government for the times in which we live.

Each generation, each assembly, each administration, owes an obligation to fashion new and better methods and techniques which draw upon the experiences of the past.

We face many complex problems and were I to attempt to discuss each one of them in detail, we would be here for too long a period and I am sure that the importance of each would be lost in the length of the total discussion. Consequently, it is my purpose only to outline the problems we face as a people, as a State, and as individuals bound by a solemn contract to have courage and conviction in meeting squarely the responsibilities which are ours. I will send for your consideration in future days individual and more detailed discussions of items within the areas sketched here today as well as of other matters which, while of importance, cannot be covered in this address.

There is no doubt that we face a new era of governmental finance in the State of Ohio. For the first time in nearly 20 years, we cannot come before you pointing to the accumulation of balances in the State treasury. As the accumulation of funds in the State treasury was largely a result of the events and conditions of an abnormal period in our history, so was the dissipation of those funds largely a result of obligations which grew at a concurrent time.

In the late 1930's upon Gov. John Bricker's recommendation, the legislature adopted a program which removed the earmarking of the newly levied sales tax. This course of action as it turned out prevented the wartime flow of revenues from accumulating automatically at local levels of government.

With the advent of the Second World War—yes, even in the early days of possible entry into war, restrictions become so pronounced that the State was effectively precluded from meeting even minimum needs for capital improvements in the form of highways and institutional construction. This created the rather paradoxical situation of increased revenues and accumulating balances but an inability to keep pace with the obvious needs of our State.

It was anticipated that these increased balances would provide for Ohio's needs during the postwar period. This situation continued during the first Lausche administration and through a part of the subsequent administration of Governor Herbert. After Goverhor LAUSCHE had taken office for the first of his four subsequent terms, the Korean United Nations action intervened and again certain restrictions on the use of steel resulted in the further postponement of construction programs. In all of these days, the accumulated surplus was zealously guarded and inroads were made only for capital improvements.

In the meantime, the passage of the $500 million bond issue for highway construction and the subsequent Federal highway bill provided funds for a stepped up highway program and the $150 million bond issue provided funds for an institutional public building and school construction program.

However, the recession of 1957 and 1958, the end of which is not completely in sight, caused a dropoff in sales tax revenues, but at the same time, increased burdens were felt in the school program, in poor relief, and in certain other areas. New institutions have brought with them a necessary increase in operating costs. The result now is a virtually complete erasure of the balances which have been our cushion for many years. While there are many people who have indicated confusion as to the conflicting statements made with reference to the fiscal situation, those who will study the factual situation will find that the record demonstrates with clarity that the deterioration of the State's fiscal position is real and critical.

My definition of a surplus is that amount of money you have remaining after your commitments have been taken care of. If we were to accept without question the last administration's budget document, we would find that at the time of its submission, when no thought was given to a possible recession, this document showed on its face that recommended general fund expenditures were expected to exceed general fund revenues by some $40 million. Thus the fiscal problem is not of current origin nor did it find its source in the recent recession.

It is true that certain revenues, principally those of the sales tax, declined as a result of the recession and also certain costs increased as a product of the Nation's economic decline. But, it also must be noted that for the greatest part of the present biennium, the government of Ohio has operated below appropriation levels and, in many cases, below the minimum standards required by decency. Not only has the State been unable to provide those goods and services which are so obviously needed in terms of the future wellbeing of our people, we have not been able to meet present needs—we have not met basic requirements of medical criteria and accepted social standards.

This, at least in part, serves to bring into focus the major problem that we now face. For the present biennium, we are definitely underappropriated for poor relief, for aid to the aged, and for the school foundation program. The amount necessary to meet these deficiencies will approximate $20 million plus the costs resulting from the flood emergency.

Only with carefully applied restraints, can we end this biennium with any cash balance at all. Might I say in clarification of the conflicting balance statements, that the best illustration is the individual himself. The money he has fluctuates from day to day. The balance he has on payday is usually not the balance he has the day after payday. His financial picture only becomes clear at the end of the month when he collects all the money he has coming and pays all of the obligations he owes. The State of Ohio has been supplementing its current pay by withdrawals from a savings account previously built up and it is now without further savings upon which to draw.

Our future insofar as finances are concerned and my recommendations for that future will be clearly spelled out in the budget message now in preparation.

We know that the department of mental hygiene and correction, even with the addition of more funds, will still be below reasonably accepted standards, but this is not something we can continue to postpone, it is a need and obligation that must be met. We know further that some of the programs outlined herein, such as the removal of the $65 ceiling on aid for the aged payments, will cost more money, but this is also an obligation which must be met in the interest of decency. We know that the school program, the need for increased teachers' salaries and benefits will produce increased costs, but this, too, is a responsibility that must be met.

Actually, the new programs suggested herein, in addition to those for which we are now responsible, will be minimal in the need for funds and these funds can be considered in the nature of investments which will produce returns that will help spread and meet these costs as far as the future is concerned.

In our budget message, we will demonstrate beyond a scintilla of doubt that efforts have been and will be made to eliminate duplication, waste, and extravagance and the sums of the financial program are those required to take care of the genuine needs of Ohio. It is our intention to proceed with a minimum of imposition on our citizens and the continuance of the conditions which have made Ohio's industrial climate the envy of many of its sister States: But we will be frank with you, the people of Ohio, and with ourselves.

While it is my intention to set out a recommended fiscal program in the budget message, I would like now to make clear my position with respect to one area which is the subject of much discussion. I recognize

the possible design of an income tax structure which might serve as an equitable vehicle for the raising of needed moneys, it is now my settled position that to presently employ such a device would be too disruptive of State-local relationships in light of the present utilization of such sources at the local level. I will not, therefore, recommend that this body enter the State into the field of income taxation.

INDUSTRIAL AND ECONOMIC DEVELOPMENT

As the State's population grows, and we know that it will, the problems of government can be met only with an increasing economic expansion. This expansion is not one that can be taken for granted.

Today, nearly every State in the Union is anticipating the need for growth. New techniques for subsidizing and attracting new industry and industrial growth are being developed.

Here in Ohio, we need such a program on a statewide level.

Presently, we find our communities pitted against whole States in their quest for new industry. We find our large communities vying with small communities, which are at great disadvantage because they do not have the financial resources to present the marketing and economic data necessary to support their bids.

In many cases, this local competition works to the disadvantage of the State as a whole.

These local community programs must be coordinated and bolstered.

With this in mind, I propose the establishment of a department of industrial and economic development.

Into this department, I propose to incorporate the existing economic development and publicity commission, now in the Department of Commerce. We also will propose to include the State atomic energy advisory board and the capital planning division, now in the department of finance. It is our hope that this department will serve as an arm of the State in the industrial development field. It should be staffed so that it can assist the State in a needed central planning function which will attempt to anticipate the needs of the State and provide the data necessary for us to meet those needs.

It is our hope that soon we will be able to bring together in Columbus representatives of the public, labor, and management, and those communities which now have industrial development committees in order that our specific program may take into full consideration their recommendations.

RESEARCH

In this modern age, we are constantly being amazed by new developments in the fields of science and medicine. We can envision more improvements in every area.

The State is spending, and has spent, millions of dollars in the treatment of disease. It will spend more.

It would be wise and provident to invest a small percentage of these dollars in the area of research. In this way, we might contribute to discoveries that will lift the burden of treatment from the shoulders of future generations.

We are spending millions in the treatment of the deaf and blind and a mere $50,000 for research into the causes of these illnesses. The same is true for the mentally retarded. Look at our expenditures for treatment of chronic illness of the aged.

It is my hope that we may be able to establish small funds, at the beginning, for research at our State universities in the various fields of human suffering.

While on this subject, might I say that Ohio is doing fine work in agricultural research.

This program, too, must be stimulated in order that we may be in a position to assist in maintaining Ohio as one of the Nation's great agricultural States.

POLLUTION

We must pursue an aggressive policy in order to prevent the pollution of our water supply and our air.

It was thought, at one time, that an inexhaustible supply of water permitted us to be careless and reckless. We have learned that water for human consumption as well as for industrial and farm use must be carefully nurtured and kept clean.

Air pollution presents a real danger to the health of our people. The State must begin—at least—to authorize the entry into compacts between community air pollution groups in Ohio and those of other States.

CONSERVATION

Although we do not deal in the intangibles of research, conservation, too, is a program that needs more vision and stimulation through education.

We must husband our resources. We know that they are not inexhaustible. We know by our population growth that the need for them will become greater with each succeeding generation.

Consequently, great care must be exercised in the preservation of our forests, our water supply and the recreational facilities that continue to disappear rapidly before the onrush of the human elements in civilization.

Hunting and fishing and boating have served as instruments to create a greater awareness of our fight for conservation.

I propose that we proceed as quickly as possible to acquire the 40,000 to 50,000 acres in Ohio practically abandoned as a result of being despoiled before the adoption of our strip mining law. This land serves as a depressing influence on the valuation of surrounding property.

Over a period of time, we can, after acquiring this land for little or nothing, reclaim forests and restore it for future generations.

We can envision great recreational uses for this land which is now lying idle, ugly, and wasted.

Not only do I recommend acquisition of this despoiled property, but I would invite the contribution to the state of any property which, in size, would lend itself to future development.

In order to prevent recurrence of the conditions that made this situation possible, I would advocate the review of the strip mining law and use of the fees collected for reclamation purposes only.

LABOR

The labor-management relationship in a State such as Ohio plays a leading role in determining whether that State will continue to grow. We must, whenever possible, encourage labor and management to resolve their day to day differences without resort to industrial warfare.

We must, whenever possible, contribute to the more mature relationship that exists when each realizes his responsibilities to the other party in the contractual relationship.

We must encourage labor and management to recognize that their paramount interest is to the public welfare.

In this necessary economic marriage, the more the parties help each other in the resolution of economic problems resulting from maladjustments, the less the burden will be on the public generally.

SUPPLEMENTAL UNEMPLOYMENT BENEFITS

I feel that when labor and management, through collective bargaining, arrive at an agreement which is not contrary to the general welfare, these agreements should be interpreted liberally.

They should be encouraged and given incentive rather than being halted, interfered with, and made more difficult.

The law covering existing contracts under which labor and management have agreed to establish a fund to supplement unemployment benefits should be clarified as soon as possible.

There should be no question as to their legality.

The benefits of this progressive innovation should be made available to the people of Ohio at the earliest possible moment. Unemployment compensation on the State level must keep pace with increased cost of living. The status of the trust fund is such that if we are to fulfill the minimum requirements, as originally intended by law, we cannot indulge in extreme revisions of the benefit schedule.

WORKMEN'S COMPENSATION

It is better to give some protection to all than to dissipate the fund quickly.

We must expand the benefits derived from workmen's compensation. The workman and his family must not be penalized as a result of injury over which he had no control and which results in the loss of his earning ability either permanently or temporarily.

Death benefits must be increased in order that dependent children might be protected in the legitimate aspirations that were those of the parents while the breadwinner was still alive.

The revision of the law in order to provide statistically for the possible influences of inflation in the future, insofar as awards for permanent disability, is also a necessity that must be anticipated at this time.

In this revision, provision must be made for the permanently totally injured worker of the preinflation days whose limited income now makes him a recipient of relief and a burden on society in general.

Thought must be given to including the total cost of administration of the program as part of the expense chargeable to the fund rather than to taxation generally.

ANTIRACKETEERING

The last point on this subject is the adoption of legislation designed to punish those individuals who violate a position of trust for selfish purposes.

There is no room in a decent labor movement for racketeers of any kind. The large number of respectable people who lead their fellow workers along legitimate organizational lines, seeking to protect their economic interest as well as the public, must have their reputation protected by the elimination of men whose only purpose is to serve themselves.

This cannot be left to the labor groups themselves, for their best weapon is suspension of an organization, leaving that organization free to continue its preying upon the public generally and the membership which, of necessity, remains a part of the suspended group.

Although most elements of organized labor, under its present leadership, is doing a commendable job in ridding its own ranks of these venal leaders, there is no guarantee that the present leaders will not be replaced or that the new leaders will have the same high motives.

This is a matter that must be handled by law and, regardless of what the Congress might do, there is no reason for the State of Ohio to wait.

We must act and act now.

HIGHWAYS

So-called crash programs are extravagant and wasteful. It is our purpose to continue a highway program which will meet the present and future needs of the State on a pay-as-you-go basis. Emphasis will be

placed on the safety of the traveling public, elimination of traffic bottlenecks and the maintenance of a balanced system which will not neglect a part of the system in favor of another.

The financial picture at the present time is clouded. We hope that by the time we send up the budget message, it will be clear enough to give the assembly a sound program.

PUBLIC UTILITY RATES

There has been a great deal of controversy over the existing formula for setting rates for public utility services. We will present a revision of this formula which will be designed to be fair to the consumer and, at the same time, provide a reasonable return for the investor.

Regardless of what formula is used, the essence in any system designed to protect the public must rest in a department staffed and able to present the public view whenever an increase of rates is before it.

It might be well, in this instance, to place greater reliance on the reorganization of the public utility division through improved administrative procedures than on a system of ratemaking which can prove ineffective if a utility's case is to be made by highly skilled and highly paid representatives in opposition to a poorly prepared statement on behalf of the public.

CIVIL RIGHTS

It is my hope that the 103d general assembly will be the one to bring to the people of Ohio a complete guarantee that the constitutional provisions for the civil rights of all individuals be implemented and given life by the creation of a commission which will have complete powers of mediation, conciliation and proper enforcement authority when education and other methods have failed. There is no valid reason to wait any longer. This is again an area in which we should have action now.

MENTAL HYGIENE

Much has been said on the subject of the treatment of our mentally ill. Setting aside the debate that goes on constantly, here, too, the difficulty rests in the improper emphasis on the program. We need people, trained people, skilled people—psychologists and psychiatrists and nurses. In order to obtain them, we need funds and we need training programs. Yet, I would not ask these funds to be provided until we have demonstrated that the administration of the department is improved, that reasonable standards have been established, that the elementary care of persons and property are being provided. This, too, will be treated more fully in a special message dealing with the legislative needs of this program.

PUBLIC HEALTH

In a State such as Ohio, there cannot be two types of programs for the protection of health. The health of our citizens is certainly as precious in our less populated districts as it is in those with higher densities of population.

Our health program must proceed from the basic, fundamental principle, that its purpose is to protect public health and to act against contagion and elements that may result in danger to health whenever it might exist. The legislative program of the Department of Health is a reasonable one and one that I believe will merit your support.

LIBRARIES

Nothing—no one single endeavor—contributes more to the cultural development of our citizens, young and old, than the public library system. We should, in every way possible, attempt to extend uniform library service throughout the State.

AID FOR THE AGED

The present $65-a-month ceiling imposed on old-age assistance is unrealistic. We must remove this artificial barrier which has no relation to reason or practicality and establish old-age assistance on a needs basis.

We will begin the administrative work necessary to establish the program. With your help, it is our hope that we can put the new system into effect with the beginning of the coming biennium or shortly thereafter.

EDUCATION

As our population continues to grow—creating the need for more classrooms and more teachers—we must begin an orderly reassessment of the part the State must share with local communities in the support of an educational program at all levels.

We can no longer continue to improvise from session to session.

We must become definite as to the State's responsibility. We will have some specific recommendations in the budget message.

STATE OF OHIO SCHOLARSHIP ENDOWMENT FUND

We do propose, at this time, the establishment of a State of Ohio Scholarship Endowment Fund, with trustees to be appointed from all segments of our economy.

The fund would be financed in part from public subscription and the balance would be contributed from public funds by the State of Ohio.

The ultimate objective of this fund would be 1,000 scholarships a year, to be awarded on a merit basis. The trustees will write the rules, changing the type of scholarship to be awarded at their discretion in anticipation of the needs of our society at a particular time.

These scholarships will be in the amounts determined by the trustees, but limited to the amount earned by the investment of the capital account. The objective will be to raise the capital account to $20 million in the space of 10 years with the State providing 25 percent of the total amount over this period of time.

This will provide a continuing source of the talents needed by the citizens of Ohio and make available to worthy individuals an education which they might otherwise not be able to obtain.

LOCAL GOVERNMENT

Here again is a subject that needs a new approach. No longer must we consider that we are subsidizing our local political subdivisions. We must either give them the right and authority to finance their own government or to spell out the services primarily rendered by local governments on behalf of the State as a whole.

Once having ascertained what these services are, then we must arrive at a formula for compensation for those services. We will offer specific suggestions and hope that, with your cooperation, we will find a final answer to this ever vexing problem.

LAW AND ORDER

In addition to the legislation proposed regarding certain labor-management practices, I propose the strengthening of our criminal code. I recommend enactment of a law making it a conspiracy, punishable as a felony, for two or more people to enter into agreements to conduct gambling ventures, prostitution, and the sale of narcotics.

Included as a party to such conspiracy will be those public officials who participate by becoming a part of such agreements.

No longer can we continue to take the petty gambler who fronts for a syndicate, punish him with a nominal fine or a few days in the workhouse, while permitting individuals who profit most from this enterprise to sit in the background and reap their unlawful harvest.

CAPITAL PUNISHMENT

The State of Ohio is achieving maturity. We have been a State since 1803. During this period, we have used capital punishment in an attempt to deter the murderer. Year after year, we electrocute, and in the past, we have taken to the gallows, individuals charged and convicted of the crime of murder.

But murder continues as a crime, along with robbery, burglary, and all the related ills of organized society.

I would recommend the repeal of the death penalty in Ohio and substitute life imprisonment—without hope, without parole, without pardon.

I believe that the State, by its refusal to take the life of a human being, would be setting an example of proper morality which would serve its citizens in good stead. I will present a special message on this subject completely covering the history of it and further reasons for this position.

In conclusion, I want to discuss the State employee. If we are to provide efficiency in our government, intelligence in its administration and courage in carrying out its responsibilities, we must have dedicated public servants and public employees.

If the State should be left in a position where only those that cannot obtain other employment find themselves in the category of career public servants, the purposes of democracy will be poorly served.

Consequently, I advocate the constant review of classification and proper compensation for public employees, the strengthening of the civil service and greater adherence to the concept that public employment and public service is a sacred and integral part of society.

We are awaiting anxiously the report on classification and suggested State employee policy now being prepared by a subcommittee of the legislative service commission. My preliminary information on this indicates that a sound and thorough study has been made and that the report will map out a pattern of procedure which will be beneficial for many years to come.

I hope that this may be the beginning of a development of morale and pride on the part of the State employee which will assure the State of their undivided loyalty and service.

In this achievement, I hope you will agree with me in the need for legislation that will spell out clearly the public employees' undivided obligation to his public trust and the writing in law what certainly ought to be our ethical and moral obligation in not engaging in an activity for profit or for friendship which conflicts with a person's obligation to his public employment.

We cannot permit a conflict of interest to exist with the public employees if we are to attain the highest degree of efficiency and responsibility.

Thank you for your kindness in giving me the opportunity to be with you today. There will be other messages, on other subjects, in the future.

In deliberating the recommendations made to you today, there will be differences of opinion. There will be differences as to the need or timing of these proposals. When those disagreements are present, let us conduct ourselves in the debate with an earnest desire to inform the public of the reason for our varying positions. Let us not permit the greater areas of agreement to be clouded by the violence of the smaller clouds of disagreement.

We shall continue to work together in that service to which we are committed; the building of a better state for all.

Sellers' Inflation

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MULTER. Mr. Speaker, a most interesting analysis and a suggestion for dealing with inflationary depression has come across my desk. It is the work of Prof. Abba P. Lerner of the Department of Political Economy, Johns Hopkins University. It will serve us well if it only stimulates our thinking about this important problem.

The analysis follows:

SELLERS' INFLATION: AN ANALYSIS AND A SUGGESTION FOR DEALING WITH INFLATIONARY DEPRESSION

(By Abba P. Lerner, Department of Political Economy, Johns Hopkins University)

The United Automobile Aircraft and Agricultural Workers of America (or the UAW) International Union, has invited the three big automobile corporations to take a first step in checking the inflationary process from which our economy is suffering. Not unnaturally, the corporations have in effect replied, "After you, my dear Alphonse." In its invitation the UAW has pointedly concentrated on the prices set by the corporations for motor cars and in their replies the corporations have pointedly concentrated on the price or wage demanded by the UAW for labor, and the level of politeness will no doubt deteriorate rapidly as the debate continues. Nevertheless, the proposals and counterproposals must be recognized as something more than sparrings for better future bargaining positions. They clearly demonstrate three phenomena of the first importance: (1) A genuine concern, on both sides, with the dangers of inflation; (2) a readiness, again on both sides, to cooperate in checking the inflation (provided that such cooperation is not exploited and diverted for the benefit of the other side); and (3), perhaps the most important, a recognition, once more by both sides, that the inflation we have upon us is based not on competition by buyers trying to buy more of everything than can be supplied, but on pressure by sellers asking for higher prices.

A NEW KIND OF INFLATION

Others also have recognized that our current inflation is not the more familiar and more thoroughly investigated kind that is caused by excess buyers' demand—by too much money chasing too few goods—by buyers bidding up prices in trying to get more goods than the economy is able to supply. President Eisenhower recognized this in making his appeal to labor and to business to help the fight against inflation by exercising restraint and refraining from demanding higher wages and prices.

If our inflation were indeed caused by excess buyers' demand, not only would the UAW proposals and the corporations' rejoinders be without interest, but President Eisenhower's appeal would be pointless. Free market prices would still be bid up by competing buyers, and sellers who exercised restraint would merely be making presents to the buyers (who would often even be able to resell at the higher free market prices). Such an inflation could be cured only by removing the excess buyers' demand via the well-known policies of tight money and restrictive fiscal measures, and the restraint called for by President Eisenhower would be unnecessary. If inflation in general could be caused only by excess demand for goods by buyers, restraint by sellers (of products or of labor) would always be irrelevant. In the presence of excess demand by buyers restraint by sellers would be ineffective, and in the absence of excess demand by buyers restraint by sellers would be unnecessary.

But excess demand by buyers is not the only possible cause of inflation, and our inflation is not the kind that is caused by excess demand by buyers. This is shown by the failure of our output to keep up with our growing productive capacity. It does not seem to be the case at all that we are unable to supply the current overall demand for goods and services. On the contrary, we are able to supply more than is being demanded of almost everything, and efforts by sellers to persuade the public to buy are as strenuous as ever (though they hardly ever take the form of lowering prices, or we would not be suffering from our inflation). Prices are rising not because of the pressure of buyers who are finding it difficult to buy. Prices are rising because of pressures by sellers who insist on increasing prices (even though they are finding it not so easy to sell). We may say that we have not a buyer-induced inflation but a seller-induced inflation—or more briefly, we have not a buyers' inflation but a sellers' inflation. That is why restraint, or the absence of restraint, by sellers in raising the prices they ask is of the essence, and President Eisenhower's appeal for restraint is far from pointless. (Whether the appeal is or can be effective in bringing about the restraint is quite another question).

INFLATION WITHOUT EXCESS DEMAND

It should be noted that in this suggested terminology the word "inflation" is used in its popular meaning of a state of affairs in which prices are rising. Some economists (including myself) have extended the word to cover all cases of excess demand (which is what causes the price increases of a demand inflation or buyers' inflation) even where prices do not rise, in spite of the excess demand, because price control of some kind prevents them from rising. This switch of the meaning of the word "inflation"' from a state of rising prices to a state of excess demand seemed perfectly legitimate, as well as very enlightening, as long as excess demand was believed to be the only force that could cause prices to rise. It helped economists to point out that the damage done by excess demand was not avoided by suppressing the rising prices. The rising prices are only the result, or the symptom, of the underlying cause—the excess demand which would have caused prices to rise if it were not for the price control.

INFLATION WITH DEPRESSION

But if sellers' inflation is possible as well as buyers' inflation, it is not such a good idea to use the word "inflation" to stand for excess demand. That use of language tends to suggest that if there is no inflation in the sense of excess demand, there can be no inflation in the sense of rising prices. It leaves us with no way of describing the kind of situation in which we find ourselves today. Prices are rising because of upward pressure by sellers, and the authorities, in endeavoring to stop the inflation, have taken steps which have been very effective in removing excess demand, but which have not removed the upward pressure on prices from the sellers' side. Indeed these measures of budgetary restraint and tight money have been so effective in removing excess demand that they have overdone this and removed some demand that was not in excess. They have brought about a condition of deficient demand, so that there has not been enough demand to enable us to make full use of our productive potential (and the visible appearance of symptoms of recession has even led to a slight loosening of the tight money policy). Nevertheless, prices keep on rising. The net result is that we are now suffering at the same time from both inflation and depression—prices are rising and at the same time we are not fully utilizing our available labor force and productive potential.

This appears paradoxical only because of our habit of using one word, "inflation," to represent two different things, rising prices and excess demand, that do not necessarily have to go together in the actual world. It is only our inadequate language, a bad speech habit, that makes us think of them as necessarily together so that we have a feeling of paradox when we observe them departing from each other. We are like my son when, as a baby, he first saw our kittens move away from their suckling mother. He cried out in consternation, "Look, Mummy, the cat broke." When he had added the word "kitten" to his vocabulary he was better able to deal with reality because he was then able to speak of the cat without assuming that the kittens were included and he was able to talk about kittens without talking of the cat. In just the same way we will be able to deal more effectively with reality if we stop saying inflation when we mean excess demand and stop saying excess demand when we meaning rising prices.

This will not prevent us from pointing out the evils of excess demand that remain, or are even aggravated, when price controls prevent present prices from rising—thus suppressing or repressing the inflation. We can do this quite simply and directly in terms of the bad effects of excess demand and price control, without calling this condition inflation, keeping that word to be used only to describe a condition of rising prices, whether the rising prices are caused by excess demand or by anything else.

INFLATION IS INFLATION

Many influential people still seem to argue as if the only kind of inflation possible is demand inflation (which I am here calling buyers' inflation). Although they cannot deny that they see excesses of potential supply much more often than they see excesses of buyers' demand, they insist that "There ain't no such animal" as sellers' inflation. They declare that "inflation is inflation" and they sternly dismiss all talk about a new kind of inflation that does not respond to the orthodox treatment of monetary and fiscal restrictions as diversionary tricks by naughty children who are trying to dodge their medicine.

CREEPING INFLATION CAN LEARN TO GALLOP

Unfortunately, such sternness is only too understandable. Some of the economists who were early to recognize the nature of sellers' inflation have been so impressed by the impossibility of dealing with it by the orthodox instruments of monetary and fiscal policy that they have capitulated to the temptation of dallying with mild or moderate inflation as part of an acceptable policy. The orthodox economists quite rightly point out that such a capitulation is indefensible either on moral or on practical grounds. Even a mild inflation accumulates, at compound interest and robs pensioners, fixed income receivers, and many other unfortunate victims, while it sabotages the proper calculations and accountings necessary for wise economic decisions. In time many of these faults could be corrected by institutional adjustments to a mild inflation, but to keep the inflation mild is more difficult than to prevent the inflation from starting in the first place, or to stop it before it gets less mild. The very same reasons for accepting a creeping inflation instead of maintaining price stability would apply with greater vigor for changing from a creeping to a walking inflation. Still stronger would be the pressures for changing from a walking to a running inflation and proportionately more powerful would be the forces turning a running inflation into a galloping one. Stability is a much more defensible position against inflation than is creeping against walking or

walking against running. This is a case where retreat only induces further retreat. Firmness is required and not appeasement.

RECOGNITION IS NOT APPEASEMENT

But the naughtiness of appears of inflation does not in the least diminish the importance of recognizing the existence of sellers' inflation, for it is not the recognition of the existence of the disease called sellers' inflation that opens the gates to the enemy. On the contrary, it is the denial of its existence, and the attempts to treat it with the inappropriate medicines that work only on buyers' inflation, that is so dangerous. The belief that the medicines appropriate for buyers' inflation are the only medicines available (because inflation is inflation just as fever is fever), when joined with the discovery that these do not work, gives rise to defeatism and appeasement. A clear recognition of the nature of sellers' inflation is the prerequisite for finding the medicine that can cure it, or better still the vaccine that would prevent it.

COST INFLATION AND PROFIT INFLATION—THE CHICKEN AND THE EGG

Another reason for reluctance to recognize sellers' inflation is that it has often been called cost inflation or cost-push inflation or wage-cost inflation and has given the impression that the whole of the blame for it falls on labor or on trade unions. When trade unions raise wages by more than can be absorbed by increasing productivity, costs rise. The employer then seems to be completely innocent of "profit inflation" in passing on the increase in costs as long as he does not increase his rate of markup, i.e. as long as he does not increase the prices he charges for the product in a greater proportion than his costs have increased.

There is, however, no essential asymmetry between the wage element and the profit element in the price asked for the product. A sellers' inflation could just as well be started by an increase not in the wage asked but in the percentage of markup of price above cost. Prices would rise and wages would then be raised by workers in attempts to maintain (or restore) their original buying power. Business would then "innocently" raise their prices again only in proportion to the increase in their costs, and we would have the inflation upon us as well as boring discussions about who started it first and the famous chicken and egg.

TRYING FOR MORE THAN 100 PERCENT

The "who started it first" debate is a complete waste of time because there is no original situation in which there was a "just" or "normal" distribution of the product between wages and profits. Any increase can be seen either as the disturbance which bears the full responsibility for the inflation, or as nothing but the correction of an inequity perpetrated in previous history—all depending on the point of view. The term "sellers' inflation", by treating wages and profits on exactly the same footing, avoids the fruitless game of mutual recrimination. Sellers' inflation takes place whenever wage earners and profit takers together attempt to get shares that amount to more than 100 percent of the selling price. When the sum of what they try to get comes to more than 100 percent of the selling price, it is futile to ask whether this is because the wages demanded are too high or whether it is because the profits insisted on are too great. No matter where justice may lie between the two claims, the only significant thing for our problem is that the sum of the claims is more than 100 percent. That is what causes the inflation.

It is of course impossible for the two parties to succeed in getting more than 100 percent of the proceeds between them, but it is precisely on an impossibility such as this that any continuing process depends. Buyers' inflation is similarly built on an attempt to reach the impossible. In that case it is the attempt of buyers to buy more than 100 percent of the goods that can be made available. There attempt bids up prices, but since that does not (and cannot) succeed in enabling them to obtain more than 100 percent of the goods that there are available to be got, they continue the attempt and we have the continuing process of buyers' inflation. In our case the impossibility that generates the process is the attempt of wage earners and profit takers between them to get more than 100 percent of the money proceeds from the sale of the product. Each increases the part he tries to take, by increasing wages or by increasing prices. Since they cannot succeed, they keep on raising wages and prices and so we have the continuing process of sellers' inflation.

OBJECTIONS TO SELLERS' INFLATION

1. There must have been excess demand

The resistance to recognizing the possibility of sellers' inflation sometimes takes the form of saying that there must have been some excess buyers' demand or prices could not have risen. This begs the whole question since it assumes, without apparently thinking it necessary to provide any support for the assumption, that the only possible cause of rising prices is excess buyers' demand, the argument assumes what it wants to prove.

2. There has been an increase in spending

A more sophisticated version of this argument points out that if output shrinks by less than the increase in prices, and this is usually the case during a sellers' inflation, there must have been an increase in the total amount spent in buying the output. The arithmetically irrefutable increase in expenditure is then triumphantly exhibited as the excess buyers' demand that is responsible for the inflation. Expenditure is the same thing as buyers' demand, but an increase in expenditure is not the same thing as excess buyers' demand. An increase is not the same thing as an excess. An excess of demand by buyers induces the price increases—it is the cause of the price increases. An increase in expenditure could be induced by—it could be the result of the increases in prices brought about by the pressure of sellers. If there is no increase in expenditure the number of units of goods bought must fall in the same proportion as the price per unit is raised by the sellers. A 10 percent increase in prices would thus result in a fall in output of about 10 percent. This involves depression and unemployment that the authorities naturally seek to remedy by monetary and fiscal measures. Such remedies all involve increases in money expenditure, so that even if only a part of the unemployment is corrected (and this is usually the case because of the authorities' reluctance to undertake inflationary measures when prices are rising), we would observe an increase in total expenditure. Buyers' demand, however, instead of being excessive, could still be deficient, i.e., it could still be insufficient to enable the potential output of the economy to be sold (at the prices demanded by the sellers). An observed increased in total expenditure is therefore no proof that the price rise is due to excess buyers' demand. The increase in expenditure could have been induced by attempts by the authorities to keep down unemployment induced by price increases imposed by the sellers. In a sellers' inflation an increase in expenditure is perfectly compatible with deficient buyers' demand.

3. Demand was not held down enough

A still more sophisticated argument along the same lines goes on to claim that even if prices are being raised by the insistence of sellers rather than by the pressure of buyers, the orthodox measures of reducing total demand would still check the inflation. By reducing total expenditure, or perhaps by merely refusing to permit the increase in total expenditure needed to accommodate the increased prices, the authorities would bring about depression and unemployment. This would stop the sellers from increasing prices. The question then resolves itself into how much unemployment would be necessary to stop the sellers' inflation, and whether it is morally desirable or politically possible for the authorities to induce or permit unemployment of the required volume and duration. This is a much more respectable argument, but before we can consider it more fully it would be desirable to get a perspective on the whole problem by a quick look at the general theory of inflation and deflation.

FOUR THEORETICAL MODELS

A. The classical model

A somewhat schematic formulation of the development of thought on this subject shows four theoretical models.

Model A assumes perfectly flexible prices and wages, so that any excess of buyers' demand makes prices and wages rise, and any deficiency of buyers' demand (through the unemployment that results) makes prices and wages fall, until price stability and full employment are restored. Monetary and fiscal policy is unimportant. As long as the volume of money is kept fairly stable by some automatic device such as the gold standard, the price level will automatically adjust itself so as to yield full employment with price stability and without inflation.

B. The Keynesian model

Model B embodies the recognition that we do not have the degree of price flexibility in the downward direction to make complete laissez faire a satisfactory monetary and fiscal policy. Unemployment does not reduce the wage and price level quickly to the level needed to restore full employment. The process is rather complex. To achieve the task unemployment must reduce the price level to the degree necessary to increase the value of the existing stock of money (as each dollar becomes more valuable) to the extent necessary to increase expenditure in real terms (as each dollar spent constitutes more real purchasing power) to the volume necessary to give a satisfactory level of employment. This process can last for years, during which time prices and wages are falling as different resistances to the reductions are gradually overcome. Meanwhile there continues an expectation of price and wage reductions still to come. This expectation induces investors as well as consumers to postpone their expenditures as long as prices are still falling, so that buyers' demand is reduced still further and the depression can get much worse before it gets better.

The recognition of the nature of such a process leads to the abandonment of laissez faire in monetary and fiscal policy. Instead of waiting for the price level to adjust itself to the volume of money expenditure, a policy is developed of adjusting the volume of money expenditure to the existing price level so as to reach and maintain a satisfactory level of employment.

This switch from laissez faire to an active monetary and fiscal policy is also applied in the opposite direction to deal with excess buyers' demand. Although there is not the same resistance to price and wage increases as there is to price and wage decreases, the necessary adjustment to excess buyers' demand by rising prices still takes time. It is no instantaneous adjustment (if only because of the existence of long-term contracts, and attempts to stop profiteering by preventing the necessary price increases) and so it causes disturbances that are unjust and reduce the efficiency of the economy. The policy is therefore applied in both directions, providing for increasing the volume of money expenditure whenever necessary to prevent an insufficiency of buyers' demand and for de-

creasing the volume of money expenditure whenever that is necessary to prevent the emergence of excess buyers' demand. The volume of expenditure may be adjusted either by working on the stock of money (by monetary policy) or by working on the velocity of circulation of money (by fiscal policy) or by some combination of the two.

Model B, which is, of course, the Keynesian general theory of employment policy, differs from model A primarily in incorporating a policy of increasing or decreasing demand if it should become too little or too great. (It has a "steering wheel" there being no rails to keep the car on the road). Because of this difference a secondary distinction arises. With policy coming into the picture it becomes important which of two instruments of policy is to be used, monetary policy or fiscal policy. Model B makes use of both instruments. (The car can use either kerosene or gasoline).

C. The anti-Keynesian models

Model C is not really a new model. It rather consists of a series of publicity releases of model B dolled up to emphasize one or another of its qualities as if this were a new invention that made model B obsolete. One very crude pamphlet of this series emphasizes the ability of Model C to cut down on demand if it becomes excessive or threatens to become excessive, seeming to imply that Model B was a depression model which could work only in the direction of increasing demand. (Model C has a steering wheel that can be turned to the right.)

A more refined variant of model C, let us call it model C*, is concerned with the relative effectiveness of monetary policy and of fiscal policy in different circumstances. An economy may be so saturated with money so that further increases in the stock of money would not be effective in increasing expenditure, and reductions in the stock would have no significant effect in reducing total expenditure. (This is sometimes expressed, though not explained, by saying that changes in the money supply would be offset by opposing changes in the velocity of circulation). Monetary policy is then useless and expenditure can be increased or decreased only by fiscal policy—by the government increasing or decreasing its own expenditure, e.g. on public works, or permitting others to spend more by reducing taxes or forcing them to spend less by increasing taxes.

It is then suggested that model B works only in this case which is called the Keynesian case. It should more properly be called Keynesian special case (of the Keynesian general theory) when it is appropriate to concentrate entirely on fiscal measures to increase or decrease expenditure on consumption and investment. (Only gasoline can be used.)

In this kind of situation even extreme price flexibility is unable to restore or maintain the desired level of real demand because it operates, after all, as nothing but a roundabout way of increasing or decreasing the real volume of money in terms of buying power. It is a kind of automatic monetary policy which is useless for the same reasons as other monetary policy is useless.

When the economy is at the other extreme from being saturated with money, and money is very tight, the situation is naturally reversed. Fiscal measures for increasing expenditure on consumption or investment are ineffective because an increase in expenditure anywhere in the economy, say in Government expenditure on public works, results in an increase in demand for money to hold in connection with the increased volume of transactions. In the very tight money situation this raises the rate of interest, or in some other way reduces expenditure somewhere else. Similarly, a decrease in expenditure anywhere releases holdings of money which permit an increase of expenditure somewhere else. Fiscal policy then is helpless, and what is called for is monetary policy to increase or decrease the money supply. (Only kerosene can be used.) This case is then called the classical case, as if it were one in which the Keynesian theory does not apply and where model B should be replaced by model C* (which uses kerosene instead of gasoline). This case should more properly be called the classical special case (of the Keynesian general theory). Since the Keynesian theory (model B) covers both situations in which fiscal policy is strategic (when model B uses gasoline) and situations in which monetary policy is strategic (when model B uses kerosene) as well as the more normal situations when both policies are effective (when model B can make use of both fuels, mixing the proportions to suit the terrain).

D. The sellers' inflation model

Model D is a genuinely different model in which unemployment not only fails to make prices and wages fall quickly enough but is even unable to prevent them from continuing to rise. When we have strong trade unions with the power to raise wages, strong corporations with the power to set prices administratively, and a general atmosphere in which it is considered normal, natural, and only fair for wages to be increased regularly, and by amounts greater than the average increase in productivity or in the share of the product that labor can obtain, prices increase, and the economy is subject to sellers' inflation. It is now no longer a question of whether fiscal policy or monetary policy is more effective in regulating the volume of buyers' demand or expenditure, since the inflation is caused not by excess buyers' demand but by the existence of powerful institutions and mores that enable sellers to insist on and obtain continually higher prices. The widespread and generous feeling that workers are entitled to the increases in wages that they get is made much easier by a recognition that any raise need not be taken out of profits, since it is possible, as well as proper, to pass it along to the ultimate purchaser in higher prices. Indeed, it is usually considered only right that profits, in dollars, should be increased so as to protect real profits from the declining value of the dollar.

DEPRESSION AS A CURE

We have already mentioned the argument that a really firm refusal on the part of the monetary authorities to prevent the volume of money from increasing, no matter what happened, would bring the sellers to their senses. Realizing, or discovering, that they will not be able to sell so much if they raise their prices, they will refrain from raising prices and they will not grant, or ask for, wage increases that raise costs by more than can be squeezed out of profits.

There are several reasons why this is not practical. In the first place, the policy of firmly or obstinately holding the money supply constant does not prevent excess buyers' demand from coming about. It does not even prevent an increase in total expenditure. This is because this policy is essentially a kind of monetary policy and we may be in the Keynesian special case where monetary policy is not effective. That we are at the present time in such a situation is suggested by the fact that while the supply of money has been held fairly stable in recent years, the volume of expenditure has continually increased. (Another way of expressing this, which is more common, perhaps, because it sounds like an explanation, is to say that the velocity of circulation has increased and that this has frustrated the restrictive monetary policy.)

HOW MUCH DEPRESSION WOULD BE NEEDED?

There is, of course, a limit to the degree to which expenditure can increase without an accompanying increase in the money stock, and if the inflation were a buyers' inflation it would come to an end when this limit was reached (i.e., when the velocity of circulation could not increase any more). But where the inflation is a sellers' inflation it does not stop at that point. After the increase in prices has absorbed all the increase in expenditure that is compatible with a constant money stock (i.e., that can be attributed to any increase in the velocity of circulation), it continues to increase. The increase in prices goes on further until it has reduced real expenditure and employment sufficiently to overcome the institutional forces that enable sellers to demand higher and higher prices. The question is how strong are these institutions? or, in other words, how severe a state of depression and unemployment would have to be maintained in order to destroy these institutions or to induce sellers not to use their power to raise prices; and how able and willing the authorities would be to bring about and maintain this degree of depression and unemployment?

An interesting indication of the strength of the most important element in the setup—the general feeling of the propriety and inevitability of continuing wage and cost increases (to be passed on in increased prices) is provided in the very debate about automobile prices and wages with which this article begins. The UAW had asked the automobile corporations to reduce the prices of their 1958 automobiles to $100 below the 1957 prices in return for the UAW promising to take this into consideration when presenting their 1958 demands for wage increases. In rejecting this suggestion the largest of the corporations put forward a countersuggestion which must clearly be considered as an extreme position, leaving some room for retreat (i.e., for conceding bigger increases in wages) in the forthcoming negotiations. This unrealistically extreme proposal, made, it must be remembered, in the course of a debate in which everyone is deeply concerned with the dangers of inflation, includes the continuation of the present contract which (apart from a cost of living adjustment) calls for a regular wage increase of 2½ percent per annum. This is more than the average increase in output per head in the American economy, so that there is a significant piece of sellers' inflation right at the lower end of the range subject to negotiation.

In such an atmosphere it would require, one would think, a quite severe depression to change people's notions of what is the proper development of wage rates and of the corresponding prices (since the right of wages to increase goes together with the right of profits at least not to fall). It would take perhaps an even more severe level of unemployment to destroy the power of labor to force the wage increases on more reluctant employers who grant wage increases only when they feel they are forced to—i.e., that they would lose more from the strikes and other weapons of the trade unions than they would lose by agreeing to the higher wages (and passing them on).

At the same time a policy of full employment seems to have won a firm place in the country's economic policy, not only because of the general acceptance of the desirability of prosperity, for human as well as for international political reasons, but because neither political party can afford the blame for even a mild depression. With such a setup there is no need to worry whether the cure is worse than the disease—whether the depression would be more harmful than the inflation that it would prevent. This cure is not one than any government would carry out or even seriously attempt to carry out.

This brings us to yet another objection to the sellers' inflation analysis.

A firm policy was not announced

It has been suggested that even if the authorities are not really prepared to bring

about the degree of depression necessary to negate the pressure of sellers' inflation, they could still do the trick by solemnly announcing a policy of refusing to provide the increase in expenditure called for by a continuing sellers' inflation. The threatened unemployment would then sober the sellers into calling off their inflationary wage and price increases.

It seems to me pretty certain first that such declarations would not be believed and that the bluff would quickly be called, and secondly, even if it were believed as regards the economy as a whole, that would not prevent any specific wages or prices from being raised while the local conditions still permitted this. It would perhaps even aggravate the wage and price increases as each tried to get his increase quickly while the local going was still good.

YOU CAN'T STOP SELLERS BY BULLYING BUYERS

All this brings us to the perhaps only too obvious conclusion that sellers' inflation cannot be cured or prevented by measures directed against excess demand by buyers. It can be successfully treated only by attacking the pressure on prices by sellers.

THE CURE MUST BE FAIR

The present debate in the automobile industry indicates where the solution may be found.

In an outstanding article which concentrates on showing the inadequacy and superficiality of proposals to prevent inflation by monetary and fiscal policies and declarations, Prof. Sumner H. Slichter seems to suggest that the distinction between buyers' inflation and sellers' inflation is a futile fantasy. Thus he says (using somewhat different terminology): "Much time has been wasted in recent years in discussing whether inflation is demand-inspired or cost-inspired. (Some 70 or 80 years ago the Austrian theory of value produced a similar debate as to whether demand or cost determines the value; the argument ended suddenly when it dawned on the economists that each blade in a pair of scissors cuts.)" ("On the Side of Inflation," Harvard Business Review, September–October 1957, p. 32.)

However, the inapplicability of this analogy jumps to the eye in his very next sentence which shows that it can make sense to distinguish between the blades, since he goes on to say "Thus changes in the price level may originate either with shifts in the demand schedules or with shifts in the supply schedules," and in another article, Professor Slichter definitely alines himself with the sellers' inflation blade in declaring that "There is no evidence that prices are rising ahead of costs and are pulling costs up. The evidence is all the other way: that prices are being sluggishly adjusted to slowly rising costs." ("Government Spending Can Reduce Taxes," Harvard Business Review, July–August 1957, p. 106.)

Workers feel that if they exercise restraint in their wage demands this would only increase the residual going to profits, while employers feel that if they should lower the price they charge for the product, wages would not be reduced proportionately, so that, instead of a general benefit from the avoidance of inflation with everybody gaining and nobody losing, there would be an unjustified or even an intolerable transference from profits to wages.

This was admirably brought out by the Ford Company which, in its reply to the UAW, turned the UAW proposal completely around and proposed, with more sarcasm than seriousness, that "if you will accept an immediate reduction in wages to the prevailing level at the introduction of our 1957 models, we will take this into consideration in determining how much we will increase prices in our 1958 models." In effect each says "you take the first step and trust me to play fair and do my part too." Such invitations are as futile as invitations for unilateral disarmament in another field—and for the same reason: neither party trusts the other not to exploit the opportunity offered to him. Agreement can be reached, if at all, only if there is a clear definition of what is to be done by both parties, and if neither party will lose, but both gain from a fair arrangement.

In the negotiations that take place between employers and labor, agreements are reached which are both clearly defined and mutually agreeable. But in the course of reaching such agreements the objective we are concerned with here—the avoidance of inflation—is lost. Both sides recognize that everybody would be better off if inflationary increases in all wages and in all profits were avoided. Real wages and real profits would be not lower but even higher to the degree that the efficiency of the economy was saved from inflationary damage. But each party tries to increase or to protect his share by asking for more money for himself and not by insisting on less money for others. Each party is, furthermore, represented by negotiators who have to show they are earning their keep by pressing as hard as possible to increase their party's share, so that there is a balance of upward pressure on the prices demanded. The result is sellers' inflation.

SELLERS' INFLATION RESTS ON ADMINISTERED PRICES

This does not happen on a perfectly competitive market because on a perfectly competitive market we cannot have the institutions and mores that give sellers the power to push prices up. On a perfectly competitive market all that is needed for stability of the price level is a monetary and fiscal policy to keep buyers' demand from becoming either excessive or deficient. No one holds back any product from the market—or can establish a price which results in some of the potential product or the available labor not being taken off the market, so that unless there is excess buyers' demand prices cannot rise, and if there is a deficient buyers' demand prices must fall. Unless there is full utilization of resources we cannot have inflation, and if there is a depression (or recession) we will have deflation (i.e. falling prices). In a perfectly competitive economy we cannot have inflation and depression at the same time.

But where prices are administered by decrees of large firms, and wages are administered by point decrees of powerful unions together with powerful employers or employer groups, the situation is different. Sellers' inflation is a byproduct of the process, and together with sellers' inflation we can also have depression—indeed we will have depression with our sellers' inflation if the authorities try to cure the inflation by reducing ("excess") demand.

These byproducts of administered wages and prices have important similarities to, and are no less socially harmful than, the monopolistic exploitation that would result from the administration of excessive prices by public utilities. We have gone a long way toward eliminating the latter evil by the regulation of prices that may be set by public utilities for the services they supply. The same kind of device can be used to eliminate the former evil. Just as the public utility prices can be and are being regulated so as to prevent monopolistic exploitation, so administered prices and wages can and should be regulated so as to prevent sellers' inflation and the depression it may bring with it.

ADMINISTERED PRICES MUST BE REGULATED

The regulation of administered prices and wages so as to prevent sellers' inflation would have to follow somewhat different lines. It would not be directly concerned as to whether there is more than or less than a fair rate of return on investments. That would be left to the strong competitive forces that still prevail in our economy. Nor would any other regulations whatsoever be involved other than price regulation. The function of the regulation here proposed would be only to prevent restrictive prices or wages from being administered. A restrictive price is one that results in the demand for a product falling below capacity output. A restrictive wage is one that results in less than full employment in the specific labor market to which it applies. With a monetary and fiscal policy concentrating on the maintenance of adequate buyers' demand for full employment at a constant price level, while preventing buyers' inflation, it would be possible for wages per hour to rise on the average at the same rate as productivity per hour, with aggregate profits rising too at the same pace as aggregate wages and aggregate output (except that increases in the degree of competition, which might be induced, could reduce the share going to profits and increase the share going to labor.)

PRINCIPLES OF REGULATION

The regulatory body would therefore have to follow a set of rules which would do the following things:

1. They would permit an administered price increase only when production and sales are at capacity. Such price increases should not be withheld on accout of profits being high.

2. They would enforce decreases in administered prices whenever production and sales are significantly below capacity. A price decrease should not be waived on account of profits being low, or even negative on this item in the firm's output, as long as the price more than covers current operating costs—more strictly short period marginal costs.

3. They would permit increases in administered wages in general at a rate equal to the average trend of increase in national productivity.

4. They would permit increases in administered wages greater than this wherever the labor market is tight—with, say, less than half the national average rate of unemployment.

5. They would permit only smaller increases in administered wages, or no increases at all, where the labor market is slack—with, say, more than twice the national average rate of unemployment. (The expected continuing increase in product per head makes it possible to avoid reductions in money wages, although it is unavoidable, for price stability, that some prices must fall if others rise.)

UNSOLVED PROBLEMS

This is, of course, not a fully worked out solution ready for immediate application. There remains much to be developed—such as generally acceptable criteria of capacity of different firms and industries and generally acceptable measures of slackness or tightness in particular labor markets, or measures for dealing with possible attempts by monopolistic industries to restrict the installation of capacity if they are prevented from restricting the utilization of existing capacity. (This would bring out the existence of a specific monopoly situation that calls for treatment quite apart from the problem of inflation.) The intensification of competition which the regulation would enforce would also, in some instances, lead to the elimination of high-cost competitors. While the public would benefit from the increased efficiency of the economy—in higher wages and lower prices—such elimination of competition would conflict with certain existing so-called antitrust policies that have become in effect anticompetition policies and need to be reconsidered.

There remain also important problems of organization and administration of the regulatory body as well as the need for wide-

spread and intensive public discussion to bring about the familiarity with, and the understanding of, the nature of the proposed regulation which is essential for its effective operation in a democracy. And in the course of such examination and debate important developments, changes and improvements are to be expected. Nevertheless the general lines indicated seem to be inevitable if sellers' inflation is to be attacked directly and if we are not to depend on irrelevant nostrums or pious exhortation because we do not dare to attack the problem at its roots.

In anticipation of the necessary discussion I would like to make only two points.

PRICE REGULATION IS NOT PRICE CONTROL

First, it is to be expected that one of the most effective debating points against the proposal will be the charge that it means price control against which there are a thousand cogent arguments, as well as a powerful popular appeal. I would like to go on record as an opponent of price control second to none. But price regulation is not price control. There is all the world of difference between them.

Price control consists of an attempt by authority to establish a price below that which clears the market, i.e., a price so low that the amount available is insufficient to satisfy fully the demand by all the would-be buyers. At the controlled price there is therefore excess demand. Buyers try to buy more than is available for them to buy. This results in disorganized supply, waiting in line, tyranny of sellers over housewives and other buyers, selling under the counter, gray markets and black markets, evasion of and disrespect for the law, corruption and gangsterism, and finally, as a lesser evil, the installation of rationing with all of its administrative burden, economic inefficiency and public inconvenience. The original sin from which all the evils stem and to which all the objections apply is the setting of a price below that which clears the market and the consequent creation of excess demand.

Price regulation does not attempt to set a price below that which clears the market. It only prevents the public utility, or whoever else determines an administered price or wage, from setting it above the level that would clear the market at the optimum output.

In the case of public utilities the price regulation results in greater output at lower prices and a more efficient use of the resources of the economy. The owners of the public utility are indeed deprived of their opportunity to make monopoly profits, but that is more than offset by the consideration that the monopoly profit could have been obtained (in the absence of the price regulation) only at the expense of a loss to the consumers much greater than the gain to the monopolists. Since there is no attempt to set the price below the level that would clear the market, everybody can buy as much as he wants to of the product—the railway travel, the electric current or whatnot—and none of the evils of price control come into the picture.

In fact price regulation is more properly seen as the opposite of price control. The function of a price is to clear the market. Price control is bad because it interferes with this function by attempting to establish a different and lower price which does not clear the market. Price regulation restores the function of price by adjusting the price so that it does clear the market at the optimum output. It interferes only with interferences, preventing the monopolists from fixing a price above that which would clear the market at the potential supply, which is the socially most desirable supply.

In the case of the proposed regulation of administered prices and wages, the suggested rules are specifically such as would always maintain prices and wages which would clear the market at full employment with price stability. Nowhere would it result in a price or wage below that which would clear the market so that the cry of price control would in no way be any more justifiable than if raised against the established policy of regulating the price of water supply or telephone service—perhaps even less justifiable, since the regulation of the prices charged by public utilities do prevent these from obtaining monopolistic gain, while the proposed regulation of administered wages and prices would only prevent the inflation from which practically nobody gains.

APPROPRIATE REGULATION INCREASES FREEDOM

The second objection I would like to anticipate is that the regulation of administered prices and wages so as to prevent sellers' inflation is in conflict with the traditions of free competitive capitalism. It is possible that the trade unions would easily see all the social benefits from keeping the prices of products down to the level needed for capacity production and full employment, but would denounce the regulation of wages as an intolerable interference with the fundamental right of collective bargaining. It is possible that employers would quickly appreciate the desirability of curbing excessive wage demands but would reject the regulation of prices as an alien and unthinkable interference with the free economy and an impious infringement of the sacred rights of management in setting prices.

Such responses would indicate that "after you, my dear Alphonse" really means "include me out of it," or "let George do it," and we will not have the bilateral cooperation that is necessary. But if the protestations against the general evil of inflation are genuine, and each side can be satisfied with an agreed fair share of the overall benefit, we may be spared all the rhetoric.

The true interests of labor are not damaged by the trade unions' relinquishing the right to institute inflation, or even by their giving up the right to use inflation as an instrument for attempting to increase real wages at the expense of profits. The true interests of capital are not betrayed by surrendering the parallel right to start (or keep feeding) a sellers' inflation by restricting output below capacity so as to raise prices (or by raising prices where this has the effect of restricting demand and output below capacity). The justification of the free economy and its institutions rests ultimately not on any ancient divine rights but on its efficiency in satisfying the needs and the desires of a free people. The price mechanism is the central instrument for approaching such optimum output, and it does this only to the extent that the prices (including wages) are those that clear the market while corresponding to the value of the alternative products that have to be sacrificed (at the margin) in order to produce the current output of any commodity or service.

Monopolistic restriction of output, causes resources to be shifted from the production of more useful to the production of less useful goods and services. The regulation of public utility prices is justifiable because it works in the desirable direction of correcting this distortion.

Inflation damages the economy as a whole. The restriction of output that results from attempts to curb sellers' inflation by reducing buyers' expenditures is more damaging than monopolistic restriction. The latter shifts resources from producing more useful products to producing less useful products, while the former shifts resources from the production of useful products to producing nothing at all—except the human frustrations and suffering from unemployment.

The full utilization of existing capacity may sometimes lead to inadequate profits, or even to losses, but that is the nature of the competitive profit and loss system. It shows that an error was made in the past in producing too much capacity in the industry, but that is no reason for compounding the error by refusing to make use of the capacity once it has been produced. The low profits or the losses are then performing their proper function of discouraging further investment in such industries.

In other cases the prices that clear the market at full capacity output will yield very large profits. These large profits are then performing their proper function of encouraging more investment in such industries (unless there is a monopolistic restriction on such investment, which would call for antimonopoly action or price regulation in the corresponding investment industries). Just as the low profits are no excuse for monopolistic restriction of output so the high profits are no excuse for enforcing price reductions below the level which clears the market. This would be price control and is to be equally condemned whether it is imposed by government or whether it is due to "restraint" on the part of producers who are powerful enough, and rich enough, to be able to do this. If the existence of excess capacity in steel and in automobiles means that current prices are set too high, the emergence of gray and black market prices during and after World War II meant that prices were then too low. The generosity of the corporations at that time in selling too cheap (in part to privileged suppliers of the black market) is no justification for selling too dear now. A genuine defense of the free market system is not appalled at the emergence either of profits or of losses. In this spirit the proposals here made will be seen not as infringing on the principles of the competitive profit and loss system, but as protecting this system from the power of sellers to raise prices and wages above the levels compatible with full employment and price stability. He is not a true friend of free society who defends the flaws in it that permit inflation and unemployment to persist.

It has been very fashionable for some time to deplore inflation and to quote Lenin's declaration that inflation is the Achilles' heel or the Trojan horse of capitalism. Recently it has become even more fashionable to preach restraint as a remedy for inflation to parties who are unable to respond, even if willing, because they have no assurance that the others will play their part. The most recent statements by labor and management in the automobile industry include public declarations of conversion to a readiness to exercise the restraint, provided the other parties cooperate. The time has come to wind up the deploring, the quoting, the preaching, and the declarations of conversion and instead, by regulating administered prices and wages, to provide the restraint needed to protect the free economy from sellers' inflation.

Boston Chamber of Commerce Protests Transfer of Customs Processing of Inbound Foreign Parcel Post Packages From Boston to New York

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I

wish to include a statement released by the Greater Boston Chamber of Commerce on January 22, 1959:

The Greater Boston Chamber of Commerce vigorously protests the announcement of Mr. Maynard Hutchinson, collector of customs in Boston, that customs processing of inbound foreign parcel post packages will be transferred from Boston to New York.

William J. Bird, executive vice president of the Greater Boston Chamber of Commerce said that in August 1958, this chamber was represented by its transportation manager, Paul K. Lambert, in a conference on this matter held in the offices of the Secretary of the Treasury, Robert B. Anderson.

At that time, Treasury officials assured all Boston representatives that there would be diversion from Boston until difficulties occasioned by previous diversions from Philadephia and Baltimore had been rectified to the complete satisfaction of those communities. "Under no circumstances," Treasury officials stated, "would there be diversions from Boston without substantial advance notification thereof to this chamber of commerce and other interested organizations."

"Such notification would have permitted independent and impartial investigation by this chamber but no such notification has ever been received by the Greater Boston Chamber," Mr. Bird said.

"In his announcement, Collector Hutchinson emphasized there would be no loss of jobs in Boston. This is good, to be sure, but where are the savings of this plan to come from? Meanwhile, the good service which our importers now receive may be in jeopardy," Mr. Bird stated.

The Grab Bag of Americana

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. HECHLER. Mr. Speaker, I pay tribute to the leading Republican newspaper of my hometown of Huntington, W. Va., the Herald-Dispatch, and under unanimous consent ask to include an editorial from the February 3 issue of the Herald-Dispatch.

Mr. Speaker, I rise to the defense of the writer of this editorial, Raymond Brewster, the able editor of the Herald-Dispatch, who has given our community outstanding service down through the years. I know that my fellow Members will not be offended by Mr. Brewster's remarks about that great grab bag of Americana, the Appendix of the CONGRESSIONAL RECORD. In defense of Mr. Brewster, I wish to state that he is basically a constructive person with a wonderful sense of humor and I trust that his remarks will be taken in a constructive spirit.

Anyone who desires to be active in public life, Mr. Speaker, must, above all, have the ability to laugh at himself and not to take himself too seriously. Congress as an institution, likewise, has survived and become stronger because its Members have not only revered the institution but have been able to take criticism of it in the proper spirit.

On the morning after election day last November, Mr. Speaker, one of the officials of the Herald-Dispatch bemoaned the fact that very few voters had followed the editorial advice of Mr. Brewster on November 4. Nevertheless, Mr. Brewster and the Herald-Dispatch are great forces in our community and I hope they will always be read carefully, Mr. Speaker. Certainly, so far as the Democratic Party in my area is concerned, if Mr. Brewster did not exist we would have to create what would be a poor substitute, I am sure.

Keeping one's constituents informed is central to the function and mission of a Member of Congress. I could not afford to buy the splendid advertising which the Herald-Dispatch continues to give me. I desire publicly to thank the Herald-Dispatch for their continuing efforts to publicize my activities on behalf of the Fourth Congressional District of West Virginia.

The editorial follows:

DR. HECHLER DISCOVERS THE RECORD

The Honorable KEN HECHLER, U.S. Congressman from the West Virginia Fourth District, and a man who does not spare the written word to let his constituents know of his multiple activities, has discovered the Appendix of the CONGRESSIONAL RECORD.

The CONGRESSIONAL RECORD is a bulky, verbatim account of the thousands of words uttered daily in the U.S. Congress. The Appendix is devoted largely to an extension of remarks by its Members. The word "extension" is used advisedly.

The Appendix is composed of reprinted texts of previously published syndicated columns, tributes to local luminaries, special groups, home, mother, and just endless words.

Dr. HECHLER has found the Appendix.

Probably the most important fact about the CONGRESSIONAL RECORD is that it is printed with your money, at a cost of $75 per page.

Since the current session began, Dr. HECHLER has taken leave to extend his remarks on at least three occasions.

The West Virginia Congressman used more than a third of a $75 page to laud the appointment of Roger W. Jones to membership on the Civil Service Commission. It took that much space to come to the fact that "a West Virginia Democrat rises to pay tribute to a Connecticut Republican."

Dr. HECHLER's constituents who may not see the RECORD will be pleased to know that he has fought valiantly for tobacco supports. Although the intelligence previously had been conveyed from the Congressman's office, the RECORD extension on the subject is folksy and full of puns based upon cigarette slogans—for another third of a page or more.

Last Saturday Dr. HECHLER extended his remarks to recognize the Des Moines Republican strategy meeting under the title "Can the Republican Elephant Be Whitewashed?"

At the Des Moines meeting Republican leaders took a searching look at a foregone conclusion—the overwhelming defeat last fall—and discussed plans for the 1960 campaign. The problem was viewed realistically with party leaders calling for stepped-up political activity on the part of the President, and Mr. Eisenhower himself urging unremitting effort. From the meeting came plans to scrutinize the party's objectives.

From this open soul-searching Dr. HECHLER deduces: "The Republicans are trying to put a coat of whitewash over their elephant, but the elephant will still look as if it were made of gold." There followed tributes to Mr. Roosevelt, Mr. Truman, and the common man.

Thus far Congressman HECHLER has extended his remarks only about $200 worth, a minute sum considering his party is pledged to spending. But we have a sneaking suspicion that seeing one's utterances extended for posterity on the pages of the RECORD could grow into an almost unbreakable habit.

Problems Confronting the Hand-Blown Glassware Industry

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. DENT. Mr. Speaker, in view of the fact that my district is vitally interested in the successful and prosperous continuance of the Flint glassworkers to maintain their employment, I deem it important that the following analysis of the escape clause provisions be inserted in the RECORD.

Most of this material appeared in a comprehensive statement delivered by O. R. Strackbein before the U.S. Tariff Commission for the American Flint Glass Workers' Union, January 27, 1959.

The American Flint Glass Workers' Union in whose behalf I appear before this Commission speaks for a majority of the employees engaged in the manufacture of hand-blown glassware in this country.

This union has not itself filed an application under section 7 of the Trade Agreements Extension Act of 1951 as amended, but wishes to go on record in support of the application filed by the handmade table and decorative ware division (division H) of the American Glassware Association.

The welfare of the industry that employs the members of the American Flint Glass Workers Union is of vital concern to these members. Injury to the industry from imports means injury to our membership. In fact, the workers are usually in the first line of defense wherever imports strike the market in competition with the goods that are manufactured in this country.

One of the first steps that the manufacturer takes when imports seriously interfere with the sale of his products, reducing either the margin of profit or sales volume, or both, is to curtail employment. This he does in one of several ways, or a combination of them.

He may lay off a part of his work force; he may reduce the number of hours of work per day; or he may go on a short workweek. His purpose will be to avoid adding more output to his stock when the goods are slow moving and high priced, hoping thus to adjust his inventory to the downtrend of his sales. In order to do this he must reduce the flow of goods from the factory; and the only normal way of doing this is to curtail man-hours of production.

The worker thus becomes a buffer between the manufacturer and rising imports. Whether the manufacturer succeeds in stopping the import tide by the measures he takes toward retrenchment depends on the character of the import competition. Should the foreign manufacturers of sources of the imports be well equipped for long-term competition on an upward trend, the efforts to make an inventory adjustment would be of little avail.

In that event, any successive temporary expedients resorted to by the domestic manufacturers would be utterly inadequate. The failure of such efforts to adjust stocks to a lower level of demand by reduction of man-hours of work would then call for a permanent readjustment. Of course, imports might continue to rise in spite of more drastic new steps and it might be necessary to repeat them. In the end the situation would become chronic and some manufacturers would become desperate. Here and there a close-down would occur, possibly with the hope of reopening when the outlook might turn for the better.

The hand-blown glassware industry has experienced many difficulties of this character; and the outlook continues to be discouraging. Not only have imports continued to increase in the past 10 years but the trend of the domestic industry is downward in terms of the share of the market supplied by it.

A declining share of the market is important among the criteria of injury found in the escape clause. Indeed, a relative decline in a domestic producer's share of the market removes all doubt about the whereabouts of the competitive advantage. It means simply that the domestic industry is on the run.

Now, it is assumed altogether too often that inability to hold its own competitively with imports marks a domestic industry as inefficient. This assumption lacks even the virtue of fairness. It is like blaming a horse that carries a heavy handicap for not winning a race. American producers carry burdens far greater than foreign manufacturers. Most of this comes from the higher wages that set off our economy and standard of living from those of other countries. Should our wages be reduced to the level of those prevailing in other countries our producers, we may be sure, would have no difficulty competing. They need then be no more efficient than they are now in order to compete. Indeed, with still lower wages, they could come into a position to drive the imports from the market. But we would lose our high standard of living in the process.

Numerous economists, imbued with much beside practical experience, persist in saying that our higher wages are offset by our higher productivity. In repeating this fallacy, they exhibit a stubbornness that might be put to better uses in the land of make-believe. The very facts of daylight belie what these economists say. They refuse to credit the words of those who have daily experience in the marketplace. Imported goods are constantly underselling those of our own manufacture. The proof of the pudding is in the eating.

Why should this process of underselling be in any way surprising? Since the last war, billions of dollars worth of modern machinery and equipment has gone overseas from this country and has been installed in many hundreds of factories. Also more than 8,000 productivity teams from abroad have come to this country to study our production methods.

Beyond this it should be clear now, notwithstanding the peculiar notions of the academic economists, that the American industrial system has no corner on the technological arts nor on science, nor therefore on high productivity. Other countries are capable of developing and installing modern machinery on their own and are doing so.

From these considerations and others it follows that the indictment of inefficiency will not lie against American industry merely on evidence of inability to compete with imports, nor on the mere word of unseasoned economists.

In the case of hand-blown glassware the direct labor cost is high. Because there is little or no mechanization in this branch of the glass industry in this country, and lacking also in other countries, we witness virtual barehanded competition between labor here and abroad, with not much cushion between them. It would be expected that the domestic industry would find great difficulty in competing with imports, and the facts support the expectation.

It should have been obvious that no tariff reductions should have been made in the first instance; but they were made nevertheless.

The evidence of serious injury is to be found in the trend of imports compared with the trend in domestic production. Imports have come to equal and then to pass domestic production. This is shown by statistics that will be furnished to the Commission by the industry and may be verified by investigations of its own by the Tariff Commission.

The American Flint Glass Workers Union has ascertained from its records in 10 unionized companies manufacturing hand-blown glassware that employment of skilled workers was 979 in April 1949 compared with 667 in April 1958. Miscellaneous workers declined during the same period from 2,526 to 1,625. The respective totals are 3,505 in April 1949 and 2,292 in April 1958. This represents a decline of 35 percent in employment in 10 years in these plants. Imports, on the other hand, increased threefold or more.

To the union this has the appearance of serious injury. To the industry it spells desperation, and the industry will submit other compelling evidence of serious injury.

Since the sole function of the Tariff Commission in an escape-clause action is a finding on injury and recommendation of a remedy, it will be in order to inquire how far this carries us.

In 1943 an escape clause was indeed inserted into a trade agreement for the correction of any injury that might develop; and such a clause was placed in all subsequent agreements. In 1947 the clause was given greater recognition in the form of an Executive order. In 1951 a statutory escape clause came from congressional action. It says simply that—

> No reduction in any rate of duty * * * or other concession * * * shall be permitted to continue in effect when the product on which the concession has been granted is, as a result * * * of the duty or other customs treatment reflecting such concession being imported into the United States in such increased quantities, either actual or relative, as to cause or threaten serious injury to the domestic industry producing like or directly competitive products.

The President himself has said:

> The President has the responsibility of considering, not only the question of injury to a domestic industry * * * but also the other fundamental questions bearing on the security and well-being of 165 million Americans. The President's final judgment in each case must represent the best composite evaluation he can make of these questions.

This statement may be found in the Bicycle case decided August 18, 1955. He listed five issues that must be decided in an escape-clause case and limited the Tariff Commission's function to the question of "injury and relief to a domestic industry."

The four issues falling in the President's sole jurisdiction and free of any testimony that might be given in public hearings were asserted by the President to be, first, our national security interest in the economic strength of valued allies in the world; second, building export markets for products of our farms, factories, and mines; third, compensation to other countries for withdrawal of concessions; and, fourth, protection of the American consumer against unnecessary and unjustified price increases.

Mr. Speaker, the wide open prairies of the West could hardly offer wider avenues for circumvention of what should be due process of law than the practice thus followed by the President in the administration of the escape clause. This, let me emphasize, is no fault of the Tariff Commission itself.

How have the four factors other than injury intruded themselves upon the scene? By what justification? The escape clause is in the nature of a reservation that permits withdrawal or modification of a concession if a certain contingency develops in fact, namely actual or threatened serious injury. That is what Congress has provided in its wording of the escape clause, quoted above. The only remaining question should be one of fact; and the finding of such fact is the function of the Tariff Commission. The law contains not one word that calls upon the President to gather an unknown volume of additional evidence outside the hearing process and with it to swamp the Tariff Commission's recommendation at will and without compunction.

Unless the Tariff Commission's recommendations should call for a duty higher in its protective effect than that from which it was reduced in a trade agreement, or a proposal for a quota that would rob the country extending a reciprocal concession, as a quid pro quo, of its bargain, such recommendation should be proclaimed without question by the President. He should regard it as representing the invocation of a reser-

vation in keeping with the widely proclaimed policy of avoiding or preventing serious injury to industry. Only if judicial review disclosed improper procedures or insufficient evidence or similar failures of the Commission, should its findings be set aside. The President should stand by his own appointed Commission. The propriety of its findings and the adequacy of its procedures should be left to the judiciary.

Mr. Speaker, under the publicly avowed policies, many times repeated, as documented in the review offered for the record, stating in effect that the trade agreements program is not to injure our industries and that a sure remedy is at hand if injury nevertheless takes place, there is no place for supplemental evidence and trumped-up issues beyond the evidence taken at hearings before this Commission on the question of injury.

It would be difficult indeed to find any support in law or elsewhere for the practice of treating delegated power as authority to skirt not only the law itself but other elements of due process. Yet this is precisely what has been done by the executive branch of the Government in its disposal of Tariff Commission recommendations under the escape clause.

Mr. Speaker, that abominable practice should cease; and the findings of the Commission in the question of injury from imports should be the last word.

Outstanding Citizens From Holly Springs, Miss.

EXTENSION OF REMARKS
OF
HON. JAMIE L. WHITTEN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. WHITTEN. Mr. Speaker, there are few if any towns and cities in the United States which have produced the number of outstanding citizens that have come from Holly Springs, Miss., in my district.

With this great record in history, today it is carrying on in every modern way; they continue real progress. Truly the people of this fine city are carrying on in the fine tradition those of past left to them. I include herewith a pamphlet listing many of these outstanding citizens:

HISTORIC HOLLY SPRINGS AND MARSHALL COUNTY, MISS., PRODUCED THE FOLLOWING ILLUSTRIOUS PEOPLE

Generals: Samuel Benton, Winfield S. Featherston, Edward Carey Walthall, Absolem M West, James R. Chalmers, Claudius W. Sears, A. J. Vaughn, Daniel C. Govan, Christopher H. Mott, and Alexander B. Bradford.

Adjutant generals: Thomas Falconer, Kinloch Falconer, and Harvey W. Walter.

Nominated for Vice President: Absolem M. West, National Party 1880; Anti-Monopoly Party 1884.

Members of Confederate Congress: Alexander M. Clayton, Jeremiah W. Clapp, Samuel Benton, Harvey W. Walter, Orlando Davis, W. M. Lea, John W. C. Watson, Alexander B. Bradford, and James F. Trotter.

U.S. Senators: James F. Trotter, Joseph W. Chalmers, Hiram Revels, Edward C. Walthall, and Wall Doxey.

U.S. Congressmen: James R. Chalmers, Absolem M. West, Van Manning, G. Wiley Wells, Winfield S. Fetherston, Joseph W. Chalmers, and Wall Doxey.

U.S. Attorneys: G. Wiley Wells and Lester G. Fant.

U.S. marshals: George M. Buchanan and John S. Burton.

Governors of Mississippi: Joseph W. Matthews, Lt. Gov. Sam Lumpkin, and Lt. Gov. Kinlock Falconer.

Secretary of state: Kinloch Falconer, Henry Myers, James Hill, and George M. Govan.

Judge of the U.S. Court of Appeals, Sixth Circuit: Jno. D. Martin.

State supreme court judges: James F. Trotter, Mississippi; Wm. Yates Gholson, Ohio; Alexander M. Clayton, Mississippi; L. A. Smith, Mississippi; and Hamilton H. Chalmers, Mississippi.

Attorneys general: David Chambers Glenn and Roger Barton (attorney general of Tennessee).

Speakers of the house: James Lockhart Totten, James L. Autry, and Sam Lumpkin.

Executive secretary to the President (of Confederacy), Robert Josselyn.

Ambassador to Kentucky: W. S. Featherston (1860).

Chancellors: L. A. Smith, Sr. and Jr.; L. G. Fant, Sr. and Jr.; and Joseph W. Chalmers.

Circuit judges: Alexander M. Clayton, James F. Trotter, James Thorton Fant, John W. C. Watson, Winfield S. Featherston, and Hugh K. Mahon.

President of Louisiana State University: Francis L. Hawks.

Counsul to Havana: Alexander M. Clayton.

Hawaiian Islands: Judge Ed Watson.

Corporation counsel, city of New York: Arch R. Watson.

Mayors of Memphis: Jeremiah Clapp, Ed Crump, and Harry Litty.

President-elect Huguenot Society of America: Mrs. Miller Keith.

Nuclear scientist: Martha S. Parks.

National historian of the Colonial Dames of America, and vice president general of National Society of the Daughters of the American Revolution: Mrs. Egbert R. Jones.

Artist: Kate Freeman Clark, who left her fortune, home and 300 pictures to Holly Springs and Marshall County.

Authors: Sherwood Bonner, Francis L. Hawks, Joseph Holt Ingraham, Prentis Ingraham, and Robert Josselyn.

Industrialists: Oscar Johnson, Jackson Johnson, Andrew Johnson, Lee Johnson, Oscar Johnson, Jr., Frank Rand (International Shoe Co., St. Louis), R. L. "Red" Taylor, Hope P. Sullivan, J. P. Norflett, Price Curd, and F. M. Crump.

Poets: Robert Josselyn, Samuel M. Patton, and Rev. F. N. Atkin.

Education: In 1860 Holly Springs spent more on education than the rest of the State combined except the University of Mississippi. General Sears and General Bradford taught here. William Yates Gholson and A. M. Clayton aided in organizing the University of Mississippi and were on its first board of trustees. We educated Hon. Hugh White and prepared him for the university and a great career. Mary and Jane Mills were the first two women in America to graduate from a college. This was in 1833 and the college was Mississippi College, Clinton, Miss.

For over a hundred years the Fant family have had lawyers in Holly Springs. One family, the Gholsons, had doctors serving this community continuously for 113 years.

We believe no small town in the Nation can surpass such a record.

Bank Merger Bills

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. CELLER. Mr. Speaker, I have today introduced two bills which would ban any bank merger or consolidation whose effect in any section of the country may be substantially to lessen competition or tend to create a monopoly.

The first of these bills would amend section 18(c) of the Federal Deposit Insurance Corporation Act. It would:

First. Expand provisions of existing banking laws so as to require prior approval by the Comptroller of the Currency, the Federal Reserve Board, or the Federal Deposit Insurance Corporation of every bank merger or consolidation involving insured banks.

Second. Prohibit the appropriate Federal bank supervisory agency from approving any bank merger or consolidation where the effect in any section of the country may be substantially to lessen competition or tend to create a monopoly.

Third. Make it necessary for the appropriate Federal bank supervisory agency to obtain the views of the Attorney General respecting the competitive phases of the transaction and require the Attorney General to submit his views within 30 days.

Fourth. Require the appropriate Federal bank supervisory agency to give notice and opportunity to be heard to the appropriate supervisory authority of the interested State in the event the transaction involves State banks.

Fifth. Incorporate a so-called antitrust savings clause for bank mergers similar to that governing bank holding companies thus making it clear that applicable provisions of the antitrust laws pertaining to banks are not to be superseded.

The second bill would close a loophole in section 7 of the Clayton Act as amended by the Celler-Kefauver Act of 1950, and prevent bank mergers achieved by acquisition of assets where the effect may be substantially to lessen competition or tend to create a monopoly in any section of the country.

Section 7 of the Clayton Act, as amended in 1950 by the Celler-Kefauver Act, covers bank mergers achieved by stock acquisitions, but fails to cover bank mergers accomplished by means of asset acquisitions. This gap in existing law has no logical basis in view of the fact that the purchase of assets has an even more enduring effect than a purchase of stocks and thus is even more inimical to competition. The bill would plug this gap in existing law and provide the Federal Reserve Board and the Attorney General with the same enforcement authority under the Celler-Kefauver Act to move against asset acquisitions by banks as against stock acquisitions.

All bank mergers whether accomplished by acquisition of stock or assets

are circumscribed by the provisions of the Sherman Act of 1890 which prohibits combinations in restraint of trade, attempts to monopolize or monopolization of trade or commerce. Illegality under section 1 of that act is established by proof that the merger has actually resulted in an unreasonable lessening of competition. Section 7 of the Clayton Act, as amended by the Celler-Kefauver Act, requires, on the other hand, only a reasonable probability of a substantial lessening of competition. Hence the bill would enable the antitrust enforcement agencies to cope more effectively with the mounting trend of bank merger activity. The bill is similar to H.R. 5948 which was introduced by Mr. CELLER in 1955 and approved by the House of Representatives that year without dissent. The Senate did not, however, take final action on the measure.

Amendment of both the banking laws and the antitrust laws would assure that Federal officials apply the same competitive test to all bank mergers. In general, the bills would make applicable to the acquisition of a bank by another bank competitive principles which, under the Bank Holding Company Act of 1956, now govern the acquisition of banks by holding companies.

These bills would establish a uniform competitive test for all bank mergers and forestall approval of any whose effect might be substantially detrimental to competition.

Legislation of this kind is vitally needed in view of the rash of mergers that has been taking place among banking houses in recent years. In the period from 1950 through 1958, for example, a total of 1,232 mergers have been completed, resulting in the disappearance of many strong, competitive, sizable financial institutions.

In large part because of bank-merger activity, concentration of the Nation's banking facilities has reached a point where a few large banks control a disproportionate share of total loans and deposits. Thus the 100 largest banks control more than 48 percent of the Nation's bank deposits. What is more, in 10 of the Nation's 16 leading financial centers, 4 banks own more than 80 percent of all commercial assets. Indeed, in each of the 16 leading financial centers, the first 2 banks own more than 40 percent of all the commercial assets; the first 4 banks, 60 percent.

The bank-merger trend has become, as the Federal Reserve Board stated, a matter of deep concern, particularly since competition is one of the strongest single factors which safeguards a sound banking system. The proposed merger of Guaranty Trust-J. P. Morgan exacerbates this situation. Permitted to be consummated, it would seriously affect the competitive banking structure of New York City. Our Antitrust Subcommittee will continue to keep a watchful eye on all developments in this matter. It is gratifying that another proposed merger in New York City between Manufacturers Trust and Bankers Trust has been called off. This transaction would have had equally grave consequences.

The President, recognizing the seriousness of the bank-merger problem, has in his recent Economic Report transmitted to the Congress in January 1959, repeated his recommendation that Congress act favorably on legislation to authorize Federal regulation of the merger of banking institutions accomplished through the acquisition of assets.

The measures I have introduced not only would carry out this recommendation, they would provide an effective accommodation as between the requirements of the banking and the antitrust laws.

Floods Again Plague Indiana

EXTENSION OF REMARKS
OF
HON. J. EDWARD ROUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. ROUSH. Mr. Speaker, I represent an area of the great State of Indiana which abounds in rich farmland, in great industrial potential, and people who are reasonable and proud. We do not make unreasonable demands upon our Government and whenever possible prefer handling our own problems. However, when we are in a position where the magnitude of our problem reaches beyond our own resources and abilities we do not hesitate to seek the help which only our Federal Government can give. We have such a problem now. Indiana has been plagued with floods for many years. Floods which have cost our people millions of dollars in flood damage. Floods which have swept away some of our richest farmland, floods which have destroyed property, floods which disturbed the economy and well-being of our people.

Last year our President signed into law a bill authorizing the construction of three reservoirs in the upper Wabash River Valley. This authorizing legislation was wise. It was not a hit-and-miss thing. It was an acceptance of the recommendations of agencies of authority who had spent years studying our problem. "At last," we thought, "we have made progress. We now have relief for our problem." Not so. Although recognition was readily given to the fact that we have a need in Indiana for flood control, this need was ignored when it came to supplying necessary funds for the final planning of these projects. The Presidents' budget ignored our request for $50,000 for the planning of the Salamonie River Reservoir and $150,000 for the Mississinewa River project.

Mr. Speaker, Indiana should not be denied the protection the construction of these projects will afford to the lives, property, and well-being of our people. At this very moment floods are sweeping away our topsoil, destroying our property, and endangering the lives of our citizens.

It is difficult for us Hoosiers to understand why we have been deprived of funds which would alleviate one of our most pressing problems.

Representative Wright Patman, of Texas, Given Award of Merit for His Key Role in Recognizing the Problems of Small Business and in Seeking To Aid in Their Solution

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, occasionally one of our colleagues in the House of Representatives receives an award that is particularly appropriate, and one that meets with wide general approval not only in this body but among the citizens of our country.

Honors come easily and numerous in the U.S. Senate to its Members with endless newspaper columns, magazine articles, radio, television, and other motion picture film footage devoted to telling the story and chronicling the event.

The path is harder in the House and one has to be particularly outstanding to be acclaimed.

It is, then, with special pleasure that all of us welcome the bestowal of the much-coveted Award of Merit on the gentleman from Texas [Mr. PATMAN] by the national coat and suit industry recovery board. This trade body is a national organization representing 1,200 manufacturers of women's and children's coats and suits and 70,000 garment workers. Member companies belong to 16 trade associations, dedicated to ethical business standards and fair labor standards, who work in conjunction with the International Ladies Garment Workers Union, AFL–CIO.

I include a news story from the New York Times of February 3, 1959, giving the details of the bestowal of this highly merited Award of Merit to our beloved colleague, who is so richly deserving of it:

PATMAN SCORES ABUSES IN PRICING—SAYS SMALL BUSINESS MUST RESIST INEQUITABLE PRACTICES OF BUYING SYNDICATES—SEEKS TO BOLSTER LAW—GARMENT PRODUCERS WARNED POWER IS CONCENTRATED IN FEWER CORPORATIONS

(By Herbert Koshetz)

MIAMI BEACH, February 2.—Small business was warned today it would lose further ground in its fight against big business monopoly unless it stood firm against pricing abuses and the demands of large buying syndicates.

Representative WRIGHT PATMAN, Democrat of Texas, who isued the warning, also declared that the rising trend of mergers, coupled with monopolistic pricing, had placed control of the Nation's economy in the hands of a few large operators.

Representative PATMAN spoke at the opening of the annual meeting of the national

coat and suit industry recovery board. This trade body is a national organization representing 1,200 manufacturers of women's and children's coats and suits and 70,000 garment workers. Member companies belong to 16 trade associations, dedicated to ethical business standards and fair labor standards, who work in conjunction with the International Ladies Garment Workers, AFL–CIO.

The board presented its award of merit to Representative PATMAN for his "key role in recognizing the problems of small business and in seeking to aid in their solution."

He is coauthor of the Robinson-Patman Act, which requires sellers to offer equitable terms to all buyers. He also is chairman of the House Small Business Committee.

REVISIONS NEEDED

Mr. PATMAN said that certain sections of the law needed to be strengthened. He said that he would again seek to achieve passage of an amendment that would make it mandatory for sellers to make known and available to all customers the favorable terms given to anyone. After the meeting he expressed the opinion that this so-called disclosure amendment had an excellent chance being passed in the present session of Congress.

"There can be ominous meaning to you," he told the meeting, "in the fact that the disparity in size between your firms and the chains, syndicates, and buying combinations, purchasers of a large part of your product, is growing at a steady rate."

In 1952, he said, a few corporations, having more than $100 million of assets each, owned 51 percent of all the assets of manufacturing corporations in the United States. At the end of 1955 this percentage had grown to 57 percent. In 1956 their share had increased to 59 percent. It is now estimated that one-half of 1 percent of all manufacturing corporations had 57 percent of total sales, leaving 43 percent for the many thousands of other manufacturers.

ACT IS DEFENDED

The 10 largest companies purchasing goods produced by the garment industry, according to Mr. PATMAN, increased their annual volume by 60 percent in the last decade. These 10, he said, did about 10 times the total business of the 1,200 companies manufacturing women's coats and suits.

He defended the Robinson-Patman Act as an instrument to fortify the smaller producer and seller against "intolerable exactions as to terms and conditions."

Moreover, he said, the refusal of industry members to compromise their trade practice standards in such matters as advertising subsidies, discounts, transportation charges, consignment transactions, and other matters, was essential not only for preserving their own business but also that of all their fair-minded customers.

Max E. Weinstock, chairman of the board, told the meeting that more apparel could be sold this year if quality and value were stressed instead of price.

Isadore Nagler, manager of the New York joint cloak board and a vice president of the ILGWU, urged the manufacturers to continue to support New York's fashion institute of technology now operating in the Needle Trades High School, West 24th Street, between 7th and 8th Avenues.

Shirley Goodman, executive secretary of the school, gave a detailed report of the new building, which will be on West 27th Street. The institute was unique, she said, as the only junior college in the Nation offering production, merchandising, and management courses in the apparel trades. It is jointly sponsored by the University of the State of New York, the New York City Board of Education, and the Educational Foundation of the Apparel Industry.

More Thought Being Given to Repeal of the Income Tax Amendment

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. SMITH of Kansas. Mr. Speaker, over the past few years, more and more thought is being given to the repeal of the income tax amendment. Bills have been introduced at the last two sessions of the Congress to repeal the 16th amendment.

Just a few years ago, to talk about repealing the 16th amendment, stamped anyone so doing as a "crackpot."

It is most gratifying to note the solid substantial organizations that endorse the repeal. Recently the American National Cattlemen's Association at Omaha, Nebr., adopted such a resolution. I append hereto this resolution and an editorial from a great newspaper, the Omaha World-Herald, in regard to this resolution:

RESOLUTION PASSED BY THE AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION AT OMAHA, NEBR., CONVENTION JANUARY 17, 1959

Whereas the American National Cattlemen's Association has frequently and consistently taken a firm position in matters of principle; and

Whereas the need for support of an equitable system of taxation, consistent with our Constitution and Bill of Rights, is paramount in the performance of essential governmental functions; and

Whereas our Constitution provides methods for amendment, and precedent has been established, following a procedure of referendum: Therefore be it

Resolved, That we respectfully request the Congress of the United States to take such immediate action as is required which will permit the American people the opportunity made possible under the Constitution to vote upon the question of whether the 16th amendment to the Constitution is to be continued or repealed; and be it further

Resolved, That we urge and request elected representatives to support an equitable tax system restoring portions of the Bill of Rights.

[From the Omaha (Nebr.) Evening World-Herald, Jan. 20, 1959]

HANDWRITING ON THE WALL

Just about every member of the American National Cattlemen's Association would be regarded as a responsible, substantial citizen of the United States. Two-thirds of them at their annual convention in Omaha last week stood up to be counted in favor of a resolution which asked that the American people be given an opportunity, by vote, to get rid of Federal income taxes.

This was not a hasty action; the cattlemen had been mulling it over for some time. But it was, to say the least, extreme. And it was something to which, we think, the political powers that be had better pay some attention.

What the cattlemen said, in effect, was this:

Uncle Sam is taking our money and spending it like a drunken sailor. He is throwing it away in every port of the seven seas, and here at home he is using it to impose upon us a big variety of welfare schemes which we don't want. And since he has refused to heed our advice to slow down, we may have to shut off his funds altogether.

We don't expect that the Government spenders will start shaking in their boots because of a resolution passed by a comparatively few cattlemen. But there are other signs, as well, that people are beginning to think seriously about their wasteful and too big Government. The handwriting on the wall looks mightly like an admonition to put on the brakes—or else.

Our Puzzling Farm Policy

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. HIESTAND. Mr. Speaker, the following article from the New York Journal-American of January 22, 1959, illustrates the futility of our present program of farm support prices, and advances the theory that our agricultural policy is our enemy's best weapon.

With our agricultural problems now, as ever, in the forefront of political debate, the subject is most timely and may be of interest to my colleagues:

OUR PUZZLING FARM POLICY

(By Bob Considine)

Eugene P. Kane, farm authority from Summit, N.J., takes me to task for a recent piece here which might have been entitled, "How You Gonna Keep 'Em Down on the Farm After They've Seen Parity?"

He writes:

"Your article cannot go unchallenged. In the first place, the theory of Agri-Dynamics is not new. It started when artificially high price supports forced farmers to produce more per acre in order to circumvent acreage restrictions. For example, in 1932 farmers planted 36,494,000 acres of cotton. The crop amounted to 13,002,000 bales. The average yield was 173.5 pounds per acre. In 1958, the figures were 12,375,000—11,581,000—and 469, respectively. Agri-Dynamics is new?

"In the second place, the expanded production of the farmers must be paid for by the consumer twice. Once when the processors pass along the artificially high price which they must pay in order to compete with Commodity Credit Corporation. Again when, as a taxpayer, the consumer is gouged to make up the losses of CCC.

"In the third place, there is little or no free enterprise in American agriculture today. The Government decides how much each farmer may plant, and at which price CCC must buy from the farmer.

"Khrushchev warned the grain collectives of Russia that their costs were too high. He combined some 30 farms near Moscow into one unit to reduce costs. Thus, he paid homage to the rule that selling price determines cost.

"In the United States, this axiom is not applied to agriculture. Parity is the measure of the farmer's cost of living and operating. CCC must buy from the farmer at a stated percentage of parity. As parity goes up, the farmer's selling price to CCC goes up. Hence, cost determines selling price.

"Who is more capitalistic in regard to agriculture—the Union of Soviet Socialist Republics or the Republic of the United States of America?

"Our agricultural policy is our enemy's best weapon."

Mr. Kane encloses CCC reports in which the Government agency, which has piled up the most colossal surpluses in world history, announces that realized losses on all commodities from 1954 until this coming spring will amount to $5,294,449,872. Total losses since the plan was first introduced by Henry Wallace in the early days of the New Deal—$12,330,632,228. We are now paying $1 million a day rent for storage of our surpluses.

Poison in Your Water—No. 10

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Salt Lake City (Utah) Deseret News and Telegram which appeared on May 26, 1958, entitled "Clean Up—On Sickness."

That article, an editorial, discusses the relation of sewage to the disease known as infectious hepatitis, more commonly known as yellow jaundice. The article points out that clean up of sewage and construction of adequate sewage abatement works will do much in Utah to reduce the incidence of this disease which has risen in a period of 1 year from 26 to 96.

This is just another reason why the full $50 million authorized under Public Law 660 of the 84th Congress should be appropriated for grants to municipalities for construction of sewage abatement. Actually, it is a good reason why the amount of the grants should be at least doubled.

The article follows:

CLEAN UP—ON SICKNESS

For a long time now, experts in sewage and water treatment have been saying Utahns are living on borrowed time. This week the meaning of that warning becomes much more clear.

This week, the State is facing an alarming increase in the incidence of infectious hepatitis. This disease, commonly known as yellow jaundice, is a serious, debilitating one that takes months, sometimes years, to throw off. It is usually associated with polluted water or inadequate sewage disposal. Utah has seen 96 cases so far, compared with 26 at this time a year ago.

This is a disgrace for a State living in the 20th century when methods of prevention of this and other diseases associated with unclean water are thoroughly understood.

Methods of prevention were, in fact, being discussed by official groups even as the hepatitis report was released. One group of officials called for a new Federal study of water pollution in Big and Little Cottonwood Canyons in relation to growing recreation pressures on the canyons. And another group released a report after extensive studies of four Utah rivers. Three of them are serious health hazards, carrying raw human sewage through populated areas.

The two problems are different, of course. No one knows just how much recreational development can be allowed in the canyons without endangering the Salt Lake Valley water supply. A fine treatment plant is finished at the mouth of Big Cottonwood Canyon and construction will soon begin on a plant for Little Cottonwood. How much additional recreation these plants will make possible, if any, is not known. Of course pure water comes ahead of any other consideration, but we certainly should have a competent study to find out how much recreation we can have in the canyons and still be sure of pure water.

But there's no doubt at all about the other problem, that of the shocking pollution of the Jordan, Price, and Weber Rivers, and of other streams in the State. Any raw sewage dumped into a stream is too much.

To this problem, there's just one solution. Money is at the root of it. Utah's growing communities simply cannot continue letting their sewage go untreated.

A number of Utah County communities have shown the way. Sick and tired of the way the recreational possibilities of Utah Lake were being lost by its use as a cesspool, they took action, built sewage treatment plants and are on the way to rehabilitating the lake.

What they can do, others can do—and must do. And now is the time to do it. Building now can create much-needed jobs. The recession means that contractors are sharpening their bids. The bond market is good. Inflation shows no sign of ending. A time may never come when sewage treatment can be obtained as inexpensively as it can right now.

The growing threat of shameful pollution-caused disease should be a most effective warning to hurry up.

George H. Christopher

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. DORN of South Carolina. Mr. Speaker, all of us were saddened by the passing of that great patriot, George H. Christopher. Knowing him was one of the pleasant associations in the Congress. He was a great friend of the veterans, the farmers, and the American who earns his livelihood by honest toil.

Those of us on the Veterans Committee loved and admired George Christopher. We could count on him to do the right thing for our country and those who served our Nation in time of war. As a younger Member, I profited much by the experience, the advice and understanding of Mr. Christopher. He understood our agricultural problems as few other contemporary Americans. A successful farmer himself, he devoted a great deal of his time and energy to improving the lot of the farmers.

George Christopher raised a fine, upright family. Mrs. Dorn joins me in my deepest sympathy to them. George Christopher will be greatly missed by those of us who knew and loved him. His great service to our country will always be, to me, an admiring reminiscence.

Report of Committee on Industrial Water Use, Pollution Abatement, Wildlife, and Recreation to the 45th National Convention of the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks, I wish to include the report which was made to the 45th annual national convention of the National Rivers and Harbors Congress by the permanent committee on industrial water use, pollution abatement, wildlife, and recreation.

I have served for many years as vice president of the congress for the State of Minnesota and was honored to be asked by President Brooks to act again as chairman of this committee which it is agreed by all has rendered a distinct service to the people of the United States.

The committee met with a full attendance on May 14, 1958, and continued in session throughout the day, reaching complete agreement on its proposed report. On May 16, at the final session of the congress, I presented the committee's report which was unanimously agreed to by the convention.

I was again impressed by the keen interest shown by the committee members representing the many diverse geographic areas of our country and it was obvious that there is a growing awareness throughout the country of the increasing importance of this complex problem of sound water-use and pollution-abatement policies and programs.

The report of our committee is as follows:

REPORT OF COMMITTEE ON INDUSTRIAL WATER USE, POLLUTION ABATEMENT, WILDLIFE, AND RECREATION

The committee reviewed its report adopted at the Annual Convention of the National Rivers and Harbors Congress held May 16, 1957, and reaffirmed the broad and constructive principles for development of adequate water supplies set forth therein, emphasizing particularly the need for constructive policies relating to conservation, municipal and domestic use, pollution abatement, flood control, irrigation, recreation, industrial use, and other beneficial purposes.

The chairman reported outstanding progress made under the provisions of Public Law 660, providing for Federal assistance to communities for the construction of pollution abatement works. He called attention to the fact that the construction program under Public Law 660 has stimulated the greatest treatment plant construction in our history, noting that in the years prior to adoption of this statute, beginning in 1952, only 3 to 5 States had had record construction years in this area, but beginning in 1956, 13 States had had a record treatment plant construction year and the number had increased to 19 in 1957 as the program gained momentum. It is the sense of the committee that even the limited program permitted by Public Law 660 has been an outstanding success.

The chairman reported further that official communications had been received from the Bureau of the Budget and the President advising that in the future, budget estimates would include no funds for implementation of the program provided for by Public Law 660. Discussion of these matters indicated the increasing urgency of pollution abatement work and the growing need for larger Federal assistance to the States and communities affected. The committee deplored the attitude expressed by the Bureau of the Budget and the President in this regard and their failure to recognize the clear Federal responsibility for participation in solving a national problem.

Accordingly, upon motion of Mr. Marshall N. Dana, chairman, Commission of Public Docks, Portland, Oreg., the following resolution was unanimously adopted:

"Resolved:

"1. That this committee compile the record of accomplishment made under the administration of Public Law 660;

"2. That this committee recommends an appeal to the Congress from the decision of the Bureau of the Budget and the President for reconsideration of the decision heretofore announced to include no funds in future budget estimates for Federal assistance in the construction of pollution abatement works in accordance with the principles of Public Law 660;

"3. That Public Law 660 be modified and strengthened by increasing the total amount authorized for Federal assistance for the construction of pollution abatement works from $50 million to $100 million annually;

"4. That this committee requests each member of the National Rivers and Harbors Congress to enlist support from Members of Congress for the action proposed in the next preceding resolution."

Reports from representatives of all sections of the Nation contained dramatic evidence of growing water problems. It is clear that the population of the United States will continue to grow rapidly, that the needs of industry, agriculture, and the general public for adequate supplies of water will continue to mount; that with improved means of transportation and greater leisure time, demands for recreational facilities for hunting, fishing, boating and related forms of enjoyment will grow apace, and that the growth of industry and population will aggravate and intensify the already serious pollution abatement problem confronting the Nation. Accordingly, the committee reaffirms its conviction that all uses of water are interrelated and are of concern to the public generally, and that conservation, control and equitable disposition of our water resources are matters of profound interest to the development of the national economy and the welfare of all the people. It is evident that the water problem will become as vital to the national interest in 10 years as the missile program is today.

In view of the growing importance of water resource development, the following resolutions were unanimously adopted:

"Resolved:

"1. That the committee recommends recognition by the Congress in the evaluation of water resources projects of the full economic values derived therefrom including public water supply, low flow augmentation, industrial use, irrigation, pollution abatement, fish and wildlife and recreation, as well as flood control and navigation and that such values be established and taken into account in computing the benefit-cost ratios of such projects;

"2. That the committee strongly approves the principles embodied in section 205 of S. 497 authorizing the provision of storage in reservoir projects, (a) for present and anticipated future needs for munipical and industrial water supplies under the method of reimbursement when contract for use of such impounded water is made; and (b) to increase needed low flows downstream without reimbursement to the extent warranted at present or during the economic life of the project with such low flows determined on the basis of widespread general benefits;

"3. That the committee recommends improved coordination among the agencies at all levels of government for the more effective development and use of water resources; and

"4. That the committee recommends a more adequate program to ascertain, assemble, and disseminate in useful form basic data relative to surface and ground water resources."

Poison in Your Water—No. 8

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the RECORD an article appearing in the San Francisco News of June 30, 1958, describing further the problems of pollution, this time in the lovely State of California and on our Pacific coast. The article is as follows:

ALL IS NOT LOST

The Downtown Association has protested to the State water pollution control board over the "big stink" at Candlestick Cove.

Anyone who has driven past that area along Bayshore knows what the association is talking about. The nostrils are assailed by the most obnoxious odors which contrive to invade passing automobiles even with the windows up.

The News is pleased to report that something is being done about it. The process will take months, scant comfort to those who daily traverse the reeking acres of "Candlestick Cove." But with patience and the possible use of a spray deodorant in their cars, we think these sufferers may be able to endure their olfactory misfortune.

The villains are two: Raw sewage and garbage.

Works Director Sherman Duckel reports that the city is negotiating with the Bayshore Sanitary District, to pump its sewage into the San Francisco sewage system for treatment—for a price. Final agreement awaits approval by Chester MacPhee, the new chief administrative officer. We are sure that Mr. MacPhee will act with dispatch.

The raw sewage from the Brisbane Sanitary District is another and more complicated matter, but the State water pollution control board is painfully aware of the problem and meets this week to seek a solution.

It has the authority to force one.

Another source of the scent is the 1,100 tons of San Francisco garbage which is dumped there daily. When garbage is dumped on sea water, it produces hydrogen sulfide gas. Whew.

The city and the pollution board have advanced several suggestions and the Sanitary Fill Co., which runs the operation, has a few ideas of its own. Unfortunately, some of the ideas cost money, which no one likes to spend, but we are sure the outcome will be happy.

We intend to follow the developments, because we know a story when we smell one.

Remarks of Hon. Carmine G. DeSapio, at the Editors and Publishers Luncheon, New York, N. Y., February 2, 1959

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include, with pleasure, a logical, powerful, courageous address, and a most appropriate one that should be of great interest to all and, in particular, to publishers and editors of our newspapers, made by Hon. Carmine G. DeSapio at the editors and publishers luncheon, at Hotel Plaza, in New York City, on February 2, 1959. The publishers and editors of the newspapers of our country should pay heed to the friendly but pointed remarks made by Mr. DeSapio.

The address follows:

Let me, at the outset, thank you for inviting me today and for fulfilling for me a dream which, in recent years, has almost bordered upon obsession. I am sure that you will understand my telling you that it becomes increasingly difficult for me to read your newspapers without wishing—indeed, without a wistful longing—for the opportunity to reply, to rebut, to tell you nice people where to get off.

But I don't own a newspaper, and I don't have hundreds of thousands of readers and, come to think of it, I don't even have a typewriter. And I must confess that this opportunity to deliver an editorial to you editorialists is one which I warmly cherish, at the same time that I am considerably awed and not a little apprehensive.

So, with your gracious permission, here is by editorial. It is entitled "The Responsibility of the Press."

Today's tragedy in Italy, where many political parties are unable to agree upon a coalition government, reminds us of similar repeated chaos in France and in other parts of the world, and emphasizes the great blessing which is America's two-party system.

Good or bad, America's political parties accept their responsibilities. They face the challenge of the voters on election day. And they provide for our municipalities, States, and Nation a system of government acknowledged by all honest minds to be the best in the history of civilization.

The two-party system of government in our country has survived wars, derpessions, crises, and the American press. With God's help—and with suitable vigorous editorial reform—it will continue to survive.

The men and women of the United States who own and produce our Nation's newspapers are universally acknowledged to be persons of high moral character, patriotic integrity, and extraordinary intelligence. This is indisputable. They are also men and women of firm principle, intense determination and, to a very large extent, unbridled partisanship. They have great power, and they know it. They wield enormous influence, and they know it. They enjoy unique positions of trust and responsibility, and they too often forget it.

The publishing business today—at least that segment of it which is chiefly concerned with reporting and interpreting current affairs—has lost the quality of independence which once was its most distinguishing and most valuable asset. Our Nation's press, to

a deplorably large degree, has rejected its historic role as a nonpolitical arbiter of public opinion. It has become, instead, an instrument for the expression of partisanship and for the selling, rather than the feeding, of ideas.

Now, it is one thing for the editor and the publisher of a newspaper to hold personal political views. Indeed, it would be catastrophic if they did not. Partisanship is the handmaiden of citizenship, and it is the obligation of every citizen to hold, to express, and to fight for a political opinion.

Yes, it is one thing to hold and to express political views; but it is quite another to color, to camouflage, to emphasize, to omit, and, yes, to distort news on the altar of partisanship.

How many newspaper publishers would tolerate a Republican electric company or telephone company, or a Democratic railroad? The analogy is clear. These organizations, like our newspapers, are public utilities. But, happily for our country, our newspapers are not regulated public utilities. Democracy would die and liberty would be destroyed if there were governmental control of our newspapers.

But, just as the people of the community must depend upon the other utilities for vital services, so must they also depend upon their newspapers as a reliable source of information about local, State, National, and international affairs.

And although the editorial pages and the opinion columns of our Nation's press traditionally and properly reserve the right to present partisan opinions on all subjects, too often—much too often—you can pick up the first page of a newspaper and from the mere presentation of news, determine at a glance the political philosophy of that paper's owner or editor.

Here in New York City, if a reader does not like his newspaper's views, you may argue, he can buy another paper. I could debate that with you, but it will have to wait for another occasion. Nevertheless, in community after community throughout our State and country, just as there is only one light and telephone company, there also is only one newspaper. And very frequently, where there is more than one newspaper, they are owned by the same person.

So here we have a vital utility, concerned with the well-being of every man, woman, and child in the United States, regulated—and, I emphasize—this is as it should be—only by the conscience of its owners.

Now let us see how this awesome responsibility is fulfilled by the distinguished men and women who own our great American press. As a politician, I know from my intimate first-hand experience over a period of many years of the great influence which the newspapers exercise upon the voter, upon public officials and upon politicians.

I must confess that much of the program of political reform which I have instituted as county leader in Manhattan was either inspired, agitated or needled into being by our newspapers. I am proud of what we have achieved and grateful to the press for encouraging me to achieve it.

But I am not proud of everything that the American press has achieved. I am not proud of the stigma which our newspapers have given to politicians—of the grotesque and untrue picture of politicians which they have painted and which has discouraged countless able decent men and women from entering politics.

Ask Mayor Wagner, ask Governor Rockefeller, ask President Eisenhower why it is so difficult to get outstanding people to accept important governmental posts. The reason is simple and terrible. It is because when a man enters politics or Government, a large section of the American press immediately brands him as a person who does not quite belong to the community of decent human beings.

Certainly, corrupt politicians and public officials should be exposed and ferreted out, just as the misdeeds of corrupt labor leaders, businessmen and even newspapermen should be exposed and punished.

Yet, there is a delicate problem of balance which must be met forthrightly. The sensational escapades of the corrupt cop, for example, are newsworthy and make for interesting reading. But it is so very necessary, in evaluating such a story, also to recognize that many thousand other policemen go about their jobs quietly, efficiently, courageously—without fanfare, glory, or publicity. And injudicious emphasis has seriously undermined popular respect for those charged with the enforcement of law and order, particularly among our highly impressionable young people.

Similarly, when you paint a complete picture around a handful of bad apples in the political barrel; when you add sinister hints of general political corruption to that picture; you create not only a distorted picture, but one which does incalculable disservice to our country, to our people, and to our system of government.

The nation's press, by and large, was up in arms over Franklin Roosevelt's quest for a third term. And when he sought a fourth term, the bitterness of much of the press was almost hysterical. And so there came forth an unprecedented campaign—unprecedented in vigor, in intensity and in determination—to limit the tenure of the presidency to two terms. That campaign—an anti-monarchy campaign it was called—was successful.

But was it?

For it has resulted in the pathetic spectacle of a President of the United States, not an overly strong leader to begin with, but now completely deprived even of bargaining strength; a lame duck who cannot even rally his own party behind his program because everybody—including himself—knows that at the end of this term, he is through.

The simple fact is that Khrushchev, McMillan, Mao-Tse-Tung, De Gaulle, and the heads of all other governments, know that President Eisenhower speaks only with temporary authority and that he doesn't even have his own partisans in Congress behind him; this, in a period in American history when the atom has balanced the world upon the precipice of disaster and when the whim of a single man can plunge us into holocaust.

Who is our leader? Who is our spokesman?

What have we done?

Yet, entirely apart from such situations, all Americans can take enduring pride in, and enjoy a sense of profound respect for, the press of our nation which daily produces the most remarkable facility of communication in recorded history—and which serves with zeal and distinction as a firm defender of our freedom, as an uncompromising guardian of our morality and as a dedicated custodian of our faith.

It has fought injustice. It has repressed bigotry. It has destroyed fear. It has given the American people a sense of security in the awareness that a vigilant press will protect their interests. But it has failed to fulfill its political responsibilities.

As a political leader, I have consulted frequently with the policymakers of our newspapers on the designation or nomination of people for positions of public trust. I have sought their guidance and, more often than not, I have respected and accepted their recommendations.

But see how difficult the press frequently makes the job of the political leader who wants best to reflect the thinking of the people and to assure the highest caliber of government. Can the Democratic Party in this State, for example—and I might say parenthetically that the Republican Party faces the same problem in other areas—can the Democratic Party in this State ever hope that whenever it nominates the best qualified person for State office the majority—or even a reasonable minority—of the press will support that candidate? Experience says no.

I tell you, my friends, if this situation continues to prevail, political parties throughout the country will be forced to select candidates solely on the results of screen tests and on the basis of personality, rather than by evaluation of ability and beliefs.

They will have to rely on the talents of the candidates for projecting themselves through the medium of television, rather than on their ability to project their views and philosophies through the medium of the press.

My good friends, just as we stand on the brink of despair, so too do we stand on the threshhold of new wonder, of new glory, of new achievement.

The barometer for success in 1960 is what we Democrats are able to do in the Congress, in statehouses, and in city governments between now and 1960.

At the Democratic National Convention next year my personal position will be the same as it was in the New York State Democratic Convention in Buffalo last year—I'll try to carry out the wishes of the majority of our delegation. They do the bossing. I just try to do what they want done.

However, I feel that when it comes to selecting a Democratic Presidential candidate the country's interest transcends that of the party. It isn't enough just to pick a man who can win—we should know that he will make a good President, that he will be a great and successful leader for America. If the Democrats don't face up to this high issue squarely, they're not keeping faith with our Nation. As a political candidate the present White House incumbent was quite a success. He did well at vote-getting. And nobody doubts his sincerity. But in meeting the rigid demands of these parlous times for truly great leadership, with force, courage, vision, and firmness, that's been quite another story.

I am sure our New York delegation will be ready to make a vigorous fight at next years' national convention, for the nomination of not just a good vote-getter, but a man who can be the great President and great leader America and the free world needs in these most dangerously critical times our country has ever faced.

For, just as the space age threatens to be an age of destruction—so, too, does it promise to be an age of new creation.

Which of these it shall be depends entirely upon the decisions which are to be made during the next few years. It is perfectly true—and it has been true through the ages—that the people need only to be armed with the facts to give expression to their inherent sense of goodness.

And this poses for you—you who are gathered here in this room today—as it poses for every political leader, for every labor leader, for every business leader, for every spiritual leader, for every teacher and scientist in America—but particularly for you—this poses a responsibility of great immensity.

The people read you. They are influenced by you. They accept you as authority. They look to you for objective guidance, for accurate portrayal and for honest leadership.

I submit that the responsible spokesmen for both parties want to work with you and to be guided by you. They want you to help them—through government—to fulfill

the wishes, the needs, the hopes, the aspirations, and the prayers of the people.

Do not damn us because we are of a different political faith. And do not praise us merely because we are of your political faith. But, rather, work with us toward the realization of a universal faith. Build with us and serve with us—and let us build and serve with you—in the cause of human justice and with the dream of a better world.

Thank you very much.

Poison in Your Water—No. 9

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. DINGELL. Mr. Speaker, an article appeared in the Providence (R.I.) Journal on June 27, 1958, telling of dumping of raw sewage and other waste into Narragansett Bay. I am satisfied that this article is another good reason why the full $50 million authorized in Public Law 660 for grants for sewage abatement works to States and municipalities should be continued and carried on.

The article follows:

WOONSOCKET CONTINUES TO POLLUTE NARRAGANSETT BAY

If the city of Woonsocket does not undertake soon to cooperate in the antipollution drive on Narragansett Bay, the State ought to use its authority to act in the city's name and charge the bill to the city's account.

In a recent report to Rhode Island on the progress of the clean-waters campaign, the Pollution Information Committee identified Woonsocket as the worst remaining source of pollution in the State. Providence, the greatest of the "Faltering Few," the committee said has just graduated to cleanliness.

But Woonsocket continues to offend today just as it has for the past 11 years, ever since the antipollution program was adopted. The northern city, the committee charges, is the only sizable community in the State that is dumping sewage, breaking the laws, and doing nothing about the grave situation.

The saddest thing about the committee's findings is that the size of the problem has been known for years in Woonsocket itself. A thoroughly inadequate sewage treatment plant cannot cope with the discharge from homes. Many industrial plants still discharge industrial wastes directly into the Blackstone River.

As recently as 1956 the question of sewage treatment improvements was discussed. But the city shelved the job of building a new sewage treatment plant on the grounds that other needs were more imperative and had to be met before it undertook to do its fair share toward cleaning up Narragansett Bay.

The city planning board proposes to give top priority to a new sewage treatment plant in the next series of capital improvement bond issues. There is no indication when the series will be submitted to voters, but about 2 years would pass between voter approval of a plant and operation of new treatment facilities.

As the information committee observes, there are no votes in sewage but a great deal of heavy spending. And really penurious taxpayers could argue that since the city wastes are sent along downstream from Woonsocket, the city has no pressing responsibility to build a new plant and extend its services.

The argument would be shortsighted. There always is danger to a community from untreated sewage dumped in waters that pass through it. But there is an area of wider responsibility which Woonsocket is ducking; cleaning up the bay is the job of every community which contributes to the fouling of the waters.

How long does Woonsocket expect to escape the wrath of downriver and bay communities which have been spending heavily on antipollution only to have their efforts almost negated by the millions of gallons of raw wastes dumped daily into the Blackstone River to dirty the whole bay?

The State would win few friends in Woonsocket if it ordered a sewage treatment plant built and then collected costs from the city. But communities which have spent willingly to keep up their end in the antipollution drive would waste little sympathy on Woonsocket taxpayers.

Woonsocket enjoys a large measure of home rule under its new charter. But with the privileges and rights of home rule go responsibilities to the State and sister communities. If Woonsocket won't meet them, the State must see that it does.

The Townsend Plan Bill

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. BLATNIK. Mr. Speaker, for many years legislation embodying the principles of the Townsend plan "pay-as-you-go social security for all" has been before Congress. In the 85th Congress I joined with Representative BURDICK, of North Dakota in sponsoring the Townsend plan bill.

I have introduced H.R. 4000, which is identical with the Townsend plan bill I sponsored in the 85th Congress, and which differs from other bills embodying the Townsend plan, in former years, only in terms of legislative form and in respect to technical construction. It does not differ in respect to any basic principle, objective, or standard. The gentleman from California [Mr. GUBSER] has introduced a companion measure, H.R. 4001.

The 1959 Townsend plan bill is specially drafted as an amendment to the Social Security Act, repealing or suspending, as the applicable case may be, the various provisions of old-age and survivors and Federal disability insurance and instituting in place thereof the Townsend plan program under title II of the act.

Under this bill, a smooth transition from the present system of old-age, survivors, and disability insurance is provided for. No persons entitled to or receiving benefits under the present system will lose a penny of those benefits—because benefits under the 1959 Townsend plan bill will overlap those of the present system until all benefits under the present system are totally absorbed by the benefits under this bill. To the extent that some benefits paid under the present system exceed those initially provided for under my bill, the difference will be paid from the reserve funds of the old-age, survivors, and disability system.

Within 2 years, after the effective date of this Townsend plan program, it will have totally absorbed all benefit obligations of the present system.

This smooth, equitable transition is provided for by these provisions: Six months after its enactment the gross income—gross receipts—tax, upon which H.R. 4000 is based, will go into effect at the rate of 1 percent for a period of 6 months. Then, it will be advanced by one-fourth of 1 percent for each succeeding calendar quarter until it reaches the full tax rate of 2 percent. It will reach this rate of 2 percent as of the 16th month after its effective date.

The initial benefits financed under the 1 percent tax rate will be approximately equal to the average primary benefit paid under the present system—so that, right from the start, present benefits up to the amount of average primary benefits will be absorbed by the Townsend plan program. Then, as the tax rate advances quarter by quarter, benefits will proportionately advance to a level estimated at between $130 and $150 per month.

Thus, virtually every possible benefit-liability of the present system, under title II, will be smoothly absorbed by the Townsend plan program. If there prove to be some few beneficiaries entitled under the present system, who do not qualify for some unforeseeable technical reasons under the Townsend plan program—they are certainly provided for many times over by the approximately $23 billion reserve funds of the present system. Under my bill, nobody will lose any benefit—and in a short time all will receive better benefits than the present system will afford them. At the same time, once full benefits have been achieved under my bill, we will no longer have people trying to live on benefits capable of affording them nothing better than severe poverty. My bill will really solve the social security problem.

The problem of providing for equitable and smooth transition from the present program has been one of the foremost obstacles in Congress to adoption of the Townsend plan. This bill completely removes this obstacle.

The 1959 Townsend plan bill specifically defines its objectives. It provides that each year the Department of Commerce, under its Census Bureau work of annually surveying the distribution of money income in the U.S. population, will report to Congress each year, specifically, what rate of the gross income tax would have been necessary during the preceding year, under the program, in order for the overall income of the aged population to have compared favorably with that of the younger, adult population. This feature is designed to create a situation whereunder the Congress—and everybody else—will henceforth know, as a matter of clear record, exactly

what the relative position of the aged is economically.

This feature is designed to provide each year a defined basis on which everybody can henceforth deal with the primary problem of just how much pensions should justly be in the light of authentic facts. Up to now, this question of exactly how much pensions really ought to be has not been officially dealt with. The Townsend program is fundamentally predicated upon exactly that study and approach to the whole problem. My bill provides, in the Social Security Act, the legal requirement that this question be authentically reported on each year, to Congress by the Department of Commerce.

Now, there have always been a long list of arguments—in principle, academic arguments—about the workability of the gross income tax on which the Townsend plan is based. This bill provides, in its definition of gross income, the conclusive end to this whole field of confusion due to these purely theoretical and academic arguments, as well as an end to the waste of time and effort in dealing with such unrealistic claims and counterclaims, in a very simple way. Since 1933, a genuine gross income tax has been operating with unchallenged efficiency and practicality in the State of Indiana. Correcting jurisdictional references, the precise text of the definition of gross income contained in the Indiana State gross income tax act of 1933, as amended up to, and including, 1953, is incorporated in the 1959 Townsend plan bill.

It is specifically to be noted that this does not constitute any change in principle or departure in policy by the Townend organization. The tax proposed in the Townsend bill has traditionally been exactly what is now proposed. However, there have always been those, in and out of Congress, who insisted persistently that the Indiana tax really was not the same, was in reality quite different from the Townsend proposal. This specious argument stands abolished since the 1959 Townsend plan bill contains precisely the same definition of gross income as the Indiana law.

The 1959 Townsend bill provides for old-age retirement at the age of 60 years; for full benefits to persons disabled between ages 18 through 59; for full benefits for female heads of family groups with one or more dependent, minor children; and for proportionate benefits of one-third of the full benefit rate for such dependent children under 18. This last is new coverage.

H.R. 4000 does not require complete and outright, all-or-nothing retirement by beneficiaries, but encourages their participation in the Nation's productivity. At the same time, it provides a deterrent sufficient to prevent pensioners from selling their services so cheaply as to constitute unfair competition with other work-seekers. The provision is that above the amount of $75 per month, adult beneficiaries would lose $1 of their benefit for each full $2 earned in employment or self-employment. For the secondary beneficiaries, the children, they, too, would lose $1 for each full $2 per month earned in excess of $50 in employment or self-employment.

When accorded serious study, the above provisions will be seen—not only as providing reasonable inducement to beneficiaries to supplement their benefits by appropriate participation in the labor force without risking frustrating reductions in their benefits—but, also, as aiding greatly in enabling workers to "ease" into retirement over a period of time and in the rehabilitation of the disabled and "easing" them back into full occupation over a period of time.

The 1958 Townsend bill requires that any person over 18 years of age must have resided in the United States for a total of not less than 10 years in order to qualify for benefits. The reasons for this provision are manifold; but, suffice it to say that very rare would be the citizen of the United States who would not have satisfied this requirement before his childhood was over. At the same time, this requirement, imposed on our own citizens, will abridge the difficulties involved in treaties we have with various nations reciprocally agreeing that we treat each others' nationals exactly as we treat our own citizens; and it will conclusively bar persons from becoming simply retirement emigrees to the United States, since all will have to have been here long enough to support the system quite substantially before becoming eligible to draw its benefits.

The bill exempts persons under 18 from this residence requirement even if the adults upon whom they depend may be barred by this residence requirement.

THE NEED FOR TOWNSEND PLAN LEGISLATION

The need for this type of legislation is embodied, first, in the fact that we have a Social Security Act, in the first place. This means that in 1935 Congress recognized the social security problem to such a degree that the act was adopted. This realization extended to the level of the problem being recognized as, in principle at least, a national, not a local or regional problem—a problem requiring Federal legislative action. This legislative action, itself, certified the ruling conviction that privately the problem could not be handled. Legislating the entirely Federal program embodied in old age and survivors insurance recognized that the problem was beyond the capabilities of local and even of State governmental scope. The subsequent actions by Congress after 1935—up to and including 1958—certify unanswerably that this conviction as to the solid, national nature of the problem has continuously solidified and strengthened.

When it is all summed up, the truth is this: We have a social security problem simply because the great majority of the Americans reach old age only to find themselves lacking the financial ability to command income and living standards reasonably comparable to the general standards of living prevailing around them. The present system of old age, survivors, and disability insurance has done good as far as it has gone, or could go. However, in recent years it has become clearly evident that the present system is not altering the above stated reason for our having a social security program, in the first place. All we have done has been to prevent the originally deplorable economic position of our aged from becoming still worse. Since the end of World War II, we have not bettered the comparative economic position of our senior citizens. As a group, their income share has remained unchanged while their comparative numbers have increased over three times as rapidly as any other part of our adult population. In fact, in the overall, despite all our efforts under the present system, the comparative income position of our elderly people remains a continually declining one. I repeat, the present program is good—as far as it goes—but, far from solving the social security problem, it continues actually failing to prevent the problem from getting slowly worse.

The bill I have introduced today is squarely based on the belief that the Americans desire and should by all means enjoy economic sufficiency and independence as the final result of life. Obviously, if they are ever going to achieve this result, we have no alternative than an entirely new approach to the problem. That new approach is the substance of the bill I have introduced.

Let us look at the facts about the economic position of our elderly people. In February 1954, the Social Security Bulletin carried an article by Jacob Fisher of the Social Security Administration's Division of Research and Statistics, namely, "Postwar Changes in the Income Position of the Aged." This report shows the population aged 65 and over increased 17 percent from 1947 through 1952—while the total population aged 14 and over increased only 5 percent—but their share of total personal income increased from 7 percent in 1947 to only 8 percent in 1952.

Analysis of Census Bureau data shows the share of the elderly to have been 7.3 percent in 1953, 7.7 percent in 1954, 7.9 percent in 1955, 7.6 percent in 1956, and 7.4 percent in 1957. By 1957, the aged population increased 36.9 percent over the 1947 number, while the total population 14 and over, including the aged, increased only 11.5 percent. Thus, the comparative income position of the average aged person declined, seriously, from the admittedly unjust levels of 1947 to an even more inferior level in 1956.

The increase of the aged as a part of our total population continues unabated, while their total share of income remains unchanging. This has taken place despite congressional action in 1950 increasing OASI benefits by 70 percent and in spite of congressional actions each 2 years ever since. It has taken place despite the dramatic increase in private pension systems and the liberalization of just about every existing public and private retirement system, as well.

Since the end of World War II, OASI has not only failed to solve the social security problem; but, it has even failed to prevent it from getting worse.

Furthermore, a 1955 report from the Social Security Administration warns that to establish even so modest a minimum OASI benefit as $75 a month would

entail payroll tax rates so high as to endanger public support and acceptance of its contributory principle. This conclusion has repeatedly been urged by this same authority in the discussion of benefit increases ever since.

The facts clearly place before us the unavoidable conclusion that we do not yet have anything resembling a Federal social security program capable of affording the American people the kind of social security they richly deserve. It is in the light of these facts that I have introduced today H.R. 4000 which is designed specifically to provide such a completely desirable social security program under title II of the Social Security Act.

Our ever-increasing ability to produce goods and services dictates that we must keep buying power amongst our population abreast of our ability to produce or suffer again and again the losses in wealth and human welfare so recently experienced because of business recession. It has become more than clear to me that unless we stop destruction of the average American's buying power upon his reaching old age, we can never do this. It is what OASI has clearly failed to do. It is exactly what H.R. 4000, the Townsend plan, will do.

Added to what we authentically know the American people can do privately for their retirement, Townsend plan benefits will end poverty and dependence in old age, establish the aged, as a group, on reasonable income parity with the rest of our adult population—thus amplifying buying power, the only way prosperously to absorb surpluses.

Therefore, the Townsend plan should be adopted immediately, in place of the present system of old-age and survivors and disability insurance.

HOW THE 1949 TOWNSEND PLAN BILL WILL WORK

On the first day of the sixth month beginning after the enactment of this bill, the program will go into effect. For the purposes of simplicity, let us assume that the effective date is January 1.

Then, as of January 1, the tax proposed in this bill will go into effect and the present payroll tax supporting old-age and survivors insurance and Federal disability insurance would cease. For the 6-month period—January through June—the gross income tax will operate at the rate of 1 percent. For the 7th, 8th, and 9th months, the rate will be 1¼ percent; for the 10th, 11th, and 12th months 1½ percent; for the 13th, 14th, and 15th months 1¾ percent; and for the 16th and all succeeding months 2 percent.

Meanwhile, beginning with the seventh month—July—the revenue collected from the first month—January—less, specifically, administrative costs, will be distributed as benefits to the qualified beneficiaries. The amount of benefits will be determined simply by dividing the available revenue—after administrative costs—by the number of primary beneficiaries plus the number of primary beneficiaries represented by the secondary beneficiaries—with each primary beneficiary receiving the resulting sum and each secondary beneficiary receiving his appropriate fraction thereof.

As of the first of the eighth month the revenue from the second month would be so distributed; and, thereafter, as of the first of every month the revenue collected from the sixth preceding month would be so distributed as benefits.

Thus, as the tax rate matures and as beneficiaries qualify, the program will ease into full effect in between 1½ and 2 years of its effective date.

Statistical studies show that as of the 7th through the 12th month, the first benefits under this program would amount to between $60 and $70 per month. Then, based on the advancing tax rate described above, benefits would progressively increase to averages of twice that amount.

H.R. 4000 provides that benefits under old-age and survivors and disability insurance will continue to be paid to whatever extent they might be greater than benefits provided by the Townsend plan, and to whatever extent OASDI benefits so continue to be paid they shall be paid out of the OASDI reserve funds.

However, since the average benefit to retired workers under OASDI is less than $70 a month—and since dependents' and survivors' benefits are but fractions of the workers' primary benefits—it is obvious that the greater part of present beneficiaries will almost immediately be absorbed under the Townsend plan. As this new program matures, under the full 2-percent rate of the gross income tax, there can be no doubt whatsoever that all benefits under the present program would be absorbed.

Nobody can seriously doubt that the $23 billion reserves of the present system are far more than adequate to finance the benefit load incumbent upon them under this bill during this period of transition to this new program.

Let me repeat, at no time will any beneficiary of the present system ever lose 1 penny of any benefit because of the adoption of H.R. 4000; and all will end up incomparably better off than they will ever be under the present system.

The benefit-coverage provided by H.R. 4000 certainly takes account of all who can possibly qualify under the present programs under title II of the Social Security Act; and it takes under its coverage those few elements still excluded under the present programs. It is, indeed, very hard to imagine persons who will be able to qualify under present programs who will not qualify under the Townsend plan. Whatever possible cases there may be are obviously so few and infrequent that they will not constitute anything of such magnitude as to be classed as a problem.

The Townsend program, once operating under the full support of the 2-percent rate of the gross income tax—as indicated by statistics on the population, the distribution of income, and the volume of business in the United States—will provide primary benefits of $130 to $150 a month. This level of benefits, under the coverage provided for in the Townsend bill, will involve a revenue of at least $2.5 billion a month. The immediate question becomes this: How can so large a number of beneficiaries at these benefit-levels be justified? In other words, the immediate question to be settled is that raised by those who are forever denouncing anything that is going to cost money. Obviously, this is a program the financial features of which really raise their dander. However, the answer is not difficult to set forth.

The first fact is a simple one: As of 1956, the group aged 65 and over lacked by just about one-half an equal share of income as compared with younger adults—aged 25 through 64. They endured this lack—about 20 percent of them having no income whatsoever from any source—despite all the programs presently in force under the social security system as it is, despite all other public and private programs, despite the expanded rates of savings and investment that recent times of unprecedented prosperity have afforded.

The answer is that less than the Townsend plan will not fill the gap, will not eliminate the economic inferiority of the aged. Less will not secure the future of the younger people from the fate of economic deterioration when they reach old age and so forth.

So, it comes down simply to this: Is the solution of the social security problem a beneficial thing to our society or not? If it is a beneficial thing to do, then it is worth the price. The Townsend program is simply the only one ever designed and put forth actually to eliminate, fully solve this problem. If the problem is ever to be solved in any other way than through the Townsend plan, it will have to be by providing the same standard of benefits for the same number and classes of people as are provided for under the 1959 Townsend plan bill. That is all there is to it, in reality. Either the problem is a valid one and should be solved, or it should not.

To those who say the financial magnitude of the problem has been overestimated, I say that economic sufficiency and independence should be the final reward in life for the people of the United States; that this requires two things: First, that retired people, retired in this context of social security benefits, be not subjected to an income level that involves poverty, insufficiency in terms of the actual, general standards of the times; and, second, that as an overall group retired people should enjoy an up-to-date share in income and living standards as compared to those enjoyed by younger adult people. Less than this constitutes inferiority, lack of freedom and independence, curtailment of the ability to participate fully in the social, economic life of the day—injustice, in short. The Townsend plan is calculated on the basis of those convictions and standards.

Now, if somebody feels, in their own view, that less than this is really an answer, let them state how much they believe should be the share of the aged. On this basis the whole matter can be settled; but, the burden of proof is theirs. The Townsend bill alone is based upon

the square question: How much should an old-age pension be? The Townsend bill provides the ways and means of providing that pension—whatever it should be.

Since it is self-evident that whatever the final decision of Congress turns out to be as to what an old-age pension ought to provide for, there still remains the unassailable truth—"It will require just as much money to be raised for just as many people under any other plan as under the Townsend plan." Therefore, the whole question reverts back to the primary one: Is the genuine solution of the social security problem desirable or not?

To those who feel that it is desirable, we present the Townsend plan, embodying the defined ways and means of solving it. To those who do not wish its solution we say: "It is time you frankly said so." This is the essence of H.R. 4000 the Townsend bill.

Off the Record

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Lancaster (S.C.) News of February 2, 1959:

OFF THE RECORD

Termites is what the Detroit automobile manufacturers now have. Seventy-eight varieties of foreign cars are now chewing away at the foundations of American prosperity because sales figures and customer surveys indicated these little imports were just a fad, a bad dream that would go away when the 1959 models hit the market.

Detroit was satisfied that the average American wanted the biggest, fastest, fanciest chariot that could be built and that he would willingly place himself in bondage for 24 to 36 months to possess the latest model. America brought the motorcar to perfection and it was nonsense to assume that Americans would forego the prestige, comfort, and service facilities of the domestic creation in favor of half-pint imports of doubtful ancestry and long-distance servicing.

This was not the picture at the annual convention of the National Automobile Dealers Association in Chicago. There was a definite feeling there that Detroit had missed the boat. Last year 340,000 small foreign cars were sold in this country and the figure is expected to reach 550,000 this year.

The dealers do not like it. Their profit margin on the imports is low and, Detroit theory to the contrary, they can't look forward to any fat fees for repairs and service. As one dealer put it:

"The service and parts required per 1,000 miles by foreign cars is negligible compared to domestic cars. The reason is, in my opinion, because the foreign cars are smaller, simpler, and better balanced."

Now this is nothing less than treason. So were other reports heard by the dealers. Detroit's idea that only kids and sportscar fans would be interested in the imports did not stand up. The average buyer was 37 years old, fairly well off financially and the head of a household. Furthermore, a majority of the 10,000 foreign-car owners questioned said they would have preferred buying an American car if Detroit would build something of similar size, price, and quality.

An Appropriation for the U.S. Coast Guard Academy

EXTENSION OF REMARKS
OF
HON. CHESTER W. BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. BOWLES. Mr. Speaker, I have today introduced an appropriation bill of $6,565,000 to replace wornout and obsolescent facilities at the U.S. Coast Guard Academy in New London, Conn.

The bill provides money necessary to carry out the recommendations of the Board of Visitors to the U.S. Coast Guard Academy, which were contained in a report to Congress on May 2, 1958.

In its report, the board expressed its concern over the "continued existence and use of World War II wooden buildings for various activities of the Coast Guard Academy."

The board reported that immediate replacement of the outmoded structures would result in long-range savings by removing excessive maintenance costs and would eliminate hazardous occupancy.

Mr. Speaker, I think none of us needs to be reminded of the valuable and courageous contribution of the Coast Guard in times of war. They were in the thick of battle as an integral part of the Navy, sailing the same seas and running the same risks.

Nor have they been any less active in times of peace. In addition to patroling our shores, they perform valuable rescue work, they keep open the sea lanes of the North Atlantic, and they are making water travel safe for surging motor and pleasure boat activities.

Yet if we do not provide sufficient funds, we will be striking at the very heart of the service—the Coast Guard Academy. This is where the new officers are trained; this is where the young service minds are shaped. We must not allow their welfare and training opportunities to deteriorate.

It is my sincere belief that as long as the United States recognizes the need for a Coast Guard, it has the obligation to maintain the service in a state of preparedness equal to the efforts made in behalf of the other armed services.

Mr. Speaker, the Coast Guard Academy is only 19 miles from my home and I know it well. It is under excellent management and it has close and most cordial relations with the New London community.

I might add that the New London Chamber of Commerce recently made a special study of conditions at the Academy and concurred in the recommendations made by the Board of Visitors.

Undoubtedly many Members of the House recall that last year a sum of $2 million was appropriated to replace the wooden cadet barracks. All friends of the Academy were gratified by this step forward. But, as the report indicates, much still remains to be done.

Therefore I have introduced a bill based on the report which would provide money for:

First. New barracks, new classroom and administration buildings for the officer indoctrination and candidate schools.

Second. Additional cadet classroom space to accommodate the increased enrollments.

Third. An auditorium for the Academy to replace the present wooden structure which the Board called a fire hazard and too small for corps purposes.

Fourth. Major repairs to the Academy docks and causeway that have badly deteriorated.

Fifth. The construction and improvement of other Academy structures that are presently inadequate, outmoded, and hazardous.

The cost of these improvements are based on estimates prepared by the Coast Guard Academy. I would like to point out here that the sum of $6,565,000 does not include an estimate for the construction of officer candidate school facilities. I have specifically stated in the bill that part of the money be used for that purpose because the operation of the school is an integral part of the Academy.

The money will have to come out of other projects, upon which the estimate was based. So even this sum of $6,565,000 may not be fully adequate to meet the entire need. Yet this is the very least we can do.

Mr. Speaker, since this sum was not included in the Treasury's budget for the fiscal year 1960, despite my pleas and those of others, I have introduced this bill in the earnest hope that the Appropriations Committee will take these pressing needs into consideration.

Although I realize that separate appropriation items are almost never reported to the floor of the House, I will be deeply grateful if this bill alerts the committee to what I believe to be a most urgent situation before it reports out the final Treasury appropriation bill now under consideration.

A Realistic Housing Program

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address I delivered at the open forum of the New York Hotel Trades Council, AFL–CIO, Friday, January 30, 1959, in New York City. The address follows:

It is a pleasure and a privilege to discuss with you the problem of how we can provide decent housing for our people.

As with all big problems, it is not only degree which is important—that is, how much we can or should do about housing but also the approach—how we should go about it. In this respect I especially wish to congratulate you. Your approach here today has been most commendable. First, you have taken up the problem from the point of view of self-help. What can your own organization do about housing? Secondly, you have considered the question in terms of local government. And, finally, you have come to the question of what should the Federal Government do?

It seems to me that there is a great deal that the Federal Government can and must do in this field. This is through no fault of forward looking local agencies like the New York Housing Authority. Nor is it through lack of efforts by the unions to bring about better housing for their members. The plain fact is that the legitimate demands of our people for decent housing have exceeded the ability of commercial enterprise, labor organizations, and local government to satisfy those needs.

There is a variety of reasons for this. The biggest single factor is the growth of our population. It is expected that within the next decade, the population of the United States will increase by 25 million people. Within the next 20 years, approximately 56 million people will be added to our population. More than 1 million new families will be formed every year in the 1960's. Each of these families will seek and should have suitable housing. Fresh air, sunlight, adequate space for family living, modern appliances, recreational areas are fortunately no longer luxuries in 20th century America. They have come to be regarded as necessities, and rightly so.

In a country as large and as varied as the United States, it is obvious that the housing problem will take many different forms. Consequently, the programs upon which the Federal Government is embarked are equally varied. In much of the country—and especially in the large suburban areas—decent housing is best provided by encouraging home ownership. Through a series of acts passed in the 1930's Congress formulated programs of Government insurance and credit reserves designed to generate a flow of mortgage money at reasonable rates. The Federal Home Loan Bank System, the Home Owners Loan Corporation, the Federal Housing Authority, the Federal National Mortgage Association were all born of the great social and economic purposes of the New Deal. In one form or another those programs have been continued up to the present time. They have been expanded and additional programs like VA guaranteed loans have been created based on the same underlying principles.

What has this alphabet soup of housing accomplished? Let the figures speak for themselves. The FHA has insured mortgages on 4½ million homes. Of these, 2½ million were new construction. Twenty to thirty percent of the new homes built each year are facilitated by FHA insurance.

The VA has guaranteed home loans to almost 5 million veterans since 1944 alone.

The Federal National Mortgage Association, or Fannie May, has purchased mortgages amounting to almost $6 billion and has thus increased the availability of mortgage credit to the homebuilder.

It is a source of enduring satisfaction to me that I had the opportunity to vote for every one of these programs. As I travel around the United States, I can see in the living conditions of our people what we have accomplished through FHA, the VA, Fannie May, and others. I shudder to think of the situation we would be in today without them.

Not only have these programs brought decent housing to our people, but they have transformed homebuilding from a craft to an industry which, since World War II alone, has contributed about $140 billion to the national product.

And this has been done, amazingly enough, at little cost to the taxpayer. If we were today to liquidate all housing assets held by the Government we would find that except in public housing and urban renewal, these programs have not only paid for themselves but have shown a profit. Long-term, low downpayment home financing has been demonstrated to be realistic, sound, and effective.

Remember the cries of Socialist and Bolshevik which we heard when the New Deal fought for decent housing? Yet, today not a single responsible leader of the housing or banking businesses would have the temerity to advocate repeal of most of the Federal housing programs. On the contrary, I think they would actually insist that the continued operation of the Federal housing programs are essential to the health of banking and the housing industry.

The argument today is rather over how much we can afford. I say that in the area of home loan guarantees and secondary market operations there is no limit on what we can provide for the simple reason that these programs have cost us nothing and, soundly administered, will continue to cost us nothing.

Legislation has already been introduced in the 86th Congress to raise FHA mortgage ceilings on sales housing and to reduce down payment requirements. It would also reduce the equity required of builders in rental housing, thus stimulating construction of rental units. Authority to increase the total of FHA guaranteed mortgages by $8 billion for the next 2 fiscal years has also been proposed. This is sound legislation and I will wholeheartedly support its passage.

The enormous increase in home ownership under FHA and related programs has, however, been responsive to only part of the national housing problem. Special conditions which could not be handled under the National Housing Acts have necessitated special programs such as military housing, defense housing, cooperative housing, college housing, and public housing.

I should like to say a few words about the public housing program. Some of you will recall that the first public housing, consisting of about 22,000 dwelling units, was built by the old PWA back in 1934. Additional units were built under the United States Housing Authority which lapsed in 1940. The program was revised in 1949 and is now in effect but on a very modest scale.

The purpose of public housing is, of course, to provide decent low rental housing to those who could not otherwise afford it. Under the terms of the program, the Federal Government lends funds to locally established housing authorities for the construction of publicly owned projects. The Federal Government also pays the local authority an annual subsidy of the difference between the rent charged and the cost of carrying charges and operation.

I am aware that a number of serious problems have developed recently in the operation of public housing. Rundown projects and problem families have made public housing less attractive than it can be. I believe that it is up to local authorities to be more vigorous in maintaining the appearance and habitability of these projects.

The poor are still with us and their demands for decent housing must be met. In the budget which the President submitted he requested no new low-rent housing units but merely an extension of time for contracting for units already authorized. An expanding nation cannot afford a holding operation on public housing. I believe that authorization for fiscal year 1960 should be increased by 27,500 units. I also believe that the frequently unrealistic maximum income limits for occupancy should be raised.

Of all the Federal programs, however, the one that has completely captured by imagination is urban renewal. I know the cities and their problems best. I was born into the city; I grew up in the midst of its crowded tenements, and I have lived and worked in the city all my life. Slums, overcrowded tenements, blighted areas have taken a heavy toll in human misery and degradation. Fine men, good citizens, have come from the slums, but so have more crime and disease than we should have. The cost, however, is not only in human values, it is also in dollars and cents.

In a typical city the taxpayer pays an average of $7 each year for services rendered in a blighted area. The area pays back only $4.25 in taxes. In a good area the average cost per citizen is $3.60, and the area pays back $11.30.

Slums and blighted areas make the largest demands on the cities' services—hospital care, fire, police, welfare services. One city finds that 40 percent of its police calls, 40 percent of its relief funds, 30 percent of its city hospital expenses are used for 6 percent of its people—those living in blighted areas. With their financial structures already weakened by the movement of industry and taxpayers to the suburbs, and as a result of the increasing cost of services, the cities just can't afford the indefinitely continued existence of slums.

Under the urban renewal program which developed from the Housing Act of 1954, the local community is encouraged to formulate a workable program of urban redevelopment. This program must include sound local housing and health codes, a master plan for the community's development, and an analysis of neighborhoods and the treatment needed. It must include evidence of financial capacity to provide the necessary local contribution. It must also include plans for rehousing displaced families. Presented with a workable program the Federal Government will, on its part, make loans and grants to pay the bulk of the net cost for clearing slum areas or for replanning blighted areas for rehabilitation. In addition, special FHA mortgage insurance is made available to encourage private investment in rebuilding these areas.

The principles governing the urban renewal program are sound ones. Emphasis is placed upon the initiative of local government in bringing about a solution of its own community problems. Assistance given by the Federal Government is realistic and effective. But we must have more, not only of Federal aid but of local enthusiasm and initiative. Urban renewal presents what is perhaps the most difficult housing problem in America today. Costs are high. Rehousing displaced families often presents a real bottleneck to otherwise effective programs. However, the goal of clean, well-planned cities and decent homes for city dwellers is too exciting, too important to be frustrated by anything less than sheer impossibility.

I believe the program should be pushed as far and as fast as we possibly can.

The President has requested $225 million a year for the next 6 years. In a period of high national income, I believe that the United States can and must do more to clean up its cities, to alleviate the misery of the slums and to provide decent city housing for our increasing population. I believe the annual appropriation requested by the President is inadequate and should be in-

creased to anywhere from $350 million to $600 million a year.

In housing, as in public works, in medical research, in industrial development, and social security this country will either advance and create a better life for its people, or it will stagnate and die. A nation's course in history is very much like a skier going up a steep slope. He keeps going up of he slides to the bottom; there is no standing still.

In the 36 years I have spent in the Congress of the United States, this country has made great progress in insuring better sosial and economic conditions for our people. The Nation has moved considerably from the place near the bottom of the hill where we were 50 years ago. I am convinced that the new 86th Congress will, in the field of housing, as in other areas, make it possible for this country to climb still further up the slope of our national aspirations.

Peorian and 11 Texas Brothers Making Career in Armed Forces

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1959

Mr. MICHEL. Mr. Speaker, on August 1, 1958, Senator LYNDON JOHNSON inserted into the Appendix of the CONGRESSIONAL RECORD an extension of his remarks concerning the Ripowski family of Dayton, Tex. The Ripowski family is truly a remarkable group in that the 12 brothers of this lineage have seen active service in the Armed Forces. This is an outstanding example of sincere patriotism and of a family's supreme devotion to their country.

However, I have learned from Mr. George J. Marker of the Army Times that Senator JOHNSON may have overlooked another fine group of Texans who have a great deal to be proud of in that they are the 11 brothers of an exceptional Illinois boy whose enlistment enabled the family to equal the Ripowski record. Pfc. Jimmy L. Melton, whose wife continues to reside in my district while Jimmy serves in Korea, is one of 12 brothers currently serving in the Armed Forces, and, in addition, all intend to make a career of the service. Moreover, this family, which is originally from Missouri, will have accrued the amazing total of more than 250 years of service at the completion of the individual careers.

Mr. Marker is of the opinion that the Meltons offer a far superior record to the claim of being the Nation's First Family from the standpoint of service and in view of their multitudinous contributions to the Armed Forces. Under leave to extend my remarks, I would like to include the following release from the Information Office of the 1st Cavalry Division dated January 22, 1959, which most certainly substantiates Mr. Marker's statement:

HEADQUARTERS, 1ST CAVALRY DIVISION, KOREA.—According to Pfc. Jimmy L. Melton, cook in Company A, 7th Cavalry, 1st Cavalry Division, when he and his brothers, all born in Quiln, Mo., complete their military careers, they will have donated more than 250 years of service to their country.

He said 5 of the 12 are soldiers, 3 are in the Air Force and Navy each, 1 is a Marine, and together they have served in practically every country in the world. Each has participated in either the Korean war or World War II.

Pfc. Melton stated that the brothers have a family meeting as often as possible, "but there is always someone who can't make it." The last get-together was held for Robert, at the Melton's farm in Houston, Tex., in 1943, and "more than 100 people were present," he added.

Other than Jimmy, the only one overseas is Maj. John Melton in Germany, the oldest of the 12, who, according to Jimmy, was the first one of them to enter the service, enlisting in 1939. James T., Michael, and Robert J., all NCO's, make the family's representation in the Army complete, he reported.

The three brothers in the Air Force, Robert F., Bill, and William E., are each assigned to Lackland Air Force Base, San Antonio, Tex. Robert and Bill are master sergeants, and William holds the airman second class rank, said Jimmy.

Also assigned together are the three sailors, Marcus, Micus and Silus, who are stationed in San Diego, Calif. Marcus and Micus, twins, entered the Navy 8 years ago just a few days apart, said Jimmy, and since then have been assigned together several times.

The only marine of the 12 volunteers, according to Pfc. Melton, is Robert T., a corporal assigned to Camp Pendleton, Calif.

Jimmy, who was the last one to enlist, said that the brothers had no idea they would all enter the service until it was up to him and, "I hated to be the only civilian among us," he recalled.

At one time, reported Jimmy, when only 11 were in the service, each was assigned overseas. This was during the Korean war in 1952, and a few months later Jimmy enlisted in the Marines. He said he was then assigned with his brother in the 1st Marine Division near Pusan, Korea, where each was in the 7th Regiment but in different companies. Both were involved in heavy fighting and each received a Purple Heart, according to Melton.

Asked how the Meltons keep in touch, Jimmy replied, "Its pretty hard to keep up with each other, but we manage somehow. We try to write each other regularly, but usually there is at least one of them with whom I have lost contact because we move around so much."

Each of the brothers calls Texas his home State, with the exception of Jimmy, whose wife resides in Peoria, Ill. All of them grew up on the same farm in Quiln, Mo., and their mother, Mrs. Marybelle Melton, resides in St. Louis, Mo.

Abandoned Strip Mines

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1959

Mr. SAYLOR. Mr. Speaker, during my 10 years in Washington scores of colleagues have commented on the beauty of the fertile farmlands, the rolling hills, and the inspiring mountains of western and central Pennsylvania. You have been most generous in your praise of our natural attractions. You have also been very frank in calling attention to a monunmental blight on Nature's handiwork that is inescapable to travelers—the abandoned strip mines so prominent in our part of the country.

We who live there are not insensitive to these pockmarks on a fetching native landscape. You do not accept such conditions, no matter how close you may be to a situation, any more than you would tolerate a fault in your front yard or chipped plaster in your living room. When you are a conservationist, the abandoned strip mines are even more appalling.

Each time I pass one of these hideous excavations I think of the economic and cultural losses involved. I conceive its transformation into a recreational site—where spiritual and physical comfort awaits those with troubled mind and tired body. I visualize playgrounds for children who may otherwise be deprived of facilities to play ball, to skate, or merely to indulge in family walks and picnics. I think of the rich fields of grain and vegetables, of fruit trees, and berries, of grazing cattle that would grace these areas if reclamation were brought about.

Our people are disturbed about this violation of our countryside. They did not protest when the huge shovels and draglines were assigned to the mission of pawing deep into the earth to lay bare the soil that covered veins of needed coal, for the time was during World War II when all available fuel was required in the interest of national defense. But as the years pass by our patience becomes exhausted. In many cases human lives are involved, for those mines which have filled with water are an extreme hazard to young children who live in the vicinity.

It is time for action. Today I am introducing a bill to provide for a study by the Secretary of the Interior and a report to the Congress concerning strip-mining operations in the United States. The survey may include but need not be limited to such matters as the nature and extent of strip mining in the United States, the ownership of the land involved, the use if any that is now being made of such land, the effect of such mining operations with respect to safety and health from such operations, the effect of strip-mining operations upon highway programs, scenic features, fish and wildlife and other resources of the United States and the several States, and the public interest in and public benefits that may be realized from appropriate use and development of areas that have been subjected to strip-mining activities.

At this time I should like to include in the RECORD a copy of a letter from Perry E. Walper, chairman, conservation committee, Allegheny County Sportsmen's League, Inc., and the preliminary data for proposed reclamation which he has submitted to me. The letter and enclosure follow:

ALLEGHENY COUNTY
SPORTSMEN'S LEAGUE, INC.,
Pittsburgh, Pa., December 22, 1958.

Congressman JOHN SAYLOR,

DEAR CONGRESSMAN SAYLOR: This is to request your participation in bipartisan sponsorship of Federal legislation to recover abandoned strip mined areas in Pennsyl-

vania. The enclosed brief explains the anticipated advantages to the Commonwealth.

As I am writing to you, a letter and brief are also being sent to Congressman THOMAS E. MORGAN. Similarly, Senators JOSEPH CLARK and HUGH SCOTT are being requested to introduce identical legislation in the Senate.

This is not a random request, but rather the result of intensive investigation by the league. Our contacts have included Fred Aandahl, Assistant Secretary of the Interior, Bureau of Reclamation; Ross Leffler, Assistant Secretary of the Interior for Fish and Wildlife; and Mr. Young, Acting Administrator, Department of Agriculture, Soil Conservation Service.

Information from these authorities clearly indicates that new legislation would be necessary to accomplish the restoration. There is no provision for such work under existing law.

During World War II, in the interest of national defense, the Federal Government requested coal at any price and in disregard of Pennsylvania law. We won the war, but the abandoned strip mines created as a result, stand as mute evidence of values lost. Certainly there is a definite Federal responsibility in this restoration.

Large appropriations have been spent by the Federal Government for reclamation of lands in Western and Midwestern States. Here in the east, comparable benefits have been trivial. With our booming population, it is high time that the welfare of our eastern lands was considered for the future of our country.

The league's only concern in this matter is the accomplishment of restoration of abandoned strip lands. The Allegheny County Sportsmen's League, its officers and members, invite your investigation of our sincerity of purpose at any time.

For the benefit of our State, your cooperation and leadership is requested. It is our thinking that you and Mr MORGAN can be of immeasurable service by collaboration, preparation, and presentation of an effective bill in the House of Representatives to accomplish this vital land restoration.

Of course, I am at your service at any time to further discuss this matter.

My best wishes for your success in the new Congress.

Very truly yours,

PERRY E. WALPER,
Chairman, Conservation Committee.

PRELIMINARY DATA FOR PROPOSED RECLAMATION OF STRIP MINED AREAS IN PENNSYLVANIA

Area: Best estimates obtainable from experienced strip mine operators indicate 70,000 to 100,000 acres of unreclaimed land resulting from operations since World War I and continuing to the Pennsylvania Act of 1945.

Exact nature, area, and ownership of lands could be determined only by survey. Lands subsequent to the act of 1945 are not considered in this proposal.

As the lands now are: They are minimal or nontax producing to the township and county concerned. This increases the taxation burden upon resident landowners, and deprives the Government of a taxable source of revenue. Many of the lands are held by the township for taxes, and hence produce nothing.

They are of no value or potential value in productivity of minerals or surface products. They are not now feasible for agriculture or reforestation. Pools of water, residual from past operations, are in the majority acid in character with some few exceptions. In their present state, such waters are detrimental if discharged into the streams of the Commonwealth. Present recreational values of the pools are nil. As a hazard to people, there is ample proof of drownings resulting from falling over high walls or swimming in dangerous areas.

If reclaimed, these lands would provide: Ample employment to the coal mining industry through use of available machinery and manpower. The coal industry is presently in an economic slump and reclamation would provide definite employment in this critical period. Increased tax values to the areas in which located. Land productivity for reforestation, pasturage or farming of several types.

Anticipated objections: If the reclaimed lands were returned to true or reasonable contour, this would set a pattern for land restoration which would be in excess of present legal requirements in Pennsylvania. Strip mine operators could view this as a pattern which would become a requirement for the industry as a whole. Objections could be voiced against restoration of stripped lands which are in private ownership; that assurance of such a program could bring about land speculation.

Summary: Regardless of concerns of the strip mining industry, present Pennsylvania law[1] is inadequate to assure land restoration for reuse and taxation purposes. Good land restoration will become mandatory as land values continue to rise with increasing populations.

Whether lands would be in private or public ownership upon restoration is of little consequence since these lands would once again be tax producing as well as productive in surface products. Further, in many instances, pure waters would return to many Pennsylvania streams, as restoration covers sites of mine acid drainage and hence pollution.

---

[1] The act of 1945, known as the Pennsylvania Bituminous Coal Open Pit Mining Conservation Act, calls for land restoration to this extent: That the operator shall place 3 feet of earth over the face of the exposed coal seam, round the tops of spoil piles, and plant grasses, trees or shrubs to the satisfaction of the Secretary of Mines. If these conditions are met, the bond is refunded to the operator following inspection and approval.

Address by Senator Lyndon B. Johnson

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 4, 1959

Mr. ANFUSO. Mr. Speaker, Tuesday evening, February 3, I was privileged to attend a dinner of the Veterans of Foreign Wars at which the distinguished majority leader of the Senate, the Honorable LYNDON B. JOHNSON, was presented with an award in recognition of his public service.

I think that the Veterans of Foreign Wars, ever mindful of the security of our country, could not have made a more appropriate and more deserving choice for this signal honor than Senator JOHNSON, who is also chairman of the Preparedness Investigating Subcommittee of the Senate Committee on Armed Services.

Senator JOHNSON's record in Congress is well known to all of us. He is a man of deep convictions, courage, and vision. He is without question the most outstanding personality in Congress today and has filled the void of leadership existing in Washington, which leadership our Nation so sorely needs in these trying days in order to withstand the onslaught of Communist aggression. Senator JOHNSON did not hesitate to sponsor civil rights legislation such as he introduced recently, despite the criticism he knew he would have to face in his home State.

Mr. Speaker, in accepting the award from the Veterans of Foreign Wars, Senator JOHNSON delivered a most timely address dealing with the problems of national security as we face them today—an address which I believe every citizen will want to read. Under leave to extend my remarks in the RECORD, I wish to insert this address in order to bring it to the attention of all our colleagues and to the American people. It is as follows:

ADDRESS BY SENATE DEMOCRATIC LEADER LYNDON B. JOHNSON AT VETERANS OF FOREIGN WARS DINNER, WASHINGTON, D.C., FEBRUARY 3, 1959

FOR THE COMMON DEFENSE

Mr. Chairman, ladies and gentlemen, for this award—and for the honor of this occasion—I am most grateful to you. While your recognition is to my public service, this moment is one of deep personal meaning to me.

I accept this award in the sense of a representative of the million of Americans who have joined in a partnership to provide for the common defense.

This includes those who faced the enemy in combat.

This includes those who have produced the tools of preparedness.

THE THOUGHT OF PREPAREDNESS

This includes those who, like the Veterans of Foreign Wars, have banded together to keep alive the thought of preparedness in the hearts of our citizens.

The VFW is not just an organization founded upon memories of events which become nostalgic as we get farther from them. It is a vital force upon the American scene today.

For 22 years now—as a Member of the House and as a Member of the Senate—I have served in the Congress. Throughout that period I have served continuously on those committees charged with the most direct responsibility for our national security.

DECISION AND RESPONSIBILITY

National security—in these times—is complex. National strength is costly.

The burdens of decision and responsibility are trials.

But when these matters are approached in terms of individual human lives, the complexities become simple, the cost becomes cheap, and the trials cease to matter.

The question today has not changed since 1942.

Can freemen ask their sons to defend freedom with less than the best of weapons or less than the maximum of willing support wherever the line of battle may fall?

For myself—and, I am sure, for you—I say that the answer is forthright and simple, "No."

NO AREA OF COMPROMISE

On this, there is no area of compromise. There is no alternative. There are choices. Either this is to be our standard and the purpose of our efforts, or it is not.

In terms of principle it is simple. It is not simple in terms of application. Twenty years ago—when we were beginning to mo-

bilize for World War II—we used what weapons were needed to protect our freedom. Where we did not have those weapons on hand, we could afford to make substitutions. We handed our sons broom handles with signs attached to identify them as guns. We posted signs on old trucks and called them tanks. We simulated artillery with water pipes.

SUBSTITUTES FOR THE REAL THING

Those weapons that mattered so much to us in 1940 are basically obsolete, and even the broom handles are obsolete.

The demands of national security—and the change of our national position—no longer permit us the leisure of outfitting ourselves with substitutes for the real thing.

This is the first—and the greatest—single change in our concept of national security.

Time is no longer our friend. Time is no longer on our side.

Security is no longer a point at which we may hope to arrive 1 year, 2 years, or 10 years hence. Security—in the modern world—is a condition we must maintain each hour of each day.

This underscores another matter of great importance.

CHANGES IN MILITARY CONCEPTS

Twenty years ago—in our period of mobilization against the threat afforded by the Axis Powers—you will recall the profound changes we were forced to undergo in our military concepts. At the beginning of mobilization, armored divisions and mechanized divisions were unheard of. Paratroops and dive-bombing and landing craft were unknown concepts. The most romantic branch of our services was the horse cavalry.

VICTORIES—THE PRODUCT OF CHANGE

Our victories in World War II were the product of changes we were forced to make in our thinking after the war in Europe had begun.

Today—and for so long as the Nation shall endure—we do not have and will not have that same margin of time.

THE EDGE OF CAPABILITY

For more than a decade, peace has been maintained because—as men such as Winston Churchill have pointed out—we of the United States have held a continuing edge in capabilities. What we often overlook is that American science gave us the lead in the nuclear age. This lead—won by the invention and creativeness of our minds—served the world as the greatest single deterrent to aggression. The fact that we had unquestioned leadership in this realm made it unnecessary to use atomic energy in any military form.

THE TIME OF DANGER

This demonstrates the point that needs making now. Our greatest time of danger in the world is at times of transition.

When we come to a phase in which old concepts are obsolete and new concepts are not yet perfected, there is where the danger lies.

SECURITY FOR THE FUTURE

If American science had not been the leader in bringing freemen to the atomic age, the cost of national security these past 15 years would have been prohibitive beyond our imagination. The parallel challenge of the opportunities of space is identical.

The weapons of the past are obsolete. The strategies of the past are obsolete. Along with this transition, we must fact another fact of change.

ONE GOAL FOR AMERICA

We are working now in the Senate on the job that is foremost for the members of the legislative branch—getting the facts. We must have those facts to discharge our duties. It is my hope, though, that out of this can come the search for a new way and a better way to bring together—rather than to keep apart—our joint pursuits of the same goal.

There is—and must be—only one goal for Americans: To provide our Nation with security and, through that strength, to be leaders for peace.

A TIME OF GREAT POTENTIAL

We have come to a time of great potential. Never has there been so great an opportunity for us as that opening now. If we move with vigor into the leadership of space, we shall turn those wild fields into the meadows of peace. The opportunity to achieve a creative peace is the opportunity before us now, and the challenge to our lives, our talents, our will. With this before us, let us so work that it shall never be said again that we did too little, too late.

Shelbyville Reservoir Will Serve Many Useful Purposes

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. MACK of Illinois. Mr. Speaker, during the last session of Congress legislation authorizing the Shelbyville Reservoir was passed and an appropriation of $125,000 in planning moneys was approved by the Senate. But in the closing days of Congress the conference committee eliminated this project because the House conferees had not yet had an opportunity to consider this appropriation.

The construction of the Shelbyville Reservoir on the Kaskaskia River is needed to adequately carry out the plans of the Corps of Engineers. The Corps of Engineers has recommended that two reservoirs be built on the Kaskaskia River, one at Shelbyville and the other at Carlyle. They have indicated that one reservoir is as necessary as the other since to build just one would only halfway do the job. Therefore, I am hopeful that the Congress will appropriate planning money for this project.

A reservoir built in this area will serve many purposes. In addition to providing flood control and providing adequate water supplies, it would also have many recreational features.

I have today received a letter from the Illinois Federation of Sportsmen's Clubs expressing their interest in this phase of the benefits derived from such a reservoir. They have also indicated other programs in which they are interested, and I am very pleased to include this letter as part of my remarks. The letter is as follows:

ILLINOIS FEDERATION
OF SPORTSMEN'S CLUBS,
Champaign, Ill., January 30, 1959.

DEAR CONGRESSMAN: I have been instructed to solicit your support of the following major projects our Illinois Federation of Sportsman's Clubs is sponsoring for congressional action in 1959.

1. Des Plaines Wildlife Area: Senator PAUL DOUGLAS has introduced S. 747, a bill which directs the Administrator, General Services Administration, to convey to the State of Illinois, without consideration, the area requested by our department of conservation, known as Des Plaines Public Hunting and Refuge Area. We believe this bill deserves support as this public land should be permanently maintained for public use and not sold for private use. In this heavily populated area of Illinois there is an acute shortage of recreational lands.

2. Shelbyville Reservoir: This second reservoir on the Kaskaskia River should be started immediately as it is supplemental to the Army engineer Kaskaskia project. It will serve not only flood control and navigation but will provide much needed recreational water for central Illinois. We believe it will serve a real economic need by developing new recreation business.

3. Indiana Dunes: We hope that Congress will set aside the unique Indiana Dunes area for the future recreation of a rapidly growing population in the immediate vicinity of the Dunes.

4. Hennepin Canal appropriation: We urge that Congress appropriate at least $2 million for use by the Army engineers in making certain improvements on the Hennepin Canal so that this potential 100-mile recreational area can be turned over to the State of Illinois ready for public use.

Our 50,000 member sportsmen in Illinois will certainly appreciate any effort you extend to see these proposals forwarded.

Sincerely,

ROYAL B. MCCLELLAND,
Executive Secretary.

Can Rural Development Solve the Farm Problem?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. MICHEL. Mr. Speaker, the magazine Better Farming Methods serves thousands of agricultural leaders throughout the Nation. Its influential readership includes many of the dedicated men and women who are advising our farm people day in and day out as they strive to produce food and fiber for a growing Nation and to improve their rural homes and communities.

In the January issue of this valuable magazine there appeared an article, "Can Rural Development Solve the Farm Problem?" This article is the clearest, most objective statement I have seen on the rural development program, which is having a growing impact in wide areas of the Nation. Under leave to extend my remarks, I submit this interesting and informative article for the RECORD:

CAN RURAL DEVELOPMENT SOLVE THE FARM PROBLEM?

(By Joseph C. Doherty)

Forty or fifty years from now when historians review the record of Secretary of Agriculture Ezra Taft Benson, the present controversy over farm price support programs and other well-known issues may take second place in his championing of the rural development program as a fundamental solution to much of the farm problem.

Although only about 2 years old as a working program, and still on a pilot or demonstration basis, the rural develop-

ment program (or "resource development in rural areas," as some States call it) has already had considerable impact on the work and planning of many farm and non-farm groups.

Agricultural leaders—extension workers, vo-ag teachers, FHA credit advisers, SCS technicians, and others—are in the forefront of the new program. In counties and areas taking part, these leaders are meeting tough problems of organization and project development with energy and imagination.

The rural development program started in 1955 with three main goals: To help families with ability and interest in farming gain the necessary tools, land, and skills; to widen the range of off-farm jobs; to provide better educational opportunities, especially for young folks.

Backing up the Secretary's decision to launch the new program were some hard statistics that had sometimes been lost in the debate over rigid versus flexible price supports, and other big issues.

In 1949, the year on which statistics in the Secretary's report were based, one and and one-half million farm families, about one-fourth, earned a thousand dollars or less in cash income. (This number is now down to about one million, somewhat less than one-fourth.)

Fifty-six percent of the Nation's farmers produce only about nine percent of marketed farm products; one-third of the income on all farms comes from non-farm sources—wages, pensions, etc.

As commercial family farmers improve their efficiency, the total number of farms continues to decline. According to U.S. Labor Department studies, there will be 15 percent fewer farmers and farm workers in the next decade. (However, professional and technical openings in agriculture and related industries will grow by leaps and bounds.)

THIRTY STATES PARTICIPATING

Thirty States are now utilizing the rural development approach in order to carry into action the three-point program. In each of these States, interagency committees have been formed to tie the work together.

A total of 102 pilot counties (including those in multicounty trade areas) were selected to get the program underway. They're located in almost all sections of the country.

Rural development is a complex program involving farm and nonfarm interests, Government agencies, and private groups. However, the core of the program is easily defined: Helping rural people, farmers, and townspeople, take a fresh look at where they stand, decide what they want to do about present conditions, and carry forward their plans.

Each county taking part in the work has formed a committee representing farm, business, civic and church leaders and other local citizens. Farm agency workers are either on the full rural development committee or have a separate group acting as advisors to the committee. In some places, health, education, welfare, and county government representatives are also on the agency advisory committee. Here you have the pilot county team: Local leaders plus agency workers.

To help land-grant colleges and universities and other agencies in the 30 States get the program under way, the U.S. Department of Agriculture makes special grants for the pilot work. Some 160 extension agents or specialists are at work on the program full time. FHA also strengthened its staff in a number of pilot counties. And SCS in 1957–58 contributed 58 extra man-years of professional time in 68 pilot counties.

This doesn't tell the whole story by any means. Other extension, SCS, and FHA personnel in these States work on the rural development program as part of their regular responsibilities. And many other agencies—ASC committees; research services; vocational agriculture departments; health, education, forestry departments; employment agencies, and others are putting time and skills into the program.

In the pilot counties, nongovernment leaders and workers representing the above agencies have joined together in a long-range campaign to build a better balance between agriculture and industry. Developing farms able to compete in modern agriculture is a big objective.

A PLAN OF ACTION

Projects in these counties are no different from projects everywhere in rural areas. But there are more of them, more people involved, and in some cases, faster progress.

Most important, in the rural development counties, leaders try to tie everything into a long-range plan adapted to the practical resources at hand.

A few examples:

Reinforced extension staffs in many program areas are helping rural development committees plan and carry forward surveys of farm family living, natural resources, health conditions, education needs. A survery just completed in Florida's two pilot counties has totaled up the most complete picture ever assembled of rural living, natural resources, and improvement opportunities.

Extension and land-grant college specialists are helping strengthen rural industries. In Watauga County, N.C., they did much of the spadework on development of a 200-employee clothing plant.

Vo-ag teachers are working right alongside other agencies in the program, setting up special classes, helping with crop and marketing projects. Kentucky's vocational education department assigned eight instructors to farm and T and I (trades and industry) projects in that State's rural development program.

A fruit and vegetable market, first one in the county, went up in Bertie County, N.C. Local people contributed the $40,000 it cost; rural development extension agents and committee members did the planning and organizing.

SCS has stepped up its work in program areas, mapping soils on farms; preparing conservation plans on small farms; advising in drainage, industrial zoning, and irrigation problems. In 1 South Carolina county 66 new farm conservation plans have resulted from the program.

In a Mississippi county, 350 families have improved their diets and general health through a joint health-extension RD project.

IMPACT OF THE PROGRAM

These few examples, from hundreds in the pilot counties, show the practical dollars-and-cents value of the rural development program.

More important, however, is its impact on the thinking of policymakers in and out of government, in short, how rural development will affect traditional ways of helping rural towns and small farms.

This is something intangible—hard to judge. But here are some of the probable effects, as seen by neutral observers in Washington and the States:

National and State leaders outside the field of agriculture now have a much better understanding of the important part played by nonfarm jobs in rural area prosperity.

Service and educational agencies in some States have begun to take a hard look at their own work, to see how they can help low-income rural people more effectively.

The trend in land-grant and other college programs toward technical assistance on area economic problems has been speeded up.

Work of citizen committees in the rural development program is stimulating more interest in developing improved cooperation between private individuals and agency workers to gain community goals.

Cooperative extension workers in all counties taking part in the program have had to step into many new fields. This is bound to have an effect on the long-term educational planning of this important agency.

Perhaps Secretary Benson summed it all up when he said recently, "Our educational and service programs, not only in agriculture but in other fields as well, must be adapted to help rural people take advantage of opportunities in an expanding economy which is rapidly changing the face of both rural and urban America."

A Better Understanding of Government Contract Requirements

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. BATES. Mr. Speaker, there are many small companies throughout the country that do not understand the methods of dealing with Government agencies, and consequently, automatically exclude themselves from potentialities available toward expanding business.

Conversely, there are many of these companies which enter into contracts with the Government and are penalized because they do not fully comprehend the requirements of such contracts.

One of the most simple, and yet comprehensive, explanations which would provide direction to such companies was written by F. Trowbridge Vom Baur, General Counsel for the Navy. The article to which I refer follows:

HOW TO DEAL WITH THE NAVY IN THE FIELD OF BUSINESS LAW

Today one may tend to visualize the Navy in terms of fast aircraft carriers ranging the seas of the world, jet planes and atomic submarines. Silhouettes of gray-hulled ships at sea with guided missiles pointing to the sky may readily spring to one's mind. And rightly so.

But there is something else in the Navy. Standing as a solid logistic base behind these dramatic items of military hardware is the Navy's enormous industrial or business organization. The Navy's buying of ships, planes, ordnance, electronics, petroleum, construction, etc., now runs to some $6 billion a year, requiring some 49,000 contracts above $1,000 in Washington and another 20,000 in the field. The Navy disposes of vast amounts of surplus property. It manages a real estate establishment valued, on the basis of cost, in excess of $12 billion, and which, for scope, activity, and variety of problems, might stir the imagination of any corporate executive. It runs a shipping organization (the Military Sea Transportation Service) some four times larger than any other shipping company in the previous history of the world. And it enters into a wide variety of other business transactions.

It is the purpose of this article to portray how a person outside the Government can deal with the legal aspects of this business side of the Navy.

THE GOVERNMENT IN ITS PROPRIETARY CAPACITY

Its proprietary capacity distinguished from its regulatory capacity

Members of a regulatory agency, such as the Securities and Exchange Commission, for

the most part sit in a quasi-judicial capacity as an arm of Congress, having as their major purpose the determination of facts, the decision of questions of law, and the application of statutory mandates to particular cases and parties. They hold such proceedings, usually adversary in character, to those ends as may be necessary. They also promulgate regulations which have a far-reaching effect of a regulatory character.

The Navy is a very different organization. It is wholly within the executive branch of the Government and it operates rather than regulates. Its main purposes are to administer the laws of Congress that implement the constitutional provision, "To provide and maintain a Navy," and to carry out the orders of the President as Commander in Chief under article II of the Constitution.

In turn, much like a corporation, the functions of the business side of the Navy are divided into what might be called a Requirements or Consumption Division, and a Production Division. The Secretary of the Navy presides over this entire complex, and personally manages the Requirements Division with the assistance of the other members of the Secretariat, the Chief of Naval Operations and the Commandant of the Marine Corps. They decide what and how many ships, planes, guns, missiles, electronics, etc., are needed to provide for a naval defense. In turn, the Production Division of the Navy is run mainly by the Under Secretary and the Assistant Secretaries with assistance from the Chief of Naval Materiel and the bureau chiefs, and with legal advice from the General Counsel. Their job is to see that the various items of military hardware needed by the Requirements Division are produced effectively, expeditiously, and economically.

In its proprietary capacity, the Navy acts much like any businessman or corporation. It makes the best deals for itself that it can, subject to the limitations of applicable constitutional and statutory provisions and within the limit of reasonableness which necessarily inheres in the standard of conduct of every governmental administrator. It deal with corporations and other business concerns, not in any paternalistic capacity, but at arm's length. The legal relationship which our Government establishes with its contractors is substantially the same as those which private contractors establish among themselves. But the Government is, nevertheless, in a preferred or superior position with regard to such things as the inapplicability to the sovereign of statutes of limitation and laches, the irrevocability of bids or offers made to the Government and the inapplicability of the doctrine of apparent authority to Government officials. In addition, Government contracts have certain distinct peculiarities which will be pointed out hereinafter. All in all, however, Corbin and Williston on Contracts, Williston on Sales, etc., are just as much standard guides for Navy lawyers in the contract field as they are for private practitioners representing business clients.

Strangely enough, however, these facts are not generally understood. There appears to be a disproportionately large number of contractors who actually come into the Navy Department, usually after their contracts get into trouble, stating an expectation that the Navy is going to take care of them; or that they were under the impression that the Navy has guaranteed them against loss. See vom Baur, Government Contracts: Small Business and the Law, 43 A.B.A.J. 605 (1957). Recently one contractor unsuccessfully argued before the Armed Services Board of Contract Appeals, though this was not a Navy case, that he should not be assessed excess costs of reprocurement of the hardware on his contract (which had been terminated for default) on the ground that the Government should have determined appellant's ability to perform before awarding the contracts. (Interstate Box Co., ASBCA Nos. 4180, 4181, 4182, CCH Government Contracts Rep., par. 75,019 (1957).) Instances of this kind reveal the serious misapprehensions and the lack of understanding which exist among contractors and even the bar generally as to the nature of the Government's dealings in its proprietary or business capacity.

Yet nothing should be more clearly established than that under the Constitution ours is a government of laws and that, under article IV, section 3, clause 2 of the Constitution, it is Congress—not officials in the executive branch of the Government—that has the power to dispose or authorize the disposition of Government property, including money. In general, the policy that Congress has expressed in authorizing the expenditure of Government moneys for the procurement of goods and services has been a policy, not of largesse, but of endeavoring to obtain value in exchange for money. Thus, in its proprietary capacity, under the applicable provisions of law, the Navy must protect itself; it must bargain at arm's length with business concerns; and contractors must protect themselves as if they were dealing with another business concern. A contractor cannot expect the Navy to hold its hand out like Santa Claus or a big brother with a large pocketbook, to possess an easy disposition or to have an unrestrained omnipotence for dispensing the taxpayers' moneys.

The crucial requirement of authorization

Ours being a government of laws and the requirement of congressional authority to dispose of Government property being absolute, the attitude which can be taken by the lawyer representing the Government in its proprietary capacity contrasts markedly with that of the private practitioner representing a business concern. The latter is apt to ask himself: What things can my client do without running afoul of some prohibition? The Government lawyer must approach his problems from the reverse position by asking himself: On what authority may I proceed? For, he represents an administrator or contracting officer who has only delegated powers and who lacks either the full powers of a natural person or the broad management authority of a corporate officer, the usual clients of the private practitioner. Thus, beginning with the Constitution itself, the requirement of authorization to act is always fundamental to the thinking and position of the Government lawyer.

The vital need for education in the field of Government contract law

It is no secret to us as lawyers that our system of law is undergoing constant growth and change. Perhaps its greatest initial period of growth was in the 13th century, in the time of Bracton, when there was, following the creation of the centralized courts in 1178 under Henry II and a great increase in litigation, a special development in the field of mercantile bonds, wills, and conveyances. Later there was the development of equity. In our own time—the last 75 years—we have witnessed in the field of administrative law what is perhaps one of the most spectacular developments that has ever taken place in the whole history of law. The legal profession should frankly face the facts that there is yet another field of law which is in the midst of boom, expansion, and change—the field of Government contract law—and that the legal profession, and indeed the Government itself, have been somewhat tardy and remiss in keeping up with it.

The principles of Government contract law go back to the last century at the time of the Civil War and an 1863 contract for the construction of the ETLAH, "an iron-clad steam battery." (See *McCord* v. *United States*, 9 Ct. Cl. 155, aff'd sub nom., *Chateau* v. *United States*, 95 U.S. 61 (1873).) However, the field got its real start in life and became an area of major importance only with the beginning of World War II. In the Navy, for instance, certain bills were enacted by Congress shortly after the fall of France in June 1940, in reaction to the wave of shock which then suddenly struck the world. They provided for the construction of a two-ocean Navy, and companion bills, designed to expedite such construction, radically altered the course of the Government contract field, probably forever. These new laws introduced into the procurement field the requirements of speed and action on a grand scale, including an expansion of the concept of procurement by negotiation. As a result, there occurred an unprecedented development in the field of Government contract law.

Today, some 15 years later, ignorance of the field in many quarters is still disturbing. This ignorance exists among contractors and, to be very frank, in many quarters of the bar itself.

For one thing, it should be generally known as an elementary principle of law that a bid must be responsive to the invitation for bids in order to be considered. Yet every day the Navy receives a substantial number of bids which are simply not responsive. Under existing provisions of law these bids cannot be considered for award of a contract. The results from this elementary type of mistake in terms of thousands of dollars wasted in preparation of a single bid are startling.

Other types of instances testify similarly. Once a contract has been entered into, many contractor representatives will take action based upon communications with persons in the Government other than the contracting officer, and then express surprise when the contracting officer advises that the action taken was not authorized. Many contractors appear to have no real familiarity with the changes, default, and disputes clauses. And many claims are inadequately presented, both to contracting officers and to the Armed Services Board of Contract Appeals.

Many contractors do not believe that they have to read their contracts with care to understand with that bell-like clarity the legal machinery thereby set up, or, indeed, even to read the contract, with its mass of printed matter, at all. Some, indeed, feel vaguely that they can somehow muddle through by playing things by ear and hoping for the best. Yet the printed provisions of Government contracts are all there for a purpose, and every sentence, virtually every word, has some legal significance.

Indeed, government contract law has now become a distinct legal subject with its own principles, structure and pecularities, worthy of separate recognition by the legal profession, and worthy of day to day attention by practicing lawyers. Only through the bar, really, can such elementary principles as the need for responsive bids be made clear to clients, let alone the more complicated principles involved in the changes, default, disputes, and appeals clauses.

Finally, the mistakes which result from this ignorance of government contract law seriously interfere with and slow up Navy administration and cost the taxpayer money. They result in trouble, friction, claims, lawsuits with the Navy and in hurt feelings; and they disrupt that smooth performance of contracts and those good relations with contractors which are the earnest objectives of people in the Navy.

The need for a broad educational program in the field of government contract law is still fairly serious. The key to such an educational campaign appears to lie clearly in the area of better distribution of written materials in the field, plus a recognition of the need to read them. Just as contractors cannot become educated on the subject except through the bar, the bar in its turn can

only become educated through the availability of adequate written materials. And the Government must undoubtedly bear some burden of responsibility for making the written materials available.

The Navy has been trying to do something about this during the last decade. In 1949, "Navy Contract Law," written by lawyers in the Office of the General Counsel under the leadership of Hudson B. Cox, then General Counsel, was the first legal textbook to appear in the field. Although issued for internal Government use, a number of copies found their way into private hands, and the publication has been extensively cited in law reviews and other legal periodicals. Undoubtedly it has been of some help in making the principles of this new and fairly complex field more understandable to the private practitioner as well as to Government lawyers and administrators. The Office of the General Counsel is now revising "Navy Contract Law." At this writing, the manuscript of the revised version is virtually complete, and the publication should be available to the bar as well as to Government lawyers within 6 months through the Government Printing Office.

Most troublesome, perhaps, has been the lack of availability of the decisions of the Armed Services Board of Contract Appeals, which are undoubtedly the best single source of Government contract law as its principles are applied in the Department of Defense. Until recently only excerpts from selected decisions were printed by a commercial service, the "Government Contracts Reporter," published by the Commerce Clearing House. The decisions themselves were issued by the Board in mimeographed form, some 300 copies being distributed to selected recipients. Thus, while Government lawyers kept their own private files of these decisions and regarded them as primary sources of the most valuable kind, and a few corporations were also on the mailing list, the decisions were not generally known by or available to the bar and contractors. This state of affairs, it so happens, had long troubled the writer, and in a speech to the Wyoming Bar Association made back in September 1954, the general publication of these decisions was strongly advocated. That portion of the speech was later reprinted in the February 1955 issue of the Harvard Law School Bulletin; and finally arrangements were made in 1956 for the issuance of a new publication, "Contracts Appeals Decisions" (BCA), by the Commerce Clearing House. This loose-leaf service is coupled with the issuance every 6 months of a bound volume containing all the decisions of the ASBCA for the period, plus a useful topical index. Another good publication is Lupton, "Government Contracts Review."

In addition, the law reviews, with increasing tempo, have been picking up gradually the orphan stepchild of government contract law. Many of the articles have been outstanding and have gone far to assist with the needed educational campaign. See for example, Pasley, "The Interpretation of Government Contracts: A Plea for Better Understanding," 25 Fordham L. Rev. 211 (1956).

The lawyer who has a problem with the Government will find it to his advantage to be familiar with these publications before aproaching officials of the Government.

DEALING WITH THE NAVY LAWYER

In order to deal with the Navy in the field of business law, the lawyer outside should know what the lawyer inside the Navy does, the scope of his responsibility, and how the Office of the General Counsel (OGC) is organized. In addition, the private practitioner should know that there are two law offices in the Navy, that of the General Counsel and that of the Judge Advocate General. The jurisdiction of OGC is that of business and commercial law, covering the great bulk of the field of civil law. OGC represents the Navy in its capacity as a large industrial organization. JAG's jurisdiction includes military justice, military law and tort claims.

Comparability in approach to the private practitioner

From time to time I have heard stories about the Government lawyer being standoffish, uncooperative and noncommittal, if not sometimes downright hostile and disagreeable. Lawyers of those dispositions no doubt may be found in the Government and in private practice. But I can say that in my own experience the average Government lawyer is not like that, and certainly not in the Navy. We strive to avoid it.

The Office of the General Counsel for the Navy, first known as the Procurement Legal Division, was founded in 1941 by H. Struve Hensel, head of the division, and later the first General Counsel for the Navy. He had been trained in a large metropolitan law firm. In those early years of wartime, the office was staffed by lawyers who had come from leading law firms throughout the country and whose basic approach was that of the private practitioner. They could not quite see why their role as counsel for various Government administrators should prompt them to act very differently from the way they had acted at a time when representing clients outside the Government.

As a result, the standards of private practice have been maintained in OGC ever since. First, OGC lawyers follow the private law firm principle of group effort. That is, different lawyers work closely with different clients and give them, to the fullest extent practical, final on-the-spot legal advice, rather than expecting every legal decision to funnel through the head of the office or go through a multiple review procedure from the Navy lawyer originally faced with the problem up to the General Counsel and back down again.

Second, we obtain uniformity through personal relations rather than through regulations. As in a private law firm, the initiative is usually left to the subordinate to come to the superior when there is something the superior should know, or when help is needed. Personal relations are close and informal; and there is a constant striving to maintain that atmosphere of mutual trust and confidence which is such a striking efficiency measure in any organization. The result is that large areas of responsibility are given to every lawyer, including the young lawyers, and, as in a private law firm, each lawyer is loaded up with about as much as he can take. In turn, this gives each lawyer a chance to participate in a project as a whole from beginning to end, and so tends to give him a greater feeling of responsibility and personal satisfaction.

In addition, a Government lawyer should be courteous and cooperative; and OGC lawyers strive to afford to persons outside the Government the courtesy and cooperative spirit which are inherent in the traditions of the legal profession. While no OGC lawyer proposes to give away rights of the Government, OGC lawyers do work cooperatively with lawyers in private practice, helping them to meet their deadlines, as private practitioners representing different clients ordinarily work with each other.

Organization of the Office of the General Counsel

Implementing these principles of private law firm management, OGC is highly decentralized in its operations; and it is also integrated so as to provide uniformity in thinking and centralized control.

First, there is the central office which is OGC's highest echelon, the supervisory unit and administrative core. It contains the general counsel, two deputy general counsel, and three assistants to the general counsel. There original legal work is done for the Secretary, the Under Secretary, the Assistant Secretaries of the Navy, and the Office of Naval Materiel.

At the next level are the bureau counsel who are counsel for the various bureaus and offices of the Navy who have business law problems. There is a counsel for each of the following bureaus: Aeronautics, Naval Personnel, Ordnance, Ships, Supplies and Accounts, and Yards and Docks. In addition, there is a counsel for the Commandant of the Marine Corps, and a counsel for each of the following: the Comptroller of the Navy, the Military Petroleum Supply Agency, the Military Sea Transportation Service, and the Office of Naval Research.

Each bureau counsel with his staff handles the great bulk of all commercial legal work for the bureau or office. Help and guidance to the bureau counsel are provided from the central office. Top-level legal problems move upward to the central office, and the closest personal relations are maintained with the bureau counsel by the General Counsel, his two deputies, three assistants, and others in the central office. A so-called bureau counsel meeting is held every Thursday morning for 2 hours, where problems of common interest are discussed much as in a weekly meeting of a private law firm. The central office issues a bimonthly publication, the OGC Newsletter, to keep all lawyers in OGC abreast of current legal developments. In addition, the counsel for the Bureau of Yards and Docks issues a monthly newsletter to its field counsel, and the counsel for the Military Sea Transportation Service issues a similar weekly publication to its field lawyers.

Field counsel are stationed at 34 field offices. These lawyers are there to give, so far as is possible, final on-the-spot legal advice to their clients of a particular naval activity; and uniformity within OGC is again attained through personal relations. The great bulk of each field lawyer's legal problems are solved finally by him. But if he has a problem which should be passed on to higher levels or on which he wishes help, advice, or guidance, he has a direct line of communication to the particular supervisory bureau counsel or to the central office and the General Counsel. There are two OGC branch offices, in New York and in London, which report directly to the General Counsel. All other field counsel are under the immediate supervision of counsel for one of the following bureaus: Aeronautics, Supplies and Accounts, Yards and Docks, the Military Sea Transportation Service, or the Office of Naval Research.

The legal profession is built around essentially informal relationships, and no particular magic or protocol is required to deal with any OGC lawyer, whether in the central office, the office of the bureau counsel, or a field counsel. The various lawyers are listed at the various naval activities under either "Office of the General Counsel" or as "Counsel" for a particular activity. They can accordingly be reached either by letter or on the telephone, and they correspond directly with lawyers in private practice.

Finally, the field lawyers in a particular geographical area, such as a naval district, are loosely banded together under the leadership of a regional counsel. While the regional counsel does not provide another echelon of review over the work of the other field lawyers in a particular area, he is expected to provide inspiration, leadership, and coordination, and to keep the lawyers in a particular area working together as if they constituted a small law firm handling all business and commercial law problems arising there. He also serves as a focal point for requests from naval activities which do not have lawyers regularly assigned. Upon receiving such a request, he will either perform the legal work himself, or parcel it out

to the lawyer in the area best able to perform it. Thus, the private practitioner with a legal problem to take up with the Navy in Washington should consult the counsel for the bureau or office concerned, or the General, Counsel, Deputy General Counsel or an assistant. With respect to activities in the field, he should consult the regional counsel or the nearest available field lawyer. A listing of all the field lawyers that includes their business addresses and telephone numbers can be obtained either from the nearest OGC lawyer or by writing to the Office of General Counsel, Department of the Navy.

What the Navy lawyer can do for the private practitioner

As has been said, the Navy lawyer is not out to give away the rights of the Government; not by any means. On the contrary, just as with the lawyer in private practice, he is out to represent the interests of his client in every reasonable and ethical way. He has a particular usefulness to the lawyer in private practice, however, for ordinarily he can tell the private practitioner in relatively few words what procedural steps are available to him in connection with any particular problem. However, the Government lawyer is subject to the statutory prohibition of the United States Code, title 18, section 283 that he must not assist in the prosecution of claims against the Government. The private practitioner should not except the Government lawyer to do for him what he can easily do for himself.

MAJOR AREAS OF INTEREST TO THE PRIVATE PRACTITIONER

Bidding on or negotiating contracts

If a private practitioner is to understand this field, he must always be aware of the legal authority on which the Government lawyer and administrator are proceedings. Specifically, he should be familiar with the basic authority of the Armed Services Procurement Act contained in United States Code, title 10 sections 2301–2314. He may also have occasion to be familiar with the "Armed Services Procurement Regulation" (the "ASPR"), which implements the act; and, when the matter concerns the Navy, with the "Navy Procurement Directives," commonly called the NPD. While the ASPR provides guidelines on problems common to the three military departments, the NPD's, in effect, fill in the gaps for particular Navy problems. The Army and the Air Force have similar departmental publications called the "Army Procurement Procedures" and the "Air Force Procurement Instructions." All of these publications are available through the Government Printing Office, Washington 25, D.C.

Private practitioners should also have some familiarity with the types of contracts which the Government enters into. "Navy Contract Laws" contains an extended discussion of types of contracts and the reasons for their use. In addition, certain contract clauses are required by law in a Government contract, and these clauses are described in some detail in a chapter of "Navy Contract Law."

Contract administration

The administration of a Government contract of any size or complexity has now grown into a subject of such distinct importance that the phrase "contract administration" has virtually acquired a secondary meaning that relates to Government contracts. A great variety of legal questions may arise in connection with the administration of Government contracts. Most large contractors who do a regular and substantial business with the Government have experienced, gimlet-eyed staffs of lawyers continually watching their Government contracts. All too often, unfortunately, we have found contracts getting unnecessarily into trouble because a contractor, usually a smaller concern, did not consult a lawyer or did not consult him early enough. Thus, the role of the private practitioner can be a very important one in the administration of a Government contract.

The first of the questions likely to arise in contract administration is that of the interpretation of the contract. Does the contract require the contractor to perform a particular item of work? Can he charge an additional sum for it under the changes and extras clause? Questions of the construction of a contract are legal questions. So here a private practitioner should consult, as Navy lawyers do, not only the books on contract interpretation and statutory construction, but also the decisions of the Armed Services Board of Contract Appeals. Many of these decisions construe particular Government contract clauses. The chances are that by consulting these decisions you may find an authoritative interpretation of a clause that is also in your contract.

Next come questions on the important changes and extra clauses. As items procured have become more complex, it has become necessary for changes in design and specification to be made in the course of construction. Ever since the construction of the *Etlah* in 1863, certain Navy contracts have authorized the contracting officer to make changes within the scope of the contract during its performance. The changes which can be made are confined to changes within the scope of the contract. It would not be right for a contracting officer by use of a change order to try to convert a contract for a hundred radio sets into a contract for the construction of an aircraft carrier. But under the applicable clause in general use, the contractor is required to proceed with performance no matter how many or what changes are made within the scope of the contract. This may well lead to additional financial, personnel, and technical burders that will have to be carried by the contractor, and before he undertakes the contract at all, he should be prepared to carry those burdens. Also, if subsequently a dispute arises as to the amount of the equitable adjustment to be paid for as increased cost, the contractor may not be able to be fully paid for the cost of the change until he has processed his claim through the contracting officer and possibly also through the Armed Services Board of Contract Appeals (ASBCA). And a lawyer should review the drafting of a contract amendment, if his client is to be protected.

Other questions which may come up in contract administration will arise under the inspection and guaranty clauses. All these questions are treated in some detail in "Navy Contract Law."

Contract termination

This is an area of crucial importance for the contractor, and an area where a lawyer with some knowledge of Government contract law is particularly needed. There are two kinds of termination under Government contracts: (1) termination for the convenience of the Government, in connection with which the Government agrees to pay costs reasonably incurred and profit for work done by the contractor; and (2) termination for default, with its requirement that the contractor must pay for any excess costs involved in reprocuring the article involved, with possible additional liability for liquidated damages and damages otherwise obtainable under common law principles. A contract may also be terminated with a no-cost settlement.

A termination for default may be an extremely serious thing for a contractor. However, a contractor who has failed to perform has one possible escape. Under the applicable contract provisions, a termination for default may be treated as a termination for convenience if a case of excusable delay can be made. Thus, if performance of the contract is getting into trouble and the contractor thinks that he has a case of excusable delay, he, and preferably with his lawyer, should be in close communication with the contracting officer and his counsel so as to acquaint them with the facts in advance of a possible termination. This is a communication problem. If the contractor and his lawyer do not remain in sufficiently close communication with the contracting officer and acquaint him with the relevant facts, they may find that the contracting officer will terminate the contract for default because he is unaware of a case of excusable delay. Even though the ASBCA may eventually treat the termination for default as one of convenience, that result will be obtained only after having gone through a lawsuit.

Disputes

The crucial disputes clause provides that any question of fact arising under the contract will be determined by the contracting officer and that this determination will be final, except upon appeal to the Secretary or his delegate, which, in practical terms, is the ASBCA. Thus, of the two kinds of claims possible under Government contracts, those arising under the contract must, by virtue of the disputes clause, be presented to the contracting officer, and on appeal to the ASBCA. Claims for breach of contract may not be determined by the contracting officer or the ASBCA and can be allowed only by the Court of Claims, or, if for less than $10,000, by an appropriate district court. The two kinds of claims are mutually exclusive: Claims arising under the contract can be determined only within the Department of Defense, and claims for breach of it can be determined only by tribunals outside the Department.

What of the presentation to the contracting officer of claims arising under the contract? If the claim is of any complexity, the assistance of a lawyer is essential. His presentation should be similar to the presentation of a comparable claim before any court or tribunal. All appropriate documents should be presented; affidavits are possible; and briefs may be useful.

Appeals

A contractor who is dissatisfied with a final decision of a contracting officer on a question of fact under the disputes clause may appeal within 30 days from receipt of the final decision to the ASBCA, the delegate of the Secretary of the Navy to hear the appeal. The ASBCA is an administrative tribunal. Its rules of practice are largely modeled on the Federal Rules of Civil Procedure. Present revision of the rules of practice was formulated with the aid of an American Bar Association committee.

The proceedings before the ASBCA compare to trials in the courts vested with judicial power and to hearings before the major administrative tribunals outside the Department of Defense. Cases are tried through the classic question and answer method and the proving of documents.

Unless a case is a very simple one, lawyers are just as essential as in the trial of any other adversary proceedings. In a case of any complexity, a contractor without counsel will be badly hampered in the presentation of his claim. From the Government's standpoint, I can frankly say that much Government (and the taxpayers') time and money has been wasted because the Board was compelled to try to sort out the facts, items, and details of a claim presented without the preparation, the sharpening, the separation of the wheat from the chaff, and the organization of material provided by legal representation.

The procedure before the Board provides for the filing of a complaint and an answer, and certain interlocutory mechanics such as interrogatories, discovery, and pretrial hear-

ings. The Navy panel makes extensive use of pretrial hearings in an effort to expedite, shorten, and clarify the trial. Trial briefs are often requested, and briefs after trial are frequently submitted. It presently takes a contractor who will proceed expeditiously about 6 to 10 months from the time of filing the notice of appeal to obtain a decision from the Navy panel. A motion to advance a case may be made for good cause shown. But it should be made only if the contractor is prepared to proceed immediately and, in the opinion of the writer, is represented by counsel.

If you have a case involving a dispute, do not seek to bring pressure on the Board through a Senator or Congressman, or by harassing the Secretary, Under Secretary, or an Assistant Secretary of the Navy. These claims are legal in nature; they have been assigned for decision by the Board; and they can only be resolved by going through a legal proceeding before the Board. The Board makes its own decisions. The Secretary of the Navy does not tell it how to decide cases. It is a quasi-judicial tribunal which acts impartially. The best course for the contractor is to see that his case is presented to that tribunal in true, lawyerlike fashion.

Real estate matters

Legal matters relating to the Navy's real estate establishment are handled primarily by OGC lawyers in the Office of the Counsel for the Bureau of Yards and Docks in Washington and by lawyers serving field activities of the Bureau. The latter are stationed in the various naval districts as counsel for the district public works officer.

SUMMARY

The Office of the General Counsel represents the Navy in its capacity as a large industrial organization much as a law firm or legal department handles the affairs of a large corporation. While the Navy is larger than any corporation, the Office of the General Counsel is organized and managed as much like a metropolitan law firm as possible, and, indeed, with a high degree of similarity. Outside persons can by and large deal with OGC lawyers as they do with lawyers in private practice.

Government contract law, a large area of OGC's work, is still inadequately understood by the bar and the public, although OGC has taken such steps as it can to make essential written materials generally available. However, lawyers can only deal effectively with the Navy in the field of business law if they sufficiently understand the subject. And the bar generally should assist in furthering the education of the legal profession in this important field. A complete educational program is still needed.

It's up to Congress

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. Charles B. Shuman, president, American Farm Bureau Federation, is something that we as Members of Congress can take to heart and consider.

In this article Mr. Shuman points out our responsibility, and it is ours alone, to keep our country sound financially and to stem and halt the tide of inflation. We cannot pass the buck on this one. In Mr. Shuman's words, "It's up to Congress":

[From Nation's Agriculture, February 1959]

IT'S UP TO CONGRESS

(By Charles B. Shuman)

A new year, a new session of Congress, new faces in the Congress, new promises—but many old, unsolved problems. Continued inflation, excessive Government spending farm program failures, a ruthless labor monopoly and further concentration of power and authority in the national Government are a few problems that demand attention. Only Congress can initiate action to cope with these situations. Wise administrative decisions and recommendations as well as court decisions which recognize basic laws and the Constitution will be helpful. However, after all, it's up to Congress.

The Constitution of the United States wisely provides for the separation of the powers of the State—executive, legislative, and judicial. During recent administrations there has been a tendency to ignore these fundamental principles. The courts have tended to legislate and the President and his staff have often assumed legislative responsibilities.

Often the balance of power between the two parties has been such that it was easy for Congress to avoid the full responsibility for initiating legislation. This is no longer a valid excuse for Members of Congress to shift their responsibilities. The Democrats have a very substantial (two to one) majority—they control all committees in both the Senate and House—they can and should accept this opportunity to initiate legislative action to meet the serious problems that concern all citizens.

Farmers believe that inflation is our most serious economic problem. The dollar has lost more than one-half of its purchasing power during the last 18 years. We cannot check this inflation if the Federal Government continues to spend in excess of its income. The President is under constant pressure from the bureaucracy to maintain spending at high levels, and Members of Congress are tempted to turn to the Treasury for pet projects for their home districts. The reckless, inflationary spending of recent years must come to an end. This new Congress can and must take effective measures to regain control of Federal expenditures.

The voting delegates at the recent annual convention of the American Farm Bureau Federation took a good look at the farm program legislation that has brought so much trouble to agriculture during recent years. They reaffirmed our objective "* * * to create conditions which will make it possible for farmers to earn and get a high per family real income in a manner which will preserve freedom and eliminate Government regulation of individual farming operations."

We believe that Members of Congress should have the same objective. They should recognize that surplus production is our most serious problem and that it is aggravated by present legislation. Most of the panaceas now proposed—such as production payments and multiple price schemes—would encourage inefficient and unneeded production, add to production costs, and increase Government intervention in the farmer's business.

Many Members of Congress have been very critical of the recommendations of the Secretary of Agriculture. Actually, legislative policy should not be the responsibility of any Cabinet officer. It's up to Congress. Farmers have a right to look to the agricultural committees of the House and Senate for sound, constructive action.

The concentration of economic power in labor unions has progressed to the point where it is a very dangerous monopoly threat to our Nation. The continued exercise of such monopoly powers by any segment of our population—industry, labor, agriculture, or Government—weakens our competitive enterprise system and will finally destroy individual freedom. Congressional committees have thoroughly documented the need for legislative action.

It's up to Congress.

International Pancake Day Race at Liberal, Kans.

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. BREEDING. Mr. Speaker, in old England it was customary for the housewives to drop whatever they were doing and hurry to the church at the tolling of the bell to be shriven of their sins. In 1445 a wife in Olney, England, started baking her pancakes rather late. They were not quite finished when the church bell rang, but she hurried off to the shriving carrying her griddle and pancakes with her. Thus an annual sporting event was born.

In Liberal, Kans., we heard of this 500-year-old event of pancake racing over a 415-yard course from the town pump to the church, and in 1950 the challenge was accepted by Rev. R. C. Collins, vicar of Olney. In the running of the first international pancake day race over identical courses, times of the winners in both Liberal and Olney were compared by transatlantic telephone.

Mrs. Breeding and I and the citizens of Liberal, Kans., cordially invite the Members of the 86th Congress to attend this world-famous celebration in Liberal, Kans., on February 10, 1959:

LIBERAL, KANS.—One of the strangest events in the realm of athletics will take place in Liberal, February 10, when housewives will run 415 yards through the main streets at 11:55 a.m. flipping pancakes in skillets in a traditional race with the housewives of Olney, England. In the 10th annual race, Liberal housewives will be trying to even the score. Olney leads 5 to 4.

It all started more than 500 years ago in England when on Shrove Tuesday, the day before lent, housewives used up accumulated cooking fats before fasting by baking pancakes. Legend has it that one day a housewife baking pancakes lost track of time until suddenly she heard the church bell ring, calling everyone to the shriving service in the church. In her haste she ran to the church, clad in her apron and with her skillet in hand, and this was the first pancake racer.

Other women of Olney in following years, not to be outdone by their neighbors, got into the act. The one who beat the others to the church was kissed by the verger, and the kiss came to be called the kiss of peace and is still the traditional prize for the winner of the pancake race here and in England.

Liberal got into the competition in 1950 after a picture of the Olney racers appeared in a magazine. Liberal Jaycees decided that their housewives might be just as fast on their feet as the Englishwomen. They dispatched a letter to the Vicar of Olney, who ramrods the race over there, challenging the English to an international race. Vicar Col-

lins quickly accepted and the race was on.

Each year since then on Shrove Tuesday thousands of cheering spectators crowd the streets in each town to watch the apron-clad housewives flit and flip their way merrily down the village streets in this sporting gesture of international good will.

In spite of any temporary diplomatic differences betwee the United States and England, the race has always been carried out in a spirit of friendly competition and has remained a strong and permanent link of international friendship between the people of the two countries.

In Liberal the race course is over brick and asphalt streets. In Olney the setting is cobblestone streets, thatched-roofed cottages, and the old bull inn. Both races, according to age-old tradition, end at a church, where the kiss of peace is administered—in England by the church verger and in Kansas by the British Consul. The accompanying whirr of television cameras and the general hubbub of a major celebration are background additions to the traditional kiss, brought on by intense news coverage of the event.

Approximately a dozen housewives are in training now to recapture the trophy. Various methods of training are used, usually under husband's advice, most of the would-be contestants practice running in the later afternoons or evenings. And it is nothing to see a woman running round and round the block where she lives flipping her pancake in a skillet, cheered on by members of her family.

One more serious contestant in recent years would eat nothing for breakfast but a cereal guaranteed to give you the utmost in pep and energy, and would eat no fats for months before the race. Others give up chocolates and cigarettes or go for long daily walks to build up their wind.

The police were alerted one evening when rural residents saw a man in an automobile apparently trying to run down a woman on the road. As it turned out, she was practicing for the pancake race, in the lights of the car while her husband timed her efforts.

Athletic attire is prohibited in the race. Regular housewifely garb of housedresses, apron, headscarf, and oxfords or regular street shoes are required.

The best time ever turned in for the race was 1:05.1 by Mrs. Binnie Dick in 1955. She won the race here 3 consecutive years, and was international champion twice. After three local victories, a contestant is disqualified.

With a tradition of 500 years of racing behind them, Olney housewives jumped off to a quick lead, winning in 1950 and 1951. Liberal women soon caught on and won in 1952. Olney avenged their loss in 1953, but Liberal girls found the winning combination and swept the 1954, 1955, and 1956 races for a record string of consecutive victories, but lost again to Olney in 1957 and 1958.

Interest will run high in the February 10 event in both places. Liberal will be trying hard to even up the score. The whole town is pitching in with feverish excitement making ready for the day-long celebration which accompanies the event. Festivities here include a parade, beauty and amateur contests, dances, and parties honoring the visiting celebrities who crowd into the small town of 12,000 for the unique spectacle. Liberal, not normally well known for its athletics, will shine if pancake racing is ever added to the Olympics.

PANCAKE DAY SCHEDULE, LIBERAL, KANS., TUESDAY, FEBRUARY 10, 1959

6:45 a.m.: All Civic Club breakfast.
9:30 a.m.: Pancake Day parade.
11:15 a.m.: Kids Pancake Day race.
11:55 a.m.: International Pancake Day race.
12:55 p.m.: Telephone call to Olney, England.
1:00 p.m.: Kiddies free matinee, Plaza.
1:30 p.m.: Five-State beauty contest.
4:30 p.m.: Sixth annual all-American Pancake Day race.
7:00 p.m.: Finals of amateur contest coronation of international and all-American race winners.

President's Approach on Agricultural Legislation Is Sound

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. CRAMER. Mr. Speaker, the President's recommendations for new farm legislation, which were transmitted to the Congress today, make sense. We all know that the present price support and production control program is not working. The program has been costly to taxpayers; it has not helped the farmers who need help the most, the little fellow; and it has stimulated production of tremendous surpluses that will be a millstone around the neck of agriculture for a long time to come. The President offers solutions to the most pressing farm problems. I sincerely hope that his suggestions can be enacted into law during this session of the Congress.

It would take too long to discuss all the difficulties now faced by agriculture. Therefore, I am going to zero in on just one facet of the overall agricultural situation, the burdensome surpluses of farm products under the control of the Commodity Credit Corporation.

At the end of November the Corporation's investment in commodity inventories amounted to about $8.3 billion, which is not far under the record $8.9 billion established in early 1956. The Department of Agriculture estimates that a new record investment of $9.1 billion will be set by this coming July 1. And by July 1, 1960, the Department says, about $10.5 billion could be tied up in commodity stocks.

At the end of this past November the Corporation's investment in price support—inventory stocks plus nonrecourse loans extended on price supported commodities—amounted to about $8.3 billion. The record was $8.9 billion, reached early in 1956. Now the Department of Agriculture estimates that a new record investment of $9.1 billion will be set by this coming July 1. And by July 1, 1960, the Department says, about $10.5 billion could be tied up in commodity surpluses.

Let us take a close look at the makeup of the November 1958 commodity stockpile.

In November the Commodity Credit Corporation had over $6 billion tied up in four grains—wheat, corn, grain sorghums, and barley. The total for upland cotton was $873 million. Tobacco accounted for another $616 million. The investment in only six commodities, therefore, was $7.5 billion—or 91 percent of the total outlay.

Do not these figures support the President's contention that most of the price-support dollars are now being channeled to producers of a few crops? Not only do the dollars go to producers of a few crops, but they also go to big producers of the few supported crops. For example, for producers having allotments of 100 acres or more, net budgetary expenditures per farm for the present fiscal year are, for wheat, $7,000 per farm; cotton, $10,000; and rice, $10,000. While all this was going on farmers producing unsupported commodities, such as cattle, hogs, poultry, fruits, vegetables, and many other essential farm products, have experienced growing markets rather than a buildup of stocks in warehouses.

There is enough wheat in this country right now to fill all available outlets at present price levels for 2 full years, with a carryover of about 300 million bushels left over as a start on the third year. The feed grain supply also is moving toward unmanageable levels. Crops of 1958 corn, grain sorghums, barley, and soybeans were all at record highs. Added to big carryovers, these 1958 crops meant record total supplies, both in volume and in supply per animal unit. The bulk of the surplus stocks are owned by the Government.

But, whether a surplus is in Government bins or in private hands, it puts pressure on market prices. And it costs money—large sums of money—to store farm products. At the present ime storage costs are well in excess of a million dollars a day. There is always the danger of loss through deterioration or spoilage. That is especially true of such perishable products as butter and cheese.

The President's suggestions encompass two basic steps aimed at solving the surplus problem. First, his program would cut down surpluses which already have accumulated; and, second, it charts sound policies which will avoid building up new surpluses. The President's program is a sound program. I endorse it. I am sure that the Congress will endorse it.

Here It Belongs

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial "Here It Belongs" as it pertains to the National Air Museum in Colorado.

The editorial is as follows:

HERE IT BELONGS

The National Air Museum should be brought to Colorado, to be placed on Air Force Academy land or adjacent to it.

At the moment it is an orphan, housed in the Smithsonian Institution in Washing-

ton. What exhibits the Air Museum has on display must compete with all the other historical displays in the giant Smithsonian, a place where you could spend a couple of weeks without even glancing at everything.

But even worse, most of the Air Museum's exhibits are now in storage because the Smithsonian, where there is considerable competition for display space, hasn't room to show them.

The presence of an Air Museum at the Air Force Academy would do much more to inspire the cadets and teach them the traditions they are heirs to than some of the stunts tried at Colorado Springs to create tradition at the academy.

It would also give much more meaning to a visitor's tour of the academy.

Since the National Air Museum was created by Congress in 1946, many groups and individuals, including Senator CLINTON ANDERSON, Democrat, of New Mexico, and the American Legion, have attempted to win for the museum a home of its own, without success.

Creation of separate facilities at Colorado Springs would serve the purpose even better than in Washington. Here the museum would receive the undivided attention it deserves; while in Washington it would still have to compete with the Smithsonian, as well as with the hundred other historical sights the Nation's Capital has to offer.

West Side Jewish Community Center, of Los Angeles, Offers Lesson in Community Living

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. ROOSEVELT. Mr. Speaker, 5 years in the history of mankind is a brief span. But when 5 years span the lives of thousands of persons, each and every year becomes more important and valuable than the mere number of days they indicate.

I make this above observation because there is an organization in Los Angeles, Calif.—and I am more than pleased that the activities of this group take place in my district—which gives factual proof to this contention. The organization to which I refer is the West Side Jewish Community Center which, during its first 5 years of existence, has offered service and brought happiness to thousands of persons.

The record of the West Side Jewish Community Center is already an impressive one, and presages for the future the enriching of many more lives.

Mr. Speaker, I offer some facts and figures about the humanitarian undertakings of this organization, behind each of which is a human being, young or old.

Built at a cost of $2 million, the West Side Jewish Community Center opened its doors on March 1, 1954, and now celebrating its fifth anniversary, the center pridefully points out that it serves almost 7,000 members each year. The aggregate attendance has been approximately 2½ million, a figure equal to the estimated population of the city of Los Angeles.

The center serves as a threshhold to community life for many newscomers to Los Angeles, particularly young adults and is open to all members of the community. Inability to pay is no bar to membership, as budget plans are possible and several scholarship funds are available.

The significance of this undertaking is focused on the fact that persons of all ages are able to get together to learn from each other and to find a spirit of camaraderie in a highly populated, broadly-spread community.

Through the activities offered—in the fields of athletics, art, dancing, swimming, crafts, music, to mention a few—adults are afforded the opportunity to develop both professional and social skills. More than 700 children have learned to grow up in a new and ever-changing world through the guidance of a skilled nursery school; over 2,000 children have experienced the opportunity to go to camp sponsored by the center.

The community spirit of the West Side Jewish Community Center has been further demonstrated by its action of opening its facilities for meetings and events to other community groups including, among others, Community Chest, Girl Scouts, and Red Cross.

I am sure that there are many others who join me in congratulating the Center on its fifth anniversary and in wishing it all success in the years to come.

Next Question, Please

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. UDALL. Mr. Speaker, I know from conversations with a number of my colleagues on our side of the aisle that they have had numerous questions in their minds regarding President Eisenhower's true position on the matter of public revenues and Federal programs. To inform their innocence, or rather, as I was saying, to straighten out certain things in their minds, I present the following excerpt from the President's press conference yesterday before he left to shoot quail in Georgia:

Question. Peter Lisagor, Chicago Daily News: Mr. President, you said that you did not think the American people wanted higher taxes. You also said that you thought localities ought to do some of the things.

The PRESIDENT. Yes.

Question. Lisagor: Such as the airport. Governor Rockefeller, of New York, has found it necessary to move to get more taxes for what he regards as desirable programs.

Do you think the American people would be willing to accept tax increases from the State, rather than from the Federal Government? Do you think this is a better approach?

The PRESIDENT. Well, I do not know, because I don't know the rate of that taxation for these several States. This is what I was talking about.

The Federal rate of taxation and what I see as the American reluctance to accept higher rates, unless they can see that there is a clear emergency demanding now current action for which they can be persuaded to make the sacrifice, and I believe they will, if you have got an emergency thing. But now, let's remember we are planning for 20 years, 30 years, 40 years. We have got to live with this thing.

And as we know, as the population grows, we get more revenues, but we also get in some of these things very much higher costs. So let us not—when we remember that our taxes run from down to—we have got a $600 exemption, and we run up to 92 percent, I believe it is, in the very top ones—I think that income taxes, which are the things that the Federal Government mainly lives on, that they are getting about as high as you can keep them on the indefinite basis.

Now, I believe you can, for emergency, tough problems, I think you can do more than that.

Question. Sterling F. Green, Associated Press: Thank you, Mr. President.

(Whereupon, at 10:29 a.m., the press conference was concluded.)

History Repeats Itself

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. DOLLINGER. Mr. Speaker, recently, a group of Southern Senators proposed a constitutional amendment that would give States exclusive power to decide whether their school systems should be integrated. It specifices that nothing in the Constitution shall be construed to deny the States the right to determine for themselves the manner in which their public educational facilities shall be administered. The apparent purpose of this is to maintain segregated schools, to discriminate among students because of color. Such a plan is undemocratic and completely contrary to the recognized duty of our States and the Federal Government, to provide education for our youth on an equal basis, free from bias or discrimination.

The prevailing opinion is that the proposed amendment is given no chance of getting the two-thirds majorities needed for approval, but we must not lose sight of the fact that it is one more attempt to allow discrimination and undemocratic practices to flourish.

Let us recall another time of internal crisis in our history. In 1861 the following amendment relating to slavery was proposed:

Article 13: No amendment shall be made to the Constitution which will authorize or give to Congress the power to abolish or interfere, within any State, with the domestic institutions thereof, including that of persons held to labor or service by the laws of said State.

This proposed amendment to the Constitution failed of ratification by the States.

The amendments discussed are analogous in that both would place certain fundamental human rights in jeopardy; each would curtail the powers of Congress to uphold and preserve the national ideal; each would make it possible for the States wishing to do so, to inflict indignities upon certain of their citizens—which would be abhorrent to the United States considered as a whole; both would reflect unfavorably upon the Nation in that their motives are undemocratic and a violation of rights guaranteed under our Constitution.

States rights are important, of course, but our Founding Fathers and our wise leaders who have followed in their footsteps have recognized the necessity of curbing a State or several States when undemocratic action by a few would undermine or belittle our Nation. Congress must have the authority to create and to uphold the law of the land in order to protect the rights of all our citizens, when problems of national import are at stake.

The will of the people prevailed in 1861 when they refused to accept an undemocratic amendment to the Constitution, as it will today, in this latest attempt to deny certain inalienable rights.

Flying Farmers 1959 Aviation Clinic

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. MACK of Illinois. Mr. Speaker, the Flying Farmers of Prairie Farmers Land, one of the country's foremost organizations of this kind, recently held their aviation clinic at Purdue University. In past years these clinics have been most fruitful and have made many constructive suggestions for Federal laws in the field of aviation.

On many occasions I have participated in these clinics and although I was not able to attend this year, I was very much impressed by the resolutions passed by the clinic. Since many of the resolutions concern Federal laws, I feel that they should be called to the attention of my colleagues. Therefore, Mr. Speaker, I am including them to be printed as part of my remarks.

The resolutions are as follows:

RESOLUTIONS FOR 1959 CLINIC FLYING FARMERS OF PRAIRIE FARMER LAND, PURDUE UNIVERSITY, JANUARY 24, 1959

I

Be it resolved, That we hereby express our appreciation to our hosts, Purdue University, Purdue University Airport, Purdue Union, Bill Graham, and the Purdue University Extension Service, the Home Economics Department, and Purdue Glee Club for the use of their splendid facilities and the wholehearted cooperation of their personnel in making our annual Flying Farmer Clinic so pleasant; be it further

Resolved, That we express our thanks to the fine people from the Federal Aviation Agency, Weir Cook Airport, State aeronautics commission, Piper Aircraft Corp., Warren Martin and Air Transport Association, and all others who gave so freely of their time and talents in making our programs interesting and instructive; be it further

Resolved, That we the membership take this opportunity of expressing our thanks to our hard-working State and Prairie Farmer Land officers for their work in carrying on the activities of your organization.

II

Be it resolved, That we, the Flying Farmers of Prairie Farmer Land, take this opportunity of expressing our affection and thanks to our former leader and executive secretary, Bill Renshaw, now convalescing in sunny Texas. Be it further expressed that we hereby convey to him and his good wife our most sincere wishes for a speedy and complete recovery.

III

Be it resolved, That we appreciate the fine cooperation of the Illinois State Park System in the establishment of landing facilities at the several of the Illinois State parks; be it further

Resolved, That we encourage the park commission to implement airstrips at all State parks; and be it still further

Resolved, That we encouraged istrict, State, and regional flying farmer meetings at such strips as well as individual use of such facilities.

IV

Be it resolved, That we support the Federal Aviation Agency and their representatives on their refusal to increase basic minimum VFR flight standards from the present 1,000 feet and 3 miles to the proposed 1,500 feet and 5 miles in U.S.A.; be it further

Resolved, That we heartily endorse this stand in the pending conference with ICAO (International Commission of Aviation Organizations).

V

Be it resolved, That we urge the creation of weather reporting substations, spaced to give a more adequate weather picture in the area currently reported by our weather reporting stations; be it further

Resolved, That we urge the implementation of the more recorded continuous weather broadcasts.

VI

Whereas we recognize and appreciate the excellent accomplishments of the Indiana and Illinois Aeronautics Commissions and directors. We hereby affirm our continued cooperation with these agencies and whereas we recognize: (1) That we are the heaviest class of property taxpayers in our respective States; (2) and that the continued development of aviation activities at the State level is necessary if air commerce and aircraft utility is to keep pace with the rapidly developing air age: Therefore be it

Resolved, That we urge the Indiana Legislature to look with favor upon the submitted budget request of the Indiana Aeronautics Commission in order that this important commission's activities will not be hampered; be it further

Resolved, That a copy of this resolution be sent to the Governor, the president of senate and house, members of the budget and aviation committees.

VII

Be it resolved, That we urge the Federal Aviation Agency to restudy the already established high density zones and to give very careful consideration, in consultation with all segments of aviation, before any further high density zones are established.

VIII

In view of the fact that the development of the aviation industry is dependent upon the increased utility of the airplane as a means of transportation; and as of this date, 60 percent of the incorporated towns in the United States have no airports or landing facilities: Therefore be it

Resolved, That we urge FAA to channel a much larger percentage of Federal airport aid toward development of the smaller airports; be it further

Resolved, That we urge the establishment of landing strips along all new and reconstructed Federal aid highways, to better serve the smaller towns, and at stated intervals in isolated areas.

IX

Be it resolved, That we wish to commend the Federal Aviation Agency for implementing the voluntary position reporting system of aircraft of VFR flights and that we strongly urge and encourage our members to cooperate in every way in giving and heeding these position reports; be it further

Resolved, That we feel a popular voluntary reporting system will produce much safer flying than an unpopular compulsory IFR system, as is being advocated by certain other segments of aviation.

X

Be it resolved, That we recommend to Congress that the hastily drawn, panic spawned, 1958 aviation law creating the Federal Aviation Agency be amended with the following changes in mind.

1. Define the powers of the administrator and confine his activities and control to air commerce and operation or navigation of aircraft thereof, within the limits of any Civil Airway as written in CAA Act of 1938.

2. Incorporate regulation and rulemaking in the hands of a board of three appointees with equal powers, and subject to approval by Congress, representing (a) military and defense, (b) air carriers and commerce, and general and private aviation.

3. Define the qualifications of the administrator safeguarding the interests of 90,000 general and private aircraft by specifying that the administrator must be a civilian and not actively identified with the military or defense organizations or their reserve components during the 5 years previous to his appointment.

4. Limit to 50 percent or less, the number of department heads which may be filled with retired or inactive military personnel.

5. Eliminate that part of the law which turns the FAA Agency over to the military in time of war. Civil administration has been adequate in previous wartime periods and there is no reason to believe it would be inadequate in the future.

XI

Be it resolved, That we commend the military and Air Defense Command for taking the lead in the use and research of high visability paints in avoiding midair collisions. We look with favor on Federal Aviation's interest in this safety device where all aircraft carry some high visibility paint design; be it further

Resolved, That we favor further research on increasing the lasting quality of such paints and also research on most optimum paint design before any regulation becomes mandatory.

XII

Whereas the continued construction of high television, radio towers, and high-tension lines has increased the hazards to low flying aircraft; and

Whereas the majority of past midair collisions have occurred between aircraft operating on IFR flight plans in VFR conditions: Therefore be it

Resolved, That in the interest of safety to some 90,000 general aviation aircraft and 36,000 military and air-carrier aircraft, that the so-called positive-control system recognize the following:

1. Control area floor be raised to 3,500 feet.

2. All aircraft operating below 10,000 feet shall be operated on a see and be seen basis, and at moderate speeds with or without VFR flight plans.

3. Under no circumstances shall aircraft be operated below 10,000 feet on IFR flight plans, when VFR conditions prevail. (Take-offs and landings excepted.)

XIII

Be it resolved, That we commend the Federal Aviation Agency for its part in its direct and indirect support of moderate weight and priced DME (distance measuring equipment) suitable for private aircraft, and operational on present Vortac system.

XIV

Be it resolved, That we urge the National Flying Farmers Association to furnish to the State chapters, on a monthly basis, current aviation news of a national scope as a means of assisting the chapter secretaries with aviation news of interest which may be used to supplement local and State news items in chapter newsletters, thereby keeping our membership better informed on general aviation.

Respectfully submitted by resolutions committee:

L. KENYON WYCKOFF,
Chairman.
VIRGIL JOYCE.
CARL HAGERTY.
JOSEPH KUENZI.
DEAN SEARLS.

West Virginia Families Hang Onto Life

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. MOORE. Mr. Speaker, my comments of yesterday concerning the series of articles appearing in the Charleston Gazette concerning the condition of West Virginia's coal industry are equally applicable to the article I would like to insert today.

These newspaper accounts are built around a tour recently made by my colleague [Mr. SLACK], of West Virginia's Sixth District, to distressed mining areas in southern West Virginia.

Once again, this article stresses the starvation point to which a great many West Virginians have reached in many areas. The picture is bleak, the atmosphere is heavy with human dread and anguish.

I feel that there are no Members of this House who would not be distraught if such conditions prevailed among their constituents in their respective districts.

I can appreciate that such conditions are not general throughout the Nation; but, the following insertion is concrete proof that West Virginia is, at present, sorely afflicted and in need of all the Federal advice and assistance it can get:

FAMILIES HANG ONTO LIFE
(By John G. Morgan)

HIGHCOAL.—The mine here was closed a year ago. That meant unemployment for 82 men, the last of a gradually-reduced force of about 500.

Closure spelled economic collapse for this mining camp in Boone County. A large number of deserted or demolished houses testify to the truth of that today.

But here and there in the remaining rows of gray houses caked with coal dust are families hanging onto life. A real estate company rents them the houses at $16 a month.

Among those still here are Melvin Smoot, 37, father of eight; Ernest Taylor, father of six; and Carl Harris, 39, father of seven.

Representative JOHN M. SLACK, JR., West Virginia's new Congressman from the Sixth District, entered the house of each of the men and talked to them and their wives.

He sought information that might be helpful in backing a legislative program for relief of unemployed miners.

Smoot, a shuttle car operator until he lost his job December 31, 1957, said he hadn't paid his rent since last July nor his electric bill within the last four months.

His monthly ration of surplus commodities includes 30 pounds of flour, 5 pounds of cheese, 5 pounds of butter, 10 pounds of rice and a small quantity of meal.

"They charge 50 cents if we've got it," he said in reference to the surplus food. The money is used to help pay the cost of local distribution by authorized agents of the State.

By the third week in each month, some types of the allotted food supplies usually are exhausted, he said. If the supplies could be doubled the family would have enough, he added.

Three of the Smoot children are of school age. One attends Sherman High School and the other two go to a grade school in Whitesville. The grade school children get free hot lunches. All of the children are in need of clothes, especially shoes.

Smoot said he went to Cincinnati once to see about a job. A friend was successful in getting one there and is trying to look out for him.

He owns no automobile. His TV set broke down last Christmas.

Asked for his opinion on who should cure the unemployment situation, Smoot said:

"I hope that last bunch they put in there will do something."

He said "bunch" meant legislators in Washington and Charleston.

Taylor, who found work at a small punch mine operation in Greenbrier County from last August to December, is 3 months behind on his rent and only 1 month on his electric bill.

He owns a 1951 Buick, although it has been parked for the past 3 weeks. His TV set has been out of commission about a week, but he has a radio.

"We have about enough of everything to eat, except butter," said Mrs. Taylor, who recently recovered from an illness of a month.

Taylor said the six children are at home and indicated that others had married or found employment elsewhere. His 19-year-old son, Junior, is an amateur boxer.

The Harris home is a religious one. There are four pictures of Jesus on the living-room wall. Mrs. Harris said the family attends the local Baptist church.

She made it plain that the monthly dole of "molligrub" (surplus commodities) isn't enough for her family. Potatoes and beans in addition to the usual fare would be appreciated, she said.

Harris, a machineman, has been unemployed a full year. He recently has been "bootlegging copper"—gathering the metal around abandoned mines and selling it to a junk dealer.

Over the past month he said he sold about 120 pounds at 10 cents a pound, or $12—enough to pay the utility bill. He said the bill is "due right now," and he is 3 months behind in his house rent.

The family has no automobile, no TV set, no radio, and receives no newspaper.

The Harris children are from 4 to 16. The oldest, an attractive girl, is a senior at Sherman High School. While a Congressman was in her house she took the opportunity to interview him. With pad and pencil she approached SLACK and asked his name and reason for being there.

Harris and Smoot drew the maximum of 24 weeks, plus a special extension of 12 weeks, in unemployment payments last year. They have signed up for resumption of payments in reduced amounts this year. Taylor only recently started receiving the weekly $30 maximum.

Each of the three unemployed miners has no idea as to what he will do when his benefits are exhausted. Each said he has searched desperately and widely for a job.

In all of the gloom there is one bright light. A doctor visits the families when called and waits indefinitely for receipt of his fees. Credit is available at the nearby Whitesville Clinic.

SLACK attempted to reassure each of the families as he left their homes. His words were to this effect: "We're going to try to give you some help in Congress. We hope that something can be done. All we can do is try."

SLACK drove his car the full extent of the ghostly camp, and turned in front of the closed company store. The abandoned coal tipple could be seen on the mountain.

On the return trip down the creek a member of SLACK's party commented on the better appearance of the houses outside the mining camp.

R. R. (Big Chew) Humphreys, secretary-treasurer of UMW district 17, said the houses probably are owned by retired people who have a steady income, such as a pension or social security.

"They make a corn bread living," he said.

A Catholic Analysis of Cuba

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dale Francis which appeared in Our Sunday Visitor, a Catholic weekly, on January 18, 1959, dealing with the questions surrounding the establishment of a new and free government in Cuba:

THE HAPPY CUBANS
(By Dale Francis)

There must have been great joy in Cuba when Fulgencio Batista left. As I've said several times in the last 3 years, the greatest contribution Batista could make to the island of Cuba would be to pack up and leave.

The trouble is, he and his friends are reputed to have packed up some $800 million to take with them. This would be in keeping with the past for other Cuban politicians have left the island with suitcases packed with U.S. dollars.

But in the midst of the joy there should be many prayers. The exit of Batista doesn't mean the problems of Cuba are solved.

This wonderful island with its wonderful people has never really had a good government. It has had some governments that were not as bad as others, but none of them could be called good governments.

Batista had a kind of popularity among some of the people a few years back, al-

though serious Cubans always resented the fact that he came to power unlawfully after an election defeat. But whatever popularity Batista had, it was largely dissipated in the last year and a half as his police ruthlessly killed and imprisoned those suspected of opposition.

The sins of Batista contributed to the popularity of his opposition, Fidel Castro. The people really don't know much about Castro. He has never held office; he has never been in a position where he could put into effect his political ideas. But the people needed an ideal to become the counter-image of Batista, and Fidel Castro was it. Today he is the most popular man in Cuba.

Is this popularity justified? Will Fidel Castro be the knight in shining armor that the Cubans expect him to be?

Well, first of all, he has the tremendous problem of organizing a government. Despite the fact that Manuel Urrutia is President, Castro still must be the man who forms the new government whether he wants it that way or not.

In forming the new government, he is going to have to show a tremendous ingratitude. Ex-President Carlos Prio and the Aleman family have helped the revolution from Florida with arms and men. Yet Carlos Prio and the Aleman family came to their wealth under circumstances that were, to say the very least, suspicious. It would be difficult for Fidel Castro to eliminate corruption from the Government if he permitted men who had profited from past corruption to have a say in his government.

Then what about the Communists? Those of you who have read this column the last 3 years know that I've expressed concern about some of the men around Castro.

One is Dr. Ernesto Guevara, the Argentine physician who commanded the rebel troops in Las Villas Province and who was the first of the rebel leaders into Havana.

Dr. Guevara has a long background of support for Communist causes. He was in Guatemala when the Reds controlled that country and he was one of those kicked out of the country when the anti-Communists took over. Is Guevara a Communist? Our State Department naively announced that a close friend of Guevara had said he was not. That may be proof enough for the State Department, but knowing something about Communists, I'd be inclined to keep a close eye on this man.

There were other known Communists in Mexico with Castro's group—among them Bayo Giroud, who had a long record of known communism. Even the Castro forces admit there has been Communist support for his cause—but this does not mean the movement is communistic.

Some have claimed Castro is a Communist and cite the fact that he was one of the young Latin Americans who protested a Pan American conference in Columbia a dozen years ago. It is true Castro was there, observers who believe this stamps him as a Communist show a misunderstanding of Latin America that is typical of North Americans. There has long been a revolutionary spirit in Latin America, a spirit justified by the fact that the governments of many Latin American countries have been brutal, corrupt dictatorships. The dictatorships have been on their way out for a long time and eventually the last three will fall to a protest that may be supported by Communists, who are always quick to capitalize on discontent, but which is not communistic.

Fidel Castro, assuming as I do that he is not Communist in his sympathies, will have a difficult time controlling the reds who gave him support. The Communists are certain to want to get into key positions.

The Catholic Church in Cuba did not enter openly into the struggle. But a year and a half ago Catholic leaders asked for a truce that both Batista and Castro refused. Castro and Batista later refused to arbitrate their differences through a committee formed largely by Catholic action.

Batista, who was baptized a Catholic, educated by Protestants and practices no religion, took the Catholic efforts as an affront to his government—the hierarchy after all did put the rebels on the same level as the government.

There followed serious reprisals against Catholic leaders. Catholic Action leaders were imprisoned and some were killed. A man we knew, the Grand Knight of the Knights of Columbus in Guantanamo, was murdered and, although the government denied any guilt, claiming he was killed by bandits, many of the people believed he was killed because of his opposition to Batista.

Such nationally well-known Catholic leaders as Jose Ignacio Lasaga sought asylum in other countries. The government brought great pressure on Catholics and the terrorism solidified Catholic opposition to Batista so that in the last year and a half many of the leaders of Catholic Action joined the Castro forces.

With Communist and Catholic influences in Castro's movement unalterably opposed to each other—there is certain to be a struggle for influence. The question is, which will be the stronger?

Well, first of all, Castro is a Catholic. He was educated in Catholic schools and he insisted on priests as chaplains for his army. This was an important thing, for there were no practicing Catholics among the officers of Batista's army and there was a well-founded rumor that no one who was not a Mason could expect to become an officer in that army.

But in contrast, when Castro's forces won out over Batista there were six priests assigned to the rebel forces.

What is even more important is that Castro called Father Amado Llorente to his rebel headquarters to seek his counsel. Father Llorente was not only Castro's teacher when the rebel chieftain was a youngster in a Jesuit school, he is the director of the most important Catholic action group in all of Cuba—Agrupacion Catolica Universitaria. This is an elite Catholic action movement of professional and intellectual leaders of Cuba, chosen while they were university students and under spiritual formation ever since.

All these are hopeful signs. Another hopeful sign came when the corrupt Batista labor movement was taken over largely by anti-Communists and Christian workers despite the fact that the Communists tried to take it over immediately after the end of the rebellion.

What Cuba needs now is the prayers of all of us. Never has there been such a chance for a good government, never has there been the prospect of a brighter future for that wonderful island.

But there are many hazards ahead; there are many ambitious men to be denied a chance to get in the Government for their own interests. There are struggles ahead in Cuba and your prayers are needed.

Say a prayer for Cuba today that Fidel Castro will be what the people of Cuba hope he will be—the man to finally bring freedom to a country that has been waiting centuries to become free.

Ike's Farm Bill and Food Prices

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. MICHEL. Mr. Speaker, analysis of the Federal budget for the fiscal year 1960, submitted by the President to Congress on January 19, reveals significant progress toward fiscal responsibility. A very excellent editorial of the Chicago Sun-Times of January 30, points out that the President's farm proposals which were presented to Congress on January 29 continues to emphasize the administration's determination to effect economies if Congress will give favorable consideration to the discontinuance of Federal programs for which emergencies have passed.

Under leave to extend my remarks, I submit this thought-provoking article for the RECORD:

IKE'S FARM BILL AND FOOD PRICES

Every housewife ought to call upon her Congressman to support President Eisenhower's farm program sent to Congress yesterday. We include farm housewives in this observation, too.

The President's new farm proposals would mean moderately lower food prices for consumers. His plan would lower food prices by reducing Federal support prices on farm crops.

Why should farm wives support a program that will reduce Federal subsidies on certain crops? There are several reasons.

The first reason is one that should draw support for Ike's program from all Americans: The farm program is stupendously expensive. It costs the taxpayers more than $5 billion this year. This is a big factor in putting the Government in the red. And, as we have repeatedly demonstrated on this page, when the Government spends more money than it takes in the result is more inflation. Inflation steals dollars from everyone's purse, including the farmer's.

In the past 6 years the Government has spent an average of $4.7 billion on farm subsidies. During that same period the annual Federal deficit has averaged $2.7. If Congress had taken Mr. Eisenhower's advice earlier and cut farm subsidies, the Government might have been able to keep in the black.

The enormous outlay of money might have been justified if it had done any good for the Nation. But it has not. The President flatly told Congress yesterday that the price-support and production-control program "has not worked." The money has gone down a gopher hole.

The expenditure has not brought supported farm products in line with demand. It has only succeeded in piling up huge surpluses, worth nearly $9 billion, in Government ownership. The cost of storage management alone is $1 billion a year. There is a year's supply of wheat in storage.

Farmers as well as the rest of us are helping to pay these costs. Yet, the billions being paid out in agricultural subsidies are not going to all farmers. The big producers—especially of wheat and cotton—are getting most of the money. Only 12 out of some 250 farm commodities are supported by law at prescribed minimum levels.

And how have these 12 fared in the general market? Not as well as those not supported, or those supported at levels that are discretionary with the Secretary of Agriculture. Producers of cattle, hogs, poultry, fruits, and vegetables which are not supported have enjoyed growing markets. Their stocks are not piled up in Government warehouses.

Mr. Eisenhower and enlightened farmers do not advocate abandoning farmers to the vagaries of nature. They favor shielding basic crop producers against crop failures. They favor a floor for them just as industrial workers have minimum wages. But they believe that the farmer's best interests will be served if he relies on the market place rather than on Government handouts. Those handouts last year amounted to 40

percent of net farm income—few of them going to farmers in greatest difficulty.

Mr. Eisenhower asks Congress to give the Secretary of Agriculture greater discretion in setting the level of supports. He asks that standards for pricing be measured against market prices of recent years instead of the nearly half-century-old parity standard now in use. Corngrowers recently adopted the market-price standard in an election. There is no good reason why it shouldn't apply to other crops.

The President's farm program is a step toward agricultural sanity. It should be adopted.

The New Leaders In Cuba

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following biographies of some of the new leaders in Cuba: Fidel Castro, Provisional President Manuel Urrutia, Prime Minister Jose Miro Cardona, and Minister of State Roberto Daniel Agramonte Pichardo. This material wrs prepared for me for my information before I went to Cuba on January 20. I feel this information would be of interest to my colleagues who share my concern for the success of Cuba's new government:

FIDEL CASTRO RUZ

Fidel Castro, the victor in a 2-year armed struggle with the administration of President Fulgencio Batista, had been in open, armed rebellion against the Cuban Government since he led his "26th of Ju'y" forces to a landing in Cuba's Oriente Province on December 2, 1956.

Born on his father's farm in Oriente Province on August 13, 1926, Castro is the son of a self-made Spanish immigrant and the fifth of nine children. After receiving his secondary education at the Jesuit-run Colegio Belén in Havana, he entered the law school of the University of Havana. He soon became active in campus politics and was elected president of his law school class. He also became active in the Federación Estudiantil Universitaria (FEU), and joined the Ortodoxo Party. In the summer of 1947, while still a student, Castro joined in the abortive Cayo Confites invasion of the Dominican Republic. Upon his return to Havana, Castro was designated by the FEU to attend a student congress at Bogotá, Colombia, in April 1948. Castro was accused of having been involved in the bloody and violent riots which took place in Bogotá during the Ninth Panamerican Congress, but he has always maintained that he attended the congress in the role of an observer and did not take part in the riots.

Upon Castro's graduation from the University of Havana, he practiced law and took an active part in politics within the ranks of the Ortodoxo Party. In early 1952, he conducted a vigorous campaign for election to the House of Representatives on the Ortodoxo ticket. The March 10, 1952, Batista coup disrupted his plans.

He formed a revolutionary group, and on July 26, 1953 (the date providing his forces with a name) he launched the unsuccessful assault against the Moncada Barracks in Santiago de Cuba, in which a number of soldiers were killed and the insurrectionists were all but annihilated. Captured and sentenced to 15 years imprisonment, Castro was pardoned in a general amnesty declared by General Batista in May 1954. Castro remained in Cuba, continuing his oppositionist activities until July of that year when he went into voluntary exile in Mexico.

In October 1955 Castro came to the United States on an organizational and fund raising tour for his 26th of July movement. After speaking in New York, Tampa, and Key West, he returned to Mexico on December 10 after the Cuban Government had protested his frankly revoluntionary activities and U.S. Immigration authorities had cut short his stay. In Mexico Castro declared his intention to invade Cuba if Batista refused to step down. On December 2, 1956, following diversionary activities by his followers ashore, Castro led a band of 82 men in a landing in Cuba's Oriente Province. In the resulting skirmishes he lost most of his men but was able to recruit additional manpower from the countryside. He continued to grow stronger and his forces slowly opened new fronts in Oriente and Las Villas Province. He achieved his objective when it was announced on January 1, 1959, that President Batista and a large number of his followers had flown to exile in the Dominican Republic.

In the early 1940's Castro married Mirta Díaz Balarti. Some time after the birth of a son, Fidel Castro Díaz, the mother divorced Castro and married Emilio Nuñez Blanco, son of Emilio Nuñez Portuondo, Batista's chief of the Cuban delegation to the United Nations. Castro is said to have a fair command of English.

MANUEL EUGENIO URRUTIA LLEO

Manuel Urrutia was confirmed as Provisional President of Cuba by revolutionary leader Fidel Castro on January 1, 1959. A lawyer and judge by profession, Urrutia came into public prominence when he was presiding justice of the district court of the Province of Oriente in Santiago on May 10, 1957. The occasion was a trial of about 150 persons accused of insurrection and other serious offenses against the Batista government. Although 111 were acquitted by the panel of three judges and 40 were given various sentences, Judge Urrutia stated in pronouncing sentence that he personally had been in favor of acquitting nearly all of the prisoners, strongly attacked the Batista regime, and added that since Batista and his administration had usurped and were illegally retaining power, the defendants had been acting within their constitutional rights. As a result, the Cuban Minister of Justice brought impeachment proceedings against him, but they were later dropped.

Entering the judiciary as municipal judge of Jiguani on January 10, 1927, Urrutia subsequently served in the same capacity at Los Arabos, Limonar and Cienfuegos, Judge of the Cienfuegos Civil Court, Judge of the Matanzas Misdemeanors Court and the Colon Civil Court, and Justice of the Santiago Supreme Court, also serving as President of the Emergency Court. In December, 1957, he went with his family into voluntary exile in New York and Miami, following retirement as a justice after a career of nearly 31 years. He returned to Cuba late in 1958 as Castro's candidate for provisional president. In August of 1958 Urrutia was designated by the Movimiento de Resistencia Civica to be Provisional President of Cuba upon the fall of the Batista regime.

Born at Yaguajay, Las Villas Province on December 6, 1901, and married to Esperanza Gladys de Llaguno Aquirre, Urrutia has two sons, ages 20 and 14, and a daughter 8 months old born in the United States. Urrutia is reported to read, but not speak, English. He has been quite active as a fund raiser and speaker for Castro and the 26th of July movement in the United States and in other countries, and is believed to be at least potentially friendly to the United States.

JOSÉ MIRÓ CARDONA

José Miró Cardona, named Prime Minister of Cuba by Provisional President Urrutia on January 5, 1959, since May 1958 has been living in exile in the United States, and is one of the leading contemporary legal figures in Cuba with a reputation which is both national and international in character. Aside from his select legal practice, he has been prominent in both the National and Havana Bar Associations (having been dean of the latter since 1952), and also occupied a full professorship at the University of Havana in the field of penal law. In the international sphere he has been a delegate to the Inter-American Bar Association conferences of 1941 (Havana), 1946 (Santiago de Chile), 1947 (Lima), 1949 (Detroit), 1956 (Dallas), and 1957 (Buenos Aires). He also represented the National Bar Association at the Inter-American Congress of Odontology, Legal Medicine, and Criminology, held at Havana in 1946.

Miró Cardona entered the political arena late in 1955 via the Society of Friends of the Republic (SAR), formed by elder statesman Cósme de la Torriente for the purpose of bringing the Batista regime and its opposition together in working out a peaceful solution to Cuba's political problems. Following the unfruitful efforts of the SAR, Miró Cardona associated himself with an organization known as the Group of Civic Institutions in another attempt to bring about what the SAR had failed to achieve. The successive failure of both these efforts found him gradually moving away from an apolitical position to one of greater criticism of the Bastista Government.

Miró Cardona was born in Havana on August 2, 1902. His father, José Miró Argenter, came to Cuba from Cataluña, Spain, at the age of 17 and followed a journalistic career. He was active in preparations for the 1895 revolution, and during the ensuing war of independence rose to the rank of general in the revolutionary army and served as General Maceo's chief-of-staff until the latter's death. His three-volume "Crónicas de la Guerra" continues to be a standard reference work on Maceo's campaigns.

Educated both in Cuba and Italy, Miró received a liberal arts degree from the University of Havana in 1937 and the degree of doctor of civil law the following year. With a scholarship from the university he went to Italy where he studied at the Universidad Real de Roma during 1939. While in Rome he also served as cultural attaché of the Cuban Legation.

Miró is married to Ernestina Torra Obar. Their daughter, Yolanda de la Luz (who is married to the sculptor Sergio López Mesa and the mother of three children) has a doctorate in philosophy and letters and teaches at the high school of La Vibora in Havana. Miró's son, José Antonio (who is married to Silvia Santaella Ponce and the father of two children) is a lawyer, practicing in Havana.

Miró Cardona, who is the author of a number of works on juridical matters, holds the following decorations: Gran Cruz de la Orden de Honor y Mérito "Lanuza"; Commendador de la Orden Nacional de Mérito "Carlos Manuel de Déspedes"; Commendador de la Gran Orden Soberana y Continental de Mérito y Honor de la Unión Democrática Interamericana; Condecoración de la Sociedad Cubana de Derecho International; and Colegiado de Honor del Colegio Nacional de Abogados.

Miró Cardona has in the past displayed a basically friendly attitude toward the United States. He has some knowledge of English.

ROBERTO DANIEL AGRAMONTE PICHARDO

Appointed on January 4, 1959, as Cuban Minister of State, Agramonte is without question one of Cuba's intellectual leaders. An important public figure, he had a firm reputation in educational circles and as an author and lecturer before he became an unsuccessful candidate of the Cuban People's Party (Partido del Pueblo Cubano-Ortodoxo-PPC(o)) for vice president in 1948.

Agramonte had been professor of philosophy, psychology, and sociology at the University of Havana from 1926 until he left Cuba in 1957. He also served as its vice rector and dean of the faculty of philosophy and letters during part of that period. A member of the Ortodoxo Party from its early days, he was vice president of its national executive committee, prior to his nomination as the party's presidential candidate in 1952. Although the elections were not held because of Batista's coup in March 1952, it has been reported that Agramonte stood a good chance to be elected had they been held. In July 1957 he left Cuba for Mexico and remained there in voluntary exile until he returned to Cuba after the departure of Batista.

Quite widely traveled, Agramonte has visited the United States a number of times. A writer of texts in psychology and sociology, Agramonte is said to be an authority on Ecuadorean writers García Moreno and Montalvo. He has lectured widely on his major subjects and his broadcasts have been popular. He was Cuban Ambassador to Mexico during 1946–47 under ex-President Grau.

Born at Villaclara, Cuba, on May 3, 1904, Agramonte is married to Concepción del Río and they have an adult son and a daughter. Agramonte speaks English.

Coal by Wire

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mrs. KEE. Mr. Speaker, 5 years ago a group of businessmen and union officials, all of them confident of the potential of electric heating, met in my office. Among those who took part were representatives of Appalachian Electric Power Co., National Coal Association, United Mine Workers of America, and electrical equipment manufacturers.

My interest in the expansion of electric utilities service is obvious enough. Mr. Speaker, West Virginia is the Nation's greatest coal-producing State, and from the Fifth Congressional District comes almost 30 percent of West Virginia's total coal output. The coal industry, directly or indirectly, is responsible for most of the subsistence of the residents of our district. When the miner receives a pay check, a widespread chain reaction takes place. The grocer gets a good portion of what the miner earns. The landlord from whom he rents or the bank with which he has his mortgage comes in for a regular percentage. The miscellany of other recipients includes the barber, the clothier, gasoline station, service utilities, and our churches. Needless to say, our Federal, State, and local governments come in for important shares of every dollar that the miner earns.

Our railroad industry receives much of its revenue from coal traffic. Without that traffic, both operational and maintenance employees are without work.

Supplying coal mines is a big business in southern West Virginia. Timber, steel products, electrical equipment, petroleum products, and many other items are used in heavy quantity by our mines.

Appalachian Electric Power Co. is itself an essential source of employment for many of our people, both in its offices and on its field staffs. What is more, the West Virginia generating stations of Appalachian Electric consume more than 3½ million tons of coal annually. As electric heating grows in popularity, this order will increase substantially. The Appalachian Co. has been in the vanguard of the coal-by-wire effort. Through its advertisements and other promotional activities, it has helped to make West Virginians more conscious of the economic value of the electric heating program.

Now, Mr. Speaker, I do not want anyone to lose sight of the fact that, although the market has declined seriously since the end of World War II, the use of coal in home furnaces is still very important to the industry. Nationwide, some 12 million residential units are kept warm by coal heat. The development of convenient stokers and ash-hauling equipment makes coal all the more attractive domestically, particularly because of its price stability in recent years. We are not suggesting conversions from coal furnaces. We do believe it to the benefit of builders and the public in general to call attention to the advantages of heating by electricity. For this reason, I am always happy when a publication devotes space to the growing popularity of electric heating.

Coal Age, a McGraw-Hill publication whose editor, Iven Given, is a native of Sutton, W. Va., and who is probably one of the best informed authorities on the mining industry, featured an article on electric heating in its January issue. Written by W. A. Raleigh, Jr., associate editor, this comprehensive review of the many facets of electric heat not only captures the imagination of investors, architects, and builders, but also offers an interesting study for anyone who is thinking of buying a new home now or in the future. I commend it to the attention of all who may read these remarks.

Mr. Speaker, I should also like to say that an excellent series of articles on "Coal by Wire" has appeared over the past few months in the United Mine Workers of America Journal. This effort has resulted in an availability of printed material that will enable any interested home purchaser or homebuilder to make his own choice of heating equipment based upon installation costs and present and future fuel crisis and supply.

From time to time Mr. Speaker, I hope to refer to these informative articles so that a digest of their contents may become an official part of the CONGRESSIONAL RECORD.

Story of Whitesville Boom to Ghost Town

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. MOORE. Mr. Speaker, I again today bring to the attention of this House the desperate plight of our people in West Virginia who are dependent upon the coal industry for their daily bread.

Herewith submitted for consideration of the House, another in a series of articles published by the Charleston (W.Va.) Gazette, after one of its staff writers, John G. Morgan, accompanied one of my colleagues, Mr. Slack, of West Virginia's Sixth District, on a tour of these distressed areas. The article is as follows:

STORY OF WHITESVILLE: BOOM TO GHOST TOWN

(By John G. Morgan)

WHITESVILLE.—About 6 years ago the mines were going full blast. Business flowed at high tide, and there was noise akin to tumult in the streets. This was a boomtown.

Fights occurred often when spirits soared too high, and City Police Chief R. W. Pittsonberger had his hands full.

Justice of the Peace Charles E. Casto had plenty of business too. In 1953, for example, he handled about 375 civil cases and a large number of criminal cases.

Today it's a different story.

The estimated total of miners in the Whitesville area has dropped from about 7,000 to 1,000. By rough count, 17 of 26 mines have closed. The remaining nine have reduced their work forces.

Merchants say business is off at least one fourth and that credit accounts are climbing. The stores and streets are never crowded, and there are times when they look deserted during business hours.

Pittsonberger admits that he has an easy job, and Casto has to depend on barbering for a living. Last year his civil cases dwindled to 31 and his criminal cases to 2.

"It's rough," said Nick Halkias, who operates a sandwich shop and two theaters. "I wash dishes, cook, sell popcorn and clean theaters—four jobs, and still I can't make a living."

He said he keeps one theater open nightly and the other only on weekends.

Zachari Karantonis, 69, who came to the United States from Greece in 1912 and who today operates a large supermarket in town, said: "We are making money, but there is no profit."

Nicholas Haddad, clothing store owner, said "Things aren't too critical now, but we can't hold up long."

Ralph Hottle said he had suspended publication of the weekly Whitesville State News, but declared that the reason wasn't necessarily economic.

He said he wanted to devote more time to teaching school, but added that the business decline did have a bearing on his decision.

Representative JOHN M. SLACK, JR., in Whitesville as part of his tour of areas hard hit by mine layoffs, heard comments of the businessmen here.

The new Congressman from the Sixth District explained that their remarks will serve as basic information in his efforts to formulate some kind of relief program for distressed areas.

The local men were enthusiastic about two possible road projects that would open up trade with surrounding areas on the other sides of mountains.

One would be the construction of a highway through an old railway tunnel to the community of Kayford. The other would be improvement of W. Va. 78 as a connection between W. Va. 79 and W. Va. 3, in the Twilight and Red Dragon vicinities, to make the towns of Van and Wharton more accessible.

Each project would chop off about 50 miles in circuitous driving and encourage an increased amount of through traffic.

Later as SLACK and his small party continued the tour, the Congressman thought out loud about the plight of displaced miners and the communities dependent upon them.

He seemed preoccupied with the thought that industries adaptable to the West Virginia terrain should be attracted to the stricken areas.

"The mountains here offer some natural protection against missiles," he said. "In the future it will be necessary for the Nation to manufacture highly dangerous fuels in larger quantities. Isolated areas surrounded by mountains would be ideal for that."

On another trend of thought, he said:

"It has been suggested to me that the Government should give seeds to these people. But in many places you can see there just isn't any spot for a garden."

R. R. (Big Chew) Humphreys, secretary-treasurer of UMW district 17, recalled that in earlier days when he was a miner and when people generally were more self-sufficient, he had a garden on top of a mountain and went to and from with great effort.

There was an interval of silence, and then Big Chew said softly and with deep conviction:

"The trouble with miners is, they just won't save."

As It Happened: The Big Havana Rally

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Times of Havana of January 22, 1959, with byline "An Old Habanero." This is an accurate and detailed report of the big rally in Havana which I think would interest my colleagues:

THUNDEROUS APPROVAL OF EXECUTIONS ECHOES THROUGHOUT REPUBLIC

(By An Old Habanero)

Placing the blame for misrepresentations of Cuba's revolutionary government trials and executions squarely on foreign press agencies and discounting critical U.S. congressional statements as not representative of the feelings of the American people, Fidel Castro addressed nearly a million people yesterday afternoon from a hastily erected wooden rostrum in front of the Presidential Palace.

The crowd was immense, incredible, imposing. Never has such an enormous mass of humanity gathered in such numbers before the executive mansion to hear Castro, President Urrutia and other revolutionary leaders lambast foreign critics and present their case to the people of Cuba. By 2 o'clock in the afternoon, throngs were pouring down Malecón, gathering in huge masses on Carlos III Avenue and crowding all the approaches to the Palace on the Avenida de las Misiones.

The people carried signs, thousands of signs, banners and posters all demanding the trial and execution of war criminals of the Batista regime. Samples: "Toothpick Workers Support Fidel Castro." "No Foreign Interference." "Zero Clemency." "Shoot the Assassins of the People." "Fidel! Our Enemies Are Hiding Behind Uncle Sam's Whiskers!" "No U.S. Intervention in Cuban Affairs." One said in English: "Execution For Killers." There were large banners, small banners, white banners, red and black banners, yellow banners, some small posters carried by individuals, obviously lettered by loving hands at home.

It was an orderly demonstration. There were no fist fights, few sudden flurries in the crowd, no angry shouts, no haranguing. Complete order reigned throughout without the need of one cop or one radio car. It was not a hostile demonstration. People had turned out by the hundreds of thousands to see and hear their beloved Fidel.

It was a voluntary demonstration. No one was forced to come. As a spontaneous demonstration of the power of public opinion, it was breath-taking and imposing. As a demonstration of public order and discipline, it was well-nigh incredible. As a mandate of the people to the Revolutionary Government, it was incontestable.

It was not an anti-American demonstration. It was a demonstration for the people of the United States, to let them see how the people of this country stood behind their government and the decisions of that government. It was a demonstration of national solidarity never seen before in Cuba. It was a monster jury for Batista men accused of torture and murder and rape. It was a national condemnation of those men. It was the spectacle of a united people.

Again and again the theme ran through the words of every speaker preceding Fidel: "See, our country, our people have turned out in numbers never before seen to show you that we are not barbarians, that we are only interested in justice, that we want to see criminals punished as they are punished in every country in the world."

President Urrutia, in an unofficial interview before the beginning of the talks at the meeting said, "Cubans are demonstrating that they want their government to carry out justice. What is being done in Cuba is justice. We have said and I repeat, we have nothing to hide. I am happy to see so many U.S. correspondents here. I have a great deal of affection for the people of the United States and I don't want to see that great people fooled into believing anything but the truth."

Several speakers preceded Fidel Castro, like boxers before the main bout: David Salvador, secretary of the CTC (Cuban Confederation of Labor); Guido García Inclán, representing the Cuban press; Juan Ruiz, uniformed, bearded, one of the leaders of the Students Federation; Luis Orlando Radríguez, Minister of the Interior; Jorge Quintana, also of the Cuban press; and Major Rolando Cubelas, of the Directorio Revolucionario, the people that had a spat with Castro, and who was barely allowed to say a few words before Fidel took the microphones.

Fidel Castro's appearance created pandemonium. Thousands and thousands of throats yelled a greeting in a deafening uproar which immediately swelled to the cry "Justicia! Justicia!" chanted over and over again. With a characteristic gesture, Castro faced the crowd and put his right index finger to his lips. He rolled his eyes and held his left hand out for silence. The chant wavered and began to diminish. "Let's see if a million people can keep quiet," he said disarmingly. The noise died down, petered out, vanished. He had a million people spellbound.

I have never seen a public speaker who can so identify himself with his audience. In slow, measured, conversational tones, frequently pausing for his words to take effect, and swerving his body to command all his listeners, Castro spoke to them as he would have over coffee and cigars after dinner. Not once did he raise his voice; not once did he adopt the traditional heroic pose of the political speaker; not once did he rise above the lowest common denominator confronting him.

"This has been the biggest victory of the people of Cuba in the revolution. You are winning a victory without a shot, without arms, but a victory for justice and reason and morals. Those who thought we were simple guerrillas, those who thought we knew only how to shoot, have found out that the Cuban revolution can win the battle of information and the battle of reason," said he.

Castro looked very tired and perspired profusely in the warm afternoon sun. At one point he stopped and sighed. "Fellow countrymen, the next time I'm going to ask for only 10,000 instead of a million Cubans. It is too much. The press is too great. It is almost impossible to make a speech today. I shall have to compress my ideas. Every minute I stay up here can cost the lives of my compatriots. Women are fainting. I shall be brief."

Major Castro was brief. For about an hour and a half he spoke, bringing his case before the people of Cuba, asking the foreign press to truthfully report what they were witnessing yesterday. "Gentlemen of the foreign press, gentlemen of the diplomatic corps," he called, "imagine you have before you a jury of a million people of all classes and races and religions. I am going to ask that jury: Those in agreement with the justice being applied now; those in accord with the trial and execution of the myrimidons now being judged, raise your hands." A "million" hands shot up in the air and a huge shout rose from the packed hundreds of thousands in front of the palace. "Press of the whole continent," Castro continued, "a jury of a million Cubans of all ideas and classes and races has voted. Those who are democrats or who call themselves democrats, I say to you, this is democracy, this is respecting the will of the people."

Castro referred to the frequent concern he had met from people who are worried about his personal safety. He went on to say that the destiny of a people does not depend on one man, and he cannot seek safety by hiding in a bank vault. He declared that no one would stop the revolution, that there are other men behind him; adding as an afterthought, "And I will tell my enemies something, behind me there are others more radical than I."

He designated his brother Raul as his successor, should anything happen to him. "Not because he is my brother. I hate nepotism; but because I consider him fully capable of taking my place in case something should happen to me."

He jabbed at foreign news agencies for having killed him a few days after his landing in Oriente Province 2 years ago. "Not having killed me successfully then, they wish to do so now." He accused the wire services of cabling that merely adherents of Batista, and not murderers and torturers, were being executed.

He charged them with sending stories of mass executions without trials. "They (the news agencies) have not spoken about the conduct of the rebel army or the civilized behavior of our people. No one has been tortured; no one has been beaten. People have not taken vengeance in their own hands (as they did in Machado's time), but have placed the criminals in the hands of the revolutionary courts," he stated.

Castro reserved his heavy ammunition for the end of his talk when he said, "Real crimes have been committed in the name of

peace. I ask the U.S. Congressmen who attacked us: What did you do in Hiroshima and Nagasaki? In the name of peace, 300,000 human beings were killed. We have not shot women, children, and old men. At Hiroshima and Nagasaki 300,000 noncombatant civilians were killed. In the name of what? To find peace * * * to avoid the death of many fighting Americans * * * so I say to these Congressmen (who should keep out of Cuban problems), we are killing Batista's criminals to establish peace, that we might have peace not only today but in the future of this country."

Castro made it very clear that the United States Government had not attacked the Cuban Government directly. He said that some of the American press has defended him, citing Herbert L. Matthews, of the New York Times, as an example. "The American Government is not hostile to us," said he. "We are asking for the support of the American people," he continued. "We have not been aggressors. We have not attacked any people of the world. Yet the Cuban people have been the victim of a dastardly and cowardly campaign; but I assure you that this battle is won. This is everybody's battle."

He referred to the order reigning in Havana today, calling it a city patrolled by Boy Scouts, a city with no police on the street and yet a city where no looting is taking place. He challenged anyone to find a city like that in the whole world, and asked newsmen to tell that story to the people of their countries.

This afternoon at the Havana Riviera Hotel Castro will hold a press conference for 385 visiting newsmen, where, he said, he would be willing to answer any and all questions put up to him.

Fidel Castro's big winner yesterday was the enormous mass of people that attended the meeting. Their order, their discipline, their reason, and the absence of passion, all combined to teach the world a lesson in public behavior.

But did I notice a very slight trace of exasperation in the leader of the revolution. Exasperation at having to explain simplicities to the crowd; exasperation at having to obtain the approval of that crowd? Fidel Castro has said repeatedly that he aspires to no public office and that he subordinates himself to the government of President Urrutia. He yesterday appointed Raúl Castro as his successor. What is Raúl Castro successor to?

The Southern Moderates Are Still There

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. UDALL. Mr. Speaker, events make it more apparent each day that men of moderation are the real hope of the South as it wrestles with the agonizing problems of desegregation. Over the years one of the most consistent and clear-headed southern voices has been that of Ralph McGill, the editor of the Atlanta Constitution.

Last September Mr. McGill wrote an article for the New York Times Sunday magazine in which he discussed the central issues that have emerged in this controversy.

The central truth of Mr. McGill's thesis was demonstrated once again this week in Virginia, I believe. And once again there is hope that honorable and practical men who, for want of a better term we call moderates, will yet lead the South out of the wilderness.

Mr. McGill's article follows:

THE SOUTHERN MODERATES ARE STILL THERE

(By Ralph McGill)

ATLANTA, GA.—After 4 years of being stormtossed on the seas of segregation, with unusual turblence and fog prevailing for the past 12 months, the southern moderate now will be able to function more effectively by reason of the United States Supreme Court decision of Friday, September 12, in the Little Rock case.

The Court upheld the United States Circuit Court of Appeals in its reversal of Federal Judge Harry J. Lemley's order of June staying integration at Central High school in the Arkansas capital for two and one-half years.

The Supreme Court decision had the immediate effect of restoring to the issue the sense of inevitability, which with that of law, is the ingredient essential to rational thought on the subject.

For almost 3 years now, but more especially since Governor Faubus began to dominate the southern segregation scene, there has been a heavy attack on the legal image of inevitability. For a time it was blurred and befogged. It was precisely in this period that the southern moderate seemed to some, at least, to have been submerged, or overwhelmed. And, in a sense, he was. But, being man, he endured.

The decision of September 12 provided a further dividend for the moderate. In addition to keeping alive the image of law and the supremacy of the high court in interpreting the Constitution of the United States, the southern moderate had been hard at work creating a new image. It is one of the Negro as a citizen. It is a fact perhaps not well comprehended outside the South that many southerners to this day have never considered the Negro as a citizen in the full meaning of the word. There is no image of such citizenship, for the good reason that it did not exist. It is only in very recent years that the white-primary laws and other barriers to citizenship have been declared unconstitutional.

The latest decision will greatly strengthen the picture of the Negro as a citizen, as well as renew the necessary sense of inevitability in the 1954 Supreme Court decision and its appeal to the moral and reasonable man. Because of this, the southern moderate's real job has been to keep this sense alive in the mind of the practical man of his region.

It is the practical man who is so necessary to an emotionally stirred, disturbed, and confused South. The southern moderate is not the quiet, assured, often scholarly, detached liberal of the East. In the deep South, ugly with reprisals, penalties, and abuses, where all the political controls are in the hands of men pledged to massive resistance, the moderate, like the liberal, learns that there is an immediacy of reaction, often violent, to anything he may say or write. From this he learns patience and acceptance of the fact that frustration is not defeat, though it can be almost as bitter.

It will be the moderate and the practical man who will see the South through this period which is to many one of agonizing readjustment far more acute than can be imagined by those whose liberal position is based entirely on principle without any corollary experience.

This practical man may be a leader on the vestry, a bishop, a clergyman, an executive of a great corporation, an editor, an attorney, or a person in some public position. With the sense of inevitability, this practical man can, and does, influence others in economic and professional positions to attain that image and to comprehend it and the ultimate meaning to his community.

It is this same image of inevitability that causes many a sincere Christian or Jew to say, "I don't like it, but I must either abandon my faith and its tenets or accept it, and so, with God's help, I will." And there are those who say, "I don't think the Court was right. I hate the decision. I wish it had never happened, but I love my country and I will accept decisions of its courts."

Governor Faubus especially, and numerous other southern political leaders—governors, United States Senators and White Citizens Council orators—had succeeded in greatly weakening this sense of the inevitable. They asserted over and over that the Supreme Court's decision was not legal or binding and was entirely unconstitutional.

It was a commonplace experience of newspapermen to talk with a southern political leader and hear him say, privately, he knew integration to be inevitable, and then, minutes later, hear the same man say to a whooping audience that the "left-wing Supreme Court" had acted unconstitutionally and that States' rights would emerge triumphant.

The citizens councils urged their members to write their Congressmen and Senators. "Just stand up and make yourself heard," they said, "and we'll win. We'll never surrender to those who would usurp our rights."

In addition, there were the fire-eaters who breathed defiance and slandered the court, the President of the United States and all who were not in agreement with them. Their text was "Never."

The effect of this, and the fact of it, were established before the Supreme Court by Richard C. Butler, the able attorney for the Little Rock school board. The people of Little Rock, he told the court, were confused about what was the law and did not accept the court's decision as final, particularly since Governor Faubus "was repeatedly" telling them it was "not the law of the land."

It was not a good argument in a court of law, but it was a factual description of a state of mind widespread in the deep south. There are even now literally thousands of good southern people who believe the court's action to be illegal and not applicable to them, because a governor, a Senator, a Congressman, an editor or some other person of position has so said or written.

The southern moderate, utterly destroyed insofar as any political influence in his State capital was concerned, was pushed out of the center of the picture by early 1955. He was chided and harassed. In some communities he was asked to resign from the vestry or board of deacons. Some teachers—a great many college teachers and some ministers—lost their jobs. There were businesses that warned employees not to "participate" in controversy. For a time various forms of coercions and reprisals flourished, mild and severe.

The Court decision shocked a great majority of the southern people, because their political leadership had failed utterly to prepare them for it. For some years the High Court had been handing down decisions which clearly indicated that full citizenship was the right of all Americans.

Political leaders began a belated, almost frantic, drive to build schools and thereby comply with the long-neglected separate-but-equal Court ruling of 1896. There were those few who spoke out, saying that segregation was on the way out and plans should be made to live with such a decision. But, as people do, they looked to their leaders. And a great majority of these told them not to worry, the Court would not and could not so find.

When it did come there was a great shock. The political leaders soon regrouped and came charging back, crying betrayal. A number of urban school boards that tentatively, and sensibly, had begun to make

plans to comply by gerrymandering school district lines and putting the fewest possible number of Negro children in school as a starter, abruptly were put in their place as legislatures hurried to write new laws and earn delay.

It was Virginia, with her pre-Civil War theory of interposition, that gave certain respectability and stature to these proceedings by throwing the great cloak of her history and tradition about total defiance.

In this period the national administration failed the cause of moderation. The Court had handed to the South, and some bordering States, a decision. But the executive department, which includes the Department of Justice, failed utterly to provide any leadership or to offer any plans for, or assistance in, enforcement.

It is true that all Governors and State officers, including judges, are sworn to support the Constitution of the United States. But in this period some imaginative national leadership and interposition between the moderate and the extremist might have made a different story. But it did not come.

However, the moderate was not as alone as he sometimes felt, or seemed to be.

There were two elections, in particular, that refuted the belief that the southern moderate had been driven from the scene.

In November 1957, Virginia went to the polls to elect a Governor. Nominee of the Democrats was J. Lindsay Almond, pledged to support a State program of "massive resistance" to the court decision. He had, of course, the full support of the Byrd organization. Senator HARRY F. BYRD himself led the Almond campaign. In public speeches he called on the voters to crush the opposition and let the Nation and the Court know how Virginia felt.

The opposition was Theodore R. Dalton, Republican. He had proposed a plan of limited integration. Thus, the sole, major issue was clearly drawn.

Almond won with, in round numbers, 300,000 votes to 188,000 for Dalton. Despite the heavy pressure by the Byrd organization, the emotionalism of the issue and the fact that President Eisenhower's popularity was down, the Republican candidate and limited integration received almost 200,000 votes.

An estimated 40,000 to 50,000 Negro votes were in this total. But of the white votes cast in a heated campaign pressed emotionally by one of the most efficient political organizations in the country, Dalton had a third.

More recent voting, that of the primary in which Governor Faubus won renomination, was one-sided. His two opponents were not well known. Neither had any following. Their efforts were not adequately financed. The Governor's organization went all out to round up the votes.

Governor Faubus received 264,346 votes. Yet, almost 120,000 moderates cast ballots in opposition. Of this vote perhaps 17 percent was Negro. But in a superheated, almost hysterical campaign, about a third of the white voters stood for moderation and due process of law.

Other elections, too, were revealing of moderate strength. In Tennessee a richly financed primary campaign based on defiance of the Supreme Court failed as a move to unseat Senator ALBERT GORE, who was charged with being in favor of abiding by his oath to support the Constitution and the courts. A gubernatorial candidate who favored allowing communities to desegregate if they chose was given no chance to win. He came within a few votes of upsetting the favorite. The moderates in the State were the balance of power in the Gore race and they almost nominated a relative unknown for Governor.

In Texas, liberal Senator RALPH W. YARBOROUGH was renominated in a primary otherwise dominated by extreme conservatives.

There is no political campaign, even in the Deep South, where race is the only factor. The extremists seek always to make this the only issue.

In Georgia's primary of September 10, the three candidates were all profoundly pledged to defend segregation. The most qualified, Ernest Vandiver, campaigned on a program of reforming the State government to eliminate corrupt practices that had been exposed. A Baptist minister, who was one of the candidates, promptly and preposterously charged Mr. Vandiver with being "weak on segregation" and carried on a campaign of political abuse that shocked all but the most extreme. The Baptist minister was all but obliterated by the heavy vote for Vandiver.

There is one generality that largely explains the many paradoxes of the South. It is that the climate, or mood, in which the moderate lives and seeks to function reflects the leadership of his State and the background that produces it.

Why, for example, could North Carolina, Tennessee, Kentucky, and Texas, all former members of the Confederacy, proceed with deliberate speed in school integration this fall while their neighbors in Virginia, Mississippi, South Carolina, Georgia, and Alabama were pledged to total, permanent defiance? They are all the same sort of people. Superficially their culture is the same. Why, then, the difference?

There is a very real explanation. Four States, Mississippi, South Carolina, Alabama, and Georgia, the heart of the Deep South, have had a continuty of political climate in which the race issue has been agitated in local and State campaigns. Some who have been most prominent in this form of campaigning have attained national reputations in that field. These same States have, on a percentage basis, the largest Negro populations. They also have remaining more of the old plantation type of economy. Industrialization came last to them.

It is neither fair, nor is it helpful in the attempt at solution, to charge the people of these States with being willfully rebellious, mean or perverse. Their political leaders are as pragmatic as those of other areas. They must first get elected. In a sense, they are captives of their past and of the leaders who before them set the pattern of violent racial agitation for political ends.

The Deep South has sent to Congress some of its ablest men. It has such men there today. Some of them have been, and are, fully qualified for the Presidency. One of the most melancholy spectacles is to see such able, intelligent men barred from greater national recognition or from the Presidency itself, not because they are southern but because their region or States advocate a policy that jars with that of the 42 other States. The frustration of such a situation leads some of them to bitterness of spirit and extremes of language and position that serve merely to add to their frustration.

In these States the political leader, or the moderate, practical, reasonable man who takes a stand and says, "Look, the only persons about to be hurt are our children; why can't we do what North Carolina or Tennessee has done—make a slow, token beginning?" is certain to be overwhelmed with abuse and charges of being a "nigger lover," or dangerous leftist, or worse.

If he is in one of the more rural areas of the Deep South he may well be in physical danger. The most preposterous charges are brought against him.

In the urban areas there are abusive telephone calls, threats, and slanderous mail, but there is less pressure for absolute conformity such as some rural areas demand. The moderate man, the reasonable, practical man, the Christian or Jew who stands on his religious tenets, the moral man of no religious affiliation, all these can, and do, take a stand.

In the elections previously referred to the substantial opposition to extremes came from the cities. But, in general, in such a climate of complete political control, the powerlessness of reasonable men is difficult for those looking on from a distance, and from an entirely different climate, to believe or comprehend.

In contrast to the Deep South, North Carolina and Tennessee, for example, have no past history of reckless political exploitation of race. The leadership there, led by the respective Governors, Luther H. Hodges and Frank G. Clement, weighed the elements involved most carefully and with all deliberate speed.

Once they had surveyed and discussed they assisted the school boards that wanted to go ahead and make a start at compliance. They assured them protection. They went on television and explained the plan to the people.

In North Carolina last year there was no trouble. In Tennessee there was. Prompt and effective police action ended it. This fall there were no incidents in a planned expansion of the program.

Neither this fact, nor the progress made in border States with a southern flavor such as Kentucky, Oklahoma, and Missouri, has made any impression whatever in the Deep South to save to produce harsh criticism of those States.

In candor, it must be said that in the Deep South the future will worsen. The region will continue to be an island of complete defiance while about it the deliberate sped of slow compliance continues. Arkansas, where five small cities have integrated schools, and Virginia, whose traditions and history make her a strange and unexpected companion of the old cotton States, are separate, if related stories.

The melancholy fact is that in the Deep South the future will see more and more schools closed. One's heart goes out to the people who have not been told by their political leadership the terrible price they and their children must pay in this deliberate sacrifice of their school system. Nor has their leadership told them the truth about the private school system that many propose.

Such a plan inevitably will be subject to injunctions and tests of its legality. If a State collects a school tax or provides money for tuition it can be said to be in the business of public education. The fact that such private schools would lack proper accreditation and that their high school graduates would find it very difficult to enter college was another truth not told.

But candor also requires one to say that many, if told the truth, would not change their minds.

Certainly, the moderates in this area, used to daily wrestling with reality, know that the outlook is gloomy and will become more so. But they also know that reaction is certain.

Within days after the Supreme Court's recent ruling there were a few who were beginning to say that, much as they hated the idea, they would rather allow a few Negroes in the schools than to have no school at all. The moderate is aware that none can set a time limit on how long the chaos of closed schools and attempted, hopelessly inadequate private schools will last. It could be a long span of tragic years.

There is one thing for sure. When the reaction begins, and the bitterness of it wells up into politics, the moderate will be needed more than ever to help put the pieces together again.

In those States where the climate of leadership is more sure of itself and, therefore,

more stable, the mood of the people is such that the practical man, the moral man, and the force of moderation will make continued progress. They will grow and prosper in comparison with their neighbors.

Not many new industries will come to a State where public education is in chaos. The young people of these States will go elsewhere seeking opportunity and schooling. That, too, is part of the price to be paid.

Meanwhile, more and more the clergy in all the South is making itself heard, if not heeded, in behalf of reasonableness and against destruction of the public school system. The Southern Regional Council continues a job of factual research and study. The Southern School News Reporting Service, a strictly objective monthly report of conditions State by State, is a continuing thorn in the flesh of extremist distortions of facts.

There are individuals, organizations, and newspapers that patiently, but firmly, point out that the question of whether one is for or against segregation is not relevant. The issue is the children, the country, and the integrity of the American dream—that here is a country which offers equal and full citizenship to all who live in it. The southerner has as much of a stake in that as anyone else.

This, then, has been, and is, the role of the southern moderate—to prevent the image of due process of law and that of the inevitability bound up in the Supreme Court's decision from being blurred. The waves have rolled over him. They will again. The clamor of the angry and defiant men now and then have drowned him out. It will again.

If he is no longer in the center of the picture in the Deep South he is still in it, if at the edge. Sometimes he gets cropped off by the picture editors.

And, in the end, of course, the moderates, the reasonable, practical men, the moral men and those whose convictions are based on religion, will be there to pick up the wreckage left by those who defy the law and the courts and forget their oath to support the Constitution of the United States. The moderates will make it unnecessary to start from scratch.

Proud Arkansas

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. TRIMBLE. Mr. Speaker, the elevation of Senator J. W. FULBRIGHT to the chairmanship of the Senate Committee on Foreign Relations is another great source of pride to the people of Arkansas. Our senior Senator, JOHN L. MCCLELLAN, who is chairman of the Senate Committee on Government Operations and also chairman of the Select Committee To Investigate Racketeering in Labor and Industry, has brought great honor to our State.

On the House side, Arkansas has two top chairmanships, with our colleague WILBUR MILLS being chairman of the potent Committee on Ways and Means, and our colleague OREN HARRIS being chairman of the very important Committee on Interstate and Foreign Commerce.

These four chairmanships make all Arkansas proud.

As an indication of this pride, I wish to insert the following articles as part of my remarks: An article in the New York Times of February 3, 1959, by Arthur Krock; and Walter Lippmann's column of February 3 from the Washington Post and Times Herald.

The articles follow:

[From the New York Times, Feb. 3, 1959]

THE RISE OF A YOUNG MAN WITH IDEAS

(By Arthur Krock)

WASHINGTON, February 2.—Sixteen years after the following words made history they seem to express no startling national attitude:

"[We favor] the creation of appropriate international machinery, with power adequate to establish and maintain a just and lasting peace among the nations of the world, and [favor] the participation of the United States * * * through its constitutional processes."

But at the time they were embodied in the public record as a statement of the international aims of the United States they marked the dramatic end of one chapter and the beginning of another in American foreign policy. As the Fulbright resolution these words and their author became famous in all the chancelleries of the world. But not for 16 years did power in the form of the chairmanship of the Senate Committee on Foreign Relations come to match the fame of the young Representative from Arkansas who is now Senator FULBRIGHT.

Thirteen years ago the Senator gained fame of a different and unsought kind, with another idea. Unlike the proposition of the resolution, the expression of this idea was unpremeditated. He was musing aloud to oblige a reporter who asked for his thoughts on the election of a Republican Congress in 1946, only a year after President Truman had succeeded from the Vice Presidency. FULBRIGHT suggested that maybe, the times being so critical and the need for executive-legislative accord so vital, it might be a constructive act for President Truman to name a Republican as Secretary of State, the office (there being no Vice President) next in line of Presidential succession, and then resign to permit this Republican to become President.

The arrival of newspapers at the White House has often set off explosions, but none that shook the walls more powerfully than the afternoon edition in which Senator FULBRIGHT's mediation was published as a full-blown project. And, for a while the President more or less adhered to the estimate he then expressed that FULBRIGHT is an "overeducated, Oxford" expletive. But with growing experience of how chance comments of his own were turned into sensations, he reverted to his appreciation of the Senator's high qualities as a statesman.

Subsequent to House passage of the Fulbright resolution, September 1, 1943, it was approved by the Senate under the sponsorship of Tom Connally of Texas, current incumbent of the Foreign Relations chairmanship to which FULBRIGHT has just succeeded. Then Representative James W. Wadsworth of New York, Wendell L. Willkie and Thomas E. Dewey, who had aided the Arkansan in getting the support of the House, overrode the Republican isolationists at a conference at Mackinac Island, Mich., to put the party on record for a similar resolution. And the United States, which had refused to join Woodrow Wilson's League of Nations, was committed to the principle of the United Nations organization, but with "power * * * to maintain," etc., curbed by one veto in the Security Council.

Less than 3 years after these events in foreign policy, Senator FULBRIGHT, still concentrating on measures to bring about a durable world peace, proposed, and Congress passed, Public Law 584. This made his name perhaps more favorably known in more countries than any American legislator in many decades. Described by Secretary of State Dulles, in 1956, as " the most fabulously profitable investment ever authorized by the Congress of the United States," it is the legislation by which teachers and students are exchanged between this and many other nations. It is the cultural counterpart to our military and economic collective assistance program through the agency of young people known the world over as "Fulbright scholars."

But, despite this international fame, the Senator at 53 has just attained his first office of direct power in the formulation and conduct of United States foreign policy. The rise was slow because of the operation of the seniority system. But in this instance the Nation is the beneficiary of the system.

FULBRIGHT's immediate objective is to relax the "rigidity and inertia" of the administration's conduct of foreign policy which he sees personified by Secretary Dulles. This conduct, and the mood it reflects, not the basic policies themselves, have been the objects of his effective and intelligent criticisms.

[From the Washington Post and Times Herald, Feb. 3, 1959]

FULBRIGHT AND DULLES

(By Walter Lippmann)

Senator GREEN has decided wisely both in resigning as chairman and in remaining as the senior member of the Committee on Foreign Relations. Old men, the Greeks used to say, should not be leaders but counselors, and Senator GREEN with his long experience and his vigorous memory will be a good counselor.

Senator FULBRIGHT, who succeeds him, is a much younger man. But he is an old hand. In terms of his interest and active participation in foreign affairs, which date back to the early days of the Second World War, there are few if any Members of Congress who have such long and continuous inside knowledge. In thinking about his differences with Mr. Dulles, it is well to remember that insofar as he has been critical he has spoken as one the pioneers and early supporters of the global policies which have replaced the old isolationism.

And as a matter of fact, a study of his record will show, I believe, that the weight of his criticism has been directed not against the great purposes of foreign policy but against mistakes and distortions in their application.

His advent as chairman of the committee marks a turning point for the better in the conduct of our foreign policy. For the first time since the new era which began with World War II, the administration will have a responsible and articulate and loyal opposition. Until the conversion of Senator Vandenberg at the end of the war, the opposition was sullen and destructive. The Vandenberg arrangement was an emergency device for getting indispensable things done. But for the long run it was not a good method of governing. For instead of promoting debate, which educates the people and refines the policy of the Administration, the Vandenberg bipartisan system avoided and evaded debate. The same must be said for the so-called bipartisan arrangement with Senator Walter George, who suppressed debate when the country would have been much better served by a thorough debate.

The time has now come, as the last three congressional elections have made sharply clear, when—within the framework of our world responsibilities—we must move beyond the stereotypes and the slogans of the postwar years. We cannot stand pat forever on all the positions taken in the postwar era. For the postwar era is ending, and here and abroad among our allies a new generation is

on the threshold of power. With Senator FULBRIGHT as the chairman of the committee, the windows of the Senate will be open to the fresh air of a new time.

By coincidence, Mr. Dulles had just about decided to go to Western Europe when Senator GREEN stepped down. It is no secret that Mr. Dulles will be trying to work out with Dr. Adenauer and our other big European allies, a workable policy about Berlin and Germany. It must be a policy on which the allies are agreed and in which the Russians are interested enough to negotiate. This will not be easy to achieve, and it may well be that Mr. Dulles has now undertaken the most important mission of his whole career.

It will help him, not hurt him, if it is known in Europe that there is building up in the new Congress an insistence that we move off dead center, and do something more than declaim the reasons why we cannot do anything at all about anything. Nor are there so many as once there were in this country who are afraid that the allies will fall apart and that Congress will revert to isolationism if we stop consulting our fears and acting like paralyzed rabbits.

The George Washington Memorial Parkway

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. LANKFORD. Mr. Speaker, next week the House Appropriations Committee will have before it once again a request from the President to appropriate the Federal Government's share of the funds necessary to acquire right-of-way for the last portion of the George Washington Memorial Parkway. In order to acquaint our colleagues with the historical significance of the area through which this 7½-mile stretch of the parkway will travel, I wish to insert in the RECORD a most interesting excerpt from a historical résumé prepared by Mr. Charles B. MacDonald. It is gratifying to know that historic Harmony Hall and Want Water are now to be included in the parkway. As an item of further interest, I wish to insert an excerpt from a letter received from Mr. Charles Wallace Collins, the present owner of Harmony Hall:

THE GEORGE WASHINGTON MEMORIAL PARKWAY

(By Charles B. MacDonald)

Twenty-nine years ago the Congress of the United States took official notice that the Capital of the Nation had outgrown the boundaries of the District of Columbia.

Washington, D.C., had, in effect, spread to parts of Montgomery and Prince Georges counties in Maryland and Arlington and Fairfax counties in Virginia. If the Capital was to continue to be a showplace worthy of the nation it represents, some measure was required to assure that development in the adjacent counties did not grip the central city in a concrete and asphalt vise.

To fill this need, the 71st Congress passed into law the so-called Capper-Cramton Act. What the Capper-Cramton Act said was this:

Because of proximity to the Capital, the regions adjacent to Washington have responsibilities to the Nation not shared by other counties far removed from the Nation's Capital. They owe it to the Nation at large to keep the Capital area beautiful and to preserve the unique scenic, recreational, and historical features of the area.

If they are to meet these responsibilities—the act said, in effect—they will need help. The Nation as a whole therefore agrees to pay one-half the purchase price of lands needed for these purposes if the adjacent territories will pay the other half. The Nation then will develop these resources as required.

The one specific purchase and development program which the Capper-Cramton Act provided for was the creation of a memorial parkway along both shores of the Potomac River, from Mount Vernon to Great Falls on one side, from Fort Washington to Great Falls on the other.

This parkway was not to be just another super-highway. It was to be a scenic route specially designed to preserve as much as possible of the shoreline of the Potomac for the enjoyment of all Americans who come to their capital and to link in a readily accessible manner the sites and monuments along the Potomac of national historical interest.

When the act passed the Congress in 1930, the Mount Vernon Memorial Highway from Arlington to Mount Vernon along the west bank of the river already was under construction. Upon its completion in 1932, it was incorporated into the parkway system, which became known as the George Washington Memorial Parkway.

Today, 29 years later, some three-fourths of the parkway authorized by the Capper-Cramton Act either has been completed or is in process of construction. Only one segment, 7½ miles from Washington to Fort Washington in Prince Georges County, remains totally unrealized.

Next week, the House Appropriations Subcommittee is scheduled to act on a request from the President to appropriate the Federal Government's share of the funds necessary to acquire rights-of-way for this last portion of the parkway. If the House denies these funds, public officials in charge of the project believe this part never will be constructed. The $28 million already spent on the three other parts will have been spent on a project never to be fully realized. When visitors come to Washington, that part of Prince Georges County bordering on the Capital would have to be swept under the carpet.

The danger that funds will be denied is great. It has already happened once—just last year. Yet planning officials and interested citizens have refused to accept what, to them, seems an unrealistic and nonvisionary verdict. They will go back to the Hill for one last try.

Mr. Speaker, the request for funds for the Prince Georges County segment has not been delayed because this section is any less needed or desirable than the others. Indeed, the recent mass transportation survey for the National Capital region listed the parkway as an essential part of the area's road system. The delay comes from the fact that not until 2 years ago, in the face of indications that if the land soon was not purchased, private development would have pushed land costs to a prohibitive level, were Prince Georges County officials able to foresee their share of the costs.

The Maryland House of Delegates authorized the county to enter into an indebtedness of $1 million as the bulk of the county's share for land acquisition. At this point, in 1957, the National Capital Planning Commission asked Congress for the Federal share of the land costs and for an 8-year loan of $1 million to Prince Georges County in keeping with a proviso of the Capper-Cramton Act.

This request passed the House. But the Senate Appropriations Committee delayed it until the Interior and Insular Affairs Legislative Committee could study the proposal and determine if a project planned as long ago as 1930 still was advisable.

By the time the Interior and Insular Affairs Committee had studied the project and endorsed it, it was too late for the proposal to be acted upon by the 84th Congress. House approval thus went for nought. The request would have to run the entire legislative gantlet again in 1958.

Unfortunately, the request failed to meet with the approval of the House Appropriations Committee. Efforts to restore the item in the Senate also met with failure. Virtually all agree that this was a distressing mistake and was apparently brought about by reliance upon minority testimony. Little opportunity was given to Government officials and other interested proponents to present once again the convincing case that has been made on so many occasions for the parkway.

Mr. Collins' comments follow:

THE GEORGE WASHINGTON MEMORIAL PARKWAY

(Comments taken from letter of Mr. Charles Wallace Collins, Harmony Hall, Oxon Hill, Md.)

This property is in the neighborhood closely associated with the life of George Washington. It is on the Maryland side of the Potomac. Directly across the river from Harmony Hall is Wellington, the home of Washington's secretary, Tobias Lear. It is situated on the original Mt. Vernon estate.

Washington ferried across the Potomac to the Maryland shore at Warburton Manor—now Fort Washington.

Ancient Want Water adjoins Harmony Hall on the north. It was built before 1700 and was the home of Col. William M. Lyles, a personal friend and neighbor of Washington. It is listed in the Historic American Buildings Survey—as is Harmony Hall. Nearby is St. John's Church which dates back to 1692. Washington frequently worshipped here. His pew is marked today with a silver plate along with that of Colonel Lyles.

No part of the Gorge Washington Memorial Parkway is more appropriate to the memory of Washington than the neighborhood of Broad Creek.

Letter by Birmingham Businessman States Case for South

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. HUDDLESTON. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a letter to the President of the United States from the Honorable Harry B. Lackey, assistant vice president of the Southern Bell Telephone & Telegraph Co. in my home city of Birmingham.

Mr. Lackey is an outstanding citizen of our city and, indeed, of the South. One of his more notable civic contributions to our State was made when for 3 consecutive years, 1954, 1955, 1956, he served as Alabama State chairman for the USO, for that organization's fundraising drives. This is only one of the many ways that he has proved his civic pride and patriotism, and thus his right to be heard with attentiveness when he voices an opinion on a matter of grave concern to our Nation.

Mr. Lackey's letter contains the thought-provoking idea that, if the Federal Government, particularly through its executive and judicial branches, cannot control its insatiable appetite for creating confusion, strife and turmoil within the confines of our Nation and particularly in the southern section of our country—whether on constitutional questions, legal principles, or long-established social customs—that it set up Federal schools in the South where consideration of racial heritage and background would be totally ignored, to be attended by any children whose parents desired for them to have an integrated education. The proposal does not touch the ancient and, until recently, hallowed system of State schools, which system in the South realistically recognizes that racial segregation is of the utmost importance if order, concord, and cultural advancement of the respective races are to prevail.

In other words, there would be two systems of education: the State system, segregated because the State and a massive majority of its citizen-taxpayers want it segregated, and a Federal system, integrated because those currently in control of the executive and judicial branches of the Federal Government think, as they view the situation abstractly and pseudo-idealistically, that it should be integrated. Then the people being left that divine right to decide for themselves, should determine which system should properly and most effectively provide their children the desired goal—an education.

I say to you, Mr. Speaker, that this proposal, worthy of the serious consideration of all those who so loudly cry for action, action—regardless of the dire consequences of that action, proves once again that on this crucial issue, the people of the South stand united and militant. It demonstrates, by its thorough reasoning and its calm tone that, in this cause, we are steadfast though not unapproachable, properly concerned though not blindly frantic, right though not arrogant.

The letter follows:

BIRMINGHAM, ALA. *October 9, 1958.*

HON. DWIGHT D. EISENHOWER,
President of the United States,
The White House, Washington, D.C.

DEAR PRESIDENT EISENHOWER: It is with some reluctance and certainly with great humility that I write you this letter. First, may I identify myself as the former Alabama State chairman for U.S.O. in the annual fund raising drives for 1954, 1955 and 1956. Through some degree of effort on my part, we were able to raise in this State over one quarter of a million dollars during this period. I attended the meeting in Washington when we visited with you on the steps of the White House in 1956, when the "Viking" Adm. J. L. Hall, Jr., was national chairman. I was in the picture taken on that occasion and later published in the U.S.O. Bulletin, a copy attached. Incidentally, I have framed and treasure a copy of that picture which was sent to me by U.S.O. in New York. Charlie Yates, of Atlanta, asked me to do this civic chore during those years and I feel good for having done so.

The purpose of this letter is far from USO activities and I relate the foregoing only for the purpose of seeking your attention because I know how sincerely you felt about that organization. Those of us who worked for the good of USO, both during and after the war, were only too glad to respond to the call for seeing to it that the objectives of this fine organization were attained. I hope I am not improperly taking advantage of a situation.

During my lifetime, I know of no man affiliated with the Republican Party that caught the imagination of our section of the country more than you when you first ran for the Presidency and were later reelected. I think people in our section, and I have occasion to talk with a number of leaders in our State, still have explicit confidence in you, but, at the same time, recent events, and I have reference to the integration issue, have created keen disappointment and irreparable damage to your political party. The question is: Who is responsible? Generally speaking, the belief is that the actions and events that have taken place were not so much your decision as it was action upon advice of others, which we all recognize is so necessary to the complete functioning of the Presidency.

I shall not attempt to picture for you the shock and disappointment of the turn of events on the part of your administration and the U.S. Supreme Court as it relates to the integration question. I believe that the people of this section are more determined and more united to resist what is now being done by the NAACP, which apparently has full approval of and is being fostered by our present Government and Court. Naturally, I do not know the feeling that existed prior to and during the War Between the States, but I have heard my grandparents relate it and it seems to me that the old sores have been opened and salt poured into the almost healed wounds. To say that the people of this section of the United States are just resistive is putting it mildly. I really believe that our people would bear arms over this issue rather than submit to integrated public schools which we believe would ultimately lead to mongrelization of America. The people of this section of our Nation, largely Anglo-Saxon, want no part of what we see now taking place in Washington, D.C. We believe the people of Virginia where my forefathers, I am told "came to this country about 1760 from Scotland along with the Scotts, Edmontons, Davises, and Campbells," are well within their moral, human, and religious rights in the position they have taken.

I have strayed from what I really want to write about, but I thought you would be interested in this reflection of opinion which I believe can be proved easily. I offer to you a sincere and, what I am told, is a practical suggestion. It is this: In the Friday, October 3, issue of the Birmingham News, an article by Robert S. Allen is headed, "As a Last Resort To Achieve Integration—United States Exploring Idea of Opening Schools in Dixie." Mr. Allen is quoted as saying, "The Justice Department head would have the Federal Government establish and operate integrated schools in these areas." The article goes on to say that you have indicated you may accept this plan "as a last resort."

I believe the people in this area would accept such a plan; that is, have the Federal Government own and operate such schools and, furthermore, that the people in the South would be willing to submit to a direct tax to support them. These schools would be known as Federal schools and would enable any parent of any child to send them to such schools if he so desired. By the same token, the States should be permitted to operate their schools in whatever manner they see fit, either publicly owned and operated or privately owned and operated. This is not unique, such schools now function without any friction on military reservations in the South. If Congress would recognize the problem and pass the necessary legislation it, no doubt, would receive congressional support in the South.

Those of us who have children in school are unwilling to see the entering wedge of integration in this area because we are fearful of the ultimate result and do not believe that the Supreme Court can change the order of things in our area by the reversal of a long standing decision to the contrary which was made many years ago and with which we have kept faith. No doubt the idea should be tested further and it is my proposal to discuss it with our Alabama congressional delegation, all of whom I know and have dealt with personally. If the possibilities of this idea are explored to the fullest, it should receive approval on the part of the people most affected, that is, in the South, and we could head a grave problem in a different and acceptable direction.

I write this letter as strictly a personal matter because I have three daughters in school and, like many thousands of others, would not agree to sending them to integrated schools. Fortunately, it would not be necessary unless private schools were overcrowded and there wouldn't be room available. Moreover, one is now at the University of Alabama and the twins will be in college next year.

My plea, therefore, is for a solution to the overall problem, rather than to a personal problem. Someday I, like you, may have grandchildren and to that extent I am personally interested.

I would be grateful to receive some expression from you. I am sending this letter with a personal note to General Persons, whose brother, the former governor of the State of Alabama, I know well and hold in high regard. I hope it reaches your desk.

Respectfully,

HARRY B. LACKEY.

Unarmed American Aircraft

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. LIPSCOMB. Mr. Speaker, the Department of State today has released a statement detailing the discussions between the United States and the Soviet Union relative to the disappearance over Soviet Armenia of our unarmed C–130 transport on September 2, 1958. The Soviet Union returned 6 bodies from the crew of 17 aboard. On January 15, 1959, I introduced House Resolution 112 which asked that the President "take such steps as may be necessary to present to Soviet Deputy Premier Anastas Mikoyan, while that Soviet official is currently visiting the United States, a formal re-

quest for information concerning the whereabouts of the 11 American airmen who are still missing" from that incident.

Both Secretary Dulles and Vice President NIXON questioned Mr. Mikoyan, but no satisfaction was received. Today the State Department has released not only a chronology of its repeated efforts to discover the whereabout of these men whose status is uncertain, but also three revealing documents which confirm our darkest fears.

The first paper contains a 12-page "Translation of Transcript of Tape-Recorded Radio Conversation Among Soviet Fighter Pilots Who Participated in Attack on C–130, September 2, 1958." The second and third documents are translations—with photostats of the original Russian articles included—of two articles in Soviet Aviation, the newspaper of the Soviet Air Force, on September 19 and 20, 1958.

The first article, entitled "Great Skill: Part 1: The Target Is Detected," glowingly portrayed the role of the antiaircraft defense posts in detecting an aerial target. The following day, part 2, entitled "A Swift Attack," was published. This relates the guidance to the target of Soviet fighter planes. It is significant to note that in both these articles constant reference is made to Soviet intercepters Nos. 201 and 582 as they are guided to the so-called target, also referred to as the enemy.

Mr. Speaker, I now call your attention to page 3 of the official translation of the tape-recorded radio conversation which took place between the Soviet fighter pilots who shot down our C–130 unarmed transport.

582, I see the target, to the right.
I see the target, a large one.
Its altitude is 100, as you said.
I am 201, I see the target, attack.
I am 201. I am attacking the target.
You are understood.
I am attacking the target.
Stand by.
The target is a large one.
Roger.
Attack, attack, 218 attack.
Stand by.
582.
Roger.

I only wish space allowed me to include the full transcript of this murderous attack which was uncalled for by every standard of civilized nations. On page 4 of the transcript, one pilot states, "The target is a transport, four-engined." Further attacks. Then "The target is burning, 582." More attacks, followed by "The tail assembly is falling off the target." On page 5, we note the Soviet pilots saying:

Look at him, he will not get away, he is already falling. Yes, he is falling. I will finish him off, boys, I will finish him off on the run. The target has lost control, it is going down.

It is deplorable to note that the articles in Soviet Aviation conclude with the description of a general welcoming home the pilots: "He shook their hands warmly and thanked them for their successful execution of the mission."

The butchers of Hungary again have done their evil deeds. The repeated disdain registered by the Soviet Foreign Office to our inquiries in this case and their refusal to let American Embassy personnel in Moscow visit the scene of the crash, shows not a feeling of remorse and regret, but a feeling of overbearing arrogance.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the release by the Department of State concerning this sordid affair. I am sure that it will be of great interest to all Members of the House and the public generally.

The release follows:

U.S. REPRESENTATIONS TO SOVIET GOVERNMENT REGARDING UNARMED U.S. AIR FORCE C–130 TRANSPORT AIRCRAFT SHOT DOWN BY SOVIET FIGHTER AIRCRAFT OVER SOVIET ARMENIA ON SEPTEMBER 2, 1958

On September 2, 1958, an unarmed U.S. Air Force C–130 transport aircraft disappeared while on a flight in Turkey. Seventeen men were aboard the plane.

As the result of an investigation conducted by the U.S. Air Force in Europe (USAFE), it was determined that the plane had been intercepted and attacked by Soviet fighter aircraft in the region of the Turkish-Soviet frontier near Kars, Turkey, following which it had crashed in flames in Soviet Armenia.

On September 24, 1958, the remains of six men were turned over to U.S. authorities.

The U.S. Government has repeatedly pressed the Soviet Government for the return of the missing 11 members of the crew of this plane or for information regarding their condition and whereabouts. In its latest written communication on this subject, a note of October 16, 1958, the Soviet Government repeated its earlier denials that any further information was available regarding members of the crew of the plane.

REPRESENTATION BY DEPUTY UNDER SECRETARY MURPHY

On November 13, 1958, Deputy Under Secretary of State Robert Murphy made a lengthy oral representation to Soviet Ambassador Mikhail A. Menshikov, presenting him with evidence that Soviet fighter planes had intercepted the C–130 and shot it down without regard to the rules of civilized international practice. Mr. Murphy said that the United States wished a settlement of this case. He emphasized that some of our men had been killed, that there were certain rules of conduct in the civilized world, and that the United States Government hoped the desired information regarding the 11 missing men would be promptly forthcoming. The Soviet Ambassador said that he would convey the details of this representation to his Government. (A full account of Mr. Murphy's representation is attached.)

The Soviet Government did not reply to this representation.

REPRESENTATION BY THE VICE PRESIDENT

On January 7, 1959, the Vice President of the United States received the First Deputy Chairman of the Council of Ministers of the U.S.S.R., Mr. Anastas I. Mikoyan. During the course of their conversation, the Vice President raised the question of the eleven missing crew members of the C–130. Referring to the desirability of reducing tensions between the United States and the Soviet Union, the Vice President said it would be useful to make progress on matters like this one. He said it would be helpful if the Soviet Government gave the United States Government an indication or a statement about what had happened to the men involved. The Vice President said that the C–130 case has great emotional impact in the United States. Great concern is felt about this case by the American people.

Mr. Mikoyan replied that the Soviet Government had given all the information it had. He said that there was no sense in their trying to hide anything and wondered why the Americans were so suspicious about this.

REPRESENTATION BY THE SECRETARY OF STATE

The Secretary took up with Mr. Mikoyan on January 16, 1959, the destruction by Soviet planes of the unarmed C–130, and asked for information regarding the eleven missing crew members. He pointed out that response by the Soviet Government to our representations would help to satisfy serious anxieties felt by the American people, who want the missing men returned, and that a meaningful response would be a helpful step from the standpoint of United States-Soviet relations.

Mr. Mikoyan said that the Soviet Government had done all that it could, that all the bodies had been returned, and that the Soviet Government did not know about any other personnel. Mr. Mikoyan protested that there would be no point in the Soviet Government holding any bodies or living crewmen, and he expressed the Soviet Government's lack of understanding and irritation over the U.S. Government's insistence concerning this case. He denied that the plane had been shot down, asserting that it had crashed.

In view of the refusal of the Soviet Government to respond satisfactorily to this Government's representations on this case, the U.S. Government reserves its rights with reference to the human and material losses incurred as a result of the Soviet action of September 2, 1958.

The remains of six members of the crew of the C–130 were returned to United States authorities on September 24, 1958. Four of the crew members were subsequently identified and were buried in accordance with the wishes of next of kin. The two unidentified remains will be buried with full military honors at Arlington National Cemetery at 11 a.m. on February 6, 1959.

ATTACHMENT NO. 1

REPRESENTATION BY DEPUTY UNDER SECRETARY MURPHY TO SOVIET AMBASSADOR MENSHIKOV, NOVEMBER 13, 1958

On November 13, 1958, Deputy Under Secretary of State Robert Murphy received Soviet Ambassador Mikhail A. Menshikov, who was accompanied by Maj. Gen. Mikhail N. Kostiouk, Air Attaché of the Soviet Embassy at Washington.

Mr. Murphy recalled Ambassador Menshikov's past statements regarding his desire to promote improved U.S.–U.S.S.R. relations and better understanding between the two countries. He then referred to the loss of the U.S. Air Force C–130 in Soviet Armenia on September 2, 1958, as a cause of grave misunderstanding. He expressed the hope that the Ambassador would cooperate in removing this misunderstanding.

Mr. Murphy told the Ambassador that it was difficult for the U.S. Government to understand why the Soviet Government had supplied no information regarding the crash until 10 days after the incident had occurred, and then had furnished only a fragmentary report. Mr. Murphy reviewed the facts in the case and informed the Ambassador that it appeared to the U.S. Government that the American pilot, as a result of the signals transmitted by radiobeacons in Soviet Georgia and Armenia, had probably made a navigational error which resulted in his unintentionally crossing the Soviet border. The plane, having thus flown into Soviet territory, had been shot down by Soviet fighter aircraft without regard to the rules of civilized international practice, as though it were an enemy aircraft. The tail assembly had been shot off and the plane had fallen out of control.

There had been 17 men in the plane, but the remains of only 6 men had been returned

to the American authorities. Accordingly, the U.S. Government was making this démarche to the Soviet Government through Ambassador Menshikov for information in the possession of the Soviet Government regarding the men who were still missing. Mr. Murphy said that he could not emphasize enough the gravity with which the U.S. Government viewed this case. The U.S. Government wanted the facts. It wanted to know what had happened to the men.

Since the Ambassador had questioned Mr. Murphy's statement that the U.S. plane had been shot down by Soviet fighter aircraft, Mr. Murphy offered to have played for the Ambassador a recording of the radio conversation between the Soviet pilots who had shot down the C–130. The Ambassador declined to listen to this recording, saying that he was not competent to assess it from a technical point of view. Mr. Murphy explained that it was for that reason that the Soviet Air Attaché, General Kostiouk, an aviation expert, had been invited to accompany the Ambassador on his call. Mr. Murphy explained that the Ambassador had been summoned in order that facts known to the U.S. Government might be communicated to him as Soviet Ambassador to the United States for conveyance to his Government. Mr. Murphy said that it was Ambassador Menshikov's responsibility, as Soviet Ambassador to the United States, to listen to the representations that were being made to him. The Soviet Ambassador nonetheless refused to listen to the tape recording. Mr. Murphy then gave the Ambassador a transcript in Russian of the recording.

Ambassador Menshikov stated that the Soviet Government had replied to the notes addressed to it by the U.S. Government on this matter and suggested that these replies represented all the information available to the Soviet Government. Mr. Murphy replied that evidence in the possession of the U.S. Government indicated that additional and very important information was available, and added that it was the intention of the U.S. Government to pursue this case further. Mr. Murphy said that the U.S. Government wished a settlement of this case. He emphasized that some of our men had been killed, that there were certain rules of conduct in the civilized world, and that the U.S. Government hoped the desired information regarding the missing men would be promptly forthcoming.

Mr. Murphy then briefly reviewed the case once more, pointing out that the operation of Soviet radio beacons in the area might easily have induced a navigational error on the part of the pilot. He said that the plane had entered Soviet airspace in error and not intentionally.

Mr. Murphy then read most of a translation of an article entiled "Great Skill: A Swift Attack," which had been published in Soviet Aviation, the newspaper of the Soviet Air Force, on September 20, 1958. When he had concluded, the Soviet Ambassader asked Mr. Murphy whether what had been read were fiction. Mr. Murphy then handed the Ambassador photostatic copies of the article and a preceding one on the same subject. Mr. Murphy once more told the Ambassador that the U.S. Government regarded this case with extreme gravity.

Ambassador Menshikov said that he would convey the details of this representation to his Government.

ATTACHMENT No. 2

CHRONOLOGY OF CASE OF USAF C–130 SHOT DOWN OVER SOVIET ARMENIA ON SEPTEMBER 2, 1958

September 2: An unarmed USAF C–130 transport aircraft, attached to the 7406th Support Squadron based at Rhine-Main Air Base, Frankfurt, Germany, disappears between Trabzon and Van, Turkey, while participating in a worldwide Air Force project to study the propagation of radio waves transmitted by United States radio stations. The plane was on a flight from Adana to Trabzon to Van and back to Adana, all within Turkey. Aboard the aircraft were Capt. Paul E. Duncan, Washington, D.C.; 1st Lt. John E. Simpson, Richland, Wash.; Capt. Rudy J. Swiestra, Compton, Calif.; 1st Lt. Ricardo M. Villarreal, Laredo, Tex.; Capt. Edward J. Jeruss, New Haven, Conn.; Sgt. Leroy Price, Hodgeville, Ky.; T. Sgt. Arthur L. Mello, Erie, Pa.; M. Sgt. George P. Petrochilos, Levittown, Pa.; A1c. Robert J. Oshinskie, Shamokin, Pa.; A2c. James E. Ferguson, Jr., La Porte, Ind.; ASC Joe L. Fields, Cynthia, Ky.; ASC Gerald C. Maggiacomo, Everett, Mass.; ASC Harold T. Camps, Coleman, Wis.; ASC Robert H. Moore, West Monroe, La.; ASC Archie T. Bourg, Baton Rouge, La.; ASC Clement O. Mankins, Fayette, Pa.; ASC Gerald H. Medeiros, New Bedford, Mass.

The Turkish Government and the Air Force begin an intensive search for the missing plane.

September 6: The American Embassy at Moscow delivers a note to the Soviet Ministry of Foreign Affairs, and the American Embassy in Teheran orally approaches the Iranian Foreign Ministry, asking for any available information regarding the plane and its crew of 17 (see press release No. 518, dated Sept. 6, 1958).

September 8: The Soviet Foreign Ministry orally informs the American Embassy at Moscow that the Soviet authorities conducting the investigation requested in the Embassy's note of September 6 desire to know in what region the plane might have approached the Soviet border. In response to the Embassy's question, the Ministry states that the Soviet authorities have no information about the plane.

September 12: The Soviet Foreign Ministry delivers a note to the American Embassy at Moscow in which it is stated that a USAF aircraft has been found 55 kilometers northwest of Yerevan in Soviet Armenia (see press release No. 534, dated September 12, 1958). The note further states that remains of bodies were found "from which it is possible to assume that six members of the plane crew perished." The note charges a deliberate violation of the Soviet frontier. In answer to oral questions put by the U.S. Chargé d'Affaires, Richard H. Davis, the Soviet Foreign Ministry states it has no further information to add to that given in the note. The Chargé Affaires requests that a further search for the missing men be made, that an officer of the Embassy or another U.S. official be permitted to visit the crash site of the plane and that arrangements be made for the transfer to American authority of the remains of the six crew members mentioned in the Soviet note.

September 13: The American Chargé d'Affaires in Moscow delivers a note to the Soviet Foreign Ministry requesting information as to the whereabouts and condition of the 11 missing men and stating that the United States expects full cooperation from the Soviet Government in granting access to the crewmen and in returning them. The note also requests that representatives of the Embassy accompanied by technical experts as may be required to investigate the circumstances of the crash be permitted to visit the scene of the crash and that facilities be extended to them for effecting identification of the victims and arranging for the transfer of their remains to appropriate U.S. authorities. The note goes on to reject the Soviet charge that the plane intentionally violated the Soviet frontier and states that the U.S. Government is unable to understand the delay of the Soviet authorities in furnishing it with the limited information contained in the Soviet note of September 12 or the oral denial of any information made by a Foreign Ministry official. It states further that the U.S. Air Force has information to the effect that the plane was intercepted by three Soviet fighter aircraft in the region of the Soviet-Turkish frontier, that following the interception the plane proceeded eastward under the control of the Soviet aircraft, and that shortly after this an explosion was heard and a large column of smoke was observed rising at a point within Soviet territory. Finally, the note demands complete information regarding the circumstances surrounding and following the interception. In answer to a question of the Chargé d'Affaires, the Ministry official to whom the note was delivered repeats that the Soviet authorities have no further information on the missing men.

September 15: The American Chargé d'Affaires in Moscow, Richard H. Davis, asks Acting Soviet Foreign Minister Kuznetsov when a reply to the note of September 13 will be forthcoming and if he has any further information on the missing men, pointing out the anguish suffered by the men's relatives. The Acting Foreign Minister replies that he has no further information, that a reply will be expedited, and that these unpleasant affairs would be avoided if American planes would stop penetrating Soviet airspace.

September 17: Soviet Deputy Foreign Minister Firyubin repeats the answers given two days earlier by the Acting Foreign Minister to the same questions put by the American Chargé d'Affaires.

September 19: The Soviet Foreign Ministry replies to the American Embassy's note of September 13. The reply states that the Soviet Government has no information on the 11 missing crewmen and indicates the willingness of the Soviet Government to transfer to the American authorities the remains of 6 members of the crew found at the site of the crash. The note denies that Soviet fighter planes intercepted the USAF C–130 in the area of the Turkish-Soviet frontier. The American Chargé d'Affaires again presses the Acting Soviet Foreign Minister for information on the 11 missing men but is told that the Soviet Government has no information about them. The Chargé d'Affaires also reiterates the request that American officials be permitted to examine the wreckage at the scene of the crash, but is informed that this would not be possible. In response to a question, the Acting Soviet Foreign Minister tells the American Chargé d'Affaires that he has nothing to add to what is in the note concerning the circumstances surrounding the crash.

September 21: The American Embassy at Moscow delivers a note to the Soviet Foreign Ministry again requesting information on the missing 11 crewmen. The note also requests the transfer without delay of the remains and all materials which will facilitate identification of the six airmen who are known to have perished.

September 24: The remains of the six airmen are delivered by the Soviet authorities at Leninakan on the Soviet-Turkish frontier to the Air Attaché of the American Embassy in Ankara (see Press Release No. 555 of September 23, 1958).

October 3: The American Ambassador at Moscow hands to the Acting Soviet Foreign Minister a note requesting further information on the plane (see Press Release No. 587 of October 7, 1958). The note repeats the description of the interception of the USAF C–130 by Soviet fighter aircraft in the area of the Turkish-Soviet frontier and states that it must be assumed that the Soviet fighter pilots involved have knowledge of the circumstances surrounding the crash of this unarmed plane. The note states that in view of this, the United States Government cannot understand why the Soviet Government appears unable to furnish information on the circumstances of the crash or on the whereabouts and condition of the missing 11 airmen. After again rejecting the Soviet charge that the C–130 intention-

ally violated the Soviet frontier, the note requests information on the crash and on the missing men, requests that United States technical experts be permitted to examine the wreckage at the crash site, and states that the United States reserves the right to full compensation for the loss of the aircraft and its equipment.

October 6: In the course of a conversation on another matter raised by the Ambassador, Deputy Under Secretary of State Robert D. Murphy requests Soviet Ambassador Menshikov for information on the missing 11 airmen and for access by U.S. authorities to the crash site of the C–130. The Ambassador states that the Soviet Government has no further information on the matter and that, since the crash site was probably in a restricted frontier area, the United States was asking to visit a closed area in the Soviet Union. Mr. Murphy asks Ambassador Menshikov to inform the Soviet Government of his comments, adding that the United States has evidence that the C–130 was shot down.

October 16: American Ambassador Thompson is handed a note by Soviet First Deputy Foreign Minister Kuznetsov in Moscow. The note reiterates the statements contained in earlier Soviet communications on this subject to the effect that no further information is available and that the United States bears the responsibility for the incident.

November 4: The Air Force announces the identification of four of the six-crew members who perished in the crash and whose remains were transferred to American officials on September 24. The Air Force announces that the two crew members whose remains were not identified will be buried at Arlington National Cemetery with full military honors. The crew members identified were:

1st Lt. John E. Simpson, Richland, Wash.; Capt. Rudy J. Swiestra, Compton, Calif.; 1st Lt. Ricardo M. Villarreal, Laredo, Tex.; Capt. Edward J. Jeruss, New Haven, Conn.

November 13: Deputy Under Secretary of State Robert D. Murphy receives Soviet Ambassador Menshikov, who is accompanied by Maj. Gen. Mikhail N. Kostiouk, Air Attaché of the Soviet Embassy at Washington. Mr. Murphy presents the Soviet Ambassador with evidence that Soviet fighter planes intercepted the C–130 and shot it down.

January 7, 1959: Vice President RICHARD M. NIXON, during a conversation with Soviet First Deputy Premier Anastas I. Mikoyan, asks that the Soviet Government give the United States Government an indication or a statement about what happened to the 11 missing crew members of the C–130. Mr. Mikoyan replies that the Soviet Government had given all the information it had.

January 16: The Secretary of State, during a conversation with Soviet Deputy Premier Mikoyan in the afternoon of January 16, asks about the fate of the crew of the C–130. Mr. Mikoyan says that the Soviet Government had done all that it could do. Mr. Mikoyan declares that the plane had not been shot down.

General Electric Receives Award for Its Work To Improve Understanding Among Nations

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 5, 1959

Mr. KEATING. Mr. President, on January 30 of this year a distinguished firm with its headquarters in New York State, General Electric Co., received a special award for its efforts to improve world relations. At a dinner at the Mayflower Hotel, the Institute of International Education celebrated its 40th birthday, as part of the third national conference on exchange of persons, which the institute sponsored.

A highlight of the dinner was the award by Vice President NIXON to General Electric, as one of five organizations, institutions, or individuals which has made unusual contributions to the improvement of understanding among nations.

In bestowing this award, the institute recognized the outstanding programs General Electric has carried out through the years by means of which many young people from abroad have been introduced to this country and have returned to their homelands to better conditions there, as well as to serve as ambassadors of good will for the United States.

We in New York State are extremely proud of this record, and are happy to join with the entire Nation in saluting General Electric for its manifold contributions to cementing world friendship and cooperation. The citation accompanying the award to General Electric outlines well the company's many international activities. It was accepted by Mr. J. S. Parker, vice president of General Electric Co., in the absence of Mr. W. R. Herod, president of International General Electric Co.

I ask unanimous consent that the text of the citation be printed in the Appendix of the RECORD.

There being no objection, the text of the citation was ordered to be printed in the RECORD, as follows:

CITATION FOR A U.S. CORPORATION

To the General Electric Co., an American corporation known throughout the world for its dynamic leadership and dedication to progress, the Institute of International Education presents its award for distinguished service.

The history of General Electric Co.'s 70 years of growth reflects its confidence and willingness to invest in a peaceful future. Matching the vision of its men of research, production and distribution has been General Electric's imaginative acceptance of its responsibility for public service, not only in the United States but in the more than one hundred other countries in which it operates around the globe.

Within a year after its incorporation, General Electric Co., in 1893, brought its first foreign student to the United States for training. Since that pioneer step, over 1,800 young men and women from 62 countries have trained in this country under the company's sponsorship and guidance. Returning to their homes with new knowledge and skills, and better understanding of the economic, social, and political structure of the United States, these young people have taken positions with local industry, government, and educational institutions. Their contribution to the economic and social development of their own nations and to the betterment of international understanding has been profound.

In addition to this major program of educational exchange, General Electric has brought thousands of its own employees and those of affiliated concerns to the United States for specialized training and observation of American industrial and community life. It conducts in the countries where it operates dozens of training schools, not only for instruction in mechanical skills essential to industrial advancement but in the English language, public health, and other subjects of importance to local employees and communities. It has cooperated closely with the U.S. Government and other agencies in providing training and observation opportunities for great numbers of foreign specialists and advanced engineers. Its domestic plants each year receive more than 2,000 special observers from countries throughout the world.

Taking the best of its laboratories and plants to millions of people, the famed Science Show of General Electric has toured the world, revealing to men and women of other nations the wonders of the future and giving new hope for their own technical, economic, and social advancement. As a public service in the field of medicine, General Electric cooperated in introducing educational television to Latin America. Nearly a decade ago, in the infancy of closed-circuit broadcasting, the company's program "Video Medico" provided Latin-American doctors with training in advanced surgery techniques. This represented a revolutionary teaching concept both at home and abroad.

The Institute of International Education believes that the General Electric Co.'s record of service and leadership in meeting international responsibilities, and its faith in the future of foreign economic development, merit this award.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Address by Paul M. Butler at Luncheon Honoring Gov. G. Mennen Williams

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. McNAMARA. Mr. President, at a New Year's Day luncheon honoring G. Mennen Williams on his inauguration as Governor of Michigan for a sixth term the guest speaker was Paul M. Butler, chairman of the Democratic National Committee.

I ask unanimous consent that the text of Mr. Butler's luncheon address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF SPEECH OF PAUL M. BUTLER, CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE, AT INAUGURAL LUNCHEON FOR GOV. G. MENNEN WILLIAMS, LANSING, MICH., JANUARY 1, 1959

This is a most memorable occasion for all of us.

First of all, it is a great day for the people of the State of Michigan, for today marks the renewal of another 2-year period of progress and achievement for the citizens of this State, under one of the most notable administrations in the history of American State government—an administration noted not only for its longevity in office but for its breadth and caliber of accomplishment.

The transformation of the character and quality of the government of this State over the past decade has served to place Michigan in the front ranks of the best governed States in the Union. The people of Michigan know and appreciate this fact.

For this reason, they have adopted the pleasant habit of returning Governor Williams and the Democratic Party to the Executive Mansion in Lansing each 2 years—and, judging by the results, I would say that it is one of the most fortunate habits that the people of this State have ever acquired. It speaks well of their political judgment and of their desire to keep their State government attuned to the ever increasing needs of a constantly growing and rapidly changing society.

Thus, today should be a day of rejoicing for the citizens of Michigan, for the achievements of the past decade, under Governor Williams' leadership, have served to make Michigan a truly great State in which to live.

This is a great day particularly for Governor Williams and his family. I am sure that it is difficult for many of us to realize that today marks the beginning of Governor Williams' 11th year as Governor—a feat unprecedented in Michigan history—for Governor Williams is one of the younger men in American political life.

At an age that would be considered very early for many capable men to first achieve high public office, Governor Williams is already the senior Governor of the United States, and he has achieved what to my knowledge no other man in modern American history has attained—election as Governor of one of our greatest States for six consecutive terms.

I know that it must be a source of great pride to Governor Williams to know that the people of his State have bestowed upon him these repeated reaffirmations of confidence and expressions of approval for a job well done. But we know that they are tributes which have been hard won and are well deserved, indeed. Governor Williams knows that the best politics is a strong record of positive achievement and that the people always respect a man of courage and conviction, even if they disagree with him on occasions. That is why your Governor is beginning his sixth term in office today.

Finally, this is a great day for the Democratic Party, and to appreciate this fact freely, one has only to look to the situation of our party in this State a decade ago.

Ten years ago, the Democrats had no U.S. Senate seat, only 3 out of 17 Congressmen, 4 out of 32 State senators, 5 out of 100 State representatives, no members of the State administrative board, no members of any higher education boards, and only 2 Democratic-nominated justices on the State supreme court.

Today, for the first time in history, Democrats hold all top State offices and both U.S. Senate seats. In addition, we have elected 7 out of 18 Congressman, 12 State senators out of 34, 55 out of 110 members of the State house of representatives, all 8 members of the State Administrative Board, 4 out of 6 members of the board of agriculture, 4 out of 8 members of the University of Michigan Board of Regents, 1 out of 3 seats on the board of education, and 5 members out of 8 on the State supreme court.

Another interesting fact is that since 1954 there have been 40 statewide elective positions at stake in five elections. Democrats have won 37 out of the 40 positions, scoring "sweeps" in four out of the five elections.

The past few years have witnessed a remarkable expansion of support for our party throughout the Nation, especially in the West and Far West, and in those areas which had only recently been thought of as impregnable Republican strongholds—such as Maine, Vermont, Kansas, Nebraska, and South Dakota. But nowhere has the record of growth of our party been more widespread and more sustained than here in Michigan—a fact which should be a source of great pride to every Democrat in this State.

Of course, this record just did not happen. There are a number of very substantial reasons for it.

First of all is the fact that not only is Governor Williams an outstanding Governor, he is a great party leader and he takes seriously his responsibility to provide political leadership.

Governor Williams knows that it is impossible for one man alone to achieve all the things which a good Governor should do for the State, and that that government which is most responsible and most responsive to the needs of the people is able, dedicated party government, functioning within the framework of the two-party system. He knows also that the principles and program of our great party transcend any one individual, and that it is necessary to develop a large number of capable and dedicated men and women who can assume positions of responsibility, carry on the work of our party, assist with the implementation of the Governor's program and give effective expression to our party's aims and ideals at all levels.

The role of Governor can be decisive in the growth of his political party. Governor Williams has chosen to act vigorously as a party leader, to provide direction, to give of his time and effort to building the party. And the results show it.

Other very substantial reasons for this great record of party success are, of course, that grand gentleman, Neil Staebler, one of the finest men and one of the most able chairmen in our party; your outstanding and distinguished representatives on the national committee, Mrs. Margaret Price and Tom Quimby and, as an alternate, Mrs. Mildred Jeffrey; your wonderful vice chairman, Miss Adelaide Hart, and scores of other such dedicated men and women of this caliber who constitute the leadership of our party in this State.

Under this leadership, active political organizations have been developed throughout the State at the county level; the precincts have been organized; many people never before politically active have been persuaded to assume political responsibilities; effective representation and leadership have been provided from your State on the national level and the whole base of our party leadership has been broadened, as it should be, to give maximum expression to the largest possible number of party members.

To belong to the Democratic Party in Michigan, to participate in it and to work on its behalf has been made an enjoyable, meaningful, and most rewarding experience for the individual.

Consequently, you have developed one of the finest groups of precinct and county committee workers of any State in the Nation and they are the backbone of any party.

Another very important reason for the success of our party in this State has been the caliber of candidates you have chosen to carry our party's banner—men like Governor Williams; that able and fearless fighter for the people's interest, Senator PAT MCNAMARA; your outstanding, intelligent, and most promising Senator-elect, PHIL HART; your fine newly elected Lieutenant Governor, John Swainson; your unusually competent congressional delegation; the members of the State administrative board, and other elected State officials.

Today, more than ever before, voters are taking a closer look at the candidates themselves, and unless the man or woman is, in and of himself or herself, worthy of the job to which he or she aspires, the chances are that the party label will not be sufficient to pull them through. One of the most outstanding features of our party here in Michigan has been your ability to keep coming up with candidates of unusual ability, integrity and attractivenes to the voter. That is the acid test of any good party organization.

As important as are the factors which I have just outlined, I do not believe that our party could ever have achieved the record it has here in Michigan, had it not been for the fact that the Democratic Party of Michigan is first and foremost an "issue-oriented" organization—one held together primarily by belief in and devotion to some commonly held, clearly enunciated principles that provide motivation for political action.

This, it seems to me, is the keystone upon which politics in the modern era must be founded.

The extent and nature of the modern means of mass communication, the increased educational level of the population, the increasing importance of nationalizing trends as regards both section and nationality, the expanding participation of citizens in the processes of political parties and the growing importance of governmental programs in the Nation's economy and the everyday life of the citizen are all increasing the emphasis on the power of issues, principles and ideas as the forces which are most responsible for the attraction and lasting attachment of new people to the banners of political parties.

Party leaders are fast discovering, some the hard way, that political organizations based solely on patronage, personal favors and the power and prestige of public office no longer enjoy the tremendous effectiveness they once possessed.

While these factors continue to be important forces to be reckoned with in building a party organization, other factors are growing in importance.

The caliber and personality of individual candidates are of increasing importance, but while temporary winning combinations may be put together on the basis of a candidate's personality alone, it is his performance in office and his identification with meaningful issues and principles that counts the most in the building of a vigorous and lasting party organization which can survive the passage of the personality from the scene.

Thus it is that the "new politics" places a premium on principles and demands greater attention be given to issues and the kind of image that the party projects to the average citizen.

A party organization which is held together by the bonds of common convictions and dedication to principles and ideas may be a more difficult and delicate structure to create but it is fashioned of hardy material, designed to endure and function as a truly responsible party should. Such a party is not only a tribute to its leadership, but a positive contribution to the society in which it operates.

And it is the most winning kind of organization. Proof of this can readily be seen in the results of recent elections, for wherever our party is creating an issue-oriented organization and is emphasizing a hard-hitting approach based on issues designed to clarify the differences between our party and the opposition, we are making steady and often phenomenal progress and achieving some remarkable victories in areas where victories by Democrats had never been seriously considered before.

It is not surprising that this should be so. For the greatest strength of our party down through the years has always been the things in which we believed. Because of our attention to issues and principles we have become known as the party of ideas. This has been our secret of success both in winning elections, achieving and maintaining a position as the majority party of the Nation, and in attracting to our ranks men and women of unexcelled excellence and intellectual integrity.

The principal problems which today face the people of the State of Michigan and of our Nation stem primarily from the shrinkage of our national economy, the declining rate of our national economic growth, and the consequent reduction of income and revenue at the local, State, and national levels. These problems are related to our failure on the national level to provide for the growing backlog of accumulated need, thus thrusting an impossible additional burden on the States at the same time that we are failing to meet the extremely serious economic, political, and military challenge posed by the growth of the Soviet Union and the growing needs of the underdeveloped countries.

These problems can be met only at the national level and only by people who have both the will and the imagination to put America once again on the road to achievement of the sustained economic growth and military readiness of which we are capable.

The very same people who advocate a backward policy of retrenchment and shrinkage of governmental effort on the State level are generally the people who offer the head-in-the-sand policy of economic strangulation by reduced national effort on the Federal level.

These are the very same people who seek to avoid Federal action by protesting in the name of States' rights and then proceed to shirk State responsibilities by threatening the flight of industry and capital from the State should the State government act to meet the needs of the times.

Thus the buck is passed, responsibilities are avoided, duties are shirked. This philosophy, long pursued, can lead, in the treacherous world of today, to only one result—national suicide.

That is why the overwhelming victory achieved by our party on the congressional level this past November is so important to our Nation. For it is only to the extent that government accepts its full responsibilities at all levels that the full creative energies of our people may be released.

The voice of the people on November 4 said that America should move ahead, at all levels of government.

The voice of the people as expressed in the mandate of the ballot box said that America can, and must, afford the price of survival.

It is our task in the next biennium to give expression to this mandate for progressive action, and to justify once again the trust which has been reposed in us.

Address by George E. Stringfellow, Imperial Potentate of the Shrine

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. JACKSON. Mr. President, on January 3, 1959, the El Katif Temple, AAONMS, in Spokane, Wash., was honored with a visit by George E. Stringfellow, imperial potentate of the Shrine of North America. At a banquet in his honor, Mr. Stringfellow offered a definition of a Mason and a Shriner that has lasting value as a reminder of the great principles on which this fraternal organization was founded and of the great work Shriners perform on behalf of crippled children. I ask unanimous consent that a digest of Noble Stringfellow's remarks be printed in the Appendix of the RECORD.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

It has been my privilege to visit your city on a number of occasions in the capacity as president of the manufacturing division of the American Mining Congress, as vice president of Thomas A. Edison Industries, Division of McGraw-Edison Co., as a Shriner, as an imperial officer, and now as imperial potentate, and I want you to know that I feel that you have always made me feel at home, whenever I visit Spokane in any capacity.

I am particularly grateful, as is Mrs. Stringfellow to your illustrious chief rabban, Noble C. Grover Wilson, and his gracious lady Irene, for the special attention they have paid to us since our arrival here. I would also single out my good friend and one of mankind's benefactors, the Honorable A. Henry Pierce, 33d degree, past illustrious potentate of this temple, chairman of the board of governors of the Spokane unit of the Shriners Hospitals for Crippled Children and a member of the board of trustees of that great philanthropic organization. He has added much to my life and he has been extremely helpful in making life more comfortable for crippled children. He is truly one of God's noblemen.

I am happy to recognize the presence of Illustrious Harold W. Walker, potentate of Algeria Temple, Helena, Mont., and members of his divan, Illustrious Sir Herman H. Dokken, potentate of Bagdad Temple, Butte, Mont., and members of his divan, Illustrious Sir Herbert L. Powell, potentate of Calam Temple from Lewiston, Idaho, and members of his divan, and finally my good friend of long standing, Barney Heffner, who for years was one of the moving spirits in Bunker Hill & Sullivan Mining & Concentration Co. and who now resides here in Spokane.

I also recognize the gracious and beautiful ladies who adorn this gathering with their presence. Some wise man once said, "Next to God we owe most to women for life itself and then for making life worth living." I am sure that applies to those in our audience.

Some months ago I was asked to give my definition of a Mason and a Shriner. Of course you Shriners know that all Shriners must first be Masons. Therefore, if you will bear with me for a few moments, I will give you that definition.

DEFINITION OF A MASON

A Mason is a man who believes in God and practices that belief. A Mason is a man who believes in brotherly love and practices his belief. A Mason is a man who uses the symbols of the builder to set for himself and his brethren a code of life which refines his thoughts, purifies his sympathy, and broadens his outlook, it amplifies his friendship, exalts his morality, and tames his passions.

DEFINITION OF A SHRINER

A Shriner is a Mason employing all of the virtues and characteristics I have just mentioned and perhaps more. A Shriner is a Mason who realizes the work of the craft, exemplifying the high code of morality, requires refreshment. In obtaining that refreshment, Shriners adopted the code, 59 years ago, of pleasure without intemperance, hospitality without rudeness, and jollity without coarseness.

The general public identifies Shriners by their red fez, gorgeous costumes, and parades. However, behind our fun and behind our frolic is a burning desire to be of help to crippled children, regardless of race, regardless of creed, and regardless of color.

The love of little children has turned Shriners into ministers of healing and ministers of happiness. The red fez thus takes its place with the Red Cross as an emblem of mercy and as an emblem of loving kindness.

Shriners' desire to help crippled children is implemented through 17 hospitals organized 36 years ago. Those hospitals are often referred to as temples of mercy. In the words of one of our leading citizens crippled children's work "gave the Shrine its soul."

May I, in all reverence, quote the words of the Holy Writ: "Suffer little children to come unto me," and paraphrase those words

as follows, "Bring into our hospitals little children that suffer, so that we may lead them from the valley of despair to the hills of help, of hope, and of happiness."

Masons and Shriners walk especially close to God when they aid crippled children, which has been one of our prime objectives for many years.

The Shrine is often referred to, of course in jest, as an old man's organization. However, I submit that youth is not a time of life; it is a state of mind. Men grow old by deserting ideals. Years wrinkle the skin but compromising principles wrinkle the brain and sour the soul. We Shriners strive to emulate St. Paul who, while crying the days were evil, labored to improve them. We Shriners radiate good will which is more precious than a gold nugget and harder to find. Good will is a measure of a man's success and to a large extent determines his usefulness to society. Good will is a priceless possession. Shriners cherish no jealousies and entertain no hatred for their fellow man.

A great Chinese philosopher more than 2,000 year ago, uttering these words, "With righteousness in the heart, there will be beauty in the character; with beauty in the character, there will be harmony in the home; with harmony in the home, there will be order in the nation; with order in the nation, there will be peace in the world," set forth a philosophy to which every Shriner can and does subscribe.

Shriners seek peace but always with honor, for we realize that our forefathers bequeathed to us a way of life that we should preserve, and if we are worthy of our heritage we will lift our voices in defense of it, to the end that every American may enjoy a high living standard and degree of liberty heretofore undreamed of.

Civil Rights and Labor Legislation

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent that two articles which were published on February 1 and 2 in the Newark Sunday and Evening News be printed in the Appendix of the RECORD. One, an editorial, is entitled "A Real Rights Bill." The other, a column by Marquis Childs, is entitled "Labor Reform Battle."

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Newark Sunday News, Feb. 1, 1959]

A REAL RIGHTS BILL

The same progressive Senators who tried unsuccessfully to knock out the anti-civil rights filibuster have returned to the fight with legislation to reinforce the Supreme Court's school integration decree. As in the Senate rules battle, New Jersey's Senator CASE, Senator DOUGLAS, Democrat of Illinois, and Senator JAVITS, Republican of New York, again lead the bipartisan coalition.

What the group seeks is a declaration of congressional policy that will support with the power of the purse and stronger laws the Supreme Court ruling which, after nearly 5 years, finds Virginia integrating 21 Negro children in the State's schools. It may be said that Governor Almond has finally abandoned Virginia's massive resistance and yielded to the Federal and State courts. But among his brother Governors, notably in Arkansas, Alabama, and Georgia, defiance goes on.

Concededly the outlook for the Case-Douglas legislation is little better than when it was bypassed last year, a senatorial abdication that had its sequel in closed schools and the bombing of places of worship. LYNDON JOHNSON, the Senate's Democratic leader, didn't want integration action then, he doesn't want it now. Otherwise he would not have barred any reference to school integration from his compromise program for which his brother Democrat Senator DOUGLAS, has another name. He calls it surrender.

That is why the new legislation contemplates the expenditure of $200 million in Federal funds over a 5-year period to support schools deprived of State funds to thwart desegregation. What happens to it will provide the country with a far better guide to Democratic intentions than any kind words for civil rights out of the governors' conference in Detroit or the pious promises that may find their way into the national platform of 1960.

[From the Newark Evening News, Feb. 2, 1959]

LABOR REFORM BATTLE—CONGRESS WARNED PUBLIC TIRES OF POWER ABUSES

(By Marquis Childs)

WASHINGTON.—In the many-sided dispute over labor legislation, one thing should be clear even to the leaders of the big unions. The appalling abuses of labor power exposed over recent months have created a widespread demand for reform.

Those who are jockeying for position and power in the struggle now beginning in Congress will ignore this at their peril.

The fight will be waged from three—perhaps four—vantage points. Here in general is the alinement:

PROBERS' BILL DUE

1. Senator JOHN F. KENNEDY was first in the field with a bill to end abuses disclosed in the investigation of James Hoffa and his Teamsters Union. But the Kennedy bill, cosponsored by Senator SAM ERVIN, JR., of North Carolina, with wide Democratic support, also contains as a kind of sweetener minor amendments to the Taft-Hartley Act that labor wants. Without these amendments, the AFL-CIO might oppose the measure and perhaps succeed in killing it.

2. The administration has put in its own measure which contains the reform proposals aimed at union corruption. It goes farther in Taft-Hartley amendments, taking in new ground on secondary boycotts and certain forms of picketing strongly opposed by labor.

3. Senator JOHN MCCLELLAN, whose committee exposed the abuses, is expected to come up with his own proposals going beyond both KENNEDY and the administration. In this same camp is Senator BARRY GOLDWATER, the foremost exponent of right-to-work and other union curbs. Because of his position on the Senate Labor Committee, GOLDWATER is sponsor of the administration bill, and that has produced considerable embarrassment to all concerned.

FEELING THEIR POWER

In between are those who hope that a reform bill shorn of the Taft-Hartley amendments can be quickly passed. Moderate Republicans, such as Senator CLIFFORD CASE, of New Jersey, are working toward this end. While he will not say so, it is possible that KENNEDY would accept this compromise to get a measure on the statute books effective against corrupt and racketeering unions and their corrupt leaders.

Labor leaders are feeling their power since the election of last November. But when it is used, as George Meany, head of the AFL-CIO, is said to have used it, to dictate the new members of the Senate Labor Committee, then even those long friendly to the objectives of organized labor grow resentful.

A moderate reform bill will neither end all abuses nor stop the controversy. But it will be a step in the right direction.

Racial Segregation

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. THURMOND. Mr. President, one of the most thought-provoking letters ever written for the benefit of public consumption was Carlton Putnam's October 13 letter, to President Eisenhower, commenting on racial segregation. This letter has been published in newspapers throughout the Nation. In most instances, Mr. Putnam's letter was printed on the editorial pages presenting an intelligent viewpoint.

In order to have this viewpoint presented in newspapers which did not wish this viewpoint known, a special committee was organized for the purposes of collecting money to have the Putnam letter presented as a paid advertisement. To my knowledge, only one major newspaper in the United States has refused to give its readers the benefit of the Putnam viewpoint; that newspaper is the Post and Times Herald, here in Washington. It is indeed tragic that the people of this area are deprived by the Post and Times Herald of the opportunity to receive fair, impartial news coverage. But many of us have accepted this, and have read other newspapers, in order to receive both sides of major issues. For the Post and Times Herald, however, to refuse even paid advertising is incredible. This opinion not only is mine, but apparently is also that of many distinguished editors. I ask unanimous consent that the opinions of some of these editors be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Charleston (S. C.) Evening Post, Jan. 29, 1959]

WHERE'S THE LINE, MR. WIGGINS?

The now famous Carleton Putnam letter, in which a prominent northerner severely criticized the Supreme Court's school integration decision, has been widely published in the South. Northern newspapers, for the most part, have not seen fit to give space for the letter.

Some weeks ago, in response to criticism of the northern press for its position, the Christian Science Monitor, published in Boston, reproduced the letter in its columns.

The New York Times agreed to publish the letter as a paid advertisement, the cost being borne by southern contributors.

The Washington Post and Times Herald, largest newspaper in the Nation's Capital, with a daily circulation of about 400,000, re-

fused to publish the letter—period. It would open up neither its news nor its advertising columns to Mr. Putnam's anti-integration points of view. The newspaper has offered no explanation for its refusal.

The irony in the position taken by the Post and Times Herald is that its executive editor, J. Russell Wiggins, has probably made more speeches defending the people's right to know and advocating unrestricted freedom of information than any other newspaper editor alive.

Unless something very unusual happens this spring, Mr. Wiggins will be elected president of the American Society of Newspaper Editors. Perhaps when he accepts the gavel he will inform his fellow editors just where the line should be drawn in the people's right to know.

[From the Charleston (S. C.) News and Courier, Jan. 21, 1959]

CAPITAL NEWSPAPER REFUSES TO PUBLISH PUTNAM LETTER

BIRMINGHAM, ALA.—The Putnam letter committee says the Washington Post and Times Herald has refused to publish the Putnam letter in a paid advertisement.

James E. Simpson, of Birmingham, chairman and treasurer of the committee that is circulating the letter, said the newspaper gave no reason for its refusal.

Philip Graham, publisher of the Post and Times Herald, declined comment at Washington.

The letter was written by Carleton Putnam, founder and president of Chicago & Southern Airlines, to President Eisenhower. Later it was published in the Birmingham Post Herald.

In the latter, Putnam, a native of New York and a graduate of Princeton, was critical of the U.S. Supreme Court's segregation decisions.

The Putnam letter committee was formed to circulate the letter. It already has published the letter in several newspapers with money collected through contributions.

Simpson said, "It is incredible that a newspaper published in our Nation's Capital should refuse to accept as a paid advertisement the fine statement of Mr. Putnam, which voices the views of the South on current problems facing our region."

Simpson made his remarks in a prepared statement.

[From the Charleston (S.C.) News and Courier, Jan. 20, 1959]

THE RIGHT TO KNOW

The Washington Post and Times Herald, influential liberal morning newspaper in the Nation's Capital, recently refused to publish the Carleton Putnam letter either in its news columns or as a paid advertisement. The Post declined to say why it won't let its readers know about this powerful anti-integration statement by a distinguished northerner.

J. R. Wiggins, executive editor of the Post, is a member of the committee on freedom of information of the American Society of Newspaper Editors. He has said repeatedly that freedom of the press means the citizen's right to know.

Will Mr. Wiggins report his paper's conduct to the ASNE?

[From the Charleston (S.C.) News and Courier, Jan. 22, 1959]

PAPER CURTAIN POST

Several weeks ago the Christian Science Monitor published the Putnam letter. This widely circulated statement by Carleton Putnam, a prominent northerner, presents the viewpoint of those Americans who oppose compulsory racial integration.

The Monitor said that newspapers in the North are being criticized for not presenting the anti-integration viewpoint. It said the letter was being printed as part of a continuing effort to meet this news responsibility.

The New York Times refused to meet this responsibility in its news columns. The Times accepted the letter as a paid advertisement.

The Washington Post and Times Herald has refused to allow Mr. Putnam's comments to appear in any form, including a paid advertisement. The Post declined to explain its reasons.

Actually, no explanation is needed. The ultraliberal Post has no intention of meeting its news responsibility on the integration question. The Paper Curtain has been lowered. The editors of the Post have no intention of raising it.

The Splendid Record of REA

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, February 6, 1959

Mr. WILEY. Mr. President, in these days of complex problems, we recognize that we have very serious challenges in the field of agriculture.

Unfortunately, according to USDA predictions, there may well be a drop in farm income in 1959. As possible, I believe this Congress should take constructive action to prevent the further decline of farm income. Our farmers and farm organizations, themselves, too, should be given every encouragement to improve our agricultural programs and bolster income. In addition, we must strengthen—not weaken—significant programs which have contributed to an improved agricultural economy and a better farm life. Important among these has been the REA program. Over the years, the REA has literally brought new light to rural America.

In Wisconsin, for example, over 30 electric co-ops are bringing light and power to more than 93,000 consumers—brightening the outlook for present and future rural Wisconsin. In 1935, only about 19 percent of our farmers were receiving electric service. By contrast, about 97 percent were being served in 1958.

We recognize, too, that REA co-ops serve marginal areas that are not economically attractive to private power companies.

From time to time, efforts have been considered, or made, to cripple this program.

In view of the economic hazards ahead for the farmer, however, I believe this is no time to take any action that would reduce benefits, or cut income, of the Nation's farmer.

To give a detailed picture of the scope of the REA program in Wisconsin and the Nation, I request unanimous consent that the current Wisconsin statistics, and a special report from REA Administrator David A. Hamil, be printed in the Appendix of the RECORD.

There being no objection, the statistics and report were ordered to be printed in the RECORD, as follows:

CURRENT WISCONSIN STATISTICS

In the State of Wisconsin, at the time REA was created in 1935, only 39,206 farms, or 19.6 percent, were receiving central station electric service. REA estimated that 149,600 farms in the State, or 97.4 percent of all farms recorded in the 1954 census, were being served by June 30, 1958.

The first REA loan in this State was approved in May 1936, and the first REA-financed line placed in operation on May 8, 1937, by the Columbus Rural Electric Cooperative of Columbus, Wis.

Up to July 1, 1958, REA had approved $134,345,289 in electric loans in the State to 31 borrowers, 30 of them cooperatives. One of these (Bangor Municipal Utility, Bangor), has discharged its financial obligation to REA. The loans were made to enable the borrowers to build 31,752 miles of line and other rural electric facilities to serve 93,385 rural consumers. Most of these facilities already are in operation.

By July 1, 1958, REA had advanced $108,500,379 in electric loan funds in this State and the borrowers were operating about 30,389 miles of line serving 85,634 farms and other rural consumers.

The average monthly consumption on REA-financed lines in this State increased from 188 kilowatt-hours per farm in 1949 to 456 kilowatt-hours in 1957.

On July 1, 1958, the State's borrowers had paid $12,740,151 in interest and repaid $18,998,251 of principal on their Government loans. In addition, they had paid $3,330,793 ahead of schedule.

No payment was more than 30 days overdue on loans for rural electrification in the State.

U.S. DEPARTMENT OF AGRICULTURE,
RURAL ELECTRIFICATION ADMINISTRATION,
Washington, D.C., February 4, 1959.

Hon. ALEXANDER WILEY,
U.S. Senate.

DEAR SENATOR WILEY: Attached is a copy of my report on the activities of the Rural Electrification Administration during fiscal year 1958, a year in which important progress was achieved in helping rural people get more and better electric and telephone service.

In both our electric and telephone programs loan needs were met fully.

During 1958, REA's electric borrowers connected more than 115,000 unserved rural establishments, raising the total number of consumers served to more than 4.5 million. They installed more than 200,000 kilowatts of new generating capacity. On and off the farm, rural consumers used more electricity, increasing purchases 8.7 percent over fiscal year 1957.

To enable rural electric systems to meet this growing demand, my office approved during 1958 a total of $241,636,869 in electric loans, bringing total loans since inception of the program to more than $3.77 billion.

REA electric borrowers continued to grow in financial strength and responsibility. During 1958, their principal and interest payments pushed total payments made since the start of the program to over $1 billion. More than $128 million of this sum represented payments made in advance of due dates. Four borrowers—an alltime low—were delinquent in payments more than 30 days as of June 30, 1958. And at the end of calendar 1957, the net worth of electric borrowers amounted to 14.9 percent of their total assets.

In REA's rural telephone program, borrowers chalked up new construction records and had connected 693,831 subscribers by June 30, 1958. Nearly one-third of these subscribers had telephone service for the first time, and almost two-thirds had their first dial service.

Rural telephone systems received 216 loans totaling more than $89 million dur-

ing fiscal 1958—another record. Total loans from the start of the program came to more than $478 million. When construction is completed, these loans will provide modern telephone service to 1,020,454 subscribers.

During the year, telephone borrowers made payments to REA totaling more than $5.5 million. At yearend, 48 borrowers had a balance with REA of $709,920 in advance payments. The number of borrowers delinquent more than 30 days in their payments was reduced to 15 at the end of the fiscal year.

Sincerely,

DAVID A. HAMIL,
Administrator.

Recognition of Outstanding School System in San Angelo, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. YARBOROUGH. Mr. President, explorers, scientists, and authors come from education. I mean explorers which are America's satellites in space, and explorers into new horizons in the various fields which will make tomorrow finer for all mankind.

Our young people need the finest training available to help this Nation retain its present position of world leadership and to improve the world of the future. A vital part of providing this training is to challenge and inspire the student. This gives the training program its extra meaning and enables the pupils to get the most from their instruction.

As a former schoolteacher myself, I have always watched the progress in American education with great interest. Recently my attention was attracted by an article written by G. K. Hodenfield, an Associated Press education writer. The article described the "Three-Rail Program" of the San Angelo, Tex., schools. It seems to me this "Three-Rail Program" deserves three cheers from all of us.

I feel that congratulations are particularly in order for the farsighted members of the San Angelo school board; for Supt. George B. Wadzeck, a man who can translate dreams into action; for the administrators and teachers who work under him so tirelessly to help our young people; and for the students themselves who, in many cases, have not only responded to the regular teaching but have requested and willingly attended extra classes as well.

Mr. President, this article presents a thrilling departure from the traditional picture of a school and its students. As a mark of recognition for all those concerned, I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Hodenfield's article entitled "Three-Rail Program Fills Needs of Pupils, Superior or Dull," which was published in the Dallas Morning News of Sunday, January 25, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THREE-RAIL PROGRAM FILLS NEEDS OF PUPILS, SUPERIOR OR DULL

(By G. K. Hodenfield)

SAN ANGELO, Tex.—This city of 60,000 on the west Texas plains thinks it has the best public school system in the United States.

That's a strong statement, even for Texas, and it begs for proof. San Angelo thinks it has proof aplenty.

For more than a year critics of education in this country have been demanding more academic achievement and less life adjustment. They want more of the solid and traditional subjects and fewer frills and vocational "escape courses," more challenges for the gifted student, more attention to the slow learners, better discipline, and more and better counseling.

In San Angelo they practice what the critics preach.

CHALLENGE TO ALL

The philosophy here is to challenge each student to do his best work in every subject, and then to provide the facilities and courses to meet and extend the challenge.

The payoff is in the curriculum—a three-rail program tailored to meet the needs and capabilities of all students, from the brightest to the dullest.

The San Angelo story is more than just the curriculum, however.

It's the story of a young, eager, and informed school board more concerned with learning than pennypinching, a citizenry willing to pay the taxes that built one of the outstanding high school plants in the country, a group of teachers and administrators willing to work 12 to 14 hours a day.

It's the story, too, of Supt. George B. Wadzeck, a man who cherished a dream for years and now has the tools and backing to make it a reality. When Wadzeck came to San Angelo 7 years ago the city had had an overdose of progressive, permissive, do-as-you-please education. It was ready for a change.

It took 2 years—until 1954—for Wadzeck to lay the groundwork and get his plans into action. And he's the first to admit there is still much to be done.

The San Angelo curriculum is based on the three-rail plan. Rail I is for superior students, able to move much faster than their schoolmates. Rail II is for average students, eligible for college after high school graduation. Rail III is for the poor student, the slow learner for whom high school is the terminal point of education.

The rail plan isn't new. Versions of it can be found across the country. In San Angelo, however, it starts in the first grade.

During a pupil's first year in school he is constantly tested and evaluated to see whether he is really ready for school, really ready for the learning process.

IMMATURITY FACTOR

"About 90 percent of a kid's trouble in grade school," says Wadzeck, "is that he is biologically immature when he starts. Some kids walk earlier than others, some talk earlier. It's the same with learning, some are ready before the others."

If a child isn't up to doing first class grade work, he is held in that grade for another year. At the end of the third grade there is a major check point.

Based on grades, intelligence tests, aptitude tests, and teachers' reports, the pupils are assigned to rails I, II, or III during the first grade. Depending on their aptitudes, some students might be in rail I English and social studies, and rail II or III arithmetic. Depending on their achievement, they can climb to a higher rail, or drop to a lower one. All three rails are taught by the same teacher in the same classroom.

Some pupils spend 4 years getting past the third grade, some do it in two. But there usually is little grade-skipping. Brighter pupils stay in their own age groups, but do more advanced work.

MAJOR DEPARTURE

One major departure from normal grade school practice, even where the program is railed, is that only the student in rail I can get an A. If he is in rail II, the best he can get is a B, in rail III a C.

Some educators will tell you this might frustrate the children, that they should be graded on the basis of whether they are doing the best work of which they are capable.

Wadzeck disagrees. "Life is competitive, and if the children don't learn it in the classroom, they'll certainly find it out for themselves on the playground," he says.

At the end of the sixth year there is another major check point. For many students, this may be a last chance to get on the academic ball.

From all of San Angelo's 17 elementary schools the pupils are brought to Washington School for the seventh grade. No other grades are taught in the building.

SIX SUBJECTS TAUGHT

Each student in rails I and II takes six academic subjects—English, reading, math, social science, natural science, and foreign language—plus one fine arts elective and physical education.

Rail III students do no seventh grade work. They spend the year catching up on work in which they have fallen behind.

And here is an exclusive San Angelo twist: If the rail III students get an A or B in his makeup work he isn't promoted. He is held back so that the following year he can take rail II or college preparatory courses. If, however, he gets a C or less he is promoted into the eighth grade in rail III.

"When a rail III student comes up with excellent grades in his remedial work," says Wadzeck, "we figure he deserves another chance. He may have had emotional problems stemming from troubles at home. Maybe he has been ill and out of school for long periods. Maybe he's just a 'late bloomer.'

STILL NOT TOO LATE

"But if he comes up with poor grades in his remedial or makeup work, we just have to figure he isn't college material. So we push him ahead on a rail III program that will give him the best education he can absorb. If he spurts ahead later, of course, our testing and evaluating will catch him and there may still be time for him to advance to a higher rail."

Rail I students in the seventh grade take 2 years of a subject in 1 year and clear the way for honor courses and college level work during the 11th and 12th grades. Rail II students take the national curriculum or normal college preparatory courses. Rail III students take modified work adapted to their capabilities, but including arithmetic every year through the 11th grade and English every year through the 12th.

In this, the fifth year of the program, San Angelo's only high school, Central High, has railed courses in math, foreign languages, science and English.

FEW ALL IN TOP RAIL

Wadzeck figures only about 1 percent of the students are able to handle the top rail in all four subjects. About 10 percent take two courses in rail I and two in rail II, and about 5 percent take only one rail I course.

In high school the students are graded according to the work they do in the rail to which they have been assigned. The transcripts, however, identify the course by the rail number. Thus colleges and universities,

as well as prospective employers, will know just what sort of work the student has done.

San Angelo's students are given every opportunity to enrich and broaden their education—and to pull themselves up to a higher rail while doing it.

For instance, the 710 seventh graders at Washington school have a 75-minute extra learning period at the end of the school day. If enough students ask for a particular course, Principal Dave Sands will try to find them a teacher.

EXTRA WORK, NO CREDIT

Thus, 20 students who take Spanish during regular school hours are studying Latin in the extra-learning period—for no academic credit. Similar no-credit courses are also offered in math, science, orchestra, drama, rapid reading, poetry, speech journalism—even football.

Almost half the 1,400 students at Central High paid tuition to take summer courses last summer. Most of them wanted only to brush up in their weak subjects or qualify for a higher rail. Wadzeck hopes that eventually all summer courses will be free.

"We encourage the students to go to summer school and pull themselves up," he says.

"That's the whole idea here—we want to challenge every student to extend himself to his limits, his full capacity. And when you get right down to it, that's all any school system can do."

Tough Tax Collector

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, February 6, 1959

Mr. CASE of New Jersey. Mr. President, a New Jerseyan with an indirect connection with the U.S. Senate is probably the oldest tax collector in the United States. He is Walter C. Black, who at 92 is still tax collector of East Windsor Township. He has been on the job for 57 years. His grandson, Walter Black Stults, of Hightstown, N.J., has been on the job in the U.S. Senate for a shorter period. Mr. Stults serves as staff director of the Senate Small Business Committee. I ask unanimous consent that an article from the Newark Sunday News, of February 1, 1959, on Mr. Black's service as a tax collector, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAX COLLECTOR TOUGH—BLACK, 92, HOLDS ONTO EAST WINDSOR TOWNSHIP JOB

HIGHTSTOWN.—Every time Tax Collector Walter C. Black, of nearby East Windsor Township, neatly pens an entry in his ledger he sets a record.

Not a record for the amount of money collected since there are only about 700 people in East Windsor, but a record for efficiency and longevity in office.

Black, at 92, is the oldest tax collector in the United States, and has been working at what he calls his avocation for the last 57 years in his office in York Road. His vocation during all this time has been the operation of a plant nursery at the York Road address.

He sold this business to his grandson 2 years ago but stayed on to help with some of the accounting work. Despite his advanced years, he still handles figures with an ease that would surprise some younger bookkeepers, and he has no thoughts of retiring.

SUCCESSFUL COLLECTING

During all the years he has handled the tax funds of the community, Black has compiled the record of never having collected less than 95 percent of the total tax levy in any year.

It was his ability to extract the needed money from reluctant residents that first won Black his job in 1902. Local officials wanted him because he was tough—not unfairly tough—but tough. When he took office, some residents owed as much as 4 years' back taxes. Within a short time all the money was in.

Black said he simply mimeographed a message to all the residents, telling them how displeased he was with the situation, and soon the accounts were up to date. He doesn't remember exactly what he wrote in th notice, but it was effective.

Last year the township built a new municipal building in Ward Road, and hung a shingle over one of the new offices which reads "Collector." The office is always empty.

Anyone looking for Black to pay a bill or chat must travel to the nursery about 2 miles away. A routine developed over more than a half century cannot easily be changed.

Black told the town fathers he wouldn't move when the building was being constructed, and they knew he meant it. The office is there in case he should change his mind.

Black graduated from Peddie School in 1886 and Rider Business College 6 months later. In 1907 he returned to Peddie as treasurer and a member of the school board, a post he held until 4 years ago.

JOBS SOUGHT HIM

Although he "never asked for an office in my life—they came to me," Black has had an active public career. In addition to his position at Peddie, he was a member of the township board of education for 54 years, including several years as president, and clerk of the board for 28 years.

He was also tax assessor for 2 years but gave it up when he found it interfered with the nursery business.

Last November the State senate took notice of his long career of public service and passed a resolution commending Black. He was also honored by the New Jersey Tax Collectors Association at the recent League of Municipalities convention in Atlantic City.

More Defense Contracts Should Go to Small Business Concerns

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. YARBOROUGH. Mr. President, the rate of failures of small business climbed last year to the highest annual total since 1933. Nearly 15,000 business firms failed, and this was an increase of 8.9 percent over the previous year.

The liabilities of these failing firms in 1958 totaled $728,258,000. Even greater than the dollar loss was the job loss to many men and women who need work, particularly in the depressed areas of our Nation.

The Senate Select Committee on Small Business, under the chairmanship of the very able and distinguished Senator from Alabama [Mr. SPARKMAN], has repeatedly pointed out to the administration that America's small businesses are frequently neglected on defense orders. But latest statistics show that the 100 largest defense prime contractors increased their share of all contracts over $10,000 from 68.4 percent in 1957 to 74.2 percent in 1958. These statistics prove that the situation is becoming worse instead of improving, and it is a condition which demands correction.

Recently one of the better daily newspapers in my State, the Sherman Democrat, under the able editorial direction of the Honorable Frank Mayburn, published an editorial discussing this problem.

Mr. President, I request unanimous consent to have printed in the Appendix to the CONGRESSIONAL RECORD an editorial from the Friday, January 9, 1959, Sherman Democrat under the heading, "Defense and Business."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFENSE AND BUSINESS

Stung by a charge of the Senate Small Business Committee that small concerns are neglected on defense orders, the Defense Department announces that small businesses averaged at least $7 billion a year in defense contracts in the last 2 fiscal years.

In 1958 small business was awarded less than the previous fiscal year, and $3,729,000,000 in prime contracts, slightly 243,000,000 in subcontracts, a drop of 2 percent. That is the basis of the committee's complaint. It compares with the total military procurement overage of $20 billion a year for the last 2 fiscal years.

A 35 percent average of all procurement for small business in military material would not seem to be equitable. Even in ships, planes, and missiles, literally thousands of items go into each, produced by some of the biggest purchases, such as small concerns. The procurement can and should be used to help small business in economically depressed areas weather the economic storm. The committee does well to press for at least half of it for small business.

Procedure To Be Followed in Case of Disability of the President of the United States

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. BRIDGES. Mr. President, Congress has in past sessions and is currently concerned with the gap in our Constitution relative to the procedure to be followed if the President of the United States became unable to serve as President because of disability.

Prof. Noel T. Dowling, professor emeritus of constitutional law of Columbia University, and a summer resident of New Hampshire, has recently written an article on this problem based on the experience of several States whose Governors became disabled.

Professor Dowling's article has been printed in the January issue of the New Hampshire Bar Journal, and I commend it to the attention of my colleagues.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXECUTIVE DISABILITY

(By Noel T. Dowling, Harlan Fiske Stone professor emeritus of constitutional law, Columbia University)

One day, now perhaps 20 years ago, a telephone call came to me at my office at Columbia University from a man who introduced himself as a member of the bar of a certain foreign country and said he wanted to consult me on a point of constitutional law. I asked him what it was about and why he had called me. He answered that he had been referred to me by a New York lawyer (well known to me), but that he would rather not try to tell me his problem over the phone.

When he came to see me shortly thereafter he told a rather lurid story of political unrest in his homeland. That unrest was largely attributable, he thought, to the presence of an ailing chief executive unable to discharge his responsibilities and yet unwilling to surrender them to the person next in succession. In the course of his story he remarked—in an offhand sort of way as if it were nothing out of the ordinary—that his countrymen had occasionally been known to resort to unorthodox or even violent means in the settlement of their political disputes. For his part, however, and others likeminded with himself, he wanted to explore the possibilities of peaceful, particularly of judicial, ways to remove a disabled executive. His specific question, on which he wanted whatever advice he could get, was whether any legal process was available under his constitution by which matter of disability could be submitted for determination by the courts. He seemed to take it for granted that we had had occasion to deal with disabled executives in this country, if not in respect to the President at least of a governor, and that our experience might provide guidance to them in the interpretation of their own constitution.

As to the President, I could tell him at once that the problem of disability under our Constitution had never been submitted to the courts. More than that, the Constitution being silent on the determination thereof, there was no assurance that the Federal courts would assume jurisdiction of such a cause. As to the Governors of States, I had no information. The upshot of our conversation was that I agreed to make a spot study of a few States and give him a memorandum of any relevant information I could find.

Almost at the outset of the study I came upon a New Hampshire case. It was *Attorney General* v. *Taggart* (66 N.H. 362, 29 Atl. 1027), decided in 1890. The action arose in the Supreme Court on an original petition for mandamus against the president of the Senate to require him to take over the powers and duties of Governor. It was begun on the written request by Governor Goodell to Attorney General Barnard to "take such steps as you think necessary to cause the president of the senate to exercise the powers of the Governor during the vacancy caused by my illness."

The pleadings were singularly short and clear. This is the petition: "Daniel Barnard, attorney general of the State of New Hampshire, in behalf of said State, complains against David A. Taggart, and says the chair of the Governor of said State has been and is vacant by reason of the sickness of His Excellency David H. Goodell, and his consequent inability to perform any of the duties of his office, and the said Taggart is president of the senate of said State; yet said Taggart does not exercise any of the powers and authorities which by the constitution and the laws the Governor is vested with, but refuses so to do. Wherefore the plaintiff prays for a writ of mandamus, or other appropriate and adequate process, directed to the said Taggart, requiring him to exercise the powers and authorities of the Governor during the vacancy, according to his duty in the premises."

And this the answer: "The defendant says he does not exercise any of the powers and authorities of the Governor's office, because his duty to do so is not settled by any adjudication or conclusive evidence of record. He is ready to do his duty when he has authoritative evidence as to what it is, and thereof submits to the judgment of the court."

The case was submitted upon evidence introduced by the plaintiff and heard by the whole court. The evidence established (a) that the Governor was disabled and (b) that there was "executive business demanding immediate attention." On this showing the court directed the clerk to enter "judgment for the plaintiff."

The opinion of the court, in which all concurred, was delivered by Chief Justice Charles Doe. He first quoted article 49 of the State constitution: "Whenever the chair of the Governor shall become vacant, by reason of his death, absence from the State, or otherwise, the president of the senate shall, during such vacancy, have and exercise all the power and authorities" of the Governor. He noted that the "mischief designed to be prevented was the suspension of executive government by the Governor's death, absence from the State, or disability," and that the "prescribed remedy is the duty of a substitute to act in cases of necessity." He then referred to the proof established by the evidence and concluded that in such a situation the constitution directs the defendant "to exercise executive powers until the Governor resumes them." That was enough to dispose of the case in hand.

But the chief justice went further. He observed that while a judicial determination of the question of vacancy "is not legally requisite to call the president of the senate to the executive chair" it may prove to be "a convenient mode of avoiding embarrassment that might sometimes arise from doubt and controversy in regard to his authority and the validity of his acts." No question of jurisdiction has been raised, but the chief justice seemed to have something of that in mind in saying that the "existence of an executive vacancy is a question of law and fact within the judicial jurisdiction." Looking ahead he remarked that if the defendant exercised executive power without a previous judgment on the question of his authority, "the legality of his acts could be contested and determined in subsequent litigation." The judicial character of the question, he continued, "does not depend upon the time when it is brought into court. With adequate legal process, the consideration and decision of such a question may be prospective as well as retrospective."

The remainder of the opinion was given over to a consideration of mandamus as an appropriate remedy. On that point and after examining an array of cases, the court concluded that when, as in this petition, "a plaintiff asserts a legal right and an infringement of it, and asks appropriate relief, his case is decided on the facts proved, without a waste of time in the consideration of a form of action." As already noted, the question of jurisdiction was not raised by the parties; nor was it explicitly discussed by the court. An objection on that score would probably have been futile anyway, since the Court (aside from the fact that in some circumstances it could give advisory opinions) looked upon the case as presenting nothing other than an ordinary "question of law and fact." On its facts—however interesting the further reaches of Chief Justice Doe's opinion may be—the Taggart case was concerned only with the problem of a willing Governor and an uncontested jurisdiction.

A North Dakota case—to mention only one other decision discovered in the course of the study—tackled the tougher problem of an unwilling Governor and a challenge to the jurisdiction. This was *State ex rel. Olson* v. *Langer*, 65 N.D. 68, 256 N.W. 377, decided in 1934. It, too, was an original proceeding in the supreme court of the State, and it asked for a writ of quo warranto requiring the respondent to show by what right he continued to exercise the powers and duties of the office of Governor. The petition was based on the contention that respondent having been convicted of a felony, even though at liberty pending an appeal, was under a "disability," as specified in the State constitution, for exercising the powers of Governor. Jurisdiction was put in issue at once by a motion to quash. The basis of that motion was that these proceedings were inconsistent with the provison for impeachment as the exclusive method under the constitution for removal of the Governor.

The motion to quash availed nothing. "After a careful examination of all the authorities (said the court, with a reference to Taggart as an early case) we are of the opinion that this court has jurisdiction to pass upon the question as to whether, under the circumstances conceded to exist in this case, the powers of the office of Governor have devolved upon the Lieutenant Governor." On the merits, the court adjudged that the respondent had "suffered a disability within the meaning of that term" in the constitution and that the powers and duties of the office of Governor had "devolved upon the (Lieutenat Governor) for the residue of the term of office for which the respondent was elected or until such disability be removed."

Such were two high spots of the memorandum. I must say that my inquirer from abroad was less surprised than I at the number of times the question of disability had been before State courts. He seemed to find much satisfaction in the way the Supreme Court of North Dakota summarized the matter when it said that, though controversies had arisen in several States over the question of who should exercise the powers of Governor, "in each case the question had ultimately been solved by the courts." I was later informed that nothing ever came of the memorandum in the country on whose account it had been prepared. No judicial proceeding was attempted. On the contrary, the question of disability of the then incumbent executive was left for the settlement by the running of time and tenure.

The Taggart case seems to me to have a larger significance than merely revealing the Supreme Court of New Hampshire as the leading exponent of the judicial method for dealing with executive disability. An outstanding feature is its recognition of the practical aspects of State government in the situation with which the court was faced. The matter in issue, whether the president of the senate was entitled to exercise the powers of the Governor, was a question arising under the State constitution, and it had to be decided within the existing framework of government. As the chief justice pointed out, that very question, if not settled in advance, "could be contested and determined in subsequent litigation." So, if eventually, why not now—especially since the judicial machinery was amply geared for the task. The court thus became an

implement of government in the orderly and prompt transfer of executive power.

On a wider front the local experience of New Hampshire and other States may supply valuable suggestions on a present-day national problem. This is the matter of Presidential disability. On what happens in the event of the President's "inability to discharge the powers and duties" of the office the Constitution speaks in clear terms, namely, that those powers "devolve on the Vice President." But the Constitution is silent on the question who determines the existence of inability. There is a widespread belief that something needs to be done about it. Proposals in a variety of form and substance have been offered. Some call for congressional enactments; others for constitutional amendments; most would establish new governmental machinery. None has gained general approval.

It is just here that the experience of the States may prove helpful. For that experience has shown that the question of disability is by no means foreign to the judicial function and that, whenever invoked, the judicial method of dealing with the question has been adequate to the occasion. In the light of that experience, a possible proposal on the national scene would be that the matter of Presidential disability, both beginning and ending, be entrusted to the Supreme Court of the United States and placed within its original jurisdiction.

An amendment to the Constitution would be required. The basic content of such an amendment (it is no complicated affair) would be, first, extension of the original jurisdiction of the Supreme Court to cases arising under the inability clause, and, second, specification of the parties entitled to institute proceedings by petition to the Court—e.g., President, Vice President, Cabinet, possibly others. Perhaps the amendment should also include authorization to the Court to make rules governing the conduct of the proceedings.

Manifestly such a proposal would raise questions of large import and deep concern. I think I appreciate—and to some extent sympathize with—much that may be said against it. For myself, indeed, the most I would urge at the moment is that the underlying idea of the proposal is entitled to receive serious consideration. At the least and without detailed development here, several points can be made in its favor. It would utilize an ever-present and resourceful institution of government; it would put the matter to be decided on the highest possible plane of dignity and responsibility under the Constitution; it would—not wholly, to be sure, but I believe as far as possible in man-made institutions—free the problem of political considerations; it would settle in advance the legality of the Vice President's assumption of power and promptly stabilize his new position.

The United States Is a Republic

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. THURMOND. Mr. President, many excellent observations are made in letters to the editor of the Boston Christian Science Monitor. In a recent edition, Mary Elaine Adams, of San Francisco, Calif., observes that the United States was set up as a republic and not a democracy.

I ask unanimous consent that her letter, entitled "Not a Democracy," be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NOT A DEMOCRACY

To the CHRISTIAN SCIENCE MONITOR:

In your article of December 30, "Majority Rule Keys Filibuster Fight," the question is asked: "Should a majority vote run a democracy?" It would seem that the answer to this can only be an unqualified "Yes," for majority rule in the essence of democracy.

However, we should remember that our Nation is not a democracy. Our wise founders gave us a republic. From their study of history and their own experiences, nearly all of them had as much abhorrence for the tyranny of the majority as for that of a king.

History had taught them that democracy was the political system that led to the loss of human freedom, and they were convinced that only a republican form of government was adapted to protect the liberties of the individual. Thus our republican system with its filtering of legislation through representatives chosen by the people—rather than voting by the people directly—was intended to protect the individual's rights. The demand for a two-thirds majority among the people's representatives when considering certain vital issues was intended not only to put the brakes on government and prevent hasty, unwise decisions, but also to prevent obliteration by a bare majority of the rights of individual States to work out their local problems individually.

At the first Constitutional Convention there was much objection to the provision in the Viriginia plan that only a bare or simple majority be necessary to settle any issue. While it is true that the Convention itself operated on the principle of a simple majority, it should be remembered that it was not a legislative body, but a purely advisory one, assembled for the sole purpose of making recommendations to the individual States. But in order to ratify the new Constitution, a two-thirds majority of all the States was necessary.

The idea of a two-thirds majority as a requirement in voting on certain important issues is thoroughly in harmony with the republican system. It is a wise check that should not be dispensed with for the sake of expediency—even if the end in view should be most desirable.

In sharpening our understanding of the terms "republic" and "democracy," contemporary lexicographers, unfortunately, are not of much help, since they make very little, if any, distinction between the two systems. Thus we must turn to the words of our founders in order to refocus our thinking on this vital question.

James Madison and Alexander Hamilton have given penetrating analyses of the nature—and consequences—of both a democracy and a republic, and the alert citizen today would do well to reacquaint himself with the political system the Founding Fathers had in mind and hewed out for us so laboriously.

Benjamin Franklin said, after the Convention, when asked what sort of government the delegates had agreed upon: "We have given you a republic, if you can keep it." Let us see to it that we do keep our priceless heritage. But in order to do so, we must thoroughly understand just what our system is and how it was meant to function.

MARY ELAINE ADAMS.

SAN FRANCISCO, CALIF.

Special Recognition of the Outstanding Abilities of Hon. J. T. Rutherford, of Texas

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. YARBOROUGH. Mr. President, the term "public servant" is sometimes overworked, but I rise today to pay special recognition to a man who has—by his wisdom and hard work—earned the right to this title in its finest sense.

I call attention to the outstanding abilities of the Honorable J. T. RUTHERFORD, Representative of the 16th Congressional District of Texas, who has humbly, conscientiously, and unselfishly worked for the best interests of his district, his State, and his Nation during his entire career.

A moment ago, I mentioned his outstanding abilities. Mr. RUTHERFORD'S talents are particularly evident in the field of public finance. His efforts in the public interest as a member of the House Banking and Currency Committee have occasioned extremely high praise from his colleagues. He is an unusually able member of the House Interior and Insular Affairs Committee.

Mr. RUTHERFORD was capably serving his State prior to his election to the 84th Congress on November 2, 1954. From 1948 to 1952 he was in the Texas House of Representatives and then served a term in the Texas Senate from 1952 to 1954 when the voters around his home gave further praise to his work by electing him to the national Congress. The people recognized a man who would work for them and stand by his principles at all times. I knew Congressman RUTHERFORD during his years in the Texas Legislature, and have been gladdened by his progress.

Mr. President, in recognition of Mr. RUTHERFORD'S fine work in the national interest, I request unanimous consent to have printed in the Appendix of the RECORD a portion of his weekly "Report to the People" which I believe shows his interest in bettering the public financial picture.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT TO THE PEOPLE

(By Congressman J. T. RUTHERFORD)

Birthday greetings are usually reserved for individuals, but this week I would like to say "happy birthday" to a Government agency: The Federal Deposit Insurance Corporation.

There are many people who may not be aware of the existence of FDIC, nor familiar with its functions. I confess that my attention to the agency is brought about by my service on the House Banking and Currency Committee, which has jurisdiction over it. Yet, if you have a bank account, chances are your money is insured by FDIC.

The greatest tribute that may be paid to the organization is that this month it reached its 25th birthday without fanfare. It may be that FDIC has moved so firmly

into history as one of the greatest financial reforms of the 20th century that no one feels the need to recall its basic beginnings. But 25 years ago, respected businessmen's and bankers' opposition to what they felt was Government banking was a bitter thing. Many well-meaning financiers and private citizens claimed the creation of FDIC would encourage recklessness among bankers, would discredit honesty and invite incredible abuses. Many of those former critics, still on the scene today, would probably like to forget their dire predictions but there are yellowed newspaper clippings around to remind them.

The purpose of the FDIC is simple: To insure us against bank disasters and to guarantee against the collapse of America's banking system as occurred inthe early thirties.

The system has worked well. Although perhaps a half-dozen banks will fail over the Nation this year (the current annual average), countless innocent families will not suffer and there will be no wild-eyed panic, because the accounts will almost surely be insured by Federal Deposit Insurance Corporation.

As of today, FDIC is insuring deposits of 13,383 of the Nation's 14,095 commercial and mutual savings banks. The insured banks hold 96 percent of all bank deposits in the Nation. (Of the 712 banks which aren't insured, about one-fifth fail to meet requirements, and the rest haven't joined because they resent the cost of the insurance or say they don't need it.)

The insurance maximum is $10,000 for each depositor, which means that if you have several accounts in different banks each will be insured up to that amount. Since approximately 98 percent of all accounts involve balances of less than $10,000 it is easy to see the vast majority of accounts are fully and completely insured.

In its 25 years, FDIC has built a nest egg of more than $1.8 billion. It raises funds by assessing member banks at the rate of one-twelfth of 1 percent of the insured bank's deposits, but has done so well it has been returning about 60 percent of the assessments. During its lifetime, the agency has paid out more than $343 million in insurance to about 1,500,000 depositors in 432 banks.

The spectacular success of FDIC has surpassed even the most enthusiastic predictions of its early supporters. And at the risk of using a poor pun, one might say its profits have made bad prophets of its detractors and former foes.

The Unlocked Back Door of the Federal Treasury

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. PELLY. Mr. Speaker, the first budget-buster bill is on its way, and the boobytrap to catch those of us who are trying to hold the line on Federal taxes as well as spending has passed the House. I was 1 of the 89 to vote against this bill. I am referring to H.R. 2256, the bill which provided $300 million for direct Government loans to veterans.

Let me make it clear, as was pointed out when the House was debating this bill, there is presently available $192 million for these direct loans, but with the realistic interest rates in the new bill I doubt if there will be a demand for funds. Private capital will meet the need and that is the way it should be.

Furthermore, as my colleagues are well aware, this $300 million was not in the budget. That is why I, for one, did not deviate from my firm determination to support holding the line on spending.

Mr. Speaker, the debate on H.R. 2256 and this $300 million unbudgeted item brought out some other facts which needed airing. In the discussions from both sides of the aisle, there was strong criticism of what has been going on and what is one of the major causes of Federal deficits. In other words, all of a sudden out in the open comes the admission of a means of back-door approach to the Treasury, which has been used to open wide the spending floodgates and to bypass the constitutional requirement of congressional review and the prohibition that no money shall be withdrawn from the Treasury of the United States, except by appropriation pursuant to law.

It was pointed out that by authorization bills, which state the administrator of an agency in question may issue notes, it has been possible to get money direct from the Secretary of the Treasury who is required to cash these notes. Thus, the need as to the spending of such funds has not been studied or approved by the House or Senate.

Furthermore, the Constitution specifically provides that all revenue measures must originate in the House of Representatives, yet, as was brought out in the debate on veterans housing, 16 bills calling for $9 billion of expenditures last year came to the floor of the House with that provision in them and 12 of these bills originated in the other body.

Mr. Speaker, the chairman of the Rules Committee has introduced a resolution which, as I understand, would require conformity with the Constitution covering appropriations. I hope it will come to the floor and if so I will support it. It is the only way to hold the line on spending.

Meanwhile, I want to emphasize that the $300 million for direct loans to veterans, which I voted against, was an example of the back door Treasury type of legislation and in large measure is the way deficit spending has been flourishing.

I do not desire to inject politics today in this statement, but for myself I must ask to be counted in disagreement with those of the opposition leadership who seek to excuse this back door approach on the grounds that without it much progressive legislation, as it is called, would not be enacted. If legislation cannot stand up under constitutional legislative process and review within the framework of constitutional procedure and congressional approval, either the Constitution should be amended or the measures not enacted into law.

The salvation of our country to my way of thinking, as recognized by the Founding Fathers, lies in control by the representatives of the people of the right to appropriate money. If we abrogate the provision that no funds shall be withdrawn from the Treasury except by lawful appropriation by the Congress, there will be little hope of checking inflation and maintaining fiscal responsibility.

Finally, let me say, as I have said so many times in the past, let us redouble our efforts to curb unneeded spending and remember that the money we handle belongs to the taxpayers and the debt we incur is their obligation and liability; not ours alone.

Creating an ever-expanding national debt to be loaded upon our children I cannot view with equanimity. Especially so in a time of comparative prosperity and highest earnings and wages in history. I cannot join the spenders and charge off deficits to "balanced human budgets"—except in times of economic crisis.

My conscience cries out that presently, as we spend more, we should tax more, and I am against both of these. They are not necessary. So I urge locking the back door of the Federal Treasury and restoring control to Congress.

Mr. Speaker, in answer to Thomas Jefferson, if a choice is necessary, I will support economy and liberty as against profusion and servitude, especially, as it may be in the latter case, it would be visiting our sins upon the third and fourth generation.

Dick Neuberger Is Fully Recovered and Will Soon Be Back in Washington

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks, I wish to report that our respected colleague and friend in the other body, the junior Senator from Oregon, RICHARD L. NEUBERGER, will return to Washington Thursday, February 12, 1959. He will be accompanied by his wife, Maurine.

It will be good to see them. His many friends have missed him. We were shocked and dismayed last fall when it was disclosed that he was the victim of a cancer the doctors identified as malignant. After a period of anxiety we were somewhat relieved to learn that this cancer was radioresponsive and that the outlook for recovery was excellent.

So it was DICK entered on a long period of cobalt treatments which only recently were completed. Now the official report is that he is wholly recovered. This is heartening news indeed for all his friends and admirers here and throughout the Nation.

Before he knew of his condition he had been in the forefront of the fight to obtain more funds for cancer and other medical research. He is resolved to continue this effort, and his very presence here should win him more allies equally determined.

The statement issued by Senator NEUBERGER's physicians on February 3, 1959, was as follows:

Senator NEUBERGER has completed an intensive course of radiation for the malignant tumor which was surgically removed last fall. He has tolerated the therapy well and has gained 14 pounds in weight. We are gratified with the manner in which he has responded to the treatment program, and we have every confidence in its success. He is returning to Washington next week prepared to resume a normal schedule of activity.

Congress Control of Debt, Inflation

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. THURMOND. Mr. President, Mr. W. W. McEachern, president of the South Carolina National Bank and president of the South Carolina Bankers Association, in the January 30, 1959, edition of the American Banker, urges Congress to do all in its power to control the national debt and inflation. One of the Nation's most able bankers and financiers, Mr. McEachern has made an excellent presentation of how the Federal budget affects even the smallest individual.

I ask unanimous consent that this presentation, entitled "Congress Control of Debt, Inflation, Called Major Task," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS CONTROL OF DEBT, INFLATION CALLED MAJOR TASK

(By W. W. McEachern, president, South Carolina National Bank, Greenville)

It is too bad that so many of us think of the budget as being something off in the distance when the real effect of what the Federal Government does is felt every day in nearly every transaction that takes place—in our grocery stores, in our department stores, on our farms, in our textile plants, in our banks, and in our homes. The sooner we come to realize that the only dollar the Government has to spend comes out of our pocket, the quicker we will try to protect against unnecessary or unwanted expenditures of the Government.

Too many Americans think of the Federal budget as some vast mystery beyond their understanding. That is just what the spenders in Washington want us to think. They want us to feel that budgetmaking is a task we don't understand and can't do anything about. That is bunk.

Perhaps the methods of accounting and the methods of arriving at a budget on the scale of the Federal budget are not easily understood, but the basic principles are the same as those we have to deal with in handling our personal income and expenditures.

When a family has a certain amount of income in a year, the most that family can spend is the total of its income, except under two conditions. If it has resources which have been saved from income in previous years, it can dip into them to supplement its income for the current year. Or it can borrow against anticipated future income.

Under certain circumstances, either of these ways of supplementing current income can be necessary and even wise. However, the one thing the family always has to face up to is that repayment must be made if it borrows. Or, if it dips into accumulated resources, the rebuilding of those resources is likely to require greater effort now and in the future than it did to build those resources in years past.

Therefore, the careful family first considers how badly it needs more funds than it is making. Then it considers the price it must pay to secure the funds. In cases of emergency, funds must be secured regardless of cost. But the prudent family is reluctant to obligate itself unless the need at a particular time outweighs the cost of the obligation it incurs to secure additional income. Or there may be other advantages to having access to additional funds immediately which outweigh the cost of borrowing.

The Federal Government is no different from the American family, except the Government can levy new or additional taxes while the family cannot call upon anybody for immediate income without having to repay.

A prudent Federal Government first tries to live within its income. When an emergency arises it borrows the needed funds and uses them wisely to end the crisis. And occasionally a situation arises that makes it desirable for the Government to borrow for a nonemergency purpose.

There is no justification for the Federal Government to spend beyond its income any more than for an average family to do so.

Deficit financing and the issuance of too many Government bonds can lead eventually to even greater Government bondage than at the present.

The Federal Government has spent more than its annual revenue 15 times out of the past 20 years. Since 1939, annual deficits have exceeded surpluses by a total of approximately $235 billion.

Our total public debt is now expected to be $285 billion at the end of 1960. This would be $2 billion over the permanent legal debt limit.

Another point we should remember is that during these 20 years while the public debt was growing to nearly 7 times its 1939 size, the Federal budget was growing too. It is now almost 10 times its size then. So the constant borrowing that increased the public debt did not help to keep the budget down. It actually added to it heavily because the interest on our deficit financing is estimated at $8.1 billion for 1960. In simpler terms, that means $1.50 out of every $10 spent by the Federal Government under appropriations for the current year.

The 2d session of the 85th Congress, which adjourned on August 24, 1958, appropriated $67,773,583,153 for 1959. However, it also approved $4,879,893,095 in supplemental appropriations for 1958, and permanent appropriations approved in prior years to be spent in 1959 are estimated at $8,334 million. The prospects are that the new 86th Congress will exceed the spending efforts of its predecessors.

Another little known element in the Federal budget is the fact that carryover appropriations for commitments made in previous years to complete unfinished projects are being spent each year. These are over and above the funds laid out for the current fiscal year.

TRUST FUNDS

The President estimated in his new budget message to Congress that the new and old obligational authority which will be available for expenditure in the fiscal year 1960 will be $128.3 billion including funds carried over into 1960 from fiscal 1959 and previous years.

In addition to the current and prior obligations included in appropriations and expenditures, the Federal Government also collects certain earmarked revenue which is set aside in so-called trust funds. These funds include such purposes as old-age and survivors insurance, Federal aid for highway construction, unemployment insurance, Federal employees' retirement, Federal disability insurance, railroad retirement, veterans' life insurance and other lesser funds among which is one for the secondary market operations of the Federal National Mortgage Association.

Sound business principles seem to have been dispensed with in handling these trust funds, just as in the overall budget making activities of the Federal Government. It is estimated that in four of the eight funds I mentioned the expenditures in 1960 will exceed the receipts.

Such policies would never be tolerated by any board of directors charged with the responsibility of regulating a trust fund, outside the Government. It is true that provisions have been made to increase the tax on employees and employers for social security, but experts on the subject still question the soundness of the program after the adoption of increasingly liberal amendments.

SOCIAL SECURITY COST

Some experts predict that the social security trust fund will be exhausted and it will be necessary for Congress to supplement it by direct appropriations. This, of course, could mean additional reductions in the taxpayers take home pay. If Congress continues its present trend toward liberalizing social security—along with all other expenditures—additional revenue will have to be found to make up the annual deficits which are sure to result.

The thing we have to remember about expanding old programs, or establishing new ones, is that, once put into effect, there is a continuing obligation which usually increases instead of diminishing with time.

One good illustration of this is the highway program which has been hit by inflation and for which the President now asks an additional 1½ cents per gallon gasoline tax.

Social security is another example of what I mean.

Along with the increases in benefits under the original program, there have been a number of additional benefits added in recent years. Many of these new benefits were provided without any sound basis for including them in an already costly program. The only sound way to operate a retirement or insurance plan is to establish it so as to take into account the amount expected to be paid in and the anticipated payments out of the funds and always to provide for a substantial reserve against unexpected emergencies which sometimes occur, even when careful business practices are applied.

In his budget message, the President pointed out that trust fund receipts in the fiscal year 1960 are estimated to be $20.5 billion and trust fund expenditures $20.3 billion.

Even if all the trust funds were lumped together—which they are not—the margin of less than 1 percent of receipts over expenditures would be too thin. This is a good illustration of the Federal Government's unbusinesslike handling of financial affairs.

OTHER FACTORS

One of the prime dangers in the system of legislating and appropriating by the Congress grows out of the fact that Congress quite often fails to take into account the possibilities of increased requirements for funds out of a program which is inaugurated without a complete determination as to how much it can grow under the limits established.

Under the price support programs of the Department of Agriculture an unexpected yield in wheat and feed grain crops means that an additional $1.9 billion will be needed during fiscal year 1959, ending June 30. This is the largest nondefense item which helped to cause the 1959 deficit of $12.9 billion estimated at this time.

Also, Congress has to take into account—or should do so—that pay increases for military and civilian personnel of the Federal Government mean increased Federal contributions into retirement funds. This calls for higher taxes, more borrowing or reducing the budget somewhere else.

Congress has been willing to borrow funds to appropriate, but unwilling to cut back expenditures or to meet essential needs by tax adjustments which might stimulate business activity and in turn increase Federal revenue.

POPULAR WILL?

Some observers have expressed the opinion that Congress has reflected the views of the people by approving increased domestic expenditures. They believe the people generally have taken the attitude that if the United States can afford to spend billions for military and economic aid to foreign countries, then they, as taxpayers, want to get as many benefits as possible under domestic programs.

Whether this was a correct estimate of the opinion held by a majority of the people or not, it is apparently the basis on which the second session of the 85th Congress permitted:

1. A deficit of $12.9 billion;

2. The public debt limit to be raised from $275 billion to $288 billion temporarily and to $283 billion permanently, and

3. Nondefense spending for fiscal 1959 to be increased by $5.3 billion against an increase of only $2 billion for defense purposes.

If the Members of Congress thought they were acting in accord with the wishes of the people, it is time for the people to let Congress know they were mistaken.

In most instances, the Members of the South Carolina delegation voted conservatively in comparison with a majority of the Congress. We should give our strong support and express our approval of an even more conservative financial course in the future sessions of Congress.

NONDEFENSE SPENDING RISE

The fact is that total national defense spending planned for fiscal 1959 will be $4.3 billion under fiscal 1953's defense budget of $52.6 billion. On the other hand, nondefense expenditures in 1959 are estimated at $9.2 billion above the 1953 level of $21.7 billion.

In the face of the growing public debt, such extravagance has no place in the budget of a prudent government any more than it would fit into the budget of a prudent family.

Let's bring the Federal budget down to everyday terms.

A family budget, operated in the same manner as the Federal budget, would mean that the family started out fiscal 1959 with a debt of more than four times its annual income. Following the Federal trend, that family would face its financial situation by obligating itself to spend more than $1.08 for every $1 of income received during the year. No sound financial institution would accept a note signed by a member of a family in such a condition.

As a matter of fact, you and I know that no family and no business or industry could ever get in such a dire financial situation with private financing. They would be considered broke long before reaching such a status.

Of course, the Federal Government need not go broke because it holds the power through Congress to levy sufficient taxes to defray the costs of government. However, only this power to dip into the pocket of the taxpayer will prevent the Government from being declared insolvent.

One thing that has happened as a result of all this bad management is that Federal securities issued by the Treasury have been undergoing severe losses in value on the market. The people too have felt the effects of inflation in the decreased purchasing power of the dollar.

CONGRESSMAN CANNON'S VIEW

Congressman CANNON of Missouri, chairman of the House Appropriations Committee, advised his colleagues to tell the truth about the situation when they went home. This is what he said:

"When your people complain about the high cost of living tell them the facts. Tell them the national debt is higher because you voted to make it higher. Tell them the dollar has gone down and the cost of groceries has gone up because you voted to depreciate the dollar and voted to raise prices."

Congressman MILLS, of Arkansas, chairman of the House Ways and Means Committee, expressed fear that the 1959 budget "could let loose inflationary pressures that in turn will be emulated by business and labor. The result could be that during the course of the next several years we will see rises in prices such as we have not seen in peacetime."

It is my opinion that the contracts negotiated by the automobile workers union have shown that the continued inflationary trend in Government has indeed been followed by business and labor. We can look forward to other similar agreements all of which will pile additional costs on the American public for no additional service or value in a product.

DUTY OF CONGRESSMEN

On the other side of the picture, the President's veto last year of a $280 million program for aid to so-called depressed areas was encouraging in an era of socialistic endeavors. And his courageous anti-inflation messages to the new 86th Congress point in the right direction. The trouble is there are too few substantial attempts being made to find ways and means of reducing Federal spending.

The executive departments and agencies cannot spend a single dollar that is not approved by Congress, so it is the duty of Congress to seek out and cut out our unnecessary appropriations. Congress also must make a start toward reduction of the national debt. If this is not done during a time of peace, reasonably high employment, and high average income, then there will never be a time to reduce the Government's obligations which really are the debts of the people themselves.

A balanced budget would mean the surplus could be applied against the debt. Then in turn the budget could be reduced too, or at least held in line, because a part of the budget now applied to interest payments would not be needed if the debt were to be reduced or paid off. One dollar and a half out of every ten collected in taxes by the Federal Government would no longer be needed for interest payments if we paid off our Federal debt.

Perhaps that is too much to expect, but certainly substantial reductions could be made through sound financial practices. That is not too much for the American taxpayer to expect and to demand of Congress.

Since Congress passed the Interstate Commerce Act in 1887, and the Sherman Antitrust Act in 1890, we have seen a tremendous development of Federal regulation in many fields. When the United States entered World War I, Government controls had been enacted in the fields of banking, trade practices, farm and power credit, food processing, and labor.

During the boom of the 1920's the emergency controls were removed, but new acts of regulation soon were approved as the economy declined in the postwar era. After the stock market crash, the real era of Federal regulation began.

NEW AGENCIES, NEW SPENDING

Actually, from the passage of the Interstate Commerce Act, in 1887, through 1939, approximately 100 new agencies were created in the Federal Government. These included such agencies as the Rural Electrification Administration, the Federal Land Commission, the Federal Power Commission, the Commodity Credit Corporation, the Export-Import Bank, the Federal Housing Administration, the Veterans' Administration, the Social Security Board, the Tennessee Valley Authority, and the Board of Governors of the Federal Reserve System.

By 1940, through the establishment of new agencies and the expansion of old ones, the Federal Government had firmly fixed its control or regulation over business and industry.

By 1944 the Federal Government was purchasing almost as great an output of goods as used by the entire Nation in 1929.

And consider this significant comparison: From 1900 through 1958 the Federal budget multiplied 140 times, while the population little more than doubled.

We have reached a point where the Federal Government is a vital and often controlling factor in the major economic decisions of agriculture, business, and industry—if not in labor. Many people in all situations have come to lean on Government and welcome Government support—if not Government control.

CHANGE IN POLICY NEEDED

We look to the Federal Government for security, for wage and hour regulation, for highways, for pork-barrel contributions to many projects. Perhaps some of the things we look to Washington for are desirable or necessary. However, many undesirable results have come about because of the Federal Government's expanded role in our daily lives.

We must be more consistent. We cannot write our Congressman to vote for a South Carolina appropriation and to vote against the same catchall bill because it contains similar funds for South Dakota. We cannot ask favors for our business which we would oppose for somebody else.

We must place principle above pocketbook.

There is no easy way to bring about a change in our situation. It will be difficult in the face of pressures and demands for new and continued Federal services and Federal aid for Congress to do an about face in spending.

However, the hard facts of dollars and cents should provide a powerful argument for a change in policy.

There are no tricks by which we can solve our financial problem. Just as the head of a family has to take drastic steps when things get out of hand with the family budget, so now must Congress take drastic steps to repair the damage done to our economy by the policy of spend and borrow beyond our capacity, and tax and tax beyond our means.

George Washington offered sound advice in his Farewell Address. These are his words:

"As a very important source of strength and security, cherish public credit."

He admonished the Nation to use credit "as sparingly as possible" and to avoid the accumulation of debt "not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts which unavoidable wars have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear."

That is a simple formula. The following of it is what takes courage.

I hope the people and the Congress will find that courage. Otherwise, we will have to face a more destructive inflation than we have witnessed in the years since World War II. None can foresee what the ultimate results would be.

Views of Business and Industrial Leaders of New Jersey on the Economy Forecast for 1959

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a symposium, prepared by several outstanding business and industrial leaders of New Jersey, on the economy forecast for 1959. The forecast was made through the cooperation of the Prudential Insurance Co. of America with the New Jersey Manufacturers Association and was published last month in the magazine, New Jersey Business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORECASTS FOR 1959: A SYMPOSIUM—SEVERAL MEMBERS OF THE NEW JERSEY MANUFACTURERS ASSOCIATION BOARDS, LEADERS IN BUSINESS AND INDUSTRY, MAKE THOUGHTFUL COMMENTS ON THE PRUDENTIAL ECONOMIC FORECAST FOR 1959 AND WHAT THE YEAR WILL BRING FOR NEW JERSEY

Paul L. Troast, home, Clifton; president, Mahoney-Troast Construction Co., Clifton; director, New Jersey Bank & Trust Co., Passaic; president, S. H. Kress & Co., New York; trustee, New Jersey Manufacturers Association; and director, New Jersey Manufacturers Insurance Co.:

"Being generally of an optimistic nature, it is not difficult for me to wholeheartedly agree with Prudential's economic forecast for 1959. It is heartening, too, to note that my optimism is shared by those in the Prudential who are so able and whose outstanding record over the past 7 years lends much stature to their forecast.

"I am disturbed, on the other hand, to note that Government spending is continuing along an upward curve and feel that we as businessmen should more carefully examine this ever-expanding expense item which is such a large proportion of our costs of doing business.

"New Jersey can hope to benefit fully from the prosperous years which lie ahead only if we reestablish the healthy tax climate which formerly prevailed and which meant so much to our expanding economy.

"Again like most businessmen, I believe that there is a place in this optimistic future for more compensating profits for our stockholders. Competition is an important and necessary part of our economy but the past year has shown too many companies operating with expanding sales and curtailed profits."

Ward J. Herbert, home, South Orange; partner of McCarter & English, counselors at law, Newark; trustee, New Jersey Manufacturers Association; and director, New Jersey Manufacturers Insurance Cos.:

"It is difficult for a lawyer, even though active in a practice devoted largely to legal aspects of business developments and business affairs, to get the personal experience needed to form an opinion about local application of a national economic forecast. Much attention is naturally given to problems and litigation arising out of transactions which have already been closed in a business sense; and some attention goes to matters which are part of long-range planning and may or may not lead to immediate construction of new plants or the like. I can venture two comments, however.

"Some out-of-State capital, when considering new plants or branches in New Jersey, shows signs of being reluctant to face our new corporate income tax. The current uncertainty about an increase in the rate of the tax does not help matters.

"As to new housing, the recent decline in transportation for commuters, with the threat of worse to come, is obviously going to hurt the sale of new homes in a large part of the State in 1959 and will discourage building to some extent.

"These are unfavorable factors here which may limit to some degree the application in New Jersey of the Prudential's optimistic forecast for the Nation."

Steele L. Winterer, home, Short Hills; president, A. & M. Karagheusian, Inc., New York City; director, A. & M. Karagheusian, Inc.; Summit Trust Co.; Strauss-Rose Carpet Corp., Chicago; Wilbur Newman & Co., Inc., Chamblee, Ga.; Seaboard Floor Coverings, Inc., Philadelphia; trustee, New Jersey Manufacturers Association; and director, New Jersey Manufacturers Insurance Cos.:

"I think Prudential's appraisal of business conditions for the ensuing year will prove to be quite accurate. It is possible that in some industries again we may find ourselves unable to sell our productive capacity but, in general, the outlook certainly seems favorable.

"Overall, our Nation, with its population growth, will have vast numbers of new family formations and these are going to have a tremendous influence on business activity in the years ahead. However, it is evident that competition will be increased rather than lessened and those businesses that are able to improve their products and lower their costs will forge ahead, while those who fail in these two areas will lose out.

"Frankly, I am deeply concerned about New Jersey's future as a leading industrial State as New Jersey is facing a real challenge from many other States and if it is to retain its eminent position as an industrial State it must take a new look at its industrial climate. I don't think that business receives either encouragement or recognition for the part it plays in New Jersey and, in the long run, the States who are aggressively seeking new business are the ones that are going to go ahead and New Jersey's position will likely decline. Whether this decline begins to make its weight felt in 1959 remains to be seen, but it is one reservation on New Jersey business that I must add to the overall picture."

F. Raymond Peterson, home, Hackensack; chairman of the board and chief executive officer, First National Bank & Trust Co., of Paterson; director, First National Bank & Trust Co., of Paterson; director, New Jersey Manufacturers Insurance Cos.:

"I do not consider the Prudential Insurance Co.'s economic forecast for this year unduly optimistic. I expect a continuation of the recovery this year even if auto production shows only a moderate increase. A good gain could be a major factor in a spirited recovery in the economy, and if this influence continues strong it could be a major factor in a materially higher level of personal income, sales, and employment in the early sixties. With most of its labor problems solved, the auto industry appears to be in a position to meet whatever demand may develop.

"We expect steel production will expand between 20 and 35 percent this year, depending, in an important degree, upon demand from auto manufacturers.

"In my opinion, another major factor in this year's recovery, and for the years immediately beyond, will be the contribution of the construction industry with emphasis on residential building. A further hardening of money rates could result in some curtailment of homebuilding, but I expect a minimum of 1 million new starts and would not be surprised to see this figure exceeded by one or two hundred thousand.

"It is reported that the University of Michigan's annual conference on economic outlook attended by 70 economists working for corporations, financial institutions, and universities, thinks prices will rise no more than 1 percent this year and that unemployment will shrink to an average of 3.7 million. The resultant increase in expendable income, coupled with a relatively stable price level, should result in the movement of a considerably higher volume of goods.

"We are inclined to keep a constant check on three factors—construction awards, inventory buildup, and Government spending. Favorable developments in these three fields should result in our expectations being met.

"The outlook for New Jersey seems to be at least as good as for the Nation as a whole, based upon a check of our leading industries.

"Chemical output should expand approximately 10 percent and iron and steel upward of 20 percent. Military requirements should increase the output of electronic equipment, and production of electrical appliances should be materially higher. For other electrical equipment and for nonferrous metals, the outlook is not clear.

"Food processing and textile production are expected to be moderately higher and drug production should increase approximately 10 percent.

"The influence of Federal funds in our area is large and growing. This is particularly true in Federal aid for highways. Construction of routes 80 and 287, together costing over half a billion dollars, should aid our local economy for several years to come."

Sydney E. Longmaid, home, Bryn Mawr, Pa.; president and chairman of the board, the Esterbrook Pen Co., Camden; director, First-Camden National Bank & Trust Co., trustee, New Jersey Manufacturers Association; and director, New Jersey Manufacturers Insurance Cos.:

"We heartily concur with the Prudential Insurance Co. of America in its economic forecast for 1959 that consumer purchases within the State of New Jersey will show a substantial gain.

"New Jersey is especially favored in the great diversification of its business. The people of the State have an unusual stability of income which such diversification permits.

"We further believe that on balance, New Jersey business has demonstrated the type of leadership necessary if we are to take advantage of every opportunity for sound business expansion in this highly complex and competitive age.

"A further constructive element is the continued expansion of employment within the State and we agree with the Prudential survey that this trend will continue in the coming year."

Donald V. Lowe, home, Tenafly; president, Lowe Paper Co., Ridgefield; chairman, the Port of New York Authority; director, New Jersey Bell Telephone Co.; United States delegate to the Transport and Communications Commission of the United Nations; trustee, New Jersey Manufacturers Association, and director, New Jersey Manufacturers Insurance Cos.:

"Based upon general reading and opinions polled, it would appear that we can anticipate a continuing recovery in the overall economic picture, but at a somewhat tapered rate through the first half of 1959 with a flattening indicated in the latter half of the year.

"It would appear that Prudential's forecast is a little rosier than current newsletters such as the most recent one from RIA. Perhaps Prudential is banking a little too heavily on inventory buildup. As in our own experience, many industries undoubtedly are watching their inventories more carefully than ever as a result of their recent recession burn.

"Generally, I would anticipate that New Jersey's economic picture would be somewhat more stable than the national average for States, in view of the fact that it has such a well diversified industry pattern. Again, therefore, I would anticipate that not having been hit as hard as States in the Middle West its recovery might be closer to 5 percent than the approximate 7.2 percent indicated in the Prudential forecast."

Alfred E. Busch, home, Short Hills; vice president and treasurer, Keuffel & Esser Co., Hoboken; director, Summit Trust Co., Summit; trustee, New Jersey Manufacturers Association; and director, New Jersey Manufacturers Insurance Cos.:

"I feel that the forecast as outlined in the Prudential 'Economic Forecast for 1959' goes pretty much along with our own thinking.

It might be of interest to you to know that we have in the past been approached by Government departments involved in forecasting future trends for information regarding our sales of certain nondurable materials, such as tracing papers and tracing cloths and reproduction materials. The figures were wanted as it was felt that the use of these items for future planning might be some indication of future production activity.

"These lines during 1958 were depressed only slightly, so we do feel that the planning which has made use of these is indicative of the impovement in production and construction that is going to take place in 1959.

"Our durable goods, such as surveying equipment and drafting equipment, were seriously down during the first half of 1958, but there are indications of noticeable recovery here, and although capital expenditures for items of this kind might not reach the high figures of 1957, we do anticipate a material increase in their sale.

"Our manufacturing activities in our New Jersey plants are scheduled to be increased by 15 percent starting the first of the year. Some of this increase, however, was brought about by a more rapid inventory depletion than forecasted.

"Altogether, our feeling is that there will be an improvement of from 7 to 10 percent in the manufacture of our nondurable items, and possibly an even higher percentage of increase in that of the durable items over the present year."

Charles B. Gilbert, home, Trenton; president, Gilbert & Mott Chevrolet Co.; director, the First Trenton National Bank; Standard Fire Insurance Co.; trustee, New Jersey Manufacturers Association, and director, New Jersey Manufacturers Insurance Cos.:

"I have read the 'Economic Forecast for 1959' by the Prudential Insurance Co. Needless to say, it is good reading and I agree generally with their conclusions.

"The summary points out that much of the lift in business is expected from consumer purchases, and I agree that an upward trend in retail sales seems assured in the year 1959. Although durable consumer goods are expected to share in this trend, there is no clear indication that sales of such goods will rebound sharply. For instance, strikes in the automotive business have delayed production schedules so that the real tests of the public's attitude toward the 1959 models will not come until late in February or perhaps in early spring.

"The other items in the 'Forecast' such as public purchases of capital goods, housing expenditures, and Government spending, all take time to show their effect and to reach the consumer's pocket, so we should not be too hasty in looking for an overnight surge in buying. I have every reason to believe 1959 will be one of our better years if the labor element will use restraint in its demands and resolve its differences quickly."

George W. Furness, home, Millville; vice president, the Millville Manufacturing Co.; director, the Millville Manufacturing Co.; Millville National Bank; Wawa Dairy Farms; trustee, New Jersey Manufacturers Association; and director, New Jersey Manufacturers Insurance Cos.:

"Due to the press of business, I do not feel that I can go into the minute detail that would be required to give a formal version of my views of the Prudential 'Economic Forecast for 1959.'

"Suffice it to say, I feel the forecast to be over-optimistic and look forward to 1959 as in no way surpassing 1957. I rather expect business at best to run on a plateau rather than a new rise. The direction that will be taken after 1959 I feel is still indeterminate.

"In the textile industry a very bitter lesson was learned concerning inventory and I doubt if in the coming year it will be forgotten. There were little or no symptoms of it being forgotten in 1958. Sales and inventory have been kept in almost too close a relationship. I feel this might well apply to industry other than my own. From what I have heard from the automobile industry, while they are not disappointed in their sales, there is nothing startling in their improvement, which leads me to the above conclusion.

"I do agree that the man-hour output will improve in 1959 due to capital investment and modern machinery but I do not agree that the workweek will increase."

John S. Leslie, home, Ramsey; president, Leslie Co., Lyndhurst; trustee, New Jersey Manufacturers Association; and director, New Jersey Manufacturers Insurance Cos.

"Certainly, Prudential's economic forecast appears to be the most optimistic of any I had read and from the businessman's viewpoint, that is encouraging, particularly in view of the statement that Prudential's average annual error in their economic forecast has only been 1.6 percent for the past 7 years.

"Since our business is essentially in capital equipment, we concur in the improvement in this field during the last quarter of 1958 and are optimistic about 1959 which we believe in our company, should be back up to the 1957 level.

"The comment regarding consumer purchases and the relatively insignificant reduction in consumer buying from the peak of 1957 to a low point of 1958, is very interesting and encouraging and would appear to confirm the viewpoint of some economists that population growth is and will continue to be an important stabilizing factor in our economy. Perhaps many of us in top management in industry are too far from the consumer level to fully appreciate the importance of this attitude and are therefore insensitive to this index and the effect which it should have on our thinking and planning.

"Another encouraging factor in this report is the emphasis on the little bearing which increased Government spending has had on the recovery to date. This again indicates that recovery is not a result of pump priming, but of a more basic nature and therefore can probably be properly interpreted as more durable."

Governor Nelson's Appointment Restores Wisconsin's International Reputation in Utility Regulation Field

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 6, 1959

Mr. PROXMIRE. Mr. President, Governor Nelson, of Wisconsin, has made an appointment to our State's public service commission which has significance far beyond the boundaries of Wisconsin, in his choice of Prof. Martin Glaeser, of the University of Wisconsin.

Professor Glaeser is internationally recognized for his pioneering and creative work in the field of utility regulation. His research, his textbooks, and his students constitute the basic foundations for this field of economic study. Moreover, he played an important role in designing the rate structure of the Tennessee Valley Authority—a rate structure which made an indispensable contribution to the outstanding success of TVA. Incidentally, there are some very worthwhile lessons in the theory underlying Professor Glaeser's work in establishing TVA's rate structure which deserve more attention from economists today in their studies of our present problems of high and rising prices in the face of severe restrictions on output. Glaeser is an exponent of promotional rates—rates established at low levels for the purpose of promoting maximum demand and consumption, so that the resulting market for the full potential output of the productive resources will yield adequate profits even at the low unit prices. Economists might very well give increased attention to this theory, and its remarkable success where it has been given practical application in the TVA and in rural electrification, in their studies of industries which have continued to raise their prices steeply even while operating at only half of capacity.

The appointment of Professor Glaeser to the public service commission recalls the days a generation ago when Wisconsin was leading the Nation in the development of ideas for advancing the general welfare. It was his work on the Wisconsin Public Service Commission that brought David Lilienthal to national attention and led to his appointment as director of the Tennessee Valley Authority.

I warmly commend Governor Nelson for this most excellent choice for the State public service commission. It is an outstanding example of Governor Nelson's determination to raise the standards of public service in our State government to the highest possible level.

Mr. President, Governor Nelson's appointment of Professor Glaeser has been highly commended by the Capital Times,

which for 40 years has been nationally recognized as the living spokesman for the progressive ideas and idealism of the La Follette era. I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNOR MAKES FINE CHOICE FOR PUBLIC SERVICE COMMISSION: PROF. MARTIN GLAESER

Commenting on Governor Nelson's appointment of Prof. Martin Glaeser to the Wisconsin Public Service Commission, David E. Lilienthal said Tuesday:

"I am confident that his appointment will help restore the national prestige of the commission and greatly strengthen protection of consumers and at the same time bring to the commission's work a judgment and understanding that will mean fair and intelligent regulation beneficial to management and investors as well as to users of public services."

From the standpoint of reestablishing the prestige of the commission, nationally or in the State, Governor Nelson could not have chosen more wisely.

He has selected a man with an international reputation as an authority on public utility regulation—a man who has made a tremendous and unique contribution to the field in which he is now called to serve his home State.

As a distinguished researcher, teacher, and author, he has helped to bring society a better understanding of the complex field of utility regulation.

His mastery of the subject has been placed repeatedly at the disposal of the public. He has helped to draft regulatory laws for Wisconsin and was an indispensable aid in establishing the first rate schedules for the Tennessee Valley Authority.

The appointment should reassure the people of Wisconsin who have watched for 20 years a dismal succession of appointments to the public service commission based only on political considerations. This is the first time since the appointment of Lilienthal to the commission that such an authoritative figure has been chosen.

Wisconsin is lucky to have him available. Wisconsin should be proud that so distinguished an authority is a native son and a teacher at the university.

Governor Nelson has shown a profound appreciation of good public service by his appointment.

Providing Additional Funds for Direct Loans to Veterans

SPEECH
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 2256) to amend chapter 37 of title 38, United States Code, to provide additional funds for direct loans, to remove certain requirements with respect to the rate of interest on guaranteed loans; and for other purposes.

Mr. MONAGAN. Mr. Chairman, I shall vote for H.R. 2256. I did favor and support the amendment which would have eliminated direct loans. The record shows that this provision would have no practical application to Connecticut. In addition, I very strongly favor the provisions permitting an increase in interest rates because I feel that this increase will start bank funds growing out in the form of GI loans and that the direct loan provision will be rendered more or less academic. Finally, I know that in my section, existing lending institutions will adequately do the job of servicing these veterans applications and I see no need for governmental intervention in this field.

Inflationary Effect of Interest Increase in Veterans' Housing Act

SPEECH
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 2256) to amend chapter 37 of title 38, United States Code, to provide additional funds for direct loans, to remove certain requirements with respect to the rate of interest on guaranteed loans; and for other purposes.

Mr. FLYNN. Mr. Chairman, citizens of Wisconsin have for many months been deeply concerned with the ever-increasing spiral in the cost of living. Inflation is becoming a major threat to the American economy. Inflation is brought about through ever-increasing prices of commodities and the resulting need for increased wages to permit working men and women to keep pace with the increased cost of living. This ceaseless price and wage increase has been a major cause of the high cost of living in America today.

We here in Congress have witnessed this year another cause of the inflationary spiral and in the months ahead it will become increasingly apparent to the people of the country that there are other factors contributing to the high cost of living besides higher wages and increased costs.

The Veterans' Administration was originally established as a means of enabling veterans of World War II and the Korean conflict to secure housing for themselves and their families at somewhat less than the full rate of interest. FHA financing was inaugurated to give all citizens assurance that they could provide housing for themselves and their families at a moderate cost. From the beginning, it has been understood that interest rates under FHA financing would be higher than interest rates under VA financing. We have, however, witnessed, especially in rural and urban areas, a virtual refusal of capital to enter into the VA program of financing. Banks, building and loan companies, and other financial institutions have and are refusing to make VA loans at the current interest rate of 4¾ percent. This rate is only one-half of 1 percent lower than the FHA interest rate and this rate has already been raised several several times by previous Congresses.

Each time that the VA interest rate has been raised, the FHA has followed suit by increasing the interest rate on FHA loans. We have no reason to believe that the present VA interest rate increase will be met with any different response by officials of the Federal Housing Administration and I predict that the one-half of 1 percent increase in the VA interest rate will result in a similar increase in FHA loans. This will bring FHA interest rates to 5¾ percent. The criminal part of the situation, however, is that when the Federal agency interest rates are upped, this increase is accepted by private bankers as a license to increase private interest rates to private borrowers from our Nation's banks and I predict that the 5¾ percent interest on FHA loans will, during the summer and fall of 1959, result in private interest rates to private borrowers, across the board, of 6½ percent.

This interest rate is too high. It is inflationary. It is increasing the cost of living. The borrower has less money left when making the loan than he had before—just as the housewife has fewer groceries in her shopping basket for the money spent than she had before. There have been three increases in the past 3 years and undoubtedly 1960 will see further demands by the bankers to increase—first, the VA interest rate, then the FHA interest rate, then the private loan interest rate.

It is true the bankers made little or no appearance before Congress. They did not need to—for they had the American Legion and some other veterans' organizations, not including the VFW, and the National Association of Building Contractors to fight their battle for them.

I view this increase in the cost of using money with alarm. I view it as such because it has a direct effect upon inflation which besets our economy. I view it as such because the very people who are complaining loudest about the cost-wage inflationary spiral are the same people who championed for the fourth time the interest inflationary spiral.

I am for loans for the veterans at a moderate cost. I do not consider 5¼ percent interest a moderate cost to a veteran. This is especially true when the veteran is required to pay from 2 to 11 points for the privilege of getting the veteran's loan. We have failed in granting this increase to hold the line against inflation.

I, like many others who voted for this bill, did so because it represents the only way Congress provided of enabling veterans to get any loans at all, and because the bill carried a direct loan provision of $300 million. This provision will enable veterans in rural and urban areas to secure loans. The money market in these areas has dried up and without this direct loan provision, the Veterans' Housing Act is of no value to veterans who do not live in the large centers of population.

Airline Accidents

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. BOSCH. Mr. Speaker, another accident in the vicinity of La Guardia Airport. How long must we wait to get corrective legislative action? This plane could just as well have fallen in the congested areas of Queens County, resulting in untold suffering and devastation, not only to those traveling in the plane but also to those on the ground.

Previous hearings indicate that about 90 percent of plane accidents are the result of bad-weather flying. The present regulations are too liberal—they need strengthening. It is our obligation to take this matter under advisement and to provide such action.

The crash of the American Airliner in the East River on February 3 is but one of many accidents which have occurred in the New York area in recent years during inclement weather. To cite a few, in April 1952 five persons were killed and four houses were destroyed when a plane crashed in Jamaica, Queens County, after it missed its landing at Idlewild Airport; in October 1953 two persons were killed and others injured when a plane crashed while taking off in fog at La Guardia Airport; on December 18, 1954, an Italian DC–6–B airliner roared low over homes and densely populated areas in the vicinity of Idlewild Airport, not once but three times, and finally, on a fourth approach ripped into a Jamaica Bay pier, burst into flames, and sank in the water, killing 26 persons.

To elaborate on this crash in December 1954, the airliner left Boston in bad weather for Idlewild where the weather was rapidly closing in; when the plane arrived at New York the ceiling was just about 200 feet—the minimum ceiling, under present regulations, for landing; the pilot had to drop below this minimum in order to establish visual contact with the ground—one point we must bear in mind is that before a pilot can effectively land upon any landing strip, whether guided by instruments or not, he must establish visual contact with the ground.

Now, this most recent crash in New York reveals that the ceiling was 400 feet at the time of the crash. In a report titled "Sensory Illusions of Pilots," published several years ago by the Flight Safety Foundation, Chief Pilot P. P. Cocquyt of Belgium's Sabena Airline, said that an overwater approach robs a pilot of landmarks by which to judge altitude visually. He often believes he is higher than he actually is and the illusion will cause him to descend toward the runway lights at a steeper angle than is warranted. I think it is safe to assume that the pilot of this plane, acknowledged by the company to be "one of the finest pilots American Airlines has ever had," lost his depth perception.

Mr. Speaker, I have cited these cases to point up the need for legislation to establish by law safety regulations to stop these bad weather accidents.

As my colleagues know, I have in the past two Congresses introduced legislation to raise, by law, the minimum visibility requirements for takeoffs and landings at the airports in the New York area. I have again introduced this legislation, which I feel would do much to avoid some of the catastrophes which have happened in the past and which I have outlined above. These bills are H.R. 4179 and H.R. 4180 which have been referred to the Committee on Interstate and Foreign Commerce. In addition, I have introduced House Resolution 162 to create a select committee to conduct an investigation and study of the powers and functions of agencies over the operation of aircraft which was referred to the Committee on Rules.

Mr. Speaker, time for talking has passed; it is time for action. I urge my colleagues to join me in urging these committees to act speedily on my bills. It is my firm conviction that they merit enactment.

Questionnaire by Farmers Grain Dealers Association of Iowa

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include an analysis of an opinion questionnaire which was sent out to the farmer-owner-directors and managers of 335 member cooperative elevator companies in the State of Iowa.

This questionnaire poll was conducted by the Farmers Grain Dealers Association of Iowa among its membership to obtain guidance in drafting resolutions for the association which would reflect the majority opinion of the members. More than 600 questionnaires, representing 32 percent of the member cooperative elevator companies throughout the State were completed and returned. Of important significance in the analysis of these returns is the following breakdown for the section of the questionnaire concerning the formulation of resolutions directed to the support of legislation to provide for a farm program:

1. The Farmers Grain Dealers Association should support a rigid farm program. Yes, 75 percent; no, 25 percent.

2. The Farmers Grain Dealers Association should support in-kind payments on idle acres. Yes, 79 percent; no, 21 percent.

3. The Farmers Grain Dealers Association should support emergency reserve. Yes, 97 percent; no, 3 percent.

4. The Farmers Grain Dealers Association should support a national agricultural board. Yes, 92 percent; no, 8 percent.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Youth Conservation Act of 1959

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "Youth Conservation Act of 1959," prepared by myself, together with an editorial entitled "A New CCC?" published in the Medford (Oreg.) Mail Tribune of January 14, 1959.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

YOUTH CONSERVATION ACT OF 1959

(Statement by Senator MORSE, of Oregon)

It was most gratifying to me to read another fine editorial appearing in the Medford (Oreg.) Mail Tribune. On January 14 this truly great newspaper of the State of Oregon contained an item entitled "A New CCC?" In it the editor of the Mail Tribune struck a note which I think that the Senate will hear time and time again in the coming months as newspaper after newspaper, the Nation over, joins the chorus of praise for the legislation to create a Youth Conservation Corps, introduced by the very able and humanitarian senior Senator from Minnesota. As a cosponsor of this proposed legislation, S. 812, I am proud to work with the Senator from Minnesota and with the other cosponsors, toward speedy enactment of the bill.

In the last analysis, as I have often reiterated upon the floor of the Senate, the basic wealth of the United States rests not alone upon the raw materials we have at our command, abundant though they be; nor is it to be found solely in the broad rivers which convey our goods to ocean ports, in our forests which mantle the slopes of our snow-capped mountains, in our wheat-golden farms, nor in our blossoming fruit orchards. These all have but a derivative value. No, the truth wealth of our country lies in our basic human resource, the boys and girls who will tomorrow be succeeding us in the trusteeship of our natural resources.

This being so, have we not a plain duty to arrange matters in such a fashion as will conserve this human resource, so that when our children assume the trust of land, water, and minerals in their time they will wisely preserve their inheritance and pass it on, not only undiminished but enhanced? How better can this be done than through a program which gives at first hand a knowledge of and love for our forests, streams, and wildlife?

The boy salvaged from the slums of our blighted metropolitan areas through the Youth Conservation Corps would gain insight into the truths expressed by the great poet when he caused his character to say:

"And this our life exempt from public haunt
Finds tongues in trees, books in the running brooks,
Sermons in stones and good in everything.
I would not change it."

The Medford Mail Tribune editorial wisely points out that the cost is small in comparison with the benefits which would accrue to the boy, the community, and the Nation, through the enactment of this legislation.

The forest-access road program, so urgently needed, would benefit immeasurably from the enactment of the Youth Conservation Corps Act of 1959. Forest-access roads pay for themselves over and over again. Our timber is a crop to be harvested. It is a tragic waste if it falls to decay. It is a hazard when it becomes tinder dry and ripe for fire. Far better that it be harvested at prime and used for homes. The Youth Conservation Corps, under skillful leadership of Forest Service and Park Service rangers and foremen, who would build the access roads, clear the underbrush, and improve our Federal forests, would profit by their growth in skills. Their health would be enhanced. They could contribute to the family income to feed their younger brothers and sisters; but, most of all, Mr. President, they would grow in understanding of the riches offered by our open spaces, crystal lakes, and fragrant forests. This is the experience which would instill a true love of country, to be passed on and treasured by the generations beyond.

It is my hope that this legislation will pass the Senate without dissenting vote when it is reported from committee. Passage by unanimous action would constitute a symbol of the determination of the Senate to develop our country through the aid we extend to the young men of America in the recreation of a Youth Conservation Corps.

[From the Medford (Oreg.) Mail Tribune, Jan. 14, 1959]

A NEW CCC?

A couple of years ago, after a jaunt into the woods with a group of foresters and outdoorsmen, we reported here on a discussion we'd heard about the possibility of forming something like the Civilian Conservation Corps of pre-World War II days.

Several of the men in the party had had experience with the boys who came west to take over the barracks camps, build roads and trails, construct forest recreation facilities, do reforestation work, build firebreaks and fight fires, and generally effect a double rehabilitation—that of the forests and that of themselves.

Frequently these lads were the products of the slums of the East, and often were "tough cookies" themselves—boys who today would be called juvenile delinquents.

A rather amazing percentage of them, if we are rightly informed, went on from the CCC into contructive, useful lives.

How much credit the corps can take for this record is, of course, subject to debate. But many men who watched the tough boys from the streets of New York or Chicago change gradually into men who knew something of the outdoors, something of life, something of their fellow men, and something of responsibility, will swear that it was the turning point in more lives than a few.

The possibility of reviving the CCC or something like it has been broached every so often since the war.

The latest to do so is Senator HUBERT HUMPHREY, of Minnesota, who advocates a Youth Conservation Corps, to provide employment for boys of 16 or over.

After reading HUMPHREY'S proposal, Bud Forrester of the Pendleton East Oregonian talked to one of that newspapers' employees who came to Oregon with the CCC in 1937, who stayed, and who became a responsible citizen. He told Bud:

"There are 12 or 14 of us in and near Pendleton now and all of the fellows have made good. They came out of New York and New Jersey and if they hadn't had the opportunity to leave there I'm afraid it would have been a different story.

"Most of those guys were tough. We had gang fights in the CCC camp here in the beginning. Every guy wanted to show how tough he was. But it wasn't very long before it all got straightened out. Eveyrbody liked his job. We realized that there wasn't any point in trying to prove how tough we were—that it didn't make any difference in this new setup. It was just the right thing for some tough guys from the big city."

And he added that he thought Senator HUMPHREY should add one provision to his proposal, that the boys enlisted in a YCC should first of all come from the slum areas of big cities. He said:

"They are the fellows who need help. The situation that many of those boys face is almost hopeless. Get them into the YCC first. Broaden the program later."

The proposal, on a national scale, is similar if not virtually identical to suggestions for young men's work camps in Oregon, except that the latter would enlist youngsters who had gotten into trouble, or were headed that way.

Such an organization wouldn't end juvenile delinquency overnight, or in any length of time, for the causes are too deep-seated in our society. But it would solve a lot of problems, particularly in the area of the tough guys who really shouldn't be sent to prison, nor yet should be set loose again with a wrist slap.

The costs of such a program would not be negligible, but when compared to the Federal military budget, say, they would amount to probably a tiny fraction of that total.

And who could calculate the good that would come out of it?

It would include the construction of Federal forest access roads, which are so badly needed to get out overripe timber; it would speed up the rehabilitation and construction of forest service and national park recreational facilities now so badly behind the demand, and it would provide the resources for much other work which would benefit the Nation on its Federal lands—work now going begging for lack of budget and personnel.

But most of all it would provide a place for young men to get into a relatively wholesome atmosphere, to gain self-respect, to learn the merits of a hard day's work.

YCC has much to be said for it.

The Need for a Two-Party System

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD the text of a speech by Eugene C. Pulliam, publisher of the Indianapolis Star and News and the Phoenix Republic and Gazette, made before a meeting of the California-Nevada Associated Press on February 5, 1959.

Mr. Pulliam presents a very penetrating analysis of the need for a distinct two-party system of Government and spotlights some of our present-day trends. I was so impressed with the concise and straightforward approach presented by Mr. Pulliam that I am asking to have the text of his speech printed in the Appendix of the RECORD as a means of calling it to the further attention of the American people.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CALIFORNIA-NEVADA ASSOCIATED PRESS MEETING

(Address by Eugene C. Pulliam, publisher, Indianapolis Start and News, Phoenix Republican and Gazette)

Members of the Associated Press of California and Nevada, special guests, ladies, and gentlemen, frankly, I didn't come here to make a speech. I came to talk as one newspaperman with other newspapermen about the most important responsibility we have—the responsibility of preserving the Republic and saving individual freedom for America. Freedom is our business. It is our most important business.

I particularly want to call your attention to some things that have happened to this country during the last year, and give you at least my opinion as to why they happened.

Any sound political observer must admit that President Eisenhower was elected in 1952 by the protest votes of unhappy Democrats. There just weren't enough active Republicans in that year to elect a President. The unhappy ones hoped for a reversal of the New-Deal-Fair-Deal-Trumanism trend, and a return to conservative, economical, honest government. But within a couple of years or so they began to feel betrayed.

During the last 5 or 6 years this country has been drifting toward a one-party system run by Washington bureaucrats. Just recently I was talking to President Eisenhower about this matter, and he asked me about Congress. I ask him to define the Republican Party, and told him that if he would define the Republican Party I would prove he was talking about the Democratic Party, and if he would define the Democratic Party I would prove to him that he was talking about the Republican Party. There are the same elements in both parties. Neither party stands for anything definite and unequivocal, and this is one of the most serious aspects of our national life. Frankly, I believe it has happened because the newspapers haven't been articulate enough in warning the American people of the dangers of a one-party system run from Washington.

On its record for the past 6 years, the Republican Party has stood for deficit spending, bigger budgets, higher taxes, more foreign giveaways, more appeasements to the Soviets, Federal aid to and control of the schools—in short, everything against which it was fighting from the days of the two deals until the American people got sick of the two deals and threw Harry Truman out of the White House. No wonder the Republican Party got dumped in the ashcan last fall. It is no longer a national party with definite principles. It has abandoned the very people who gave it power and position in this country for the first time in 20 years. It has helped tremendously in establishing a one-party system in Washington and thus cut the ground out from under its supporters in State and local governments.

And yet the Republican Party does not need to die of suicide, as it seems just about to do. It can fight and win, as BARRY GOLDWATER—the most vigorous, the most unyielding, the most courageous Republican of them all—fought and won in Arizona.

Facing the combined assault of the rich and powerful AFL–CIO organization, COPE, facing the challenge of a popular and experienced former majority leader in the U.S. Senate, facing abandonment by his own party in Washington, and facing a population of voters registered overwhelmingly Democratic—as they always are in Arizona—GOLDWATER met every challenge. He did not retreat 1 inch from the principles in which he believed. He made not one particle of compromise with the liberal line. He fought for the very things his party once fought for in 1952, when he was elected, and he won a smashing victory, a victory so big that he carried a relatively unknown Republican Governor into office with him.

How did he do it? A month before the campaign BARRY GOLDWATER was beaten. Every poll taken in the State indicated this, but we kept hammering, hammering, hammering every day. We proved that the AFL–CIO organization called COPE was in the State with plenty of money, trying to take over both the State and local government and, above all, beat GOLDWATER. Not until we aroused the people of Arizona to the danger of having a labor-socialist government in the county and State did they begin to respond. By election time you know what the result was—the most disastrous defeat ever suffered by the Democratic Party in Arizona. And that was because they had allowed COPE to come in and manage their campaigns for them.

I tell you these things for only one reason. The American people will do the right thing when they are told the truth, but you have to tell it to them day after day, day after day, day after day.

The tragedy of these last few years is that during this period of deterioration of the Republican Party, America has been drifting day by day toward a welfare state. There has been practically no organized or concerted opposition to the welfare state throughout the United States. Some newspapers oppose it consistently, others spasmodically, others not at all. Very few papers have paid attention to the great danger that faces this country when we degenerate into a one-party government. That's practically what we have now, because there is no difference between the Republican and Democratic Party as far as their governmental objectives are concerned. They are both dedicated to some type of welfare state.

I hold no brief whatever for the Republican Party. I have supported the Republican Party and I have fought the Republican Party, but as long as the Socialist leaders of labor are hell-bent on controlling the Democratic Party, the only effective opposition must come from the Republican Party. In other words, I think it is our job as newspapermen in our effort to save this Republic to constantly, day by day, reiterate the importance of a two-party system and to stimulate the Republican Party to adopt a set of principles which are completely antiwelfare and anti-Socialist, in order that the people of this country may have a choice between a labor-Socialist government and a traditional American government. As I have said before, the people of this country will always do the right thing when they know the facts and are aroused to their own responsibility. Frankly, they take government for granted. They have been disgusted with the trend toward welfarism, but they really don't take time to do anything about it. It is our job to stir them up and make them understand that they must do something about it if they are to maintain individual freedom.

In the early 1900's, the New York bankers and the railroad presidents ran this country with an iron hand. The people finally rose up in rebellion and stamped out that dictatorship. Today our fight is with a group of highly intelligent but selfish bureaucrats in Washington and the Socialist-labor leaders of the country who are determined to turn our Government into a welfare state. As newspaper people we had to arouse the public to fight the railroad presidents and the bankers. Today it is our job to do the same thing—to arouse the people to the danger of a bureaucratic dictatorship in Washington, which leads to totalitarian government.

Another very grave danger has developed in this country, with some, but not too effective, opposition. And that is the definite objective of the Supreme Court to take over the legislative functions of the Government.

The Socialist-labor leaders are so exultant over their victory in the 1958 election that they are now determined to force a repeal of section 14–B of the Taft-Hartley law and thus nullify the right-to-work laws now in effect in 19 States.

This raises the question: Does the Congress have the power to prohibit such rights to the States?

When Senator Taft and Representative Hartley included section 14–B in their labor control law, they were simply acknowledging a State right which already existed. They granted no special sovereignty, because that sovereignty had already been established in the Federal Constitution. The Congress has no power to grant nor to prohibit the powers given to the States in the 10th amendment.

It is quite another matter, however, when we consider what politically inspired courts might have to say about the rights of the States. The American Bar Association and the Conference of Chief Justices of the States have been so alarmed that they felt impelled to rebuke the U.S. Supreme Court for decisions considered to be far more political than judicial. It is very obviously possible that the political courts, under the pressure of socialist-labor union bosses, might ignore the 10th amendment and render decisions which would emasculate the constitutional powers of the States.

The honorable Justices of the Supreme Court should remember that the laws and court decisions must stand the test of public approval and support. The 18th amendment, the prohibition amendment, was rendered ineffectual and finally repealed because it lacked the support of the American majority.

The people, after all, are the court of last resort and no judges, however they may be affected by delusions of power, can withstand the frowning disapproval of the people. It should be insisted then that the Congress has no power to nullify right-to-work laws in 19 States and that courts have no constitutional authority for upholding such an emasculator of States rights.

And this applies to all States rights—not only to the right to work. We have to maintain the integrity, the sovereignty, and the rights of the States if we are going to preserve the Republic.

So again I say to you that freedom is our business. It is our business to protest against this usurping power of the courts to make laws. The people must understand just what the Supreme Court is doing to the States and to the Constitution of the United States, and they won't understand it if we, as newspapermen, remain passively silent.

Thomas Jefferson, probably the wisest statesman America ever produced, recognized the great responsibility of newspapers and also what happens when people are not informed. He made this very dramatic statement, "Were it left to me to decide whether we should have a government without newspapers, or newspapers without a government,

I would not hesitate to prefer the latter—newspapers without a government," because he knew newspapers, properly operated and dedicated to the public good, would keep the public informed and the Republic would be preserved.

The American press is the real backbone of liberty in this country. It represents the very depths and sinews of freedom in America. If we continue to maintain our fierce independence regardless of party affiliations, if we continue to resist the coddling and courting and flattery to which too many spineless eastern newspapers have capitulated, then freedom in America will be safe—safe in your hands. The preservation of a free America through a free press is more important than any other thing any of us can do. It is the finest, the ultimate service we can offer to our family, our State, our country, and our God.

Soviet communism certainly is a great threat to the American Republic. It is a great threat to the American people, but we can lick communism only if we keep America free and alert. Eternal vigilance is the price of liberty, and that is something we've got to tell our people day after day after day after day.

Has it ever occurred to you that, while the United States is drifting into some type of Socialist welfare state Russia is backing away from the actual practices of Socialist philosophy?

The progress which Russia has made in economic and industrial development is in almost exact ratio to her withdrawal from Socialist concepts of government.

Collective farming is being supplanted by incentive farming. Scientists and industrial workers and professional people are being given individual rewards for outstanding service. This is all contrary to socialism, but as Russia abandons socialism she is moving forward economically and industrially, while we are drifting downward into a socialized abyss.

How long will it take the American people to learn that 5,000 years of history prove that socialism has failed miserably in every country where it has been adopted? The Russians have discovered this, but so far our Washington bureaucrats and world planners are blind to the truth.

Low morals and excessive taxation have destroyed every civilization since man organized himself into collective society. Study all of them—almost without exception they were destroyed from within rather than from without. They are destroyed by taxation upon taxation, until people lose their incentive, their initiative, and the whole morale of the nation disappears. This is a lesson we must learn. This is a lesson we must tell our readers. Federal bureaucracy is a far greater danger to the life and future of this Republic than is that of Communist domination—even though that at the moment is still very, very serious.

Today America stands alone, the only free country left in all the world. Blessed to have such a beachhead, as newspapermen we should be proud to do battle for our God and for our faith in freedom. If America remains free, the things we hold dear and all our bright hopes for the future are secure. If we preserve and protect our freedom, then sometime, someway, somehow, America, being free, will show the rest of the world the road to freedom. This is the mission, this is the crusade which I urge on you now as newspapermen, with all your initiative and all your courage, to assume as your own. This is the divine mission of America—freedom for ourselves and eventually freedom for all the world in which the spirit of the Lord will abide.

So I salute you, American newspapermen, on your opportunities as American ambassadors for freedom. Wherever you go, whatever you write, and with whomever you come in contact, remember that America is great only because America is free.

New Parole System in Texas Saves Money and, More Important, Men

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Monday, February 9, 1959

Mr. YARBOROUGH. Mr. President, a new professional parole supervision system has recently gone into effect in Texas, and I believe it to be a progressive step in the field of rehabilitation of convicts.

It is estimated the new plan will save the State $1,250,000 in 2 years. However, I feel the new plan will save a commodity much more important—the lives of men.

Under the system set up by Texas' 55th Legislature, the requirements for the men who must administer the program were stiffly set. This will insure men of quality who will not only deal fairly with the parolees, but will conscientiously try to help them and their families. The good works which parole officers elsewhere have accomplished with patience and understanding are legion.

In addition, there is a supplementary system whereby local citizens volunteered to work with the parolees. As of the first of last year, there were 2,700 parolees out under the volunteer system. An additional 1,400 have been released under the professional system, for a total of 4,100. Of these, only 260 were returned to prison. This means more than 3,800 parolees have been returned to society. Certainly some will again run afoul of the law, but I feel these figures show most of them will abide by the law if given the chance. I am glad to say the Texas program is giving many convicts the chance to return to contributing lives outside.

Mr. President, I have a special interest in this program due to my 5 years experience as a district judge at Austin, Tex., and a member of the juvenile board of Travis County. Based on that experience, I led the way in advocating a State parole system in Texas staffed by professional officers and made more than 1,500 speeches in Texas between the years 1952 and 1957, advocating the system which has been set up.

And I feel special congratulations are due the State parole officers for their tireless, dedicated efforts to help their fellow men who have made mistakes, and to the legislature for establishing the program, and to the State board of pardon and paroles for its cooperation.

Mr. President, in recognition of the work being done by these men and women, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Milton Turner which was published in the Beaumont Enterprise for February 2, 1959, telling the story of Henry Kirby Pitts, one of the dedicated State parole officers, under the heading "Professional Parole Officers Serve Offenders at Less Expense to the State."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFESSIONAL PAROLE OFFICERS SERVE OFFENDERS AT LESS EXPENSE TO STATE

(By Milton Turner)

Jefferson County and the rest of Texas now has a professional parole supervision program designed for greater public protection and economy. Since Texas' crime problem has grown more rapidly than the population this program has become a vital State project.

Tall Henry Kirby Pitts, 27, of Kountze, may look more like an all-American basketball player than a State probation officer, but he opened the first State probation office in this area on April 21, 1958.

SIX-COUNTY AREA

Operating from his headquarters in the basement of Jefferson County Courthouse he has charge of six counties, including Jefferson, Hardin, Tyler, Newton, Jasper, and Orange. He makes personal contact with an average of 150 to 200 parolees each month and keeps tab on others by telephone and mail.

In his role as State probation officer he must, at times, be judge, officer, friend, chaplain, psychologist, and adviser to parolees and their families. Not only does he keep close tab on the location, conduct, and condition of his charges but, upon request, check on parolees from other States.

STATE BOARD ACTS

Before the State board of pardons and paroles will release a convict on parole he must show that he has a place to live and a job waiting him on his release. It falls on the shoulders of Officer Pitts to get this information and return it to the board in report form.

It is well to remember that a parole is not forgiveness for an offense, nor is it a pardon given an inmate. It is simply a means for a deserving inmate to serve the remaining portion of his sentence outside prison walls.

If he fails to live up to the conduct expected of him, he is returned to prison. The results of a parole officer's investigation is the deciding factor in an inmate's release or reincarceration.

When the 55th State legislature appropriated funds to set up the present professional system consisting of a director, 4 supervisors, and 40 parole officers, it took into consideration that the Texas prison system was filled to capacity.

Parole is cheaper, and the legislators reasoned, by using professional probation officers citizens would be better protected and parolees would have a better chance of making a success of their freedom.

VOLUNTEERS SUPPLEMENTED

The former volunteer system where local citizens contributed their time and effort to work with parolees has not been discontinued but supplements the present system.

Under the volunteer system only 750 parolees could be release in 1957. As of January 1, 1958, there were 2,700 parolees out under the volunteer system. The same year the professional system made is possible to release an additional 1,400 parolees making a total of 4,100 parolees in the State.

Of that figure 260 were returned to prison due to new felonies and other parole violations. It is estimated that at the end of 2 years the State will realize a net saving of

$1,250,000 after all parole costs have been deducted.

The division of parole supervision which operated under the State board of pardons and paroles is divided into three State areas including southeast, northeast, and southwest. There are 20 district offices.

Requirement for parole officers are necessarily stiff. For the job which pays a maximum salary of $400 a month, officers must be between the ages of 26 to 55. They must have completed 4 years in an accredited college, have had 2 years experience in correctional work, education, personnel or social work.

District State parole officer Pitt surpasses even these standards. A 1947 graduate of Kountze High School, he matriculated at Lamar Tech and in 1956 received his bachelor of arts degree from the University of Texas. A former State highway patrolman he is now working part time on his master's degree in educational counseling.

Rural Electrification Administration Doing a Good Job

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. HOEVEN. Mr. Speaker, the Rural Electrification Administration has filed a very enlightening and comprehensive report covering the activities of that agency for the fiscal year 1958. In connection with the submission of said report, I enclose the following letter received by me from Mr. David A. Hamil, Administrator of REA, giving a concise breakdown of the subject matter of the report:

U.S. DEPARTMENT OF AGRICULTURE,
Washington, D.C.

Hon. CHARLES B. HOEVEN,
House of Representatives.

DEAR CONGRESSMAN HOEVEN: Attached is a copy of my report on the activities of the Rural Electrification Administration during fiscal year 1958, a year in which important progress was achieved in helping rural people get more and better electric and telephone service.

In both our electric and telephone programs loan needs were met fully.

During 1958 REA's electric borrowers connected more than 115,000 unserved rural establishments, raising the total number of consumers served to more than 4.5 million. They installed more than 200,000 kilowatts of new generating capacity. On and off the farm, rural consumers used more electricity, increasing purchases 8.7 percent over fiscal year 1957.

To enable rural electric systems to meet this growing demand, my office approved during 1958 a total of $241,636,869 in electric loans, bringing total loans since inception of the program to more than $3.77 billion.

REA electric borrowers continued to grow in financial strength and responsibility. During 1958 their principal and interest payments pushed total payments made since the start of the program to over $1 billion. More than $128 million of this sum represented payments made in advance of due dates. Four borrowers—an alltime low—were delinquent in payments more than 30 days as of June 30, 1958. And at the end of calendar 1957, the net worth of electric borrowers amounted to 14.9 percent of their total assets.

In REA's rural telephone program, borrowers chalked up new construction records and had connected 693,831 subscribers by June 30, 1958. Nearly one-third of these subscribers had telephone service for the first time, and almost two-thirds had their first dial service.

Rural telephone systems received 216 loans totaling more than $89 million during fiscal 1958—another record. Total loans from the start of the program came to more than $478 million. When construction is completed, these loans will provide modern telephone service to 1,020,454 subscribers.

During the year telephone borrowers made payments to REA totaling more than $5.5 million. At yearend, 48 borrowers had a balance with REA of $709,920 in advance payments. The number of borrowers delinquent more than 30 days in their payments was reduced to 15 at the end of the fiscal year.

Sincerely,

DAVID A. HAMIL,
Administrator.

Legislation Amending the Federal Airport Act So as To Extend the Time for Making Grants for Community Airports Should Be Approved

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. VAN ZANDT. Mr. Speaker, this morning I appeared before the House Committee on Interstate and Foreign Commerce in support of legislation amending the Federal Airport Act in order to extend the time for making grants and so forth.

The statement follows:

STATEMENT OF REPRESENTATIVE JAMES E. VAN ZANDT, 20TH DISTRICT OF PENNSYLVANIA, BEFORE THE HOUSE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, FEBRUARY 9, 1959, IN SUPPORT OF LEGISLATION TO EXTEND THE FEDERAL AIRPORT ACT

Mr. Chairman, as one who introduced a bill to amend the Federal Airport Act in order to extend the time for making grants and so forth, I appreciate this opportunity to appear before this committee in support of such legislation.

As many of you know, I represent the 20th District of Pennsylvania, comprising the counties of Blair, Centre, and Clearfield, and in this area the communities of Altoona, DuBois, Philipsburg, and State College are interested in the legislation now under consideration.

For your information, Altoona is served by the Altoona-Blair County Airport located at Martinsburg, Pa.

At this moment the airport is undergoing expansion, and it is estimated that at least another $315,000 of Federal assistance will be needed to complete the modernization program.

In the case of DuBois, Pa., the airport is under construction at this time with an estimated $300,000 in Federal funds being needed to complete the airport and make it operational.

At Philipsburg, Pa., the Black Moshannon Airport will need at least $100,000 in Federal funds to complete badly needed improvements including a terminal building, and so forth.

At State College, Pa., the site of the Pennsylvania State University, according to communications I have received, the sum of $100,000 in Federal funds will be needed to expand an existing and inadequate airport.

Mr. Chairman, in my three-county area the need of modern airports is acute.

The area is mountainous and what rail service we enjoyed the past many years is rapidly diminishing due to the curtailment of passenger service.

In the wintertime—and our winters are lengthy—travel by highway is precarious.

With the area being serviced by Allegheny Airlines, to obtain full enjoyment we need adequate airport facilities.

The communities which sponsor these airports through an airport authority organized for that purpose find it impossible even with State aid to finance the expansion and construction of airports.

Therefore, without Federal assistance the program of airport construction and expansion will come to a standstill.

It is for that reason I am appearing before this committee in support of legislation to extend the Federal Airport Act.

Engine of Overproduction

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, Prof. Raymond F. Mikesell, a leading economist, is Miner professor of economics at the University of Oregon in my hometown, Eugene, Oreg. Professor Mikesell was quoted in the following editorial from the New York Times for January 6, 1959, and I include it here by unanimous consent, with respect to a problem which this Congress must squarely face as soon as possible:

ENGINE OF OVERPRODUCTION

In the period of 16 months between July 1, 1957, and October 31, 1958, the Commodity Credit Corporation disposed of surplus farm products whose cost to the Government had been $4,207 million. Proceeds of their sale, however, were only $2,956 million, a return of roughly 70 cents to the dollar. Stated another way, the loss to the Government in these transactions, which involve buying up farm commodities at the artifically supported domestic price and selling them for what they can bring in the world market, came to $1,251 million.

Now, if the effect of that expenditure had been to reduce by $4,207 million a Government-held surplus accumulated over a period of years, and if we could count upon similar progress in the years immediately ahead, then it might perhaps be economically and socially justified. But such was not the case. On the contrary, the figures just released by the U.S. Department of Agriculture reveal that over this same period of 16 months the CCC's price support inventory actually rose from $5,372 million to $5,576 million.

Prof. Raymond F. Mikesell, in a recent study, "Agricultural Surpluses and Export Policy," prepared for the American Enterprise Association, points out that rapid and unpredicted shifts in demand and supply conditions may create temporary surpluses

in which the Government may intervene to cushion their impact upon prices and ease the process of readjustment. So far as American agriculture is concerned the most important single element making for a shift of this kind is to be seen in the fact that between 1940 and 1955 output per man-hour alone increased by 88 percent. But when the Government's intervention results, as in this case, not in a temporary farm crop surplus but in the indefinite continuation of surpluses, notes Professor Mikesell, it can no longer be regarded as a readjustment program. "Thus," he observes, "the foreign disposal programs are a regular outlet for current overproduction. In fact, the disposal programs have become an engine for continuing overproduction."

Visit to Washington, D.C., by Students and Faculty Members of St. Martin's Episcopal High School, Metairie, La.

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. LONG. Mr. President, it was my pleasure several days ago to have as my guests in the Senate a group of students and faculty members from St. Martin's Episcopal High School in Metairie, La.; which is a suburb of the city of New Orleans.

St. Martin's Episcopal High School is fairly new to the New Orleans educational scene, having been founded in 1950. However, it is already the largest private school in metropolitan New Orleans. St. Martin's must be one of the few high schools in the United States to have all the members of the last three graduating classes enrolled in universities throughout the country. With this record, its standards are obviously of the highest order.

As part of its general educational program, the graduating class of 1959 made a trip to Washington between semesters for the primary purpose of giving the students an opportunity, before completing their secondary education, to visit some of the important centers of government activity in the country. During their visit to the Capitol, they were able to see the actual operation of our body and to observe at firsthand the procedures which are followed by the Nation's lawmakers in handling the many problems which confront us today.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the names of the students of St. Martin's Episcopal High School and their chaperones who visited Washington.

There being no objection, the names were ordered to be printed in the RECORD, as follows:

Chaperones: Mr. Ellsworth O. VanSlate, headmaster of St. Martin's, Mrs. Ellsworth O. VanSlate, Mrs. Robert Bowers, and Mrs. Carleton Schupp.

Students: Pete Smith, Jim Hitchcock, Mack Kennington, Chip Favrot, Bob Head, Stan Ligon, Randy Nockton, Bruce Cornay, Holland Collins, Larry Haas, Jimmy Williams, Jay Schupp, Eddie Ellzey, Ingersoll Jordan, Robert Bowers, Walter Drake, Philip Tiller, Susan Dean, Dana Suggs, Susan Vreeland, Carolyn Wirth, Lynne Hall, Sara Hogue, Paddy Livaudais, Leigh Moise, Cathy Brawner, Sally Heyerdale, Merle Morrow, Ellen Ryan, Eleanor Faulk, Wing Sinnott, Dixie DeLong, Sue Fulks, Kathleen Ross, Sue Kerlin, Gwynne Bowman, Jeannette Boykin, Carolee Andrews, Barbara Mayo, and Taffy Yeargain.

Senate Act Usurps Power of the House

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. George Rothwell Brown appeared in last Sunday's New York Journal-American, February 8, 1959.

The powers of the House of Representatives on all moneys to be appropriated are very clearly spelled out in the Constitution that we have all sworn to uphold 1 short month ago.

At this time in our history we can ill afford to have the powers of either body of the Congress curtailed or infringed on in any way:

SENATE ACT USURPS POWER OF THE HOUSE
(By George Rothwell Brown)

WASHINGTON.—By an extraordinary usurpation of power, the Senate last week passed a Federal housing bill that increased President Eisenhower's estimates by $1 billion, and knocked a $135 million hole in the current budget.

The bill enacted by a reckless "liberal" Republican and Democratic coalition, was both an appropriation bill and in some features a tax bill.

Under the Constitution's provisions regarding all money bills, this highly inflationary raid on a balanced budget, if presented at all, should have originated in the House of Representatives.

Instead it unconstitutionally originated in the Senate Banking and Currency Committee, and was then for purely political reasons hurriedly rushed through the Senate before the House had begun even considering its own bill.

If this bill properly could have originated at the Senate it should have been considered first, and reported, by the Senate Appropriations Committee.

Instead the Appropriations Committee was bypassed. But this was not all. The Senate also by the same dubious procedure bypassed the House Ways and Means Committee, the House Appropriations Committee, and the House itself.

When the bill was passed by the Senate Thursday, and was sent over to the House, the Appropriations Committee of that body was bypassed again, and the bill which would commit the taxpayers to a cost of $2,675 million over a 6-year period, was referred for consideration to the Banking and Currency Committee.

This is a free-loading, free-spending, welfare-state committee. Thus the Appropriations Committee, which is supposedly the watchdog of the House, was ignored.

The housing bill shifted the appropriations function of Congress to a sidetrack and laid down a secret pipeline directly into the U.S. Treasury through technical loans.

The clever scheme of sneaking into the Treasury vaults, as it were, through the coal hole, when nobody was looking, began about 20 years ago. The matter has now become a very great abuse, crying loudly for reform.

The Democratic Party in the Senate cut $225 million from the original Sparkman housing bill, partly to evade the spendthrift tag that is being placed on it, and partly to escape a possible presidential veto.

It is now up to the Democratic leadership of the House, where there is a threat of an even greater raid through the Treasury's coal-hole pipeline, to keep the Housing Act of 1959 within the sane bounds laid down by the President, and avert the peril of runaway inflation to which it opens wide the door.

Hon. J. W. Fulbright, of Arkansas, Brings International Reputation as Patron of Scholars to Chairmanship of Foreign Relations Committee

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. PROXMIRE. Mr. President, the United States is fortunate indeed that it has a man of the competence, training, vigor, and good judgment of the Senator from Arkansas [Mr. FULBRIGHT] to take over the vital responsibilities that go with chairmanship of the Foreign Relations Committee at this critical time in our history. In addition to his committee experience, the Senator from Arkansas has another outstanding asset to contribute to the Nation in his important role in our foreign relations. This is the symbolism associated with his name throughout the world through the Fulbright scholarships program. This association is indeed a most fortunate one for the Nation. The Fulbright scholarships have been a tremendously effective and constructive force in developing and cementing good understanding and friendly relations in many areas of the world. Indeed, this program has been one of the most successful ventures of the Government of this country in the eyes of the men and women in other countries who share the major responsibility for leadership and government.

The merits of the Fulbright scholarship program are set forth in an unusually well informed and thoughtful article which appeared in the Milwaukee Journal on Friday, February 6. This article, by Mr. Gerald Kloss, gives full

recognition to the fortunate contribution to our foreign relations which the chairman's association with the Fulbright scholarships makes at this time. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SENATE'S MR. SCHOLARSHIP—J. WILLIAM FULBRIGHT, OF ARKANSAS, NEW FOREIGN RELATIONS HEAD, IS KNOWN INTERNATIONALLY THROUGH STUDENT EXCHANGE PROGRAM

(By Gerald Kloss)

Senator-J. (for JAMES) WILLIAM FULBRIGHT, of Arkansas, new chairman of the Senate Foreign Relations Committee, enjoys one distinction that no other living American politician can match: His name has become part of the language.

The word "FULBRIGHT" is not yet spelled without a capital letter, but over most civilized parts of the globe it is practically a synonym for an American Government-sponsored college scholarship. Since 1946, when Senator FULBRIGHT pushed through a bill for a student-exchange program, about 16,000 American students, researchers, and teachers have gone abroad on "Fulbrights" and 15,000 foreign students from 31 countries have come to schools here. Not even the Marshall plan or Truman doctrine have achieved a closer identification with their authors.

A good many Fulbright scholars call on the Senator when they visit Washington, much as one would say thanks to a host upon leaving a party. FULBRIGHT regretfully has had to cut some of these visits short—"I haven't time for them all; I have to be a Senator, too."

He will have less time than ever from now on, for this week he started one of the most important and responsible jobs in the country, replacing the 91-year-old Senator THEODORE FRANCIS GREEN, of Rhode Island, as head of the Foreign Relations Committee. Under FULBRIGHT'S leadership, the committee is expected to take an even larger role in shaping American foreign policy.

For several years FULBRIGHT has been one of the Senate's sharpest critics of the Eisenhower-Dulles foreign policy, scourging the administration particularly for its lack of initiative. He has urged greater flexibility in handling the Berlin crisis and has attacked Dulles for refusing "to get off dead center" in dealing with Red China and Russia.

He has been outspoken in other fields, too. While still a freshman Senator, he calmly suggested that President Truman resign and let a Republican take over the White House in order to prevent a politically split Government following the Republican sweep in the 1946 congressional elections. Truman frostily ignored the advice, as did President Eisenhower when FULBRIGHT made the same suggestion after the Democratic victory in the 1954 congressional elections.

HE OPPOSED SENATOR M'CARTHY

Even more spectacular was his stand against Senator McCarthy of Wisconsin in the heyday of the latter's era. Convinced that McCarthy was doing the Nation a vast disservice, FULBRIGHT voted against a further appropriation for the McCarthy subcommittee on investigations early in 1954—the only Senator to do so. He also lined up votes and directed policy in the censure resolution that tumbled McCarthy from power.

For all his candor, however, the 53-year-old Arkansan also has been tagged the Senate's most reluctant gladiator. According to Senator PAUL DOUGLAS, of Illinois, FULBRIGHT is a child of the 18th century—a throwback to that age of enlightment, trust in reason, temperate argument and slightly aristocratic tendencies.

A handsome, blue-eyed man who keeps in trim by golf and frequent workouts in the Senate gymnasium, FULBRIGHT starred as an athlete and as a scholar in college.

At the University of Arkansas, which he entered at 16, he was captain of the tennis team, first president of the student government and a 60-minute halfback on the football team. In one game, against Southern Methodist in 1922, he gained 20 yards on a fake pass play, passed for a touchdown, ran 40 yards on a punt return and dropkicked a field goal, leading his team to a 9–0 victory.

Graduated from Arkansas at 19 with a straight A average and a Phi Beta Kappa key, FULBRIGHT then spent 3 years at Oxford as a Rhodes scholar, studying modern history, playing tennis and rugby and touring Europe. He continued his studies on this side of the Atlantic, getting a law degree at George Washington University in 1934.

After serving briefly as a Government attorney in the Justice Department and teaching at George Washington, he returned to the University of Arkansas in 1936 as a law professor. When the university president was killed in an accident in 1939, FULBRIGHT was named the new president. At 34 he was the youngest State university head in the United States.

His academic career ended in spectacular fashion 2 years later—he was fired. The new Governor of the State, Homer Adkins, had been opposed by the Fulbright family newspaper, the Northwest Arkansas Times of Fayetteville. Governor Adkins fired the college president after FULBRIGHT emphatically refused to resign.

A year later he made his first try for public office, running for the House of Representatives from the Arkansas Third District. He won easily, piling up the biggest margin of votes in three decades.

Flouting the tradition that freshmen in Congress should be seen and not heard, FULBRIGHT leaped into national prominence in 1943 by introducing a 55-word resolution favoring U.S. participation in a world organization for peace. The House adopted the Fulbright resolution that fall, and the Senate followed suit 2 months later, assuring the world that America would not retreat into isolation after World War II, as it had after World War I.

Running for the Senate in 1944, FULBRIGHT topped a 4-man field by 32,000 votes—1 of his opponents, by the way, was Governor Adkins. He was reelected in 1950 and 1956 without opposition. He professes to have no eye for office beyond the Senate—"the end, the total of my political ambitions."

Senate observers have a hard time fitting FULBRIGHT into a niche, either as a politician or as a man.

A liberal in international affairs, he generally takes the conservative side on domestic matters. On the touchy problem of school integration—especially touchy for a Senator from a State the capital of which is Little Rock—FULBRIGHT has lined up with the southern bloc. He calls himself a "constitutional traditionalist" in civil-rights questions, and feels that the Supreme Court was wrong in trying to change a whole social pattern through a single Court decision.

He favored the controversial Dixon-Yates power contract and sponsored a bill exempting natural gas producers from Federal rate control. In labor matters he has frequently voted wrong, according to the AFL–CIO, but the unions do not consider him a labor baiter.

Similarly, FULBRIGHT has broken with his party on certain occasions, such as his celebrated suggestion that President Truman—of all people—resign in 1946. FULBRIGHT'S investigation of the Reconstruction Finance Corporation in 1950–51, as chairman of the Senate Banking and Currency Subcommittee, gave the Republicans potent political ammunition, with the uncovering of the mink-coat and deep-freeze scandals in the Democratic administration.

SWINISH BLIGHT OF OUR TIME

Although FULBRIGHT disdains the backslapping approach to politics—some of his Senate colleagues refer to him as "the professor"—he has shown a good sense of timing and a high degree of skill in political maneuvering. One such occasion was when his student-exchange bill came up for a vote in the Senate in 1946.

His bill provided that funds for the scholarship program come from the sale of military surplus abroad—the money, of course, was in foreign currency and had to be spent abroad. This provision removed the curse of financing the program directly out of Treasury funds. Even so, FULBRIGHT learned that Senator McKellar, chairman of the Appropriations Committee, was against the bill, and his opposition might well kill it.

So FULBRIGHT quietly got the backing of both party leaders in the Senate and did not bring up the bill for passage until McKellar happened to be off the floor. Then he called it up as a routine measure, announcing that it had the approval of both party leaders. The bill passed with no trouble.

Education has been one of FULBRIGHT'S primary concerns in his Senate career—he told an interviewer last year that the student-exchange program "is the thing that reconciles me to all the difficulties of political life. He has carried the lance time after time against what calls the swinish blight so common in our time, the blight of anti-intellectualism.

Some critics, of course, have pointed out that FULBRIGHT'S stand on school integration hardly squares with his fervent appeals for higher educational standards in the United States. That aside, the honorable Member from Arkansas is considered one of the most brilliant men in the Senate. Senator McCarthy once angrily dubbed him Senato "Halfbright" because of his opposition to the McCarthy investigations. Nobody has used the pun since then.

National Spending and National Income

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, February 9, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the New York Herald Tribune on January 31, written by E. F. Hutton whose column is entitled "Think It Through." It represents a brief review of the attitude of the American Farm Bureau Federation toward national spending and national income. I strongly endorse their position and commend to the attention of Members of Congress the farmers' feeling as focused by Mr. Hutton.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THINK IT THROUGH

(By E. F. Hutton)

At Lexington in 1775 the embattled farmers stood and fired a shot heard around the world.

In 1958 at nearby Boston the embattled farmers fired another round. It was the annual meeting of the American Farm Bureau Federation, the largest farm organization, representing 1,600,000 farm families.

Those who think the old American spirit of Lexington and Concord has gone over the hill, would have been cheered by the speeches and resolutions of this notable convention of working farmers.

They were in rebellion against the whole trend of misgovernment for lo, these many years. They called for a balanced budget, reduced Federal spending, severe curbs on labor monopolies and the elimination of Federal controls on agricultural products at the earliest possible date.

The president of the federation, Charles Shuman, is convinced that without price fixing since the war ended, all agriculture would be better off.

A New Hampshire delegate said, "Every time you send $10 to Washington, you get 50 cents back, after passing through 21 different offices, in each of which there are 33 bureaucrats, all of them not doing anything."

The president of a State bureau brought down the house with, "There is a surplus of jackasses in this country and nine of them are on the Supreme Court."

Rough talk—but easily understood.

Something is cooking in the farm kitchens.

And, as Patrick Henry said, "If this be treason——" you know what.

Now or Never

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Star of February 8, under the interesting caption "Now or Never."

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

NOW OR NEVER

Several days ago Budget Director Stans said that if the Federal budget is not balanced this year it will never be balanced. This, we believe, is a correct estimate of the Nation's fiscal outlook, and it is against this background that one should appraise the maneuvering in Congress over the bills to provide Federal funds for housing and airports.

There are those, of course, who don't believe in balanced Federal budgets. Others may be more interested in finding a political issue than in appropriate airport and housing aid. These are a minority, however. Most of the members of Congress, we assume, are genuinely interested in and concerned with drawing the line at the right point between necessary Federal aid and unnecessary Federal spending.

Thus, the Democratic housing bill was trimmed somewhat in the Senate and it has been cut back even harder by a House banking subcommittee. Even so, it calls for spending about $100 million more than recommended by the President.

The airport bill, as passed by the Senate, also reflects a modest retreat on the part of the leadership. But it still calls for substantially more spending than provided for in the budget, and it retains what we think are undesirable provisions for use of Federal money in building airport facilities which are not directly related to flying and flight safety.

This cannot be viewed as strictly a partisan matter, although the Democratic vote on final rollcall was 50 for and 5 against. For on this same vote 13 Republicans were recorded as for the bill and 17 against. In earlier votes on proposals to reduce the total outlay the Republicans were able to muster somewhat more strength.

The opposition arguments were summed up by Senator COTTON, Republican, of New Hampshire, when he said the total authorization "unbalances the budget, invites extravagance, and saps Federal money from the most vital of all programs—air safety."

The President, who vetoed a similar bill last year, will weigh the final versions of both the housing and the airport bills in the light of the uses which would be made of the money and their effect on the budget. In their present form these bills would produce a deficit in a budget which, at best, is precariously balanced. So Mr. Eisenhower will have to decide whether to approve these breakthroughs, and thereby pave the way for further and perhaps more serious breaches. If he approves, Mr. Stans' prophecy will be well on the way toward fulfillment.

Inflation

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. SCHOEPPEL. Mr. President, the Members of this body are all aware, I know, of the serious threat of inflation in our own United States.

The Kansas City Daily Drovers Telegram of January 29, 1959, briefly outlines the course of inflation as it occurs in some countries other than our own. The warning is clear and obvious.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE VICIOUS CIRCLE OF INFLATION

With some of our South American friends, it seems, inflation is a way of life. Few of them really like it, we understand, and many of them are quite militant in their opposition to it and those who perpetrate it, as shown by the violence that often results in changes in heads of states. But apparently governments, new or old, know no other course to follow.

One observer on the scene down there sends us this candid report on how the inflationary cycle works in some South American countries:

1. Printing is the first step, he says. In order to encourage productivity in the factory and on the farm, governments need money. So most of it is simply printed.

2. Spending is the second phase of the cycle. Fresh from the printing presses, the crisp, new money goes out from state banks to develop public and private enterprises.

3. Price rise is the third phase. The larger quantity of money in circulation serves to bid up the cost of goods and services. When labor finds prices rising, it strikes and riots, threatening political stability.

4. Wage rise comes next. In order to regain labor's support, politicians raise wages. Both prices and wages have then reached new levels.

5. Next comes devaluation of the currency. The rising cost of goods and labor serves to price exports out of foreign markets. Governments must then devalue their currencies in relation to the dollar in order to cheapen exports.

Then the cycle starts all over again at the printing presses.

Apparently the only ones who benefit from such a vicious circle as this are the politicans who manage to stay in office by hoodwinking the public, which has become demoralized and confused through successive inflationary cycles. Strange that they should be so foolish, and strange, too, that we up north who live in glass houses are still inclined to throw stones.

Spend and Tax

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared under date of February 6, in the Rockford (Ill.) Morning Star, entitled "Spend and Tax."

SPEND AND TAX

The public is not unmindful of the soundness of the position President Eisenhower has taken in challenging Democratic spenders in Congress to provide new taxes to pay for their reckless spending programs. That would be the straightforward way, the President said, to whether the country really wants these programs.

The President hurled the challenge as both Houses of Congress were rushing to put through housing legislation which would sweep aside the administration's balanced budget. The Democrats are making it clear that they prefer inflation to a hold-the-line policy on spending.

President Eisenhower declared that neither he nor the American people want higher taxes, the way to avoid higher taxes he pointed out, is for the Government to live within its income and avoid unnecessary expenditures.

For their own protection, Americans by the millions should answer the President's plea for public support in his fight for economy in Government and preservation of his balanced budget. The spending zeal of the Democratic-controlled Congress should arouse the ire of the taxpayers. They are the ones who have to pay the bills.

President Eisenhower and the out-numbered Republican forces in Congress can win the fight for economy if the public stands with them. The force of public opinion can provide the reinforcements necessary to beat back the spenders.

The President's challenge to Congress applies not only to housing but to all other reckless spending programs that are churning in the legislative hopper. The President is leading the fight that must be made for fiscal responsibility and economic stability. It should be everyone's fight.

Beardless Grant Eyes Vicksburg Fete

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. SMITH of Kansas. Mr. Speaker, I am sure most Members are aware that the Congress created a Civil War Centennial Commission 2 years ago. This Commission has been actively engaged in forming plans to commemorate the War Between the States.

Gen. U. S. Grant III, was wisely selected to be the head of this Commission.

As a member of this Commission I firmly believe we should commemorate many of the important events of this conflict.

I append hereto, an article written by a southern lady from Jackson, Miss., which contains much information in connection with the proposed commemorative activities of this Civil War Centennial Commission:

[From the Jackson (Miss.) Clarion-Ledger-Daily News, Jan. 25, 1959]

BEARDLESS GRANT EYES VICKSBURG FETE

(By Florence Sillers Ogden)

Well, you can't have everything. I did not get to attend the President's White House Press Conference. He did not have it and I could not stay any longer in Washington. He did have a conference, as you know, at the National Press Club luncheon. But that was a segregated affair. Men only. I wonder what the Supreme Court thinks of that?

But I did see Gen. U. S. Grant, 3d. I did visit the White House on the VIP tour. I did see the Hope diamond. I did attend the concert of the Philadelphia Orchestra with Sir Thomas Beecham conducting. I did hear the great pianist Artur Rubinstein with the National Symphony Orchestra, Howard Mitchell, conducting. Both concerts were at the D.A.R. Constitution Hall.

My visit to General Grant was one of the highlights of my trip. The office of the Civil War Centennial Commission is on Jackson Place, diagonally across from the White House. My sister Mary and I called on the General and Mr. Karl S. Betts, executive director of the Commission.

And I tell you, friends, General Lee himself could not have been more courtly and hospitable than the grandson of the general who shelled my grandma's plantation nearly 100 years ago. They really rolled out the red carpet for us. It seems the whole staff had read my plantation-shelling letter to General Grant and they greeted us like old friends.

General Grant lives up to the description by George Kennedy in his column in the Washington Evening Star, entitled "The Rambler"—only more so. To quote Columnist Kennedy:

OLD SCHOOL GENTLEMAN

"General Grant * * * is a big, broad-shouldered, handsome, white-haired man with the military bearing one would expect of the West Point class of 1903."

I found him not only handsome, but very charming—a gentleman of the old school, with a sense of humor and a kindly twinkle in his eye. Indeed, he did not look old enough for the class of 1903. His face is smooth and unwrinkled, his hair still a white plume. I wanted to ask him where his beard was, for actually I felt as if I were in the presence of General Grant the first. Only he is far more handsome than his grandfather.

A large picture of his grandfather hung on the wall to the right of General Grant's desk, and directly across the room, by Mr. Bett's desk, was a lovely picture of Gen. Robert E. Lee, and others of several Confederate generals, among them Stonewall Jackson, and Pemberton, who commanded the Confederate troops at Vicksburg.

This is evidence that there will be no swords drawn during the Centennial. Mr. Betts, the executive director, is a most alert, enthusiastic person with plans and historical facts at his fingertips. They both went over plans with me and are anxious to see a centennial program at Vicksburg. Each State or city, or area, has to plan and finance its own commemorative program. I, for one, would like to see a colossal pageant in the National Park at Vicksburg.

Mr. Betts said that if this was done, they could probably set aside 1 year as Vicksburg Year for the one big event. The logical time would be the summer of 1963. Cooperative assistance would be given by the Army, Navy, Coast Guard, and so on.

TO REENACT BATTLES

Virginia plans to reenact the battle of Manassas, and Maryland, the battle of Antietam. But General Grant says it is not their plan to reenact Civil War battles except in certain areas. My idea for Mississippi would be a pageant depicting the history of the State and the river and culminating in the siege of Vicksburg. Of course, I am only one person, but I can have my dreams.

General Grant says there are two things he would like to see us concentrate on, the raising of the Federal Gunboat Cairo, which has been located in the Yazoo Pass, and locating and marking the graves of Civil War soldiers.

Governor Almond, of Virginia, has invited the Centennial Commission to hold its first general assembly in Richmond. This meeting will take place at the Hotel Jefferson, April 16–17. Outstanding national figures will be present and a banquet will be held. All members of the State and Advisory Centennial Commissions, the Civil War Round Table, and representatives of civic and patriotic organizations are invited to attend. It will be an exciting and stimulating gathering.

WILL READ HISTORY

In discussing historical events, I mentioned the burning of Prentiss and the Bolivar County Courthouse. General Grant, Mr. Betts, and two other gentlemen of the commission were very much interested, and all of them want a copy of the "History of Bolivar County."

Of course, I am sending one to General Grant, but told him I must reread it first to be sure we did not write too much that was bad about the Yankees. He was equal to the occasion and, with a twinkle in his eye, said:

"You send me the book. I will read it and tell you whether it is true or not."

I am indebted to Senator JOHN STENNIS for these pleasant experiences and associations, for it was he who gave my name to the commission, and I received my appointment from General Grant, as have a number of other Mississipians, most of whom I know.

Who Is the Workingman's Real Friend?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Chicago Daily Sun-Times, Feb. 6, 1959]

WHO IS THE WORKINGMAN'S REAL FRIEND?

President Eisenhower laid it on the line with congressional spenders Wednesday. Discussing a Democratic proposal for expenditures on housing that alone would unbalance the budget he has submitted to Congress, the President asked:

"If we are going to ask for these new expenditures—and everybody admitting that deficit spending is certainly not a good thing—why doesn't each one of these bills include a measure for increasing taxes?

"That would be the straightforward, honest way to see whether the United States really wants this kind of thing."

Mr. Eisenhower was not seriously proposing that taxes be increased; he would like to see them cut. He was telling Congress and the people that if they want to spend more money than he has budgeted then they should be honest and schedule higher taxes to pay the bills. Otherwise, the Nation will go down deeper into debt and more inflation will rob all of us.

"I stand on this," the President went on. "You are going to hear me saying this often during the coming session and you will probably get weary of it * * *."

Readers of this page may get weary of our warnings about inflation, too. But, like the President, we are going to keep sounding them. Inflation is like a thief in the night who steals the savings of the industrious, pensions of the elderly, and insurance money of the widowed.

This week the Institute of Life Insurance warned that the United States can no longer temporize with inflationary forces in the economy. In the post-World War II period inflation has raised living costs 60 percent. Unless halted, inflation may undermine the people's desire to save, the institute pointed out. This would endanger the major source of thrift and investment funds upon which the country's future growth and progress are so vitally dependent, it explained.

We will put this another way, bluntly: Continued inflation could discourage family investment in insurance. Large funds invested by insurance companies would shrink. That would mean a shrinking of new construction and investment in business—and that would mean fewer jobs.

When the President speaks of inflation, therefore, he is not speaking of some theoretical and abstract economic theory. He is thinking about the effect of inflation on the average-American and his family. That is why he is so confident when he says the people will side with him if offered the alternatives of cheap money (inflation) or living within your income (a balanced budget).

Of course, the Congressmen who want to spend billions more than the President proposes, say that they are thinking of American families, too. They say that the expenditures that they propose are needed. They say that millions of dollars more than the President recommends are needed for urban renewal. They want millions for low-interest loans to house elderly people. They want more public housing.

Naturally every city dweller wants to get rid of slums and he wants to house low income and elderly people. But Americans should not confuse what they would like to have with what they can afford.

What would it profit elderly persons to have Government loans at the cost of further inflation that eats up their pensons and life insurance proceeds? Inflation hurts the slum dweller, too. If there had been no inflation—in recent years—no 60 percent increase in prices—the slum problem and the problem of the aged would not be as great as it is.

Putting the Government deeper into debt will create only greater inflation and bring still more problems of housing, slums, and the aged. A nation's needs should not be met at the cost of wrecking the nation's currency. Without sound money, no needs can

be adequately met—from military security to slum clearance.

Sound money requires that labor and business exercise restraint, too.

Many labor unions are preparing 1959 wage boost demands. They should ponder well that they, too, have a responsibility for inflation. They are powerful enough to exact wage increases that exceed the rise in productivity. What is the result? Here's a quote from the Guaranty Survey, a bank letter.

"The result is a wage-price spiral that impoverishes individuals and institutions with fixed incomes, while the increase in real wages is limited to the rise in productivity, precisely as it always has been."

In other words, most of the added real wages—purchasing power—workers have accrued over the years have come from the rise in productivity. That is why pay raises should be tied to productivity. The other dollars in the pay envelope are inflation dollars, worthless.

Congress will be putting more of these worthless paper dollars into pay envelopes if it votes to spend more than the Government takes in. This is hardly the role for the Democrats, who pride themselves on being the friend of the common man. It looks to us as though the common man's friend is Dwight D. Eisenhower.

Needed: A More Active Interest in Politics

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. KASTENMEIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which William Scherwitz, chairman of the town of Oakland in Jefferson County, Wis., wrote recently for the Daily Jefferson County Union newspaper published in Fort Atkinson, Wis. Mr. Scherwitz' well-thought-out article should be read by all who are interested in good government:

NEEDED: A MORE ACTIVE INTEREST IN POLITICS
(By William Scherwitz)

The elections, for the time being, are over; budgets of the counties and local units of government are formulated; and the amount of money needed for the coming year has gone into the tax roll.

At this time, one who is actively engaged in politics begins to wonder about the worthwhileness of his efforts. From many sources come criticisms because taxes are high. Yet, those criticizing are often the same ones who wonder why services aren't better, why this road or that one isn't smoother, why the highways that pass their places aren't plowed or sanded at the minute it stops snowing, or why law enforcement officers aren't at the scene of the crime the moment it happens.

Naturally, our public officials are and should be eligible for constructive criticism. Such things as mink and vicuna coat scandals cannot be condoned, but more often than not this specific criticism becomes general criticism of all politicians and leads to open insult of capable and honest public officials—these officials being accused of being intellectual morons with no view in mind save the filling of their own pockets with illgotten gains from the Public Treasury.

Our young people go to grade school and high school to learn about the true greatness of America and its democratic form of government, and how that greatness could not have been attained without such men as Washington, Jefferson, Franklin, Jackson, Lincoln, and many others. These men were statesmen—and also politicians. Yet, when the young people show any interest in politics, they are encouraged not to enter that dirty game.

The otherwise responsible citizen, when told he ought to run for public office, offers these excuses:

"It might hurt my business."
"I don't want to make enemies."
"I have troubles enough now."
"I wouldn't take that abuse for anything in the world."
"I can't afford to waste my time that way."
"I don't want to be classed as a politician."

Can anyone tell us, then, from where the responsible men are supposed to come?

Is it any wonder that there is increasing concern for the future of our country?

Doesn't it seem strangely inconsistent that we spend billions to send our young people to school and use a great part of this money to teach citizenship, political science, and history and then tell them how horrible all our officials are and urge them never to become a working part of that government they have been taught is so great?

Wouldn't it be better if we would occasionally search out those officials who earnestly try to do their duties—and there really are many of them—and commend them? We should do this whether or not we entirely agree with their views. Or maybe we should endeavor to put ourselves in their positions, and then ask what the dictates of our consciences would have been?

Would it not be wise to remember that all our statesmen have been politicians even though, unhappily, all our politicians have not been statesmen?

Surely, as mentioned before, politicians are not above criticism, but unless we begin to encourage those who are really trying to do right, and create more interest and respect for public office, our political structure will deteriorate to where we will be ripe for subversion.

Russian Propaganda in Sports

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a sports article entitled, "Barnstorming With Barnea," printed in the Manchester (N.H.) Union Leader of February 4, 1959. In making this insertion, I desire to bring widespread attention to the fact that the United States is in direct competition with Russia in all aspects on all fronts. We all recall that in the last Olympic games the Soviet Union broke its agreement to keep separate the scores of the male and female teams. Although the U.S. male team had defeated the Russian male team, the Russians, by adding in the score of the Soviet female team could boast that they beat us in the aggregate. We can also recall what great propaganda use they made of this so-called victory.

Recently a touring hockey team of Russian professionals was passed off by the Soviet Union as amateurs, and great propaganda capital was made of the fact that they defeated some of our better college teams. Now comes the basketball fiasco in Chile, which the Soviet Union is using in the same propaganda way.

So important is the matter of prestige in the eyes of many impressionable people in the world, who are seeking to aline themselves with what they expect to be the dominant power, that we should not overlook any facet of the prestige contest. We must be completely realistic about the fact that Russian athletes are not amateurs but professionals nurtured, coached, and supported by the all-powerful state. Let us get hardheaded about this situation and enter these competitions on a realistic basis.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BARNSTORMING WITH BARNEA
(By Joe Barnea)

Can you imagine the fuss and furore that would result if the U.S. Government sent a group of college science students down to Cape Canaveral to take over the important job of beating the Russians in the race for space?

Every loyal American, of course, would be up in arms at the mere thought of sending a bunch of boys out on a man's mission.

But that, in a sense, is what happened in the recent world amateur basketball tournament in Chile, in which a United States amateur quintet was soundly trounced by both Russia and Brazil.

Representing this country in the world tourney was a team recruited from Air Force volunteers, presumably the only team available. But, at a time when the United States is fighting so desperately for prestige, why wasn't every effort made to send the best basketball talent in the country into the tournament?

Senator HOMER E. CAPEHART of Indiana has strongly criticized the haphazard selection system which resulted in the disastrous defeat of the U.S. team at Santiago, Chile. The Republican lawmaker said that this country should make proper preparations in advance for such world events. The setback should be a lesson, he said.

He noted that the Yankee quintet not only was sadly trounced by the Russian representatives—who withdrew from the tourney after refusing to meet Nationalist China because they claimed it is not a country—but also was further humiliated when showered with debris from the stands in a game with Chile.

CAPEHART quoted a Santiago newspaper as stating, "When it comes to shooting at the moon or at a basket, the United States cannot keep up with Russia."

The Indiana solon said the team's showing was deplorable at a time "when our prestige could be much better in some parts of the continent to the south." He remarked, also, that basketball is an American sport introduced by the United States to other nations. "We should guard that heritage zealously, I might even say, jealously," he said.

Senator CAPEHART does not stand alone in his criticism of the selection method for such events. Alex Hannum, coach of the Wichita Vickers, a National Industrial Basketball League team, also blasted both the State Department and the National AAU for their selection of the United States team in the world tourney.

"Without consulting the National Industrial Basketball League, the strongest amateur basketball league in the world," Hannum declared, "they selected an Air Force all-star team that was soundly beaten by Russian and Brazil."

Continued Hannum: "I know for certain the Russians will make great propaganda use of the fact that they beat us in the sport which the United States invented."

And most certainly they will. The Russians will use any victory over the United States—whether in sports or in the field of missiles—in an attempt to mislead the rest of the world into believing that our system of government is decadent.

Whatever happened to that trusty, old axiom, about always putting your best foot forward? It would have been better to have stayed out of the world tournament rather than run the risk of playing into the hands of the Russians by fielding anything short of the best possible team.

What's going on in American sports today?

On the one hand, we use a Peruvian tennis star to help us recapture the Davis cup; on the other, we make no attempt to field our strongest quintet in a world competition.

It just doesn't make sense.

But, as usual, the Russian propagandists are having a field day.

The Spenders Can Be Stopped: Editorial Comment

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. SCHOEPPEL. Mr. President, the Nation is looking to us, the national Congress, for the use of commonsense in the spending of its money.

The viewpoint of the average American is probably summed up in an editorial appearing in the Kansas City Daily Drovers Telegram of December 24, 1958, entitled "The Spenders Can Be Stopped." The frank warning in this editorial should give us food for thought.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SPENDERS CAN BE STOPPED

President Eisenhower's promise to propose as close to a balanced budget as possible for fiscal 1960, stirs up a whisper of hope among a debt-burdened people that there is still a thread of sanity in Washington.

Additionally cheering was the observation by Representative ARENDS, of Illinois, that through the meeting at which the President made his statement there ran a dominant theme of fiscal responsibility. What a great thing it would be for the country for the future if Congress actually were to assume that obligation again—an obligation it has seemingly cast aside like an old cloak at the urging of the wild spenders.

We wish it were possible to be optimistic, as well as hopeful, over the talk of a balanced budget. Instead, we are fearful that this early talk is merely more whistling in the political rainbarrel, and that the beautiful theory will in time be assassinated by a gang of brutal facts resulting from the actions of a dollar-crazy Congress. The legislative halls are due to be packed again by a preponderance of men who believe a nation can be made stronger by pouring out its resources—in hand and as much more as can be borrowed—all over the Nation and the world. The result will be more huge deficit spending, more inflation, a dollar that's worth less.

This will happen unless people do not want it to happen—and are willing to do something about stopping it. What can they do? A suggestion was made the other day by Thurman Sensing, outspoken advocate of a sensible fiscal policy for the Nation, to this effect:

"Unreason on spending undoubtedly will flourish in the liberal and labor dominated 86th Congress. President Eisenhower, who has recently struck out at the spenders, has a great opportunity. Conservatives will pray that he takes advantage of this opportunity. He is constitutionally barred from running again for the Presidency. The need for appeasing the spenders has vanished. He can save America by using his powers to stop the spenders in their tracks. The President's great power to prevent unreasonable legislation is the Presidential veto. As a President without an ax to grind, he can use the veto in a constructive fashion. He can save the American economy from raids by the pirates of the left wing.

"The American dollar—its value—is at stake in the political struggles of the next 2 years. If this wonderful symbol of American strength and financial integrity is not to be shattered, it will be necessary for President Eisenhower to act with firmness. All thinking citizens ought to write and urge him to use his freedom of action for this high purpose. A ruined dollar would symbolize the destruction of the free American economy.

"American taxpayers should also write their Congressmen urging them to vote against the welfare-state spending that produces an unbalanced budget. Not all of them are under the spell of the spending cult by any means. Even those who are, might be brought to see the error of their ways—if they heard from enough voters."

Mr. Summerfield Has Improved the Postal Service

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Summerfield Delivers," published in the Youngstown, Ohio, Vindicator of January 31, 1959. The editorial relates to the improvements made in the Post Office Department during the tenure of Postmaster General Summerfield.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. SUMMERFIELD DELIVERS

The Postmaster General who is a good businessman and executive is rare. On the average, he is a political figurehead who is given the office as a reward for successfully running a presidential campaign.

Only infrequently are taxpayers given the services of such a Postmaster General as Arthur Summerfield who, since taking office 6 years ago, has made notable progress in modernizing and streamlining the Department's operations.

The job hasn't been easy. The postal deficit in fiscal 1958 hit an all-time high largely because of congressional and other obstructions, yet Mr. Summerfield pushed through the first general increase in rates in years, thereby stemming the flow of red ink. He has increased Post Office efficiency and speeded up its service. He has enlisted the aid of private industry in finding better ways of processing an ever-mounting volume of mail.

Despite postal pay raises and huge increases to railroads carrying the mails, the long-range outlook for the Post Office is improving. Retroactive boosts in costs are out of the way; the higher rates voted last year will swell revenues through 1959, and some of the rate hikes are progressive. At the same time, the Department is working hard to cut costs while improving service. In the last year, for example, it has expanded rural deliveries, extended window hours, and stepped up mail collection.

More significant, perhaps, is the beginning of drastic changes in mail handling within the Post Office itself. Mr. Summerfield has sought the help of many private concerns in designing, producing, and testing equipment.

In short, the Post Office under Mr. Summerfield has displayed extraordinary vision, initiative, and energy in solving its problems and improving service. He has well earned public commendation.

The Arizona Watershed Program

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. HAYDEN. Mr. President, for a long time we in the arid Southwest have recognized that our number one problem is water. From the number of articles in the newspapers and national magazines on the subject, it is clear to me that the other sections of the country are waking up to the fact that they, too, are confronted with a water problem. This is indicated by the resolution introduced by the Senators from Montana, Mr. MURRAY and Mr. MANSFIELD—Senate Resolution 48 creating a committee to study our national water problems, which deserves prompt and favorable consideration.

There are a number of Federal and State agencies giving consideration to the full development of our water resources, as well as a sizable number of study groups, both public and private, involved in research programs dealing with water. In Arizona we are conducting a unique experiment. It is known as the Arizona watershed program and is a cooperative effort on the part of Federal, State, and private agencies.

The program is under the direction of the Arizona Water Resources Committee under the chairmanship of Lewis W. Douglas who is assisted by Mr. Kel M. Fox, the secretary-treasurer of the committee.

The specific purposes of the program is to determine, through study, research, and pilot operations, how best to manage the land areas of Arizona on a multiple-

use basis to assure the greatest possible water yield.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the December issue of the American Forests magazine by Mr. Kel M. Fox entitled "The Arizona Watershed Program."

To those members of the Senate, and others, who are concerned with adequate supplies of water I recommend this article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ARIZONA WATERSHED PROGRAM

(By Kel M. FOX, secretary-treasurer, Arizona Water Resources Committee)

Great ideas are sometimes hatched in the most unlikely places. Take the Arizona Watershed program for example. It was conceived under a pine tree, far from any conference room, let alone human dwelling place.

Two men attended this fateful meeting: Jake West, a hydrographer, and Dave Wingfield, a rancher with a penchant for practical conservation.

Both came well prepared. Born on a farm near Silver City, New Mex., West had spent 40 years climbing the ridges and exploring the canyons of the vast Salt and Verde River watersheds. His job, certainly one of the most unique in the world, is to see that this huge area delivers enough water to irrigate the thousands of farms, homes, and budding industries of the Salt River Valley. Lean and keen, West looks and acts like one of the fabled mountain men who once tramped these same canyons in search of beaver pelts, and he probably knows these watersheds better than any man alive.

Any man, that is, with the possible exception of Dave Wingfield. Now in his mid-seventies, Wingfield was born not many miles from where he and West were chatting. He had worked cattle in that very country before Theodore Roosevelt made his celebrated ride up San Juan Hill. He could remember the week-long drives to the railroad, the lonesome hours in the saddle scattering grass seed from a gunny sack tied to the horn, an occupation that has earned him the title of the "Johnny Grasseed" of Arizona. He could remember how this country looked 50 years ago, before there was a U.S. Forest Service.

The meeting between Wingfield and West began as an informal exchange of ideas on the same theme: Why were the lands of the Salt and Verde watersheds producing less water and less feed than they did 50 years before?

It ended with a conclusion, based on a century of combined experience: Something, probably the unregulated growth of brush and trees, was devouring the water and replacing the grass. If the brush could be controlled and the trees thinned, so they reasoned, springs that had vanished during their own lifetime could be made to run again, areas choked with trees and worthless brush could be restored to grass.

The theory found a responsive audience, and, before the year was out, the Salt River project, the Arizona Land Department, and the University of Arizona were embarked on a project to test its theoretical validity. Experts, a majority of whom were affiliated with the Forest Service, were called in to study the watersheds and express their opinions. These opinions were compiled by a staff headed by Dr. George W. Barr, at that time professor of agricultural economics at the university, and were printed in a report entitled "Recovering Rainfall," a report now almost universally known as the Barr report, after its chief author.

The Barr report took the raw theory of Wingfield and West and refined it into a broad program of recommendations for managing the various types of vegetation on the Salt and Verde watersheds. It predicted a considerable gain in runoff would result, along with such other benefits as fast growing, better-quality timber, more grass, and improvement in game and recreational sites.

Its release met with a mixed reception. It was hailed in some quarters, questioned in others—notably by spokesmen for wildlife groups fearful of possible changes in game habitat. The Arizona Legislature was sufficiently impressed, however, to create a new division of watershed management in the State's land department to promote the program, and elsewhere a group of citizens met and formed what is known as the Arizona Water Resources Committee.

This committee and the watershed management division, headed by Joseph F. Arnold, a former forester, have since become the principal champions of and spokesmen for the watershed program.

The committee is unusual in a number of respects, some of which are worth exploring. A private, nonprofit corporation, it operates on a very small budget, none of which comes from public funds. Aside from its president, Lewis W. Douglas, former ambassador to Great Britain, and its secretary (the author), each of its directors represents a group with an economic or other interest in the product of the watershed. Farmers are represented by Victor I. Corbell, president of the Salt River project; the logging industry by Pete Gaffney, a vice president of Southwest Lumber Mills, Inc.; ranchers by Ernest Chilson, former president of the Cattle Growers' Association; mining by Jack Pullen, of the Phelps Dodge Corp.; municipal users of water by Jack Williams, mayor of Phoenix; industrial users by George Christie; banks by C. C. Cooper, Jr.; game and recreation by Jay Price, former regional forester; publications by Richmond Johnson, former editor of the Arizona Farmer.

Each director has an advisory group of 4 to 12 representatives of his particular industry or activity.

The first task of the water resources committee was to make a fundamental decision: Would it promote the sweeping, sometimes controversial, recommendations of the Barr report, or would it choose a more cautious approach?

The answer was a combination of both. Six of the recommendations of the Barr report were adopted, in principal, with this important proviso: that each be evaluated in relatively small, field-test experiments before its adoption as a proven tool for management could be recommended.

Thus the Arizona watershed program, as it stands today, calls for experiments in the following:

1. Patch-cutting in the spruce-fir, mixed conifer type.
2. Thinning overstocked thickets of young ponderosa.
3. Conversion of noncommercial ponderosa to grass.
4. Removal of juniper and pinon where practical.
5. Chemical control of brush.
6. Thinning of stream channel vegetation in nonrecreational sites.

It is important to remember the proviso. The Water Resources Committee isn't recommending anything beyond the present research program until the experts, who should know, say it will work.

With this commonsense approach, the committee quickly established good working relationships with the Forest Service and Bureau of Indian Affairs, the two agencies managing some 90 percent of the Salt and Verde watersheds.

The Forest Service agreed to take the lead in conducting experiments to prove whether patch cutting could improve runoff in the spruce-fir and mixed conifer-type forests. About 100 acres of the Apache National Forest have been cut in this manner. Results are being closely watched. On an adjacent area, three small watersheds are being measured for rainfall and runoff before one is cut by patch method, one by the selective method, the third left uncut as a check.

The Forest Service is also taking the lead in experimental work in ponderosa pine type, which embraces most of Arizona's not inconsiderable timber resources. Thinning of overstocked stands of saplings is taking place on several thousand acres of the Coconino National Forest. In the same general area, the Forest Service has removed all the noncommercial ponderosa pine from a 200-acre experimental watershed.

The Bureau of Indian Affairs and the Forest Service are both engaged in fairly large-scale juniper-pinon removal projects.

With the enthusiastic support of the Indians themselves, who are supplying a portion of the necessary funds, the BIA is removing 33,000 acres of juniper on the Fort Apache Indian Reservation in a project being carefully measured for effects on water yield. Elsewhere on the same reservation, some 100,000 acres have been cleared of juniper and pinon, primarily to increase forage.

Forest Service juniper removal is approaching the 10,000-acre mark on the Wet Beaver pilot watershed project on the Coconino Forest.

The same agency is in charge of experiments to convert brush to grass on selected areas of the Tonto and Prescott National Forests. Various control methods are being tried, the chemical tests on this particular project being handled by the Agricultural Research Service.

The fourth agency playing a major role in the Arizona watershed program in the U.S. Geological Survey. Survey technicians have installed and are readying stream gaging stations for both Forest Service and Indian Service projects. In addition, the USGS is undertaking an important project in cooperation with the Land Department and Salt River Valley Water Users to measure the effects of removing cottonwoods growing along the banks of a stream located in Mohave County.

Research in watershed management and in the control and conversion of vegetation takes money, and the Water Resources Committee feels it has an important responsibility to see that agencies cooperating in the porgram get the necessary financial support. To this end, it has strongly backed agency requests for funds, and with good results.

Congress appropriated $210,000 for watershed research projects in fiscal 1957, raised this to $324,000 the following year, and made $485,000 available this year. Some additional funds are appropriated by the State and by semigovernmental agencies such as the Salt River Valley Water Users Association. In addition, Indian tribes and ranchers are spending considerable sums each year in juniper removal work beyond the scope of these research projects.

Assuming positive results—and there will be a lot of long faces in Arizona if there are none—treatment of several million acres, at a cost of millions of dollars, will be the next step. How to raise the money, and the proportions to be borne by the several beneficiaries, are problems yet to be encountered.

The rapidly expanding Southwest desperately needs more water, and no one is more aware of it than the members of the Water Resources Committee. The committee feels it has taken a moderate, scientific approach to a problem that could easily become explosive in less cautious hands. It hopes the

ultraconservationist group on the one hand, and the more water at any price group on the other, will both be patient until the results are in.

Republican Support During Truman Administration for an Adequate Air Force

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter entitled "Symington's Failure," which was published in the Washington Evening Star of February 5, 1959, over the name of Maj. Gen. Julius Klein of Chicago, Ill.

I believe the letter goes a long way in setting forth the true facts regarding the positions of certain Republicans during the Truman administration with respect to support for an adequate Air Force.

Mr. President, the letter correctly asserts that my distinguished colleague, the late Senator Robert A. Taft, and I joined with the Senator from Missouri [Mr. SYMINGTON] in his plea for a strong air arm as a vital part of our Nation's defense program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SYMINGTON'S FAILURE

Your January 19 editorial entitled "SYMINGTON'S Failure" just came to my attention.

I have the greatest respect for your editorial policy and your fairness, and I am sure you would like to have the facts from someone who knows something about this matter.

I yield to no one in my admiration with respect to Senator STUART SYMINGTON. As a matter of fact, if I ever have to vote Democratic I hope it will be for him. He is a truly great public servant and a fine, courageous patriot. Senator SYMINGTON and I were both assistants to the late Secretary of War Robert P. Patterson. I find no fault in the praise you have for Senator SYMINGTON, and endorse it. But I do object to your statement that Senator SYMINGTON had no Republican support or help when he fought for an adequate Air Force while Mr. Truman was President and when Mr. Truman was opposed to the policy of his own Secretary of Air. The responsibility rests with the Democratic leadership and the administration of the Congress that did not support Mr. SYMINGTON.

I do not agree with the attack of the Republican National Committee on Senator SYMINGTON, and you are right in bringing out the facts, but I do disagree with you when you say you cannot recall the name of even one Republican politician who stood up and fought with him.

I can name two great Republican Senators who were right in Mr. SYMINGTON'S corner. One was my beloved and sainted friend, Robert A. Taft, and other one is Senator STYLES BRIDGES. And in my capacity as a Republican consultant Senator Taft directed me to rally all support for SYMINGTON. I personally arranged a meeting between Senator Taft and Senator SYMINGTON, and Senator Taft assured the then Secretary Symington of his solid 100 percent support for the Symington Air Force program. Senator Taft felt that America must have the most powerful air force in the world as a deterrent to any aggressor. And no one will remember this better than my good friend, Senator SYMINGTON, if he is asked by you for the real facts.

I always felt that it is criminal to make the defense issue a partisan issue. Neither Senator Symington nor Senators Taft and Bridges ever did that. And when you speak of the Symington report in 1949, before Korea, you will find that Senator Taft was the staunchest supporter when many Democrats and the administration were opopsed to it. No truer patriot ever lived than Senator Taft. He was a great statesman and a great politician, but also a partisan; but when it came to the security of America, Senator Taft championed the cause just as well as his and my Democratic friend Senator SYMINGTON. I owe it to the memory of Senator Taft not to let your editorial go unchallenged. If the Symington-Taft-Bridges program had been carried out the Korean war would have ended in complete victory or might never have taken place. Gen. Douglas MacArthur could have defeated the North Koreans and the Chinese Communists then and there—if he had not been hamstrung by the administration.

JULIUS KLEIN,
Major General (Retired), Chicago, Ill.

Out of Politics

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the February 1, 1959, issue of the Rockford (Ill.) Morning Star, entitled "Out of Politics."

OUT OF POLITICS

President Eisenhower's farm program recognizes the urgent need for getting the politicians off the backs of the farmers and allowing agriculture to produce freely for the market and not for Government warehouses. After spending many years and many billions of dollars in trying to solve the farm problem, the politicians and the Government haven't solved anything. They created the problem by burdening agriculture with programs dedicated to the impossible task of trying to make time stand still.

In his farm message, the President called upon Congress to move agriculture toward independence and stability by overhauling the Government's farm-price-support system, which is based on long-outdated standards. He cited the huge accumulations of surpluses and outlays of Federal funds as demonstrating the need for reduction of incentives for excess production. By the end of the current fiscal year on June 30, the Government will hold more than $9 billion in farm surpluses. The supply of wheat, the President said, is enough to meet all domestic and export needs for an entire year, even if American farmers didn't harvest a single bushel of wheat this year. The Federal money goes to a relatively few producers of farm products and to warehousemen.

The President told Congress that the parity system which has been in effect since early in the New Deal should be scrapped in favor of a plan which would gear price supports to a percentage of market prices in recent years. The proposed change is designed to permit a gradual removal of the floor under farm prices. The President's call for support reductions applies to the six basic crops now covered—wheat, corn, cotton, peanuts, rice, and tobacco. Production controls would be eased and eventually eliminated.

The course proposed by President Eisenhower and Secretary of Agriculture Benson is in line with the thinking of the farmers themselves. America's corn farmers last November voted nearly 3 to 1 in favor of Benson's plan to cut corn price supports sharply and eliminate acreage controls. Under the plan, which will go into effect with the 1959 corn crop, supports will be based on the average market price of the past 3 years. The American Farm Bureau Federation has urged a similar plan for wheat.

Adding weight to the President's arguments is the fact that producers of farm products, such as livestock, not covered by price supports, are doing well.

The politicians cannot continue indefinitely their stumbling efforts to try to guarantee the farmers a profit. Agriculture and the public will be better served when farmers are free to rely on their own ability rather than on Government paternalism.

Tribute to India League and J. J. Singh

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following farewell message to the India League of America, which is suspending its activities on March 1, 1959:

INDIA LEAGUE OF AMERICA,
17 East 54th Street,
New York, N.Y.

DEAR FRIENDS: I cannot tell you how much I regret not being able to be with you at this farewell meeting of the India League of America. I feel as if I were saying goodby to old friends by proxy, and that I know is no way of revealing the depth of friendship and regard I have felt for the members of the India League. I wish I could be with you to tell you of the personal satisfaction I have gained from my association and participation in the work of the India League.

I want to single out from among the many friends in the India League the one with whom I have worked closest and who has given me so much of his time and thought when there was work I could do as a friend of India in the Halls of Congress. J. J. Singh has been a source of strength and inspiration to all of us; a man of dedication to his principles; a sturdy ambassador of good will for India. I remember the work we did together in accomplishing the passage of legislation that removed the obnoxious India Exclusion Act from our statute books and prepared the way for the naturalization of Indians resident in the United States.

Though he is leaving our midst, I know that our paths will cross again.

We who are the friends of India will not forget one moment that a crucial role in world history is now being played by the people of India. India must be given every opportunity to prove to the world that freedom and economic opportunity can exist

side by side and that it is not mandatory that freedom of a people must necessarily exclude its economic well-being, or that economic progress can only be made at the expense of freedom. This is the test mankind faces in these troubled times and one of the most significant of all testing foregrounds is the subcontinent. It is not a choice, it is a must that we, in the United States, give economic aid to India, help to increase her trade, and help to finance her new industries. That we have so far failed to recognize the importance of India to the development of a free society everywhere is borne out by the fact that of the $20 billion of trade that the United States carries on, only $5 million relates to India. Yet India gives us the mica, the jute, the manganese, the spices that we ourselves must have in the development of our own economic and scientific progress. To India we look for the attributes of charity and compassion, steeped as she is in spiritual strength. We in the United States cannot afford to take our eyes away from the Indian scene. I have witnessed for myself, in my visit to India, the heartbreaking problems that face her. I have seen, too, the tremendous work that is being done in the villages. The intelligence and sensitivity of her leadership, her men and women of dedication and sacrifice have left a deep impress on me. The world watches the struggles of a free people of India and the progress made under that freedom as against the brutal totalitarianism of Communist China. In a sense then I say—and I repeat—that herein lies the test tube of whence our civilization shall go.

I shall miss you all, but I must leave you with the assurance that my work and my friendship for India shall continue unabated.

Sincerely and hopefully,

EMANUEL CELLER.

Rising Retail Food Costs Are Not Caused by Farm Price-Support Programs

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. O'KONSKI. Mr. Speaker, payments to farmers for food products in 1957 were $19.5 billion, almost the same as the $19.2 billion paid in 1948, just 10 years earlier. This payment applies to food sold. It does not reflect the value of food produced on farms and used there by the farm family.

But the retail value of this same quantity of food in 1957 was $50.4 billion. This is what the consumer paid. It was only $39 billion in 1948. The increase in the marketing charge over the 10 years was $11.4 billion. This is the rising food cost to consumers.

These payments to farmers and retail values apply only to foods produced on farms in the United States and purchased at retail by consumers. The quantity was larger in 1957 than in 1948 because of the increase in population. The retail values are calculated in such a way that food eaten at restaurants is valued in terms of retail store prices.

The table below shows how these values and payments have changed during the 10 years under consideration.

Payments to farmers and marketing charges for farm food purchased by civilian consumers in the United States, 1948–57

[In billion dollars]

Year	Market value	Payment to farmers	Marketing charges from farm through retail store
1948	39.0	19.2	19.8
1949	37.9	17.1	20.8
1950	38.9	17.7	21.2
1951	43.0	20.2	22.8
1952	44.5	20.1	24.4
1953	44.6	19.0	25.6
1954	44.9	18.3	26.6
1955	46.2	18.3	27.9
1956	48.3	18.7	29.6
1957	50.4	19.5	30.9

During the years from 1948 through 1957, the population residing in the United States increased from 146 million persons to 170 million. This averages out at about 2.4 million more persons per year. But the farmers' take from feeding the smaller population in 1948 was $19.2 billion, whereas in 1957, 10 years later, it was $19.5 billion. This is no idle achievement. It shows that the farmers have been very efficient in providing the food supply. Less farmers providing more food each year have delivered enough for everyone with some added for export and at a lower gross cost in a period of serious inflation.

What caused the increase in food costs to consumers? Labor, transportation costs, and taxes seem to have been very important in the increased cost of distribution. Additional marketing services, particularly in packaging, and the preparation of these foods for retailing were also significant sources of increased distribution costs.

The justification of these increases in food costs to consumers is not questioned. If consumers want to purchase their food in more costly prepared forms, that fact alone is sufficient justification. But it is important that consumers should understand the reason for increased food costs. All too often the farmer is assumed to have received a comparable increase in income.

All too often the increase is attributed to price-support programs with respect to farm products. The data above, however, include farmers' total income from food products. His income attributable to price supports is included. The farmers' contribution to the consumers' food bill has not increased in the 10 years reviewed. Even when the increased quantities of food used by the growing population are added, the farmers' take did not increase, but since 1951 has generally declined.

Incomes to persons who are not farmers have increased steadily since the war. The cost of goods and services which farmers must buy has also increased. But farmers' cash incomes for the postwar period have been relatively static. These are facts which should be considered by those who would reduce price supports. Consumers of food have been getting a bargain, insofar as farmers are concerned.

The farmers as a group have a proud record in the past 10 years. Hunger in the United States has been greatly reduced. Important inroads have been made on hunger outside the United States. And all of this at prices which reflect the opposite of inflation in years when inflation has become our No. 1 national problem.

INFLATION HAS NOT AFFECTED BUTTER PRICES

Inflation, we are told, is one of the important problems of our time. Prices rise, and with them, the index of living costs also rises. In the case of butter, however, prices have declined. The average price of 92-score butter at wholesale in 1950 was 61.7 cents a pound. It rose to 72 cents in 1952, but since that time it declined until in 1958 the average price is 58.7 cents, 3 cents per pound less than in 1950. This shows that the farmers who produced milk for butter have not shared in any increase of income. Responsibility for inflation cannot be laid at the door of the dairy farmer. Consumers have been repaid for the tax cost of price support in their lower price for butter.

In 1950, the average retail price for butter was 72.9 cents a pound, and in 1958 it was 74.2 cents, an increase in cost of 1.3 cents per pound for this 8-year period. Retail prices also reached their peak in 1952, and since 1952 have declined, contrary to the general trend in prices. Whereas retail food prices increased by 30 percent between 1950 and 1957, butter prices increased less than 2 percent.

Butter: Retail and wholesale prices, 1950–58

Year	Wholesale price per pound 92°, Chicago	Retail price per pound United States
	Cents	*Cents*
1950	61.7	72.9
1951	69.2	81.9
1952	72.2	85.5
1953	65.9	79.0
1954	59.7	72.4
1955	57.4	70.9
1956	59.2	72.1
1957	59.6	74.3
1958	58.7	74.2

Hopes for Good Legislation on Capitol Hill Remain Slim

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared February 6 in the Rockford, Ill., Register Republic, entitled "Hopes for Good Legislation on Capitol Hill Remain Slim":

HOPES FOR GOOD LEGISLATION ON CAPITOL HILL REMAIN SLIM

(By Holmes Alexander)

WASHINGTON.—It's predictable that along around June, the Senate-House Democratic leaders will claim great accomplishments for the 86th Congress and will cite the large

numbers of legislative bills to prove the point. This is a regular annual occurrence, and it measures the amount of legislation rather than its quality. Nobody can tell by counting the sheaves of paper that have passed through printing presses whether a Congress has been good or bad. But here in February it is possible to make the calculated estimate that it will be among the least productive sessions that ever assembled and this is why:

Labor legislation, perhaps the most needed of all, gives every sign of being a dud—noise without force. There are three kinds of labor bills in competition. The AFL–CIO would like to have the Taft-Hartley Act repealed or, since that is impossible, emasculated. Andrew Biemiller, the AFL–CIO legislative director, let this cat out of the bag in his first day of testimony. Responding to a deft query by Senator GOLDWATER, Biemiller admitted that "at the present time we certainly would not support the Democratic (Kennedy-Ervin) bill without title 6," the latter being the Taft-Hartley revision section.

The Eisenhower administration has submitted a reasonably good bill, but the Democats and liberal Republicans won't back it. This means it simply doesn't have the votes. Senator GOLDWATER may submit a very strong measure, probably including an antitrust provision. It could not possibly get the votes to pass. What will pass, in all likelihood, is a very feeble law against crime and misfeasance, completely dodging the labor issue in our times.

Military legislation, not quite as urgent as labor because it is less neglected, will not advance much beyond its present status. The administration, despite being under constant criticism, is very pleased with itself about our military posture. Senator SYMINGTON, the chief Democratic critic, says this is false complacency that is based upon minimized estimates of Russian strength. But, as one of his armed services colleagues has told this reporter off-record, the only way SYMINGTON can be proved right is for the Russians to attack.

Defense Secretary McElroy has developed a pretty unanswerable retort to the observation that he is spending less money on national defense, even though the dollar is losing purchasing power and the Russians are increasing their ability to assault us. McElroy says he has learned how to spend more effectively and does not need so many dollars. The country is in a mood to believe him rather than pay more taxes. There is little reason to think that this session will produce any improved military legislation.

Civil rights has been the main conversation piece in the early session. Everybody in Congress seems to have a bill or two. But the signs are that the heat is going out of the civil-rights issue. The collapse of massive resistance to school segregation in Virginia is a shattering blow to all defenders of State sovereignty and a tranquilizing victory for the other side. If the courts can do this, why should Congress act by passing unpopular force acts? We will probably get an extension of the present Civil Rights Commission and possibly a new bureau of community conciliation, but neither will alter the current situation. The new laws may be showy but will hardly be substantial.

Inflation will remain, as it is now, a problem which labor and business will have to solve, or become engulfed. Nobody expects the President's budget to yield $77 billion in taxes so as to achieve a balance. But the President was right—and the rest of us wrong—last year at this time when he predicted a petering out by spring of the recession. He could be right again. Still, the two things that could be called dramatic—a tax cut, on the one hand, a return to economic controls on the other—seem very remote.

Welfare and public works, including school and hospital construction, as well as more dams and airfields, are much in demand, especially by the many new congressional Members who came in by promising everything. But except for airfields, which the jet age demands, the spending may well be discouraged by Presidential vetos and by serious-minded public opinion.

This leaves foreign affairs, a field in which Senator HUMPHREY is especially anxious to shine because of his 8-hour talkathon with Premier Khrushchev. HUMPHREY has been majoring in atomic disarmament, but he has no more chance than ever of finding a workable formula.

Sadly, it is world communism rather than the American Congress which can be expected to dominate events in 1959. In early February the signs are for a chatterbox session with humdrum results. All things considered, this could be the luckiest way to have it.

The Teaching of Foreign Languages in the Elementary Public Schools of Florida

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. BENNETT of Florida. Mr. Speaker, Hirris C. Long, superintendent of the public schools of Clay County, Fla., has recently made available to me the results of a survey of the teaching of foreign languages in the elementary public schools of Florida. This study was made in cooperation with Sidney L. Horne, director of instruction, and Mary Zeller, general supervisor. It speaks well for the initiative of these able school officials and of the effort of local school authorities to meet one of the important challenges of our time—understanding among people through improved communication. The report is as follows:

THE TEACHING OF FOREIGN LANGUAGE IN THE ELEMENTARY PUBLIC SCHOOLS OF FLORIDA

BACKGROUND

One 10-teacher school in Clay County, the Middleburg Junior High School, this year became interested in offering instruction in a foreign language to some elementary schoolchildren. The fifth-grade teacher is well qualified in foreign language and was interested in teaching conversational Spanish to small children. The second grade was selected and, with the very active cooperation and support of the principal, arrangements were worked out under which, for one period per day, the second-grade teacher would exchange classes with the fifth-grade teacher. During this period, the fifth-grade teacher teaches Spanish to the second grade, while the regular second-grade teacher continues with routine instruction in the fifth grade.

The enthusiasm of the second graders in learning something of the use of the Spanish language is much greater than had been anticipated. Parents are interested and cooperate wherever needed. Other pupils have become so interested that the regular fifth-grade teacher is now finding it necessary to teach some Spanish in her regular class. These children felt that their teacher was letting them down by going elsewhere to teach something which they also wished to learn. Other teachers and other schools in the county are watching this experiment with interest.

Feeling that the county could profit by experiences of other counties in this field of effort, and also prompted by the possible implications of the Federal Defense Education Act on language teaching, Clay County instituted a study to determine to what extent Florida Public Schools have gone into the field of elementary foreign language teaching. In addition, some information was requested which would, to some extent, indicate the types of programs in operation in the State.

PLAN OF THE STUDY

Letters were sent to each of the 67 counties of Florida requesting that the following information be furnished:

1. Is foreign language taught in the schools of your county below the ninth grade?
2. What languages?
3. Is teaching traditional or conversational?
4. Number of schools in the county teaching foreign language(s) below the ninth grade?
5. Grades in which taught?
6. Is there an in-service teacher training program for this type teaching in your county? Please describe.
7. Helpful comments.

FINDINGS

The excellent response to the inquiry is perhaps indicative of the statewide interest in this subject. Sixty-four counties have replied to the request, and the other three may perhaps reply later. Of the responding counties, 24 are teaching foreign language in some classes below the ninth grade. Twenty-two are teaching Spanish; four are teaching French; and one is teaching German. Where this item was checked, the counties indicate that the language is taught as conversational rather than traditional, with the exception of the seventh and eighth grades in French and Spanish in Okaloosa County.

Dade, Hillsborough, and Pinellas Counties are conducting foreign language instruction by radio, and Palm Beach County plans to institute such instruction in January of 1959. Dade County also conducts a program of television instruction in foreign language. Gulf County indicates that phonograph records are used for foreign-language instruction.

There appears to be little or no consistency throughout the State as to programing and general practices. It is interesting to note that Brevard County reports that "we use parents in the community and are not concerned about the language." Orange County indicates that it has a policy of supplementing the salaries of some teachers who conduct instruction for classes of 20 pupils after regular school hours. Some counties consider the language instruction to be a part of the social studies program, others consider it to be a separate area of instruction.

The 24 counties reporting affirmatively on the teaching of foreign languages show such instruction being practiced in 177 schools, plus an indefinite number covered by such general terms as "optional with the schools," "several," "some," etc.

Only five counties report an in-service teacher training program for teachers of elementary foreign languages.

There seems to be little consistency with regard to the grades in which foreign language instruction is being conducted though the tendency seems to favor the upper elementary grades (grades 5 and 6). Three

counties teach foreign language in the first grade, 5 in the second, 8 in the third, 9 in the fourth, 11 in the fifth, 14 in the sixth, 4 in the seventh, and 3 in the eighth.

RELATED STUDY

Under the leadership of Mr. R. W. Sims, coordinator of research, State department of education, a study is being conducted designed to make an analysis of offerings and enrollments in foreign languages in all public high schools in Florida. A preliminary report has been published on this study, based on 1957–58 enrollments, and covers the following 20 counties: Alachua, Baker, Bay, Bradford, Brevard, Broward, Calhoun, Charlotte, Citrus, Clay, Collier, Columbia, Dade, DeSoto, Dixie, Duval, Escambia, Flagler, Franklin, and Gadsden. In this group it was found that 17 of the 20 counties were teaching some foreign language in at least one high school in the county, and 1,723 seventh and eighth graders were enrolled in language courses as follows: 1,615 in Spanish and 108 in French.

REPORTING OF FINDINGS

Copies of this study are being distributed to each county in the State and to other interested persons. Clay County appreciates the assistance of each of you in making information available.

A compilation of all data furnished is contained in the following:

1. A tabulation of the replies of the 64 counties from which replies were received.

2. Summary of comments offered by the reporting counties.

SUMMARY OF COMMENTS OFFERED BY THE REPORTING COUNTIES

Baker: The foreign language program in junior high is exploratory type.

Bay: This is a beginning program so we have not gone far enough to be helpful.

Brevard: We use parents in the community and are not concerned about the language.

Broward: We are giving some consideration to the teaching of Spanish in the eighth grade.

Collier: We plan to initiate a conversational Spanish program in the intermediate grades (fourth, fifth, sixth) in one of our schools in the county in the school year 1959–60.

We have been in contact with the foreign language departments of both Florida State University and the University of Florida concerning such a program, and have received much helpful material as suggestions. Our elementary supervisor plans to take a course offered by the University of Florida during the summer of 1959 which is designed particularly for teachers of Spanish on the elementary level.

Dade: Weekly TV programs by superintendent of Spanish, evening. Also daily program by radio to every class in every school.

Dixie: We have a second grade teacher who is a good Spanish teacher and offers Spanish to the second grade of her own accord. We do offer Spanish in high school.

Duval: An exceptional child program teacher for gifted children has been teaching French in two schools to selected pupils. One school is experimenting on letting classroom teachers learn Spanish along with the children.

Escambia: Several elementary schools teach Spanish as an extra activity in sixth grade but no formal teaching is done in our schools below ninth grade.

Gadsden: This French is taught in a small school (grades 1 to 8). The principal of this four-teacher school teaches both seventh and eighth grades (12 children). This French class is enrichment.

Glades: The above program (Spanish fourth, fifth, sixth grades) is designed as an enrichment or challenge for the apparently superior and gifted students. It is not available to the total student body in those grades.

Gulf (Spanish, sixth grade): We use records (phonograph) and the guidebooks developed by Dade County.

Hillsborough, (Spanish): In the fourth, fifth, sixth, and seventh it is taught by radio and teachers are given a guide for the lessons. Teachers do not have to be able to speak the language itself. Radio teacher is available to help classroom teachers. A course in conversational Spanish is offered adults through our adult program.

Hamilton: How effective is the foreign language in the elementary and what is the true purpose for teaching it? We, too, are interested in this idea.

Lee: This was part of our enrichment program for gifted students.

Leon: There are a few teachers in the county who teach a little Spanish on their own. This is not a planned program, however.

Levy: We are a small rural county and do not have teachers qualified at the present time. We have had a 30-minute class in conversational Spanish 1 year in the elementary grades which was very well received by both pupils and teachers. We had to discontinue this when we lost this person.

Marion: We had a Spanish class in one of our third grades 2 years ago but due to the faculty we were not able to follow the program in the fourth grade. At this time, we are simply giving thought to the possibilities in the future.

Nassau: Our junior high day is overflowing now. I would like to see the daily schedule of a junior high class which has a foreign language.

Okeechobee: We plan to teach Spanish beginning with the second semester, in an advanced section of the fifth grade.

Orange: We are trying out an experiment of teaching four classes in foreign languages in four different elementary schools, after school hours. The teachers will get $300 a year and the hours will be from 3:30 to 4:30 p.m. Each class will be limited to 20 students. This is all the foreign-language teaching we have in the elementary schools at the present time, and this experiment has just been started.

Palm Beach: Through the adult education program, classes for teachers will be organized in conversational Spanish. Consultant from Miami will work with teachers who will be engaged in the program. We plan to initiate a program of Spanish radio lessons beginning at the third-grade level on January 27, 1959.

Pasco: (Spanish third grade). We have just started this and as yet would not be in a position to make an evaluation. It does seem thus far that the pupils enjoy it and tend to make a game of it. If it is successful we will probably expand it at a later date. We would be happy to have the results of your experiment.

Pinellas: We have a course in conversational Spanish taught by radio and on a voluntary basis.

Putnam: We are planning to begin a program (on a very small scale) in one of our elementary schools here in Palatka. We are at present attempting to secure suitable materials. At present we are looking over materials from Harr Wagner Publishing Co., San Francisco.

St. Lucie: In some third grades a limited amount of conversational Spanish is taught.

Seminole: Two sixth grade teachers in one school teach some Spanish in connection with social studies.

Volusia: (Spanish—grades 1 through 6) A junior college Spanish teacher is conducting a weekly class in Spanish with the entire faculty of 35 teachers in the one school where this is being done. This is the first year of the experiment and so far there is little which can be reported but the interest seems to be high. Every teacher participates in the program. In one other school a French war bride is conducting a small class in conversational French on a voluntary basis in the upper elementary classes.

Radical Surgery

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an article by Arthur Daley, entitled "Radical Surgery," and dealing with professional sports legislation, which appeared in the New York Times on February 6, 1959:

RADICAL SURGERY
(By Arthur Daley)

ESTES KEFAUVER, the resident surgeon at the legislative cure-all hospital in Washington, is operating on his sports patients with all the finesse of a physician who uses a meat ax instead of a scalpel. Even though the operations are successful, the patients surely will die. The surgery is far too radical and has been prescribed without any true understanding of the backgrounds of those about to be carved.

Senator KEFAUVER has just dropped into the hopper a sweeping sports antitrust bill that almost seems antisports as well. He proposes such an amputation job on the reserve clause that baseball hardly will be able to stand. He would cripple the draft, a move that baseball might survive but that would kill pro football.

The phenomenal rise of pro football is predicated almost entirely on the fact that evenly matched teams make competition so keen that these are the sharpest sports blades ever honed. It's the draft that supplies the razor's edge.

NEIGHBORLY LOOK

The Senator doesn't have to look far to find exhibit A. Just up the pike a bit from the Capital is Baltimore. Not many years ago the Colts were hopeless. But the draft kept giving them first whack at star players and the Colts now are the champions. The Detroit Lions won a title one season, dropped to last the next campaign and picked up just enough star performers to zoom back near the top again. The draft is the greatest equalizer ever invented.

If it should be eliminated, the rich clubs with the biggest seating capacities will dominate the National Football League. That would mean the Los Angeles Rams, the Cleveland Browns, and the New York Giants. They would corner the talent in an open market. That's what the Browns did in the All-American Conference and the lack of an adequate challenger to Coach Paul Brown's invincibles led to the league's dissolution.

The baseball draft is not quite so important as a feeder. Yet it has its place. When there was no draft some 30 years ago, the shrewd Jack Dunn of the old Baltimore Orioles of the International League built up one of the strongest of all minor league teams. While he was at it, Dunn delayed the big league debuts of a slew of stars.

DELAYED PROMOTION

The Oriole owner was the chap who sold a brilliant left-handed pitcher to the Boston Red Sox in 1914 for $2,900—a fellow named Babe Ruth. Eleven years later Dunn was an infinitely better salesman. He sold another brilliant southpaw, Lefty Grove, to the Philadelphia Athletics for $100,600. The reason for that odd price was because of the fact that Ruth's resale to the Yankees was for $100,000, then a record. Dunn merely wanted to top it with Grove.

But Lefty was then 25 years old, a late start for a fireballer of his superlative skills. Max Bishop was 25 when he was sold by Dunn to the A's for $50,000. Jack Bentley was 28 when he went to the New York Giants for $65,000. Other high-priced Orioles were George Earnshaw, aged 28, and Joe Boley, aged 29. If there had been a draft then, they'd have gone years earlier.

Dunn made a profitable operation out of minor league ball. But the minors never did recover from the blight of the depression. The number shrank to 14 leagues in 1933 and the alarmed majors began to subsidize their little brothers. In the lush postwar years the leagues zoomed to nearly 60, an obviously inflated number. Now they are down to 26, which is much too deflated.

But the majors are to blame for the most part because of their reckless flooding of minor league territories with television broadcasts. Commissioner Ford Frick would dearly love to control TV but is powerless to do so. If Senator KEFAUVER really wanted to help baseball, he would take the shackles off Frick and permit the Commissioner to order restraints.

SMART SYSTEM

Bert Bell, the fooball commissioner, operates a tighter league and he took the gamble of ordering blackouts of home games. When he won in court, his circuit's prosperity was assured because the play-for-pay gridiron performers were not required to give away what they were trying to sell.

However, Frick's sprawling baseball empire is so constituted that lawsuits with triple damages involved could lead to bankruptcy. If he could remove the risk of charges of conspiracy, the Senator from Tennessee would be doing a real favor. Instead of that, he seems inclined to fuzz up the situation even more by consigning baseball's television problems to the Federal Communications Commission.

The Kefauver bill, as reported in the press, appears unnecessarily harsh and unrealistic. It wouldn't cure the minors of their ills but would kill them because they would die of malnutrition as soon as the majors withdrew their subsidies. And there would be little spending for talent by the majors when they lacked assurance that they might some day profit on investments.

Maybe Senator KEFAUVER just got confused from listening to Casey Stengel's testimony in Washington last summer. The Yankees' manager can confuse anyone.

Jimmy Waits, but Page Job Hope Is Fading

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. AYRES. Mr. Speaker, the following article, written by Mr. William McGaffen, of the Chicago Daily News, in my judgment, is one of the most factual reports on the troubles little Jimmy Johnson, Jr., has experienced.

I thought it would be of interest:

[From the Chicago Daily News, Feb. 6, 1959]

JIMMY WAITS, BUT PAGE JOB HOPE IS FADING—INTEREST IN CHICAGOAN'S CASE SLACKENING OFF IN CONGRESS

(By William McGaffin)

WASHINGTON.—Jimmy Johnson, Jr., flew in from Chicago on January 28, a 14-year-old Negro boy bursting with happiness.

Representative O'HARA, Democrat, of Chicago, had arranged for him to be a page in the House of Representatives.

This meant that Jimmy could attend the Capitol's page school and, perhaps, get a scholarship to go on from there to medical school.

After a week and a half of waiting, however, Jimmy still does not have the job. His nerves are so shot, his mother, Mrs. Avis Johnson, has had to take him to the doctor.

While Jimmy sits in the apartment of his aunt, Ethel Payne, nursing heartache and disillusion, the interest his case aroused at first seems to be dying down.

Who was to blame for the fact that the job was not open when Jimmy arrived?

O'HARA asserted that he had received a go-ahead from the Democratic patronage committee to send for the boy.

The committee later told him, O'HARA said, that it had made a mistake and confused his recommendation with one made by Representative O'BRIEN, another Chicago Democrat and leader of the Illinois Democratic delegation.

Representative WALTERS, Democrat, of Pennsylvania, chairman of the patronage committee, contends that O'HARA's version is incorrect.

After the initial shock wore off, however, it was not a question of who was to blame. Rather, could a job be made available for a boy who, through no fault of his own, was without one after being promised it?

O'HARA said he would fight for the boy. He would offer a resolution in the House to increase the number of pages from 50 to 51 so that Jimmy could be appointed to the vacancy.

WALTER countered that this would do no good as there were 14 Congressmen ahead of O'HARA with greater seniority waiting to appoint pages.

O'HARA might still have gone ahead with his promised fight except that the Democratic leadership in the House gave him the cold shoulder treatment. And the white-haired veteran of many a political battle was unable to rally enough support among his personal friends to fight "city hall."

Is there an unwritten rule or a gentleman's agreement, inspired by the powerful southern Democrats who control the House, that a Negro shall not serve as a page in Congress?

Some northern Members of Congress are beginning to suspect this.

They say perhaps that is why there has never been a Negro page in either House, although there are two now in the Supreme Court.

The patronage committee denies that race had anything to do with his. But the committee is not lifting a finger to cooperate with two Congressmen who are attempting to provide a solution to Jimmy's problem.

Representative ROOSEVELT, Democrat, of California, and Representative AYRES, Republican, of Ohio, have offered to share Jimmy as a clerk and messenger boy in their offices until a page job opens up for him, providing Jimmy is allowed to go to the page school.

"This has left a terrible impression around the country," said AYRES. "A little kid who was promised somehing and then Congress reneged."

AYRES said that although Jimmy now had a job offer, he still would have to get the approval of the Democratic patronage committee before he could enter the page school.

An official of the school confirmed this. Chairman WALTER, however, challenged both the school official and the Congressman. He said the committee's approval was not necessary.

Budget Out the Window

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following:

[From the Peoria Journal Star, Feb. 6, 1959]

BUDGET OUT THE WINDOW

It hasn't taken the Democratic majority in Congress long to dash all hopes that the United States will operate on a balanced budget, as proposed by President Eisenhower, in the next fiscal year.

With the House of Representatives authorizing a new $300 million fund for veterans housing, the Senate pushing through a $2.9 billion omnibus housing bill and Senate Majority Leader JOHNSON fronting for an airport improvement bill, it is obvious that the Democrats have launched on a spending spree that is likely to run up a deficit similar to the $12 billion one that we'll have during the present fiscal year ending in June.

The Democrats have shown definitely that they have no interest whatsoever in ending deficit spending or in making possible a reduction in Federal taxes any time in the foreseeable future. More than ever they are embarked on a high spend—high tax program with no thought whatever as to the consequences.

President Eisenhower in his press conference this week put the finger squarely upon their fiscal irresponsibility when he called upon those who vote for more spending also to vote to levy the taxes to pay for the expanded programs which they are espousing.

In their votes on housing and in the airport promotion program the Democrats have given no indication that they plan to provide additional taxes to pay for those programs. Apparently they have given no thought whatever as to how the money is to be provided.

Reckless spending of this sort can lead only to increased inflation and a further devaluation of the dollar.

There is only one thing good about the situation as it has developed. The responsibility for the wild spending spree is definitely placed at the door of the Democratic Party. There can be no doubt about that.

Life Magazine Prize Editorial

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. MADDEN. Mr. Speaker, the following editorial in last week's Life magazine sets out facts regarding international problems. All Members should read the timely warning which reminds us of the downfall of nations in world history when the people followed the easy way of profits and pleasure.

THE COST OF EASY OPTIONS—WE MUST RECOVER OUR PUBLIC CONSCIENCE TO DEAL WITH RUSSIA'S IRON PURPOSE

Beneath the particular controversies over the missile lag, foreign policy, and the budget, a deeper and more fearful concern has been stirring some of the most responsible U.S. leaders. Their worry: are Americans—undereducated, overentertained, tossing easefully but restlessly in what Reinhold Neibuhr calls a state of sophisticated vulgarity, still capable of discharging their moral duty as citizens to their country and to the world they live in? When, they ask, will we realize that the very power and success of U.S. society demand more, not less, individual dedication from its citizenship.

The concern has lately been voiced by many men of widely separate outlooks—Vice President NIXON, Secretary of Labor Mitchell, Adm. Arthur Radford, Walter Lippmann, and Senator LYNDON JOHNSON, among others. And increasingly it is stated not in terms of security but of survival. In the long run, they agree, nothing but an intense national effort can halt the hugely purposeful Soviet assault on free civilization.

The best recent statement of this informed worry comes from Adlai Stevenson, in a speech about the condition of survival. It makes sharp and disturbing reading—especially against the background of the current proceedings at the Communist Party Congress in Moscow where Khrushchev's re-Stalinized leadership loudly boasts of the speed with which communism can overtake and defeat the United States.

Stevenson first cites his own recent observations of the Soviet Union: "An overwhelming impression of thrust and purpose in most aspects of Soviet life * * * no effort, no dedication, no sacrifice is too great that may help realize the Communist Party's goals in Soviet society * * * no corner of humanity can be a matter of indifference to the Communists, because the whole human race is destined to become one in Communist brotherhood."

This Soviet purpose he sets against the dilatoriness of the United States, which like the self-distracting hare seems content to watch Khrushchev's curious armored tortoise plod steadily toward the race's finish line. ("Why should they be so busy?" he asks. "Why do we never meet an isolationist Communist?") The reason for the discrepancy: "* * * the Soviet Russians believe in their truth, as the men of the Western World once believed in theirs. * * * The fact that their faith is in many ways an evil perversion of the great propositions that once made the blood course in our Western veins

does not alter the fact that their tempo is dynamic and ours sluggish—even, I think, to ourselves.

"All our talk—in diplomacy, in strategy, in aid and trade * * * has been to a depressing degree purely defensive. We have offered aid not to help others but to shield ourselves. We watch the skies for other people's sputniks and listen to the telegraph wires for other people's moves. Yet we are the freemen of this universe, the children of liberty, the beneficiaries of unequaled abundance, and heirs of the highest, proudest political tradition ever known to man."

This U.S. defensiveness comes from a paralysis of will, which has nothing to do with any deficiency of technology or resources. It is a matter of people forgetting that political freedom can be sustained only by continuing individual commitment. As Stevenson continues: "The great German poet Goethe, who also lived through a crisis of freedom, said to his generation, 'What you have inherited from your fathers, earn over again for yourselves or it will not be yours.' We inherited freedom. We seem unaware that it has to be remade and reearned in each generation of man.

"Do not let us make any mistake about this. The natural government of man is servitude. Tyranny is the normal pattern of government. * * * For freedom demands infinitely more care and devotion than any other political system. It puts consent and personal initiative in the place of command and obedience by relying on the devotion and initiative of ordinary citizens.

"If freedom means ease alone, if it means shirking the hard disciplines of learning, if it means evading the rigors and rewards of creative activity, if it means more expenditure on advertising than education, if it means bachelor cooking and life adjustment courses in the schools, and the steady cult of the trivial and the mediocre, if it means—worst of all—indifference or contempt for all but athletic excellence, we may keep for a time the forms of free society, but its spirit will be dead.

"I believe we have had enough of adjustment, conformity, easy options and the least common denominator in our system. * * * The dreary failure in history of all classes committed to pleasure and profit alone, the vacuity and misery accompanying the sole pursuit of ease—the collapse of the French aristocracy, the corruption of imperial Rome * * * all these facts of history do not lose their point because the pleasures of today are mass pleasures and no longer enjoyments of an elite. If we become a nation of Bourbons, numbers won't save us. We shall go their way. Vacuity and indifference are not redeemed by the fact that everyone can share in them.

"We do not slip into happiness. It is strenuously sought and earned. A nation glued to the television screen is not simply at a loss before the iron pioneers of the new collective society. It isn't even having a good time. No society has even spent as much as we do on drink and tranquilizers. Can we argue that this is evidence of universal fun?

"How are we to defend freedom if, for the tyranny of external control, we substitute the clattering, cluttering tyranny of internal aimlessness and fuss?

"I doubt if any society in history has faced so great a moral challenge as ours, or needed more desperately to draw on the deepest source of courage and responsibility. Ours is the first human community in which resources are so abundant that almost no policies lie beyond our capacity for purely physical reasons. What we decide to do, we can do * * *."

The ease of modern living makes our responsibility for wise decision greater, not less. "In a century in which so many of the mentors of the public mind—from the psychiatrists to the admen—speak to us in terms of what we owe to ourselves, may there not indeed have been a slackening of devotion compared with those days not so long distant, when what man owes to God and his neighbor was a common theme of public discourse?"

The implications of Stevenson's concern run too broad and deep to be confined to any set of rules or helpful nostrums. Some areas of U.S. life are more obviously targets of his criticism than others—in another speech last week Stevenson himself singled out the damage done to our schools by life adjustment educationists. But the prevailing climate of moral isolationism is found in every corner of our society, and almost everywhere it contrasts sadly with the immoral but energtic expansionism of the Soviet Union.

The United States grew into a great and free society precisely because the Nation could always count on a widespread instinct among its citizens for translating private moral conscience into public virtue, a virtue made operational by the citzens' action in the Nation's life. At the moment this instinct is dangerously weak. The resultant gulf betwen privae conscience and public virture cannot be bridged by easeful living, spectatoritis or a let-George-do-it indifference. The wider this gulf becomes, the narrower grows our margin of national survival.

Military Research and Development

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an address "Military Research and Development," delivered by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development, Department of the Army, at a luncheon of the American Management Association, held in Hotel Roosevelt, New York City, on January 14, 1959.

General Trudeau, a dedicated American is one of the best qualified men to discuss this subject matter of his address. His address should be as widely read as possible.

In making the remarks he did about Deputy Prime Minister Mikoyan of the Soviet Union, he is to be admired not only for his remarks, but for his courage in making them; remarks that at least 99 percent of our people agree with and approve. This is particularly so now in view of the release by the State Department of authenticated evidence of the inhuman and cold-blood killing of American airmen.

The Department of the Army is to be congratulated in having Lieutenant General Trudeau as one of its officers.

As the Department of the Army is a service branch of the Department of Defense, my observations above applies to this Department.

The address follows:

MILITARY RESEARCH AND DEVELOPMENT

Dr. Marvin, distinguished guests, members of the American Management Association, ladies and gentlemen, it is always a pleasure for me to visit this great center of financial and industrial management and especially so when I can address such a notable group of Americans devoted to the ideals of better management.

Management—its concepts and practice—is the directing force of our national economy. It determines the effectiveness of our Government, our foreign relations, world trade, and our entire way of life. There is a growing recognition of the fact that it is one of the most vital factors in the tremendous challenge that lies in the future, particularly now, when we have a late but a growing awareness of the economic struggle ahead.

Today, I would like to discuss this challenge in the light of military research and development and how this program is related to industry and, to put it bluntly, to our national survival.

One hundred eighty-one years ago—just about this same time of year—Gen. George Washington was trying to rebuild his shattered army at Valley Forge to meet an enemy seemingly invincible at that time. The British were waiting for spring to close in on him and the American people were dismayed, at least those courageous Americans who believed in freedom. It appeared likely that the infant American Republic would not survive its birth struggle. There were many people in our country at that time who, I am sure, said either openly or covertly, "If that fool Washington would go home and leave things alone, we'd be much better off and business could go on as usual."

This group of people, who never have stood by the colors very well, I am sure said the same thing at Bunker Hill. They thought our fellow Americans were fools to stand and face the British and possible death by waiting until they saw the whites of their eyes, despite the fact that these patriots were fighting for principle and for honor and for freedom.

Unfortunately, there is still an element that feels that way today and advocates peaceful coexistence with the Soviet bloc without any appreciation of what the end result of such a policy would be.

Some of you have probably seen Bunker Hill. It is not a very impressive hill. In fact, it is not a very big hill at all. But the men who were there were very tall men because they stood for principle. When our country takes a firm position today with respect to Quemoy and Berlin as frontiers of the free world, it is taking the same attitude that those courageous men took at Bunker Hill and Valley Forge long years ago, even though the purpose be somewhat different. This has been done in spite of those weaklings who haven't the courage and of some who haven't the desire to support our national position in these difficult, delicate times; in fact, they constantly seek to dilute and destroy our national will to resist the ravages and inroads of world communism.

Now it was during this heartbreaking winter at Valley Forge that an American soldier sat down one night to write, and by the flickering light of his campfire, on a drumhead, he wrote as follows: "These are the times that try men's souls. The summer soldier and the sunshine patriot will, in this crisis, shrink from the service of his country."

This soldier was, as some of you may have guessed, Tom Paine. And the paper was the first of his many pamphlets titled "The American Crisis." While there are many points in the philosophy that Tom Paine expounded to which I do not agree, and I am sure some of you disagree also, we would have a hard time finding any fault with this particular thought.

A little later he said again: "Those who expect to reap the blessings of freedom,

must, like men, undergo the fatigues of supporting it."

I stand shoulder to shoulder with you members of the American Management Association and with real Americans everywhere who are willing to stand by their responsibilities for the privileges of reaping the blessings that have been bestowed on our country and retaining them for our children. We must do it with our whole strength and our whole mind and our whole spirit. I hope, and I know, that there are among us here no summer soldiers who are going to shrink in any crisis, and it is reassuring to me today to stand before such a group dedicated to the ways and means of keeping our Nation strong and uppermost in the struggle for freedom.

Our blessings of freedom today are being seriously challenged by an enemy who is powerful, fanatic, shrewd, ruthless, and completely unscrupulous. The Communists regard the struggle between themselves and ourselves as a matter of life and death. And it is truly that. Anyone who studied the tenets of Marx, Engels, Stalin, and Lenin cannot help but appreciate what these people, the proponents of this philosophy of life—as between ours which represents the dignity and freedom of man, and theirs which represents the slave world—are intending to do as far as we are concerned.

Khrushchev, the latest exponent of the Communist philosophy, states it in his own words. He made it very short, and only used four words, five syllables: "We will bury you." And he continues to repeat that day after day. The policies he follows indicate clearly his intentions, and we would be completely stupid to disregard them.

The Communist intention is very clearly stated in their own words—to destroy us. Yet there is that segment of our population who would try to tell you otherwise, through ignorance or intent, who would try to lull you to sleep, who would try to make you lie down as the lamb with the wolf and expect to wake up in the morning.

We must either be prepared to defend ourselves adequately or be willing to accept the consequences. That is the national challenge today, and the question is up to us—the American people—and our leaders to recognize these problems.

To meet the challenge of the Communist economic, political, and military threat that they have fashioned, our National Government and the military services must carry out an expanded research and development program that will result in better ways and better means to meet that threat. I am sure the great Soviet success with their lunar probe will give added impetus to our own programs.

At this moment in another part of this great city the No. 2 man in the Soviet Union is trying to convince some of our business leaders that the bosses of the Kremlin are really great and well-meaning fellows and that we ought to give them large credits to equip their industry so that it can outstrip ours more quickly. Since by their own definition they are our enemy this would clearly be giving aid and comfort to them in my opinion. Only last year Khrushchev said, and I quote:

"Of course we must recognize that we cannot coexist externally. One of us must go to the grave. We do not want to go to the grave. They (the West) don't want to go to their graves, either. So what must be done? We must push them to their graves."

But now our visitor's personal charm, ready wit, and pleasant smile are given the wishful interpretation of representing a new and really friendly Kremlin. It is easy to effect a grin that is a photographer's delight (this seems to be modern proof that one is a success and a great fellow) but we need a cold appraisal of the verbal vodka that flows from the Kremlin. It is alarming that this is so readily imbibed by many gullible people who accept the smiling face of Mr. Mikoyan as the proof and trademark of newborn sincerity, friendship, and integrity on the part of the Soviet despite the absence of any single action on their part to recede from or alter policies and programs that revulse the free world and foreshadow world chaos.

Our guest should be accorded courteous treatment by all means, whether he is here to borrow, bargain, bluff, or bludgeon—but if we have money to lend or invest and credit to give, let us turn our eyes to our friends in Latin America and elsewhere around the world who are trying to fend off the insidious and subversive pressures of communism by improving their stability and internal economy.

I would now like to turn to the military research and development programs, cover some of the more important aspects and point out where we need some bold steps forward. Following that, I would like to briefly examine research and development in industry and the combination of Government, military, and industrial research and development efforts as they affect our security for the future.

First, our Government research and development program.

As scientific and technological progress has accelerated in the past decade, so has the emphasis on research and development. I think it is a recognized fact that our ability to meet the military requirements in the next decade has largely been determined by research and development efforts which started several years ago. This is due to the present long leadtime cycle required under our system to produce operational weapons and equipment. We like to say that leadtime is the period from wanting to getting, or from "womb to boom." More specifically, it is the time from the initiation of a project until the finished hardware is delivered to the using troops.

At the present time, it takes an average of 8 to 10 years to complete this cycle. This is much too long. This time covers research, development, testing, engineering, and production. When compared to the Soviet leadtime of about 5 years, we can see that we have a serious problem between Government and industry to shorten this leadtime. And shorten it we must, if we are to match the wide and shifting range of Soviet capabilities. We can't compete in quantity with the manpower of the Soviet bloc, so it is necessary to be superior in weapons and material along with strategy and tactics if we are to assume a strong and adequate national posture and maintain it in the face of the Soviet threat. This means superior management, a dynamic research program and better utilization of our manpower.

I am not going to discuss the details and mechanics of the development cycle nor the corrective measures we are seeking to oil the gears of production. I do want to impress upon you the importance of shortening leadtime if we ever hope to establish a sustained advantage over the U.S.S.R. As an example, if a technological breakthrough were achieved today it would not be until 1966, or later, that a new family of developments could be operational. In contrast, the U.S.S.R. could acquire such new information 2 years later—or steal it from us meanwhile—and still beat us to the punch by 1 year with a similar weapon or a counterweapon. This is the real meaning of leadtime to us and the reason we are so conscious of the need for a drastic revision in our funding and management techniques to achieve a much shorter cycle of 4 years. This is a positive step to keep obsolescence from undermining our new developments.

You have undoubtedly noticed a definite tendency for centralized control of the national research and development effort. The President has a scientific adviser, Dr. Killian, a new Federal Council for Science and Technology, and other organizations such as the National Science Foundation and the National Aeronautics and Space Administration. The important point is here that research and development is becoming such a big business with the Government that centralized direction of such effort is necessary. However, there is always a danger of becoming overcontrolled. Of course, this is a problem that is common not only to Government and the military services but also to industry as well. In these days of superior communications and rapid transportation we often neglect the proper decentralization of authority to commanders and operators on the ground. Instead of letting a responsible manager make a decision, he can more easily be told to make a phone call or asked to come to his superior's office by plane to discuss the problem. This shifts the decision away from the place where it can best be made on many occasions and is costly in time, money, and effort.

It's an area that we all have to watch very carefully in the future. We all know the basic rule of good management that warns against overstaffing as it so often dissipates authority among those who share no real part of the responsibility for the results of their actions.

In general, the national research and development program has achieved widespread recognition in recent years as a basic requirement for the continuing scientific and technological progress of our Nation and the free world. Our Government has expanded the national budget to reflect this emphasis and has organized more facilities to pursue the fields of research. The services in turn have devoted more funds to research and development as requirements for more expensive and complex weapon systems increase with the growing Communist bloc threat.

Now for the military research and development program.

Because of the present environment of military uncertainty, all of the services face a difficult task in creating and maintaining effective weapon systems to carry out their missions. As you know, the Army has the mission of winning the land battle as well as providing elements for air defense. It is our objective in research and development to provide the most effective weapons and materiel for our future Army. The scope of this research and development mission covers an extremely wide spectrum of developments and we feel our responsibility very keenly whether we are predicting future needs in mobility, communications, firepower or logistical support.

I know that you representatives of management deal with organizations and objectives a great deal, but I would like to say a few words about the Army's research and development organization as an example of the military effort. We monitor over 2,000 tasks in the 2 general areas of basic research and applied research and development. By and large, these projects are actually executed by the Army's seven technical services and civilian contracting agencies.

We conduct a substantial amount of basic research through industry and some 123 colleges and universities. Ten major fields and 74 subfields are covered from mathematics and materials research to human factors and nuclear effects. We must continue to emphasize this type of work. Without it there would be little future development. As a matter of fact, our technological progress today determines the state of the weapon art in any future period. We can never afford to neglect basic research which contributes the seed from which applied research and development not only extracts the crop of weapons but also redounds in so

many ways to the betterment of our civilian economy and the welfare of our people.

Inseparably related to management, proper funding is one of the most critical factors in our program. An effective research and development program capable of producing weapons and equipment superior to that of any potential enemy in a timely manner requires hundreds of millions of dollars in any given fiscal year. There has to be appropriate adjustments to this amount annually to accommodate rising state-of-the-art and cost trends. Some of the factors inherent in the increased funding required are interesting to investigate because of their impact on our national economy and their general application to industry and Government, as well as to the military.

First, the acceleration of technological advances leads to earlier obsolescence of materiel, requiring more frequent replacement. This is part of the reason for the Army's $15 billion modernization program. As a result of rapid obsolescence, constant product improvement is required and it is seldom adequate. Bold steps forward are required in this area and these steps are often costly. While the horse and lance remained important weapons of warfare for more than 2,000 years, the manned airplane may last less than 100 years. Only man remains irreplaceable and we can hope that ultimately he will gain the wisdom to forgo the horrors of warfare.

Next, the decreasing value of the dollar serves to provide less and less return from each dollar expended. Based on comparative statistics, the Army can expect its current dollar to buy only 80 percent as much goods and services as dollars did 5 years ago. Projected to 1960 and translated in terms of the research and development program, this means that the money provided in our budget will procure 20 percent less than the dollar in the 1955 appropriation.

Third, the increasing cost of the more sophisticated weapon systems required in the modern Army further limits the return per dollar. The guided missile systems that became operational in 1953 such as the Nike and the Corporal are being replaced with newer systems today that cost several times more. Such is the cost of survival today in the face of the growing threat that confronts us but it is better to spend dollars than blood to preserve it.

The last factor is the increasing likelihood of hostilities without a thermonuclear exchange and with a possible restriction on the use of nuclear weapons. This requirement for dual approaches to satisfy conventional as well as atomic military needs—like the artillery piece that must be capable of firing either an atomic shell or an ordinary high explosive charge—further increases costs.

To secure the maximum advantage from available dollars, we must continue to eliminate projects that offer only marginal improvement. We don't have the funds to develop one-third of the projects that are favorably recommended to us. Consequently, we have to constantly review the developments already initiated or proposed and cut off those which appear to be only of marginal value.

Although I have not mentioned the role of management specifically, it is certainly up to military and Government management to terminate unprofitable projects of the type that I have just mentioned. This requires a definite degree of boldness, for you run head on into enthusiasts, backers, and manufacturers of these items who do not give in quietly. To keep our programs moving we must continually review and reject or cut off those at the bottom of the pile, while being aggressive but more selective in seeking newer developments for the future.

Another important action of management is to require a constant and studied boldness and alertness by scientists and technologists to seize upon new techniques and breakthroughs that continually change the research pattern. Such information must be quickly assimilated, disseminated, and exploited.

To take advantage of this rapid technological pace, concurrent research, development, production design and engineering is necessary in many cases. This is the "systems engineering concept where production engineers enter the picture early. These two areas of research and development are certainly fundamental in any analysis of the relationship of the technological goals of the military to the profit goals of industry. I have covered some of these technological goals in a rather general manner so far, so now I would like to be more specific in this respect.

The military services seek weapons and materiel that can be produced in the shortest possible time. This equipment must be as foolproof as possible, yet rugged enough to withstand the rigors of a dusty, grimy, dirty, muddy battlefield under all types of environmental conditions. The equipment must be lightweight to provide the utmost mobility. Above all, it must reliably perform its particular function, whether it is a complex guided missile system or whether it is merely a new item of clothing designed to keep a soldier warm in the most extreme arctic conditions. Integrated into this must be the human factors concept of engineering this equipment, so that maintenance, and particularly, training can be performed by a man with only limited military experience. Some of our recent electronic developments like module packaging and rapid "go, no-go" checks are examples of this type of design and engineering which give full consideration to man-machine compatability problems.

In addition to those characteristics of new materiel which reflect the latest state-of-the-art, the military also seeks a broad base of research and development experience that covers the various sciences and delves into the area of new materials, energy sources, radiation effects, and high frequency transmission systems. With a sufficient investigation of these areas, the requirements for future weapons and equipment can be more readily and better met.

Enough for the military side of research and development. Let's look at the industrial picture with which you are so familiar. I can only attempt a brief discussion in this area, but I would like to point out a few factors that I think are important.

As you well know, in our civilian economy, each corporation engages in research and development activities to increase its sales, either with new or improved products. The cost of such research and development must be borne completely by the corporation and will be reflected in the price of the product. Normally research and development by a corporation is done by laboratories and personnel within that organization or by contract. Generally speaking, the urgency of civilian research and development is dictated by economic factors and the rate of progress of such research activities is that which will give the most economical end result.

Research and development in industry is always a high risk business. The investment in research and development of products for the civilian market has to be considerable these days but industry must be able to please the customer with its newest products if its sources of profit are to continue. When a company is particularly successful in doing so, because of product innovations or improvements, the earnings are high enough to pay off many unsuccessful attempts. Therefore the same factors that govern military research and development—funding and management—achieve the same importance with industry albeit the motivations are different.

Now when civilian research and development is combined with the military programs we find that industry faces monumental new requirements. And all of these considerations have to meet the added requirement for mass production in minimum production time.

There is quite an impressive list of requirements that must be achieved if the technological goals of the military are to be met. When you also consider the time-consuming contractual and budget procedures, you can see why there is a need for bold innovation at every level of the research and devlopmnt process to include its management, funding, and administration.

On the national level again, it is mandatory that we increase our ability to better manage our resources, both material and human, if we are to cope with the Communist threat. If we feel that we can control our material resources by better research, engineering, development, and production methods, then perhaps we should look more closely at how we manage our human resources. I mean this: I believe we have failed seriously to advance our social sciences and their application at the same pace as we have advanced our physical sciences. This includes failures in the field of education and failure to indoctrinate our young people and our fellow workers with the ideals, morals, pride of accomplishment, initiative and acceptance of responsibility that made America great. Our philosophy of life needs a searching review.

Theodore Roosevelt expressed it this way: "The things that will destroy America are prosperity-at-any-price, peace-at-any-price, safety first instead of duty first, the love of soft living and the get-rich-quick theory of life."

Those are certainly words to think about and they rather indicate some of our present national attitudes toward life.

We cannot maintain the status quo of our economy and our way of life if we continue to look at ourselves and the world with the same old complacency that dictates holding the line and only advocates a higher standard of living for us with no willingness to make greater sacrifices or accept greater responsibilities on behalf of the free world. We need to regain the dynamism that energized us during the past century.

I believe that this directly bears on our national ability to project a more energetic research and development program in the military, industry or in government. Today, I have emphasized the military part of the research and development program and tried to indicate some of its objectives and technological goals as well as how it functions, at least within the Army. There are many ways to improve and broaden this vital program and I have stressed that the problem today is not so much one of shortages of material and human resources as it is the problem of better management and funding. Aggressive action in these two areas will result in better equipment and material for our future civilian as well as military needs and production by industry in a shorter lead time than we have now.

I opened my remarks with a bit of our rich American heritage which culminated in the establishment of our Nation years after that bitter winter at Valley Forge. Those men, those patriots, never ceased to take their eyes, their hearts, or their souls from the vision of independence. They came through the test by courageous action and not complacency for it was a most difficult task to even survive that environment in those times.

Liberty is a precious thing. It was bought with the blood of our fathers, and preserved by you and me and many of our sons within our lifetime. The signers who

pledgers their lives, their fortunes and their sacred honor on July the Fourth, 1776, and the hundreds of thousands who gave their lives for America on this century's battlefields would look down on us with shame if they thought we would fail them now.

We must have a bold confident spirit in the fact of the Communist threat that endangers the free world today and a faith in our destiny as well as in our heritage. This is the kind of spirit that a fellow Vermonter of much earlier vintage had. His name was Ethan Allen.

After he had captured Ticonderoga and turned in the booty that he had captured, the Congress in its timidity considered turning the captured cannon back to the British, whereupon Ethan Allen wrote a letter to Congress and this is what he said among other things:

"I wish to God that America would, at this critical juncture, exert herself. She might rise on eagle's wings and mount up to glory, freedom and immortal honor if she but knew her strength."

Thank you very much. It has been a pleasure to be with you.

New Chairman of American Council on Education, Dr. O. Meredith Wilson, Distressed at Status of Education in United States

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, the new chairman of the American Council on Education is Dr. O. Meredith Wilson, president of the University of Oregon which is located in my hometown of Eugene. Dr. Wilson is the youngest chairman ever chosen for the council and is the first selected from west of the Mississippi. His honor is an honor for our State and the university. Dr. Wilson is concerned about the status of education in our country today. He urges wise investment in education to bring each of our children to his brightest potential. His remarks at a recent dinner in his honor are thought provoking. Portions of his address appeared in the January 30, 1959, edition of the Eugene Register-Guard. The story by Dan Sellard follows, under leave to extend my remarks in the RECORD:

UNIVERSITY OF OREGON'S WILSON WARNS COUNTING PENNIES HARMS EDUCATION

(By Dan Sellard)

SALEM.—America must not relax its attitude toward education, for tomorrow is looking in on us to se whether we are writing a prolog to tragedy or pages in an epic drama in which tomorrow can be a happy episode in a triumphant cavalcade, O. Meredith Wilson, University of Oregon president, said here Thursday evening.

Wilson spoke at a dinner gathering which honored him for his recent election as chairman of the American Council on Education. He is the youngest chairman ever chosen for the council and is the first west of the Mississippi.

About 150 guests were present at the dinner. Charles A. Sprague, Salem publisher and a former Governor of Oregon, was host.

Wilson expressed distress at America's status since the 19th century which has bred in us complacency, fed our national ego, quieted our pulse and stultified our efforts.

"There is merit in viewing the past as a prologue * * * but it is a fateful conceit for us or any nation to believe that we are the goal and that ours is the golden age."

To believe that "ours is the golden age," he said, "would mean that for western civilization this is the finale, and all since sputnik is but curtain call."

"Our history, read as prolog," he said, "should be searched for cause, in the hope that we may write a better script for what our children in their time may consider to be the final act."

The Nation has always invested generally in the minds of men, Wilson said, "but today we are faced with new difficulties, and if out of national conceit we spend our time in self-congratulation, we will be prologue to catastrophe."

THE HUMAN RESOURCES

"A sudden upsurge in the birthrate after World War II has presented us with the greatest crop of human resource in the history of our civilization," he continued "but at the moment when we should be congratulating ourselves and gladly making the appropriate investment to bring each of these children to his brightest potential, half the country is cautiously counting the educational pennies as though the perfection of our children were an extravagance rather than a prudent investment."

"Without support, education will fail and we will be prelude to tragedy," he said. "At the very moment that Russia, learning from our history, seems about to triumph through education, we threaten to make our education less general in its influence and more particular in its consequence."

QUOTED DE TOCQUEVILLE

Wilson quoted the French historian De-Tocqueville, who in 1835 said that "There are two great nations in the world * * * the Russians and the Americans * * * the Anglo-American relies upon personal interest to accomplish his ends and gives free scope to the unguided strength and commonsense of the people; the Russian centers all the authority of society in a single arm. * * *The principle instrument of the former is freedom; of the latter, servitude. * * * Their courses are not the same; yet each of them seems marked out by the will of heaven to sway the destinies of half the globe."

Wilson said that "what DeTocqueville expressed so clearly 125 years ago we were unwilling to recognize until sputnik rang the alarms and brought us bolt upright from the couch on which we have been taking our cultural siesta."

After tracing the history of American culture and education, Wilson launched into a case for spending more public money for better and more teachers.

DANGER TO EDUCATION

Obsolescence must be plowed under * * * without new adaptations or inventions, the quality of education must decline, for our supply of qualified teachers in college is soon to be in shorter supply than it has been in secondary education.

"In order to provide instruction for this increase (100 percent of college students by 1970) 440,000 new teachers will have to be appointed * * * but during the period, only 220,000 doctor of philosophy degrees may be awarded if we are able to double for the next decade the output of the last. * * * "But of the 220,000 doctors to be prepared, only 50 percent may be expected to enter teaching. * * *

"In other words, at a time when we are most concerned about the quality of the education we require for national security and economic prosperity, it appears certain that only one in four of our men teachers will be prepared as well as we would like to hope."

A possible innovation to alleviate the teaching load, Wilson said, is television, but he urged that this innovation be viewed with "a word of warning."

DO "WITH" NOT "TO" STUDENT

"The act of teaching should not suggest doing something 'to' but rather 'with' a student * * * it is, therefore, regrettable to contemplate an American society that is conditioned only to receiving—to being told. * * * If discussion falls victim to mechanical invention both education and democracy must suffer."

In conclusion, Wilson made an eloquent plea for more money to change higher education in Oregon from an average system to one of distinction.

It is always distressing, Wilson said, "that when the biennial (budget) decisions must be made, to be caught up in a campaign to keep Oregon's education average.

"As a State we are eager to grow. We have launched a great centennial celebration to attract attention. But we overlook the obvious, most simple step.

"The difference between the costs of average and distinguished higher education is primarily expressed in faculty salaries and library resources."

OTHER COSTS FIXED

"The other costs remain fairly fixed. For a small percentage addition to our asking budget we could catch attention where it really counts.

"Distinguished faculty draws distinguished students and funds for research often many times the State's investment. If there is any thing I can do for Oregon, this would be most useful: To persuade my people that investment in distinction would be prudent.

"Of course, it would have been prudent," he continued, "to have invested today's missile money in the last decade's education, for the success or failure of each countdown is but a sympton of our state of knowledge.

But we must remember that we are prologue, too, and that we must invest again, now. * * *

The wisdom and courage of today's investors in education will be measured in Oregon's growth and security tomorrow," he concluded.

Interview With Hon. Theodore Francis Green, of Rhode Island—An Elder Statesman at 91 Looks at the World Today

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, February 9, 1959

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interview with Senator GREEN, of Rhode Island, by the U.S. News & World Report, published in the issue of that magazine for February 13, 1959.

In my opinion, this interview with the distinguished senior Senator from Rhode Island is noteworthy, because it was participated in by a man who has seen much of the changing history of our country and the world. He has observed with wisdom and concern what has occurred and has, I believe, a good

deal of good advice for the rest of us.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERVIEW WITH SENATOR GREEN—AN ELDER STATESMAN AT 91 LOOKS AT THE WORLD TODAY

Question. Senator GREEN, what do you think is the most exciting period you've lived through?

Answer. Oh, I think this is.

Question. Why would you pick this period?

Answer. Well, I think possibly because more things are happening, faster and over a larger area. We are spreading out into other worlds now. And, partly because I am more susceptible to these changes, I find them more exciting.

Question. You are in the middle of them—

Answer. Yes, yes; I have a part in it and it is wonderful, I think—a wonderful time to be alive for any of us, but particularly those of us who possibly have something to do about it.

Sometimes it works the other way, of course, and it is depressing to think something ought to be done and it isn't, and you can't get it done, but I think it's better to try, even if you fail, than not to try.

Question. What is your general feeling, Senator, about the kind of world we are living in today, compared with earlier years?

Answer. Well, we are living so much faster today in every way—physically and every other way.

Question. Have you found that you can live more slowly than the general mass of the people?

Answer. No, I don't live any more slowly.

Question. Do you think things are moving in the right direction in Europe?

Answer. Well, we are moving so fast——

Question. Are they moving toward us, toward our ideas of what should be done?

Answer. Oh, I think so. I think the rest of the world is developing. They are going through some of the things we went through. The world has gotten so small now—we have to deal with the whole world. Even when I was a boy, our world was very much more limited than it is now.

Question. Are there many big men in the Senate today—and were there many big men years ago?

Answer. I don't think the big men in the Senate seemed as big at the time as they do now, when we look at it historically. Don't you think it makes a difference?

Question. Do you think the system of election by the legislatures gave us better men—more qualified men—than we get now through the primaries?

Answer. I don't think you had as great a variety. No, I think it's a better system—the elected system.

Question. In your quarter century on Capitol Hill, what changes in the service that Congress renders to the people have impressed you most? Hasn't it become more international minded?

Answer. Oh, yes, it has; but that isn't owing to Congress—that's owing to the world outside. I think the Congress has changed as the world has changed.

Question. We read in the papers all about the nuclear age. Are you fearful of our future? Do you think we're going to be destroyed?

Answer. What difference does it make?

Question. Does it make no difference?

Answer. No.

Question. Why? Are you a fatalist?

Answer. I'm going to do my duty as I see it as long as I'm here, and if I'm destroyed and everybody else is at the same time, what difference does it make—for me, for them, for any of us? Here where we are talking about all these worlds—suppose this earth is blown up by sputniks or some new inventions or discoveries.

Question. You don't have any fear about the future, then?

Answer. What is there to fear?

Question. Being blown up——

Answer. I fear a lot worse things might happen to us than being blown up.

Question. Should we stop worrying about it and get down to business?

Answer. That's right. It's our job to do the best we can with things as we find them—try to improve them—we can't make them perfect; we realize that.

Question. You don't think it's wise to look into the future too much?

Answer. Yes; I do. Look to the future. But I wouldn't worry about it. You can't change it probably very much—perhaps you can.

Question. Are you a fatalist? Do you believe what's going to happen is going to happen, anyway?

Answer. No. I think that men can do a great deal to affect their own careers and to affect the career of their country.

Question. Do you think there is much difference between the Republican and the Democratic Parties today?

Answer. I think it's much less than it has been.

Question. Have the Republicans come over toward the Democrats?

Answer. More of that than the other, yes. I think they have become more "liberal."

Question. Do you think the Democrats have become less "radical," and they have gone over to the middle of the road in both parties?

Answer. I haven't seen many signs of that.

Question. Do you think they are still as "radical" as they were in the thirties?

Answer. I think it sways back and forth a little bit. It's more the mood for the moment than it is the plan of the centuries. We're not planning for the good of the generation. Perhaps we ought to, but I don't think we do. How can you these days? A new invention comes along, and everything is changed in a week or a month or a year.

Question. Senator, you're a great traveler. Would you like to take a trip to the moon?

Answer. Yes, I would.

Question. You would volunteer to go on the first planet ship?

Answer. I never ask for invitations.

Question. You've been asked this a lot of times, but how do you account for the fact that you are looking so well at the age of 91?

Answer. Because I had a lot of warnings when I was young. I was an invalid. I had everything—all the usual children's diseases and a lot of extras—everything—pleurisy, pneumonia, typhoid fever—everything.

I was sick most of the time, so I couldn't go to school—not well enough when I was a little boy. I had tutors. Then I got better and better and, when I was old enough, my father sent me to a private school about a mile and a quarter north of where we lived. I remember the winter and I thought I would freeze to death. I withstood it and I got toughened up and I had all the other things I could have so I was pretty well after that and got better and better. I became interested in athletics.

Question. Do you still walk back and forth to the Capitol every day?

Answer. I frequently walk up in the morning—that's 2½ miles.

Question. Do you do any other exercising?

Answer. It all depends on whether I can find the time. Now it gets worse and worse. The longer I am here the worse it is—the less time there is.

Question. You played tennis until recently——

Answer. Yes, I played until about 2 years ago. It was a question of time more than anything. I like to play singles better than doubles.

Question. Do you exercise in the gym now, Senator?

Answer. I don't get time. I wish I did.

Question. You did that regularly for many years——

Answer. Yes, yes. I've had less and less time for myself.

DIET: "I EAT ANYTHING"

Question. Do you follow any particular diet?

Answer. No, no—luckily. I go out to so many dinner parties that I eat anything that is put before me.

Question. And you live through it?

Answer. Yes.

Question. You've spent a good deal of time abroad in recent years, haven't you?

Answer. Well, yes, I went abroad first in 1889. My grandfather thought that a young man—had the old idea about "finishing"—he ought to be "finished" by a trip abroad. I thought it was a very good idea, so he sent my two cousins who were just a little bit older and myself on a grand tour of Europe.

Question. And you have been going pretty regularly ever since?

Answer. Off and on.

Question. But in the last few years you've made official trips abroad, haven't you?

Answer. Yes.

Question. There has been a lot of criticism of our educational methods——

Answer. Oh, I don't think that boys and girls study here as hard as they do abroad.

Question. Should they study harder?

Answer. They should. But I don't think they do.

Question. You went to college both in Europe and here. How would you compare the two?

Answer. Well, it depends. They prepare you for a different life, perhaps. You usually decide there much earlier than you do here what you are going to do in life. In some ways one is ahead, and in some ways the other.

But I do think that, for instance, a German boy had to study a little harder than any American boy that I knew here. I know one of my friends, I remember in those days, could recite a whole book of poetry—I mean the whole thing right straight through—and things like that. They memorize a great deal.

Question. Does that train the mind very much?

Answer. That's one kind of training and the other is to develop your powers of thinking and reasoning. There are different parts of your human brain that you want to develop more.

Question. Do they narrow down the people they are going to educate?

Answer. The universities there had a different standard right along. They didn't care whether you studied or not. It was up to you. I don't think there was any more responsibility developed there than here. I regret to find the tendency seems to be the other way here.

They build these dormitories, for instance, at colleges, and they used to be standing free. Now they like to build them with moats around them, so the boys can't get in and out easily. They have to go through the gates—like they do it in English colleges. They keep tabs on them—when they go out, when they go in.

In Germany they go to the other extreme. They don't pay much attention to the boys. If they want to get a degree, they've got to pass an examination. In order to pass the examination, they've got to study hard to do it.

Question. They put the responsibility on the youth rather than on the teacher?

Answer. That's right.

Question. Do you think an individual's life is fuller now than it was when you were a small boy?

Answer. I think so. I think the average individual life is too crowded. That's the reason they do most things half well.

Question. Is that true on Capitol Hill?

Answer. Yes, certainly.

Question. Who was the first President of the United States you remember, Senator?

Answer. I've known every President—I've met personally every President—beginning with Hayes. Except Garfield—I never met Garfield.

Question. Of the Presidents you have known, which one has impressed you most?

Answer. I haven't known many of them intimately. I've known both Roosevelts—Theodore and Franklin—very well, indeed. I admired Woodrow Wilson very much indeed. He was a scholar, made great sacrifices—he'd go the limit. He practically died for his country. And he had a clean mind, clear. He was more scholarly than those I've known. He worked a great many reforms. He had a deep knowledge of government; he impressed me that way.

Question. Who do you think was the best politician of the Presidents?

Answer. I think Franklin Roosevelt.

Question. How about Teddy Roosevelt? He was pretty successful——

Answer. Not as good. He came to Providence, when he was first running, and he made a rather antiprotection speech. As the subject of tariffs was foremost in the minds of most conservative Rhode Islanders, that was the wrong speech to make there. I am told he never mentioned that subject again during his New England campaign.

I was very fond of him. I knew him very well, indeed. I stayed at his house. I had a standing invitation—a room at my disposal whenever I wanted to go and stay there.

Question. Even though you were a Democrat?

Answer. Yes; I knew all his family well.

I shocked him sometimes. I remember one Sunday morning he came downstairs in his togs—"Rough Rider" stuff—and I didn't have any. And he said, "Here, take an ax. Come out and help me chop down some trees."

And I said, "Well, I won't come down and help you chop down some of your trees because I've got on my 'Sunday-go-to-meeting' clothes, but I'll come around and boss the job." And I realize this was something terrible, and a sort of gasp went around the room because I had the nerve to say that to the President.

He asked me to be his campaign manager when he ran on the Bull Moose ticket. I had just come back from my first experience of a Democratic National Convention in Baltimore. When I got home, I found this request from Roosevelt to be his campaign manager for New England. Of course, I wasn't going to do it, couldn't do it, and had to write him to that effect.

But I ran for Governor that year and I never mentioned the fact—and there was a Bull Moose ticket in Rhode Island, too, but I didn't think it was decent to take advantage of a friendship and hurt him. And so I didn't and I got licked, but that wasn't the only cause.

Well, anyway, I never told anybody about it, except a few intimate friends who wouldn't tell. And I was staying, a couple years afterward—they were having a dinner party at Sagamore Hill, and somebody said, "Well, Mr. President, I guess nobody ever turned you down when you asked for anything."

"Oh, yes," he said, "they did, and he is right at this table now." Then he told the story.

Question. Senator, does government better serve the interest of the people today than when you were trying to bring about governmental reforms in Rhode Island back in the thirties?

Answer. Oh, I don't know. I can't compare those parts of the government. I think that Rhode Island and Pennsylvania were supposed to be the worst-governed States in the Union then. And by the time I got through with my State—I was elected Governor and I changed over the whole government—everything, including the whole supreme court and everything else.

Question. Senator, when you changed over the whole government, do you mean that you changed the people in it, or did you change the system—reorganize the government itself?

Answer. I reorganized it. I had the same constitution and the same laws. I changed those gradually, too.

Question. What changes did you bring? How were you able to get hold of the situation?

Answer. In the 1934 election I got a majority in both the senate and the house.

On January 2, 1935, the date of my second inauguration as Governor, the general assembly met at noon and I was sworn in for my second term about 11 p.m. that night.

Previous to my being sworn in, the house and senate met and several measures which had been carefully prepared as a result of several very secret meetings held at my home in Providence were introduced and passed immediately. I remember one bill vacated the five supreme court places held by the Republicans. The grand committee of the general assembly then elected five new judges—three Democrats and two Republicans.

At that time we had in Providence a Republican State board of public safety which really controlled the Democratic city of Providence.

The general assembly passed a bill repealing the State Board of Public Safety Act, and I named Ed Kelly superintendent of State police and temporary safety director for the city of Providence.

This bill passed the general assembly about 10:30 p.m. on the night of January 2, and I recall very well that I had my secretary, Eddie Higgins, take my car and chauffeur and deliver personally, at that time of night, letters from me to the board of public safety letting them know that they had been fired. The next morning I saw many broad smiles on the faces of the policemen and firemen in the city of Providence.

The assembly, at my suggestion, abolished the office of finance commissioner and created the office of budget director and comptroller—the appointee to be named by the Governor. We also had a bill passed declaring vacant the office of high sheriff of Providence County and reduced the term from 5 to 3 years.

We also passed bills that day restoring home rule to a number of cities and towns. The control of cities and towns had been taken away from these municipalities and placed in the hands of this Republican-controlled machine.

We passed a bill that day providing for the consolidation of about 80 overlapping bureaus and commissions. We set up this reorganization to take effect in 60 days and created under it 11 new departments in the State government.

I recall that at that time Colonel McCormick, of the Chicago Tribune, became very upset about what we did in Rhode Island, and the story is to the effect that he cut out one of the stars from the American flag which hung in the Chicago Tribune Building. From what I am told, someone tipped the colonel off that he was desecrating the flag, and he had it removed from the lobby. I did not know for years why the colonel was interested in Rhode Island politics, but I later found out that one of the stockholders of the Tribune lived in Rhode Island and was very active in Republican circles.

One incident I recall regarding the so-called bloodless revolution on the night of January 2, 1935, is regarding the Republican judges who were still in office. As I recall it, the judges were in a committee room waiting to be escorted to my second inauguration. Of course, there was considerable delay because the general assembly was busy passing these bills and I was busy signing them.

The judges sent some of their sheriffs out to find out what was going on and they soon learned that they might be out of office shortly. In order to save them some embarrassment, I went down to the committee room and saw the chief justice and the presiding justice of the superior court. I told them what was going to happen.

As a matter of fact, the legislature was at that moment passing the bills vacating their offices. I suggested that they might be somewhat disconcerted if they were to stay around, and I understand that they called their sheriffs and all went back to the courthouse.

The next day they were all out of office at 12 noon and the new supreme court, which had been elected in grand committee and sworn in by me, had taken over in the supreme court chambers.

LAWYER AND BUSINESSMAN

Question. Senator GREEN, it isn't often that someone serves in business and public life as many years as you have. Did you start as a lawyer?

Answer. Yes. I went to college—Brown, and Harvard Law School then to the universities of Bonn and Berlin. Then I came back and I practiced law—went in with my father.

The eldest son in every generation is a lawyer. My great-grandfather, the eldest son, was a lawyer. His eldest son, my grandfather, was a lawyer. My father, the eldest, was a lawyer. I was the eldest son, so I am a lawyer. I am not married. My eldest nephew of the name is a lawyer, and I take for granted his son is going to be a lawyer.

Question. How long did you practice law?

Answer. I still am, I suppose—theoretically, anyway. I have a law office in Providence.

Question. Then you went into business after that?

Answer. I never ceased being a lawyer—I am still a lawyer.

Question. You were head of a bank in Providence. Did you give full time to that?

Answer. I couldn't give full time to all these different things, although I did them all contemporaneously. I was chairman of the Providence Plantations Bank; I started it, and I am still chairman of the board, and I know they don't resent that I hang on because, on my 90th birthday, they gave me a large silver punchbowl and ladle.

And I was president of the J. P. Coates Co., the thread company.

Question. You were also a director of the National Exchange Bank in Providence?

Answer. Yes, for many years.

Question. You were officer and director of various railroad companies?

Answer. All of them in Rhode Island.

Question. You've also had an active participation in some of the public institutions there, too. You are a member of the board of fellows and a trustee in Brown University.

Answer. Oh, that's just like being loyal to the family. Ever since Brown University started—except for half a dozen years some member of my family has been on the board of trustees.

My great-great-grandfather's brother was the first—and for 2 months he was the only—student in the college. They had a president and only one student. So nobody can date further back than that, you see, or as far back. So I am a trustee, I am a

member of the board of fellows, I am the senior fellow. When the president is absent, then the senior member of the board of fellows takes his place. So I've been president of that, too.

Question. Before you were elected Governor of Rhode Island in 1932, you had already lived a pretty full life. When you became Governor you were 64—an age when most people are retiring. Was the governorship your first elective office?

Answer. No; 25 years before I was elected to the general assembly. That's the first taste I had of politics, the first active part I had in public office.

I was on some good government drive—they had a terribly rotten machine in Rhode Island—and I saw the rotten government we had. Rhode Island and Pennsylvania were the worst governed State in the Union. "Corrupted, contented," was the combination of adjectives there—it applied to both—and I said, "Well, I am going to change this if I can."

So I started out then and I ran for public office and got licked most times. For 25 years off and on I ran for something—the general assembly or Congress or something or other. I was elected Governor in 1912 but firmly believed as do many others, that I was counted out by the then Republican-controlled State board of elections. The Republican machine controlled everything, including the courts.

Question. How did you overcome that?

Answer. Well, I kept on running and I guess they got tired of voting against me.

NO PLANS TO RETIRE

Question. Do you plan to stay in the Senate?

Answer. In the last campaign they said I was too old to run. At first I thought the proper thing was to ignore it. Then I said it was going too far, I guess I would have to tackle it—so I did. And I said I intended to stay in the Senate until I was 100.

Question. How old was your last opponent?

Answer. Middle aged.

Question. Did you have much difficulty with that campaign?

Answer. No; I had more votes than I ever had before. Every time I have run I have gotten more than I have the time before.

Question. You have gottten practice each time. What's the secret of that success?

Answer. Honesty is the best policy. You'll find it so as you grow up.

Minnesota Provides a Model Report for State Studies of Radiation Control

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, in this atomic age the problem of radiation control is at once one of the most serious problems and one of the most neglected problems. The State of Minnesota has faced up to the problem. Under a unanimous consent previously granted, I am including here a copy of the review prepared for the Bulletin of Atomic Scientists by Dr. Ralph E. Lapp, famed atomic publicist, of the Minnesota report.

BASIC DATA REGARDING ATOMIC DEVELOPMENT PROBLEMS IN MINNESOTA

(Review by R. E. Lapp)

The State of Minnesota has issued a report on atomic energy which other States might well use as a model for their own studies. A Governor's committee consisting of more than a score of scientists (mostly from the University of Minnesota) and specialists compiled a very useful sourcebook on atomic energy which should be of value beyond the State's boundaries.

The report presents basic data on the science and technology of the atom, atomic power and radiation applications. No attempt to treat the military applications is made since this is obviously beyond the control of the State. There are some 20 pages devoted to summarizing measurements of radioactivity in Mississippi River samples and in air. These data amplify the summary reports published for the Nation by the Bureau of State Services, Public Health Service (Department of Health, Education, and Welfare). The availability of fallout data at a State level will be valuable in resolving local arguments about fallout.

A survey of radiation exposure was made within the State of Minnesota and it was found that X-ray shoe fitting machines ranged in dose from 0.4 to 23 roentgens per exposure (there was an estimated 100,000 exposures per year). It was found that there are 55 radioisotope licensees in Minnesota. Detailed data on the radiation dosage from diagnostic X-rays are presented.

It remains to be seen whether or not the States can handle the complex problems of radiation control; it is clear, however, that some States are fully aware of the problems and are looking for solutions.

Foreign Economic Competition

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. SMITH of Kansas. Mr. Speaker, I want to call attention to an article that recently appeared in the Boeing News of Seattle, Wash.

I have been one of those who has constantly tried to point out that these foreign aid programs—which this country has been engaged—is nothing more nor less than buying foreign competition for the American worker and farmer.

The president of Boeing Aircraft, Mr. Allen, recently pointed out some most significant facts. Why anyone cannot see that by promoting these economic foreign aid theories all over the world for other countries—that eventually these countries would be bringing back to our country products which have been made with their cheap labor—which causes workmen in our country to lose employment.

It seems to me that this article points out very dramatically that we are now reaping what we have sown.

How anyone believes that we can compete in the world markets with our labor price of $1.87—with other countries' cheap labor of 25 cents an hour—is beyond my comprehension.

I commend this article most highly:

America is entering a new era of worldwide economic competition which will have a tremendous impact on business, labor, and our standard of living. So declared Boeing President William M. Allen, in an address this week to the West Coast General Management Conference. Because his discussion of the road ahead deals with matters of tremendous importance to all Americans, Boeing News carries here some of Allen's comments:

COMPETITION FROM ABROAD

"In the years since the Second World War * * * there was a domestic market hungry for goods. * * * We could offset lower wages in other countries through our mastery of mass production techniques. That era * * * has come to an end.

"The list of U.S. companies now having products made overseas for sale in U.S. markets is growing every week. In addition, foreign manufacturers of various important products are rapidly increasing their participation in our domestic market.

IMPACT NOT YET APPRECIATED BY AMERICAN PEOPLE

"Just as we ended our political isolation when the Japanese bombed Pearl Harbor, so today we are ending our economic isolation. The results of internationalization in military and political terms are all around us. * * * Changes of the same magnitude are now in the making as a result of the internationalization of markets. Such a change will have an impact on business, on labor, and on our standard of living to a degree not yet appreciated by the American people.

OTHER COUNTRIES USING MASS PRODUCTION, TOO

"We are now entering upon a competitive world economy. Ten years ago—even 5 years ago—most American producers could take solace in the confidence that they could produce better goods at a price competitive with foreign makers—by reason of the American's mastery of mass production techniques. In the meantime, other countries of the world are in the process of developing an industrial base which utilizes mass production and marketing techniques.

WE BEGIN WITH TWO HANDICAPS

"In endeavoring to compete with foreign producers, we begin with two basic handicaps. One is a wage scale that is dollars above those paid in competing nations. The other is lack of drive, in comparison with the will to work and the will to face up to economic reality which exists in certain other countries of the world.

PRICING OURSELVES OUT OF WORLD MARKETS

"Here at home, we have been and are in an inflationary spiral * * * So long as increases in wages do not reflect true increases in productivity, prices will increase—or profits (the use of which is one way of increasing productivity) will be squeezed further—or both. Thus, we face the prospect of pricing ourselves further out of world markets—and out of our own as well. We face also the possibility that capital, needed for greater mechanization of industry, will not be attracted to industry in this country. The rate of return on invested capital has declined steadily since 1948.

NOTHING SHORT OF A NATIONWIDE EFFORT

"It seems clear that the American people must exert their very best efforts to increase the productivity of labor and of invested capital in the years ahead, if we are not to be left will behind in the coming competition for world markets. Nothing short of a nationwide effort is likely to bring about percentage increases in the productivity of labor greater than the increases in the cost of labor which appear to lie ahead.

CAN WE MEET THIS CHALLENGE?

"Can we successfully meet this economic challenge? The answer, of course, rests in the attitude of the American people. There must be a general recognition that we have no God-given right to live at a higher standard of living than the rest of the world. We are entering an era in which we cannot maintain our economic position if we are unwilling to put the same amount of effort into a given product as do our competitors for an equivalent reward.

CRITICAL ROLE OF LABOR LEADERS AND BUSINESSMEN

"The President's economic report emphatically states that the future well-being of our country is dependent upon our ability to control the inflationary spiral with a resultant stability of prices. You have no doubt read that his statement regarding the responsibility of labor leaders in this effort have met with little enthusiasm in certain quarters. The President said 'Leaders of labor unions have a particularly critical role to play, in view of the great power lodged in their hands.'

"However, the President did not ignore the vital role of the businessman. He said: 'Businessmen must redouble their efforts. They must wage a ceaseless war against costs. Production must be on the most economic basis possible.'

SOMETHING WITHOUT WORKING FOR IT

"There is a need to get back to basic principles. We cannot expect to get something without working for it. We must stop the inflationary practice of paying more for less. The American people must understand that their welfare and their country's welfare are dependent upon a return to these basic principles."

Communist Penetration in Latin America

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. REECE of Tennessee. Mr. Speaker, the challenge of communism today is primarily its threat to the peace of the world and the many, many directions in which its subversive tentacles reach throughout the world. Like every American, I am very concerned with the problem and, over the years, I have acted to expose communism and its dangers.

There was recently brought to my attention an address given by a friend of mine who is well known throughout the United States and all of Latin America. It carefully develops the penetration of the Red threat to this hemisphere. This gentleman, who devotes much of his time to this effort, is Mr. Pedro de Mesones, of Peru, who delivered an address to students of Latin America at Fordham University, December 9, 1958.

Mr. Mesones comes from a distinguished pioneer family of Peru who have contributed much to the development of that nation both in its economy and through many philanthropies. His travels and study in many countries qualify him for his post as permanent delegate in the United States for the Inter-American Federation for the Defense of the Continent, an organization of citizens of all Latin American nations, the United States and Canada, who carry on the fight against communism. It is their aim, through extension of friendship between these nations, to solve the mutual problems brought about by Communist assaults upon our shores. I commend the efforts of Mr. Mesones.

I believe this address would be beneficial to all the people and under leave to extend my remarks in the RECORD, I include it in the RECORD at this time:

COMMUNIST PENETRATION IN LATIN AMERICA
(By Pedro de Mesones)

The great French political writer Charles Maurras once said that "contempt is not a political attitude." I should like to borrow that phrase and apply it to communism. To be contemptuous of communism would indeed be a grave mistake, for it is the most intelligent and systematic challenge our western Christian society has ever had to face.

Taking a leaf out of the book of another great Frenchman, Marshal Foch, let us apply the same system he used in the First World War whenever he was confronted with difficult situations created by the German Army. "De quoi s'agit il?" What is it all about? If we consistently tackled our problems from this angle, we should greatly facilitate their solution. What, then, is communism all about? First, we must understand what it is.. Secondly, the nature of the mechanism whereby it expands. Thirdly, how we can block its advance.

Communism may have been, in its beginnings, and above all in the minds of its first theorists, the social ideology of the working class. According to Marx, the progressive concentration of capital would inevitably produce a type of society in which all the means of production would be controlled by a tiny minority, which would hold the rest of the population in subjection. This polarization of forces would result in the seizure of power by that immense majority of the dispossessed, either through universal suffrage (social-democracy) or by means of revolution (communism).

According to this thesis, the countries best fitted for socialism or communism would be those which had achieved the highest degree of industrial concentration: Germany, Britain, Belgium, the United States, and so forth. Countries with an agrarian social structure, on the other hand, would be practically impervious to socialist ideas.

Events, however, have not borne out these Marxist predictions. Those four highly industrialized countries I have mentioned are ruled by Social-Christian parties, in Germany and Belgium, and by traditional conservatism in England and the United States. Yet, agrarian Russia, backward China, and Korea and Vietnam, which have hardly emerged from the Middle Ages, are dominated by the Communist Party. What has happened? What is it all about, as Foch would say? Simply this: Marxism has triumphed, thanks to a factor disdained by the Marxists—the decisive action of a human minority. It was the Bolshevik Party, a small group representative of the Russian working class—itself hardly 2 percent of the population—which seized power in Russia by means of two completely anti-Marxist platforms: Peace and the agrarian revolution, characterized by the bourgeois slogan of redistribution of the land. Lenin, a strategical genius, liquidated Kerensky and all the political and social philosophies in harmony with Russia's historical development in 1917 and seized power. From this position of power, with the aid of the slogan "Soviets plus electrification", with the iron discipline of the Communist Party, he diverted Russia's historical course and built on that immense, leaderless, agricultural country, without industrial tradition, technology, or capital, what is now the world's second industrial nation. We must not, therefore, underrate communism. Charles Maurras was right.

From the standpoint of Marxist theory, the countries best adapted to Communist penetration are still those of Western Europe and the United States, but, with the sole exceptions of Italy and France, where the local Communist parties have attained great numerical strength, communism is practically nonexistent in the rest of the industrial zone. On the other hand, it has triumphed throughout central and eastern Europe and has made serious inroads in the agricultural and backward continents of Africa, Asia, and Latin America.

The way in which communism took power in central Europe is common knowledge. The Red army, which occupied the whole area, insisted upon the formation of popular-front governments. There sprang up in 1945 in Poland, Czechoslovakia, Hungary, Yugoslavia, Rumania, and Bulgaria, a group of popular governments composed of representatives of the Communist Party, the Socialist Party, and parties representing the poor peasants. Communist participation, at the beginning, varied between 20 and 25 percent of the members of the assemblies and cabinets. In the second phase, the Red army, using reasons of security as a pretext, asked—in reality, demanded—that the Ministers of Interior, War, and Propaganda should be members of the Communist Party. With these key government posts in their hands, they launched the third phase: the discovery of plots against the new regime, always organized by Socialists or peasants. Step by step, and always in defense of the state, the Communists gradually increased their participation in the government until they achieved a complete and absolute monopoly.

The tactics adopted in China were different. There, the Communists of Mao joined forces with Chiang Kai-shek's Nationalists in a struggle against a common enemy—Japanese imperialism. But while Chiang devoted all his efforts to this single purpose, the Communists were penetrating his organizations and gaining control of key positions in the country. Suddenly, once the common purpose of the struggle had disappeared with the collapse of Japan, Mao turned on Chiang Kai-shek and, in an amazingly rapid campaign, expelled him from the mainland, uniting the ancient land of China with the Communist world.

This brings us face to face with a paradox whose consequences may prove fatal for the course of civilization. While the highly industrialized areas of the world—western and northern Europe, Britain, the United States, Canada, and Australia—remain impervious to communism, the agricultural areas of central and eastern Europe, Russia, China, and parts of Korea and Vietnam are completely under the control of communism. It is from this vantage point that the Communists begin the struggle for the conquest of Asia, Africa, and Latin America. On the result of that struggle depends the future of our western, Christian culture.

In Asia, the struggle has favored communism from the outset. Outer Mongolia, Sinkian, and Tibet, occupying peripherical political and geographical positions, have been completely absorbed by the Communists. There is danger of absorption in Indonesia, Thailand, Burma, and Ceylon. There is already one state in the vast subcontinent of India—Kerala—with a Communist government, and several others in which the Communist Party, with a parliamentary representation only slightly inferior to that of the Congress Party, hopes to come to power with the next change of government. There is Communist penetration in Nepal and in a number of border states between India and China.

In the Near East, Russia has used the emergent nationalism of the Arab world and its opposition to the State of Israel to mask profound penetration. The Syrian and Egyptian armies are being supplied with Communist arms; yesterday's newspapers announced the shipment of Soviet arms to Iraq and everybody knows about the $100 million loan granted to Nasser for the construction of the Aswan Dam, on the Nile. The Communist Party is lying low in Tunisia, Algeria, and Morocco, but it is

numerically powerful and only awaits a propitious occasion to assert itself. There is a strong Communist influence in the new African Negro state of Ghana and the political leader Sekou Tore', of Guinea, which recently won its independence from the French Empire, is a declared Marxist.

What is the situation as regards communism in Latin America? First of all, a brief outline of social and economic conditions will help us to judge to what extent our continent is suitable soil for Communist expansion.

In a recent statement addressed to the National Association of Manufacturers, Mr. Correa, the Ecuadorian Ambassador to the United States, declared that, if the Latin American population maintains its present rate of increase, which is 2.5 percent a year, by the end of the century it will reach the figure of 498 million inhabitants. During the same period the combined populations of the United States and Canada will only reach 300 million. A recent study published by the economist Woytinsky gives the annual per capita incomes of a number of Latin American countries. With few exceptions, the present standard of living in the great majority of the countries of Latin America is slightly superior to that of Africa and Asia, and the per capita income is hardly more than $100 a year. The social structure is also very similar, the rural population accounting for the vast majority of the inhabitants. In Haiti, Honduras, Guatemala, and Nicaragua, more than 70 percent of the population is made up of country people. That is to say, there exist simultaneously in Latin America three factors—population increase, poverty of the masses and the absolute predominance of agriculture—which, as we have seen and contrary to Marxist theory, are the elements most favorable to Communist penetration.

In 1945 the French Communists had the largest parliamentary representation and three of four Ministers in the Cabinet. The Minister of National Defense was a Communist. ' In Italy the situation was identical. It was at that time that the famous writer Kestler said that the Communist Party could have seized power in France over the telephone. Why did it not do so and how was it possible for its failure to do so to be transformed later into the recent rout of the French Communists in the latest elections? It was simply because it was not convenient to Moscow for the Communists to seize power in a western and industrial country like Italy or France in 1945. It was not expedient for international reasons, inasmuch as it might very well have provoked an armed attack by the United States at a time when Russia was still not prepared militarily; and it was not desirable from an internal point of view, either. Russia does not want any power to dispute her hegemony within the Communist world. The defiance of Yugoslavia—an only slightly industrialized country—has already caused her considerable difficulties. The rebellion in Hungary practically threatened her empire and she eyes with misgiving the industrial progress of China. The inclusion of an industrial western European country in the Communist sphere could conceivably cause a shift of its center of gravity from Moscow toward Paris, Berlin, or London, and undermine the whole historical plan, based on nationalism, of the Russian Communists. The Kremlin's plan is to expand into the agricultural and economically primitive regions of the world: First, Asia; then, the Near East; later, Africa; and finally, Latin America. The fact that our continent is last in the program of Communist expansion is due to two main reasons: Its geographical and spiritual isolation from Moscow and the presence of the United States. But everything seems to indicate that the time has now come for penetration to begin. For the time being and in order to avoid arousing the opposition of the United States, which has made the Monroe Doctrine the keystone of its international position, Communist activities in Latin America are limited strictly to the economic field.

We have three examples of this policy: Argentina, Brazil, and Bolivia. One of the causes of the chronic crisis in Argentina is its lack of petroleum. Importations of that fuel cost an estimated $300 million a year. The elimination of this deficit would stabilize the balance of payments, reinforce the national currency, and lay the foundations for the development of the country's economy. Blind nationalism and Communist opportunism have violently opposed any deal with foreign oil companies capable of helping the country exploit its oil. But recently the Frondizi government, with a display of rare courage, signed two contracts of different types. One was with Russia and the other with the United States and European powers, and both were aimed at the development of a domestic oil industry. What was the reaction to this move? The Communists, and the Peronists, following in their wake, declared a protest strike in the oil zones of Mendoza, against the national "abdication" implied by the contracts signed with the United States, but said not a single word against the signature of similar contracts with Russia. It is to overcome this strike in Mendoza that the Frondizi government has had to proclaim martial law, running the risk of civil war.

In Brazil there is a very similar situation. There also the Communists and the extreme nationalists of ex-President Vargas oppose any collaboration with the big American companies which might tend to increase the tiny domestic oil production. The imports of that precious fuel, also estimated at some $300 million a year, are a contributing factor in the grave economic crisis through which the country is passing. The Communists—who are partly to blame for it—take advantage of this situation to extend their political influence. Brazil is also faced with the prospect of a new civil war, and there is already very serious talk of the liquidation of Kubitschek and the formation of a military government.

In Bolivia, with the victory of the national revolutionary movement, a political revolution has triumphed which is most cordially hated by the Communist, since it is composed of a truly popular mass, socially progressive and politically anti-Communist. Russia wishes to discredit the Bolivian Government, in the same way as it has tried to discredit that of Yugoslavia, and to that end it has made use of a very dangerous economic weapon. Soviet agents in London recently launched on the market huge quantities of Chinese tin, to precipitate a vertical decline in the prices of that metal on the exportation of which Bolivia lives almost exclusively. The Bolivian Communists were thus enabled to make political capital out of the situation by asserting that the collapse of tin prices was due to the maneuvers of Patino, protected by Wall Street and the big American economic interests.

In other parts of Latin America Communist activities are carried out on a purely political plane. We refer principally to Guatemala, Venezuela, and Mexico. We have already seen the Communists at work in Guatemala; their penetration in that country was achieved by means of the popular front platform so successfully employed in Spain and France before the Second World War. Colonel Arbenz denied his Communist sympathies, but once ousted from power by Castillo Armas, he installed his family in a country behind the Iron Curtain. The Community minority in Venezuela is very important. There the Communist Party, whose cynical opportunism is proverbial, supported the candidature of Admiral Larrazabal against that of Romulo Betancourt, with whom it has broken and whom it considers, like Paz Estenssoro, Haya de la Torre and Tito of Yugoslavia, as its friendly enemy for the moment.

In Mexico, the Communist Party, weak and disorganized, is not a menace, either on the political or the economic plane. But, for a number of geographic reasons, the Mexican nation has long been used by the Communists as a springboard for activities throughout America. That excellent newspaperman, Roscoe Drummond, at present in Mexico, has just denounced this fact in one of his columns. "The families of more than 100 American Communists live in Mexico" he says, "since the persecution of the Communist Party began in the United States; moreover, during the period of dictatorship in Venezuela, Mexico was the meeting place for the leaders of Venezuelan communism. Between 100 and 150 of them lived in Mexico for 5 years, working under the orders of the officials of the Soviet Embassy. It was the same with the Guatemalan Communists. The secretary general of the Guatemalan Communist Party, Jose Manuel Fortuny, finally obtained a false Mexican passport to go to Moscow, but was discovered in time by the Mexican authorities. He was able, nonetheless, to make the trip to Russia, and on his return, via Rio de Janeiro, he was arrested by the Brazilian authorities for using a false passport." Drummond explains that, during the trial of the Soviet agent, Sobie, in the United States, the American authorities asked Mexico to permit the extradition of one of his accomplices, Martha Dodd Stern, and her husband. It was not possible to arrange it, and a few weeks later the two turned up in Prague. The Soviet Embassy in Mexico is one of the largest in the world, being composed of 125 adults and 48 children. Since the restoration of diplomatic relations between Mexico and Russia, the Soviet Embassy in that country has been considered the most important center of espionage against the United States and Communist expansion in Latin America. The mysterious murder of Ambassador Oussinsky, in Mexico, confirms this theory.

Russia, then, has penetrated by means of its economic maneuvers in Argentina, Bolivia, and Brazil. It exercises a powerful political influence in Chile and has considerable minorities at its beck and call in Venezuela and Guatemala. Mexico is the geographical center of its activities in Latin America.

We repeat that, for reasons of political opportunism, Moscow has not yet given orders to its agents in Latin America to mount a general offensive, but the historical perspectives for its development are so favorable that that order for mobilization may be given at any moment, opening up a new chapter of grave import in the history of the continent.

The countries of Western Europe have had at their disposal a defensive instrument whose effectiveness has surprised all the political observers: Christian Socialism. Without it, the traditional Democratic and Socialist Parties would have been unable to stem the Communist tide. At this moment, Christian socialism controls the governments of the following European countries: Italy, Germany, Belgium, Denmark, Holland, and Sweden; very similar organizations direct the destinies of Luxembourg and Norway. De Gaulle is a militant Catholic and the same may be said of Salazar and Franco. What would have happened if the defense of Europe had been left in the hands, for example, of that French radical-socialism that has just been overwhelmed in the recent elections in France? Pacciardi's Liberal Party has only 3 or 4 deputies in Italy. There is no Liberal representation in the Belgian Parliament, nor in Adenauer's Germany; it hardly exists in Sweden, Norway, Holland,

and Denmark. The Liberal Party, formed historically in England, has hardly half a dozen Members in the House of Commons.

The tragedy of Latin America is that, in the absence of powerful Christian-Social groups, it is these "liberal" parties that aspire to canalize the revolution. We have already seen how, in Europe, they merely become the Trojan horses for Communist penetration.

This historical lack in results, in Latin America, in the triumph of the so-called strong men or the establishment of military dictatorships. The army really stands behind Frondizi in Buenos Aires. The same is the case in Brazil. Strong men govern the destinies of Cuba, the Dominican Republic, Nicaragua, and Paraguay. The Venezuelan elections have most likely been won by an admiral, and the liberal experiment in Colombia is succumbing before the threat of a military government.

There have only been two timid manifestations of Christian-socialism in this continent: in Brazil, where it was symbolized by the figure of the Christian general, Juarez Tavora, and in Venezuela, through the presidential candidature of Mr. Caldera. Everything would seem to indicate, however, that, despite the catholicism of the Latin-American masses, Christian-socialism does not find fertile soil in those countries as a political ideology, and that the political panorama in those republics, in the face of the traditional incapacity of parliamentary liberalism tends to oscillate between the latent danger of communism and military dictatorship.

It is our duty, in the face of these tragic prospects, both as Catholics and as Americans, to encourage the development in our continent of these Christian-social ideologies, which, based as they are on the fundamental principles of humanity, have become in Europe an unbreakable barrier against which the atheistic despotism of international communism has hurled itself in vain.

A Great President Vindicated

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. GEORGE. Mr. Speaker, a number of years ago the newspapers were filled with caustic and slanderous remarks on the administration of a great President. We have now learned that one of those who was the object of this malignant offensive has been vindicated, and I deem it only fitting and proper that the article which appeared recently should be made part of the permanent RECORD of this House, and under leave to extend my remarks in the RECORD I include the following article which appeared in the Washington Daily News on February 6, 1959:

GENERAL VAUGHAN WINS $10,000 LIBEL SUIT

Maj. Gen. Harry H. Vaughan (U.S. Army, retired), President Truman's military aide, was awarded $10,000 libel damages by a jury yesterday against the Curtis Publishing Co.

The verdict was based on a November 3, 1956, picture caption saying "charges" by Columnist Drew Pearson against General Vaughan had been "confirmed by testimony before a Senate committee."

General Vaughan told a District Court jury he had been "criticized" during 1959 Senate "5 percenter" hearings, but that there were no formal "charges" as, he said, the caption implied, and nothing was "confirmed."

TESTIMONY ONLY

General Vaughan was accused by witnesses of using his influence to help business friends deal with the Government. He denied giving any help that was improper.

There were Republican demands he be fired. But President Truman kept him on until the President left the White House. He now lives in Belle Haven, Fairfax County.

The trial sounded like the 1949 hearings repeated in miniature. General Vaughan was asked about John Maragon and others. He told the jury:

"I was instructed by the President to give aid to anyone who came in with a legitimate request for cutting redtape."

His lawyers were Byron N. Scott and Hyman Smollar.

"It was the principle," General Vaughan told a reporter afterward. "A verdict of $1 would have been enough."

It's Good To Be Free Again

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, the following in an exact copy of a letter written in English to Rhoda Jenkins, 4 Garden Drive, Rye, N.Y., from her friend Elena Centurion in Havana, Cuba. Paragraphs concerning her family are omitted. It gives a first-hand account by a highly successful architect who studied at the University of Pennsylvania and is now practicing in Havana. Miss Centurion is a teacher at the University of Havana and has a conservative background, her family coming from the professional and land-owning class of Cuba. Mrs. Jenkins sent me the letter in the hope that it would help Members of Congress better understand the feelings of Cuba concerning Castro:

JANUARY 23, 1959.

Our emotions have been great since January 1 at 4:30 in the morning when someone called us and told us Batista was gone. What a wonderful beginning for 1959. How much father would have enjoyed knowing it. Fidel really did it. We all sympathized with his movement. Genaro's (her husband's) ex-partner was in exile over a year and a lot of people we knew personally or by reference. Every night for the last year we kept hearing at 11 p.m. the broadcast from Caracas, Venezuela, that retransmitted Fidel's speeches, ideas, and advances. We had complete censorship in our newspapers and in speech. They were paying $33.33 to people who gave away any information and it seemed there were quite a few. Many of those are the ones killed on that first days in the streets. Fidel's movement called the "26" didn't want those things to happen, but they were inevitable. One of father's property was burnt partially (brick and concrete didn't suffer) because one of the worst men of Batista, Masferrer, leader of a bunch of killers, had taken the house with his paper in the lower floor and two upper stories—he owed 2 year' (rent) but there was nothing we could do—it was full of machineguns and at night he even closed the street. That goes for democracy. I wish the Congress in your country could realize what countries like ours get from American democracy when they give their moral support to a man who takes the government by force like Batista did 2 months ahead of elections. It's too bad that so many had to die and suffer penalties, for I think I would rather die once than suffer what some people underwent. Now they've found the different implements of torture, for people had been found dead without nails, eyes out, burns and all kinds of things done to their different parts in their body. One can't imagine those things going on until it comes from people we know.

From your editorials it seems in the States they don't like us having people shot. I can tell that I wouldn't kill a mouse, but after going through all these years of terror I can well understand how people claim for it. It doesn't seem possible that you send someone to the electric chair for killing one person and yet have someone who has killed and tortured several, teaching others that one can do that and yet go on living as if nothing had happened. It was too bad that Batista and the worst men of his regime got away. I wonder if he was afraid of them for he let down practically all those who had given him moral and economic support. Tell your mother that Aguilera (was an architectural client of her's) was one of them. He didn't get notice on time like most of his political collaborators and they are all in the embassy's or hiding. I don't know where he is at all. He hasn't been caught as others who are in prison. It seems the revolutionary movement expects to make people give money back to the state and all they've done so far is freeze their bank accounts, taken their homes and business, and looked for documents and guns in their homes and offices. We don't know yet what or how they are going to do it and if good relations and influence will help or not.

As to the university, we don't know yet when it will open. I guess soon. A group of revolutionary (not the "26") was up against Fidel and took the university with tanks and guns but Fidel has crushed them apparently anyhow, by talking on the television. Never in your life you could imagine how people went out for him when he arrived to Havana. We saw him from a roof eight floors up. Today the university hasn't been handed back to the professors. Give Nora this letter and believe it, it's good to be free again.

ELENA.

Should Stop Selling Savings Bonds Until Inflation Halted

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. SMITH of Kansas. Mr. Speaker, here is an editorial from the Kansas Stockman, which has a new approach to the inflation problem.

Too few people realize just what inflation does to people on a fixed income. Too few people seem to be aware as to just what happens with bonds purchased 20 years ago with 100 percent dollars and cashed today on a 47-percent-dollar basis.

The article appended hereto would tie bond interest rates to the cost of living. Many wage contracts between unions and management have this provision. It

would seem that elderly citizens who have invested in Government bonds should be entitled to some protection from the evils of inflation.

The editorial follows:

SHOULD STOP SELLING SAVINGS BONDS UNTIL INFLATION HALTED

The thrifty and patriotic citizens who own the vast bulk of the $42 billion of U.S. savings bonds outstanding are entitled to protection of the value of the principal and interest of their investment in Government bonds.

So far the Government has failed to give them that protection, and those who have held these bonds since the early offering years have lost over 50 percent of their savings in terms of buying power. This record stands as a shocking indictment of the fiscal integrity of our Government.

If this confiscation of savings by inflation continues, these bond owners, who qualify as the most patriotic of our citizens and also as the segment of our citizenry who can least afford to lose will be financially wiped out to the degree they have trusted their Government.

Accordingly we propose that the Government face up to this problem now, and that it take immediate steps to give these frugal and trusting creditors a square deal.

To this end we propose either of the following alternatives:

1. That the sale of savings bonds be halted until the President has achieved at least a 2-year period of stability in the cost of living, or

2. That savings bonds issued from February 1 on carry an escalator clause on both principal and interest, giving the owner a guaranteed increase of both interest and principal proportionate to further increases in the cost of living.

As citizens deeply interested in the economic and political independence of the people of America, we contend that further temporizing with this grave injustice cannot be tolerated.

We urge that President Eisenhower, in his current stand against reckless and inflationary spending, recognize the significance of this evil, and that he make its correction a project for immediate action. We suggest that such prompt action on his part would do much to halt the flight from the dollar that is so apparent in the stock exchanges and trading markets of the Nation.

Statement of General Pate Before the Senate Armed Services Committee

---

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. THOMPSON of Texas. Mr. Speaker, under leave to extend my remarks I desire to insert in the RECORD the recent statement of the Commandant of the Marine Corps, General Pate, before the Senate Armed Services Committee.

It is a precise factual document. It lists in factual language the repeated instances during the past year when our ready Marine forces have had to move rapidly in response to emergency. Our need for this professional amphibious force in readiness in these tense times is starkly apparent from this mere recital of the record.

There follows an equally dispassionate account of the effect of the deep cuts in the Marine Corps which have been directed by the Pentagon. Without editorial comment, the effect of a cut of 25,000 Marines below the 200,000 the Congress considered minimum, and appropriated for, is factually set forth in terms of deactivated combat battalions and aircraft squadrons, and continued maintenance of remaining units at reduced strengths.

General Pate's statement is a simple, dignified statement of facts.

I consider it of such importance that I most urgently ask that all Members find time to study it with care.

For in it we see the actual results of the continued failure of the Pentagon to heed the most carefully considered and clearly expressed judgment of the Congress on a matter of vital importance to the Nation's military policy.

We have determined and provided by law that the Marine Corps shall be organized into three combat divisions and three air wings. We have determined that a strength of 200,000 is the minimum necessary to enable the Marine Corps to comply with the law. We have appropriated the funds necessary to maintain a Marine Corps of 200,000. We have stated our intent regarding this small, professional force in readiness in the most clear, simple and unmistakable words. The Senate Armed Services Committee, for example, used these words:

This decision to appropriate the funds necessary for a 200,000-man Marine Corps was made with full consideration of the fiscal and military implications. The committee desires that it be clearly understood by appropriate agencies in the executive branch of the Government that it is the clear-cut intent of the committee, and of the proposed appropriating legislation, that the Marine Corps be maintained at the strength of 200,000.

It is against this background that we must assess the Pentagon's order to cut the Marine Corps by 25,000 below what the Congress considered an absolute minimum. We are seeing a deliberate stripping from the Congress of constitutionally imposed responsibility.

This is the true impact of General Pate's plain statement of the facts.

Never has the need been greater for our Nation to possess this combat-ready Marine striking force to respond to any of the potential crises that confront us. Only with such a force as we possess in our fleet marine forces can we apply the proper amount of military pressure to protect American interests, carry out our national policies, and at the same time prevent a localized fire from spreading into a worldwide holocaust.

It just does not make sense to extend the draft and force into Army service unwilling—at least unenthusiastic—recruits while at the same time we arbitrarily direct the reduction of 25,000 hard, lean, highly professional, completely volunteer Marines. It does not make sense to say that we can maintain out strength for limited war by reducing each of our divisions by two battalion landing teams—for a total of six battalion landing teams out of the 27 we now have in our Marine Corps.

I am convinced that this arbitrary reduction of the Marine Corps to 175,000 is the deliberate, chosen method of the Pentagon for undermining and vitiating the provisions of Public Law 416 of the 82d Congress, very appropriately known as the Vinson bill after our distinguished chairman of the House Armed Services Committee, who was largely responsible for conceiving, sponsoring, and the ultimate passage of the law that requires three combat divisions and three air wings in the Marine Corps.

The continuing series of crises which have characterized the East-West conflict in the past few years have completely vindicated the position taken by the Honorable CARL VINSON in insisting that this bill be passed and thus provide the Nation with such a striking force of marines. In spite of this congressional foresight the Pentagon, unfortunately, has seen fit to disregard the provisions of the statute and the intent and desire of Congress when we appropriated the money to give meaningful effect to the provisions of the Vinson bill.

The argument that the Marine Corps is stronger by reducing its forces and disbanding a large portion of its combat units in the divisions cannot be understood except as a smoke screen behind which there is a deliberate effort on the part of the Pentagon—which stubbornly opposed the original passage of the Vinson bill—to erode and destroy its provisions. No other conclusion can be drawn from the action that is now taking place in refusing to apply the funds to provide the forces for which they were appropriated.

This is not only a matter of straight military policy. Even more strikingly it poses in crystal clear form the deep issue between the legislative and executive branches in the field of defense policy.

I am not one of those who feels that Congress should go into details of the direction of the Armed Forces. The use of the Armed Formes is the clear-cut prerogative of the President in his role of Commander in Chief. However, the Constitution places squarely upon Congress the inescapable responsibility of providing and maintaining those forces. This responsibility is not one that Congress can pass on to the executive, nor is it one which in good conscience Congress can let go by default.

The Attorney General of the United States speaking of the power of Congress to raise and support armies and to provide and maintain a Navy has stated:

This power to raise and support armies and provide and maintain a Navy is plenary and without limitation or restriction, and Congress is the sole judge of how the Army or Navy shall be raised and of what it shall be composed (27 Op. Att'y. Gen. 259).

I know of nothing which has changed the correctness of that opinion. Indeed I am convinced that legally only a constitutional amendment could strip the Congress of the powers so precisely delineated by the Attorney General. I may also note that supine acquiescence

by a legislative branch which abdicates its responsibilities to a faceless, general staff type of executive omniscience will just as certainly accomplish the same perversion of the wise separation of power established by Founding Fathers.

We live in perilous times.

The Congress, after exhaustive, careful hearings rejected the proposal of an administration which insists on a Marine Corps of 175,000 as adequate to our needs.

Even as the Congress determined a ready force of 200,000 marines is vital to the Nation's security in these troubled times, the twin crises of Lebanon and Taiwan force an admission of Pentagon error when a Marine Corps of 190,000 is kept in hand to deal with these relatively mild examples of the Communist policy of constant pressure against the free world.

Then as the order is issued to execute the cut to 175,000 the Secretary of Defense tells the Nation that our military policy must be shaped with the lessons of Lebanon and Taiwan in mind.

Do these lessons justify a 12½-percent cut below appropriated strength in what is already the smallest of our active services?

How do they justify this cut—400 percent greater in relation to appropriated strength than that imposed on any other service—in the very forces which were able to respond most rapidly, most precisely, when Lebanon demanded action in a matter of hours?

No one has answered these questions.

No once can. For the true answer is that we are witnessing a return to the disastrous reasoning of the Louis Johnson school—the Alice in Wonderland theory that we gain strength through weakness.

Only strong, decisive, and immediate action by the Congress can reverse our course.

Never has the foresight of our distinguished colleague from Georgia [Mr. VINSON] the sponsor of the Marine Corps bill, been more thoroughly vindicated than in the past year as well as the continuing crises which characterize the probings and incursions of Communist aggression.

Never has the Nation's need for a small professional force in readiness such as the Marine Corps been greater than it is today.

General Pate's statement follows:

STATEMENT OF GEN. R. McC. PATE, U.S. MARINE CORPS, COMMANDANT OF THE MARINE CORPS, BEFORE ARMED SERVICES COMMITTEE, U.S. SENATE, JANUARY 26, 1959

Mr. Chairman and gentlemen, the Marine Corps deeply appreciates the interest you have always shown in our affairs. We welcome opportunities such as this to appear before you, and to report on our status. In general, I feel this committee is quite familiar with the Marine Corps. We are guided by the missions which Congress has assigned us. For the purposes of this meeting I will not make a lengthy statement, but will confine my remarks to two main points: (1) A summary of our activities during the past year; and (2) our plans, programs, and capabilities for the coming year.

During 1958, the basic deployment of our Fleet Marine Forces, which we have maintained for the past several years, was found responsive to the realities of global military pressures. One division and one aircraft wing were maintained on the east coast of the United States with the Atlantic Fleet. At least one battalion landing team of that force was normally on rotational deployment with the 6th Fleet in the Mediterranean. Two divisions and two aircraft wings were assigned to the Pacific Fleet, one division and one aircraft wing operating on the west coast, and one division and one aircraft wing in the western Pacific. The latter division/wing team was under operational control of the 7th Fleet. This distribution of our forces provided for an amphibious capability in each of the great ocean areas.

To render these deployments meaningful, our Fleet Marine Forces were constantly prepared for combat action. The state of their readiness was several times demonstrated, when world events called for limited military action by the United States.

In May 1958, incident to the Vice President's visit to Caracas, Venezuela, elements of the east coast team deployed. Two rifle companies of a battalion landing team were airlifted to Guantanamo Bay, Cuba, and embarked aboard the cruiser *Boston;* a third rifle company was lifted from the parade-ground at Camp Lejeune by helicopters which then accompanied them on board the carrier *Tarawa* to join U.S.S. *Boston.*

In the summer, world attention was focused on Lebanon, where the orderly processes of constitutional government were endangered. As tension mounted, the normal amphibious troop strength of the 6th Fleet was increased. An additional battalion landing team was provided in May; in late June a third departed its east coast base. On July 14, the Lebanese President sent an urgent request to our Government for assistance. As the Nation's initial response to that request, the 6th Fleet quickly landed the three battalions of Marines—the first one hit the beach on the 15th of July at the precise hour directed by President Eisenhower. The prompt arrival of those units had a stabilizing effect on a very explosive situation, and ultimately the Lebanese were given an opportunity to work out a Lebanese solution to a Lebanese problem.

In late August, there was need to reinforce the air defense of Taiwan.. Marine Air Group 11, stationed in Japan, was alerted for the purpose. The fighter squadrons flew off at once; but it is a mark of the mobility of the entire unit that within 12 days after its new base field was designated, the entire group—aircraft and ground support units alike—had moved their personnel and equipment 1,300 miles by sea and were effectively contributing operational support to units already at Taiwan.

Each of the incidents I have mentioned constituted a real emergency. In each one, the amphibious forces demonstrated professional competence in responding to the requirements of their role in our national defense. As a result of careful prior preparation they reacted immediately, using normal task groupings and communications, and without last minute, frantic planning. They moved at once to the trouble area, and they remained in the area until their presence was no longer required. The real mobility of naval forces was thus made apparent, and the true nature of the fleet's readiness demonstrated. No international political arrangements were necessary to permit the movement of these units. They were free to anticipate international events. They needed no rights of transit; and their own strength and self-sufficiency gave them ability to stay as long as their presence was needed.

So much for 1958. Now let me turn to our plans, programs and capabilities for this year.

The Reorganization Act of 1958 will necessitate no change in Marine Corps operations. Under its provisions we will continue to do what we have done in the past; that is, equip our troops, train them in the specialized techniques of amphibious warfare, then assign them to appropriate field commands. However, we do so in a somewhat different way than do the other services. The bulk of our Marine fighting forces are assigned directly to the principal fleets of the Navy. They become an organic part of the fleets to give them balance and complete the flexibility of their striking power. The fleets, in turn, are assigned directly to the several unified commands. Their commanders thus possess a ready amphibious arm which they may deploy in any locality bordering on the seven seas.

We started this year with a strength of approximately 187,500 officers and men. Right now, today, we have about 185,000. We will continue to decline as we implement the directive to reduce to a strength of 175,000 by June 30 of this year. Our supporting base, and the security forces which we must provide to other Government agencies, have already been reduced. Their strengths have reached the minimum consistent with efficient operation for the forces and missions presently assigned. For this reason, reductions have to be made in our combat units—the Fleet Marine Force. To effect this, we have two alternatives. We can either provide fewer and fewer men to the units than their tables of organization call for, or we can deactivate units.

In fiscal year 1958, with a ceiling of 188,000 personnel, we had a personnel availability in our Fleet Marine Forces equivalent to 8 battalion landing teams per division or a total of 24 within the Fleet Marine Forces. However, I chose to retain the full structure of 27 battalion landing teams in the 3 divisions and levy reductions across the board.

However, during the past year our experience in Lebanon and the Far East clearly demonstrated to us the fallacy of maintaining units at levels seriously below combat strength. I have therefore abandoned this philosophy, and returned to one of maintaining our battalion landing teams at full combat strength. This, linked with the further reduction to 175,000, has required me to deactivate 2 of the battalion landing teams in each of our 3 divisions. Thus our 3 Marine divisions will be reduced from a total of 27 to a total of 21 battalions. All remaining divisional units can then be maintained at not less than 90 percent of their table of organization strength. Also, by June 30, 6 aircraft squadrons and 100 additional aircraft will be deleted from our 3 aircraft wings. Some other reductions in our combat strength will be entailed, but I have mentioned the principal ones.

Elsewhere in the personnel field, in order to get every possible benefit from our Marines, we are making strenuous efforts to improve quality, to keep commitments for housekeeping and support functions to a minimum, and to reduce individual training requirements wherever possible.

These programs are meeting with considerable success. For example, the reenlistment rate for first enlistees has increased from approximately 17 percent in fiscal year 1957 to 25.4 percent in the first 5 months of fiscal year 1959. Added to this, the trend among first enlistees is to sign for 4 rather than 3 years. Last year only 21 percent chose the 4-year term. This has increased to a high last month of 89 percent of 4-year enlistees. The trend should continue. The combined effect of these programs will lead to a significant reduction in our training load, higher quality marines and increased readiness.

Throughout the past year, the Fleet Marine Forces carried out a number of exercises, battalion size and larger, aimed at the improvement of old and the perfection of new techniques of amphibious warfare. Each

exercise was in every sense a rehearsal for combat. Each exercise, regardless of size, involved the interplay of Marine air and ground units operating as a team with Navy amphibious forces. This mode of operations is a hallmark of our composition and doctrine, exemplifying, with the Navy, the essential qualities of modern war on the land, on the sea, and in the air. We have another full schedule of exercises planned for this year. Through them we will maintain our readiness for any eventuality.

In all of our exercises and in all of our training, we are stressing modern techniques of amphibious operations—the vertical envelopment concept. The helicopter assault landing capability, which we developed, is a reality now, and it is growing in potential from year to year.

The assault elements of our divisions are organized to take them transportable by helicopter. The structure of each Marine aircraft wing on the Atlantic coast, the Pacific coast, and in the western Pacific provides for a balanced helicopter group in each locality.

In order that helicopter capabilities can be employed in amphibious operations, carrier decks are required. In the Pacific, the Navy has one aircraft carrier specially converted for use as a helicopter platform. This is U.S.S. *Thetis Bay*, a former escort carrier which in 1955 underwent minor conversion and overhaul to give it a troop-carrying capability, and to facilitate the handling of helicopters. Marines have used it extensively. It has provided the naval amphibious forces with much valuable experience, both in perfecting modern amphibious techniques and for ideas of design to be incorporated in new construction vessels. However, *Thetis Bay* provides vertical assault capability for less than one battalion and only in one ocean. More is needed.

The Navy's approved shipbuilding program will provide two carriers specially designed for the purpose in 1962, but the problem cannot be put off until then. We feel there is urgent requirement that greatly increased helicopter lift capabilities be available to the fleets right now.

The chief of naval operations and I have, after much study, arrived at an interim solution. By providing additional marines to augment the Marine detachment to help fill out their crew, two—and possibly three—CVS-type carriers can be kept in service and devoted to helicopter operations. We have determined that a Marine detachment of 10 officers and 323 enlisted men will be required for each carrier designated, and I have agreed to furnish those marines. The Marine detachments, organized into two companies, will perform assigned air, guard, supply, communication and other support duties appropriate for marines. I might point out that this solution to our problem is only possible because of the close and intimate association of the Navy and Marine Corps over the years.

In the Atlantic area the amphibious forces inaugurated the use of the carrier *Boxer* early this month. In addition to U.S.S. *Princeton*, to be assigned to the amphibious forces in March, one more carrier is under consideration for assignment at a later date. These vessels are not ideal for efficient helicopter operations, nor for amphibious troops habitability, but they do provide a significant increase in our combat potential. They enable us to apply modern doctrine in our amphibious operations.

Any comment on our combat readiness would be most incompetent without mention of the Marine Corps Reserve. We place great reliance upon it. In the event of mobilization, our reserve will provide us immediately backup strength.

Our ready reserve comprises 208,000 men. Of these, some 43,000 are organized into drill-pay units. Drill-pay unit training programs maintain these units in a state of readiness that makes them immediately available for mobilization.

The balance of our reserves would be called to duty and placed in combat units as quickly as refresher training could bring them up to fleet marine force standards. Right now I am proud to say our reserve is in the highest state of readiness we have ever achieved short of full mobilization.

Gentlemen, I have summarized briefly our accomplishments during the past year, and indicated our posture for the year ahead. As it always has been, it is now—a posture of preparedness. Everything we have available to us today is in the highest state of readiness we know how to achieve. You have my assurance it will be kept that way.

Kentucky's Future—Soil and Water Conservation

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. NATCHER. Mr. Speaker, for the second consecutive year a young man from the Second Congressional District of Kentucky was won first place in the soil conservation essay contest. This year's recipient of the award is Glenn C. Dockery, a 17-year-old Ohio county high school senior. He is the son of Mr. and Mrs. Owen Dockery and resides on rural Route 1, Beaver Dam, Ky. Glenn's essay entitled "Kentucky's Future—Soil and Water Conservation," was judged best from a record number of 31,426 written by grade and high school students in 118 Kentucky soil conservation districts. This honor which has been bestowed upon Glenn C. Dockery is to be coveted and is one of which he has every right to be proud. Not only in this particular instance, but by other means he has set an example which can well be emulated by young people throughout Kentucky. He has served as vice president of the Beaver Dam Chapter of the National Honor Society and as treasurer of his high school junior class. This year he is president of the honor society and vice president of the science club. Also he is a member of the student council and the junior conservation club.

Over the years the young men and women of the Second Congressional District of Kentucky have manifested a deep interest and concern in agricultural pursuits, and, by virtue thereof, have received recognition for their accomplishments. In addition to Glenn C. Dockery, winners in this year's soil conservation essay contest from our district are:

Jean Goodman, Scottsville, Allen County; Johnnie Hines, Hardinsburg, Breckinridge County; G. McCoy, Morgantown, Butler County; Mary Alice Wethington, Utica, Daviess County; Jackey Pearl, Big Clifty, Grayson County; Jacqueline Stephens, Pellville, Hancock County; Brenda Briscoe, Hebbardsville, Henderson County; Lena Villines, Nebo, Hopkins County; Sarah Miller, Sacramento, McLean County; Joyce DeBruler, Fordsville, Ohio County Lynn Caudill, Franklin, Simpson County; Shelby Woodring, Morganfield, Union County; Joe R. Cowles, Bowling Green, Warren County.

Mr. Speaker, soil and water conservation means a great deal to the State of Kentucky. Not only are the people of Kentucky, generally, aware of the necessity for a soil and water conservation program, but our young poeple have been well instructed along such lines, as evidenced by Glenn C. Dockery. The awards received by him and the other boys and girls are indicative of the outstanding work being done by our Soil Conservation Service under able and conscientious leaders. The young people who reside in the congressional district which I have the honor to represent belong to the different farm organizations such as the Future Farmers of America, Future Homemakers of America, and 4-H Clubs. I am justifiably proud of our future farmers and homemakers. I am thankful for the enormous potential that resides in the youth of our land. I feel that such potential for good is being fully realized. As our youth see, they understand, and as they hear, they are comprehending the truth so that they and all the citizens of our land may live more abundantly.

More Art Needed in Federal Architecture

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. ASHLEY. Mr. Speaker, on January 26, 1959, the Toledo Blade took occasion to applaud the recent admonition of the Fine Arts Commission against the stark functionalism of our Federal buildings throughout the Nation generally and in the Nation's Capital particularly. In an editorial entitled "One Percent for Art" the editor makes an eloquent plea for filling this aesthetic void through the judicious use of ornamentation to reflect something of the spirit and aspirations of the American people.

Surely the reservation of one percent of the funds appropriated for construction is little enough to devote to alleviating the barren utilitarian and uninspiring severity that has so characterized our public buildings.

Under unanimous consent, I include the full text of the editorial, and I commend its sentiment to the thoughtful attention of my colleagues.

The editorial follows:

ONE PERCENT FOR ART

In many American cities and towns Federal buildings are among the most prominent architectural features. In Washington, of course, they dominate and convey both to foreign visitors and to our own citizens something of the spirit of the American people and their Government.

For this reason Congress ought to take note of the complaint of the Fine Arts Com-

mission against the plainness and severity in design which has made Government buildings constructed in the postwar period examples of barern monotony. Too often, the commission says, paintings, sculpture and other enlivening ornamental features have been struck from the plans of Federal and District of Columbia buildings.

The Government can afford to be a better patron of arts and American artists in this respect. Particularly do we believe that the humblest of Americans from the most remote crossroads would want the public buildings in the Nation's Capital to be of inspiring beauty and dignity. Elsewhere, too, the example of the Government in departing from barren monotony would have a leavening effect on other public, as well as private, buildings.

What the Commission would like is for Congress to set aside a special fund, equal to one percent of the appropriations for Federal and District of Columbia construction, that could be devoted to the judicious use of art" for buildings and their adjacent surroundings. The size of the sum which should be made available may be debateable but not we think, the need for the Government to move away from any sterile, purely utilitarian concept of building.

Thanks for the Sputniks

EXTENSION OF REMARKS
OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 29, 1959

Mr. BENNETT of Florida. Mr. Speaker, it was my pleasure to hear my dear friend Dr. John S. Allen, president of the University of South Florida, when he recently made an excellent address before the Phi Delta Phi law fraternity breakfast at the University of Florida. I am happy to include here the challenging but, at the same time, encouraging thoughts which he presented on that occasion.

The address follows:

THANKS FOR THE SPUTNIKS

A century ago the colleges of this country taught liberal arts, theology, and a little science. Law was not in the college curriculum, it was read in a lawyer's office. The science that was taught was very simple and elementary compared to what is known and taught today. I have on my bookshelf an astronomy book that was used as a textbook by some of our colleges about a century and a quarter ago. It has in it the following definition: "Electricity is an all pervading fluid emanating from the sun." Today out information is more accurate and more elaborate.

A century ago colleges were small. President James Garfield described the ideal classroom as "a log hut with only a simple bench, Mark Hopkins on one end and I on the other, and you may have all the buildings, apparatus and libraries without him." Today we have so many attending college that it is physically impossible to provide President Garfield's ideal classroom, and in fact we seem to be going in the opposite direction when we point a television camera at a professor and carry his message by coaxial cable to literally thousands of students. If we will admit that some people can do good teaching by the lecture-demonstration method, then television is simply a device to carry the work of one excellent teacher to thousands rather than having most of the students subjected to less than excellent teaching. Many will feel that this is losing the personal touch, and education in the crowded classrooms of today is just not as good as it was in "our day."

On October 4, 1957, Sputnik I went into orbit and sent radio beeps to earth with coded messages. We Americans were embarrassed and annoyed by this, because we like to be first. A lot of people who had never been very much concerned about schools went into orbit and started beeping. They now want better schools. For this, I say, "Thanks for the sputniks."

I want better schools too. We all want better schools. Thanks to the sputniks, maybe we can get them. But I am not sure the general public knows what kind of schools they really want. I have known people: Who objected to their children having homework to do; who really desired social success more than academic success for their children; who thought time off from school for basketball practice was proper; who would provide car transportation for athletes after practice; or who would contribute personal labor to help build a football field. But would they do this for a library or for an honor student?

The practicing lawyers at this breakfast find themselves in the role of leading citizens of their respective communities. You who are still in law school will soon find yourselves in this role. People just expect a professional person, such as a lawyer, to be informed. They will expect you to know about the schools and how they may be improved.

Many of the practicing lawyers here are in my generation. We, of course, look on our days in school as a rigorous program of such high quality, that it made real men of all of us. Unfortunately, nostalgic memories are not very accurate. I propose to present some facts that will give us all a better understanding of where we are.

We should not be misled by nostalgic stories of the past when it is reported that men busied themselves with glorious fighting for church and country, or they amused themselves by dancing around the maypole. Actually, in the past most people were poor, sick, illiterate, short-lived, and worked from dawn to dusk to keep body and soul together. They were slaves to their jobs. They had no real freedom of choice or freedom of opportunity if they wanted to eat regularly. A boy learned his father's trade. A girl taught school or was a housewife, and that was about the only choice they had.

Freedom has come with our material abundance. A boy or girl can work at what they want to do. They can make a living by encouraging and exploiting any talent they enjoy. They can work in business, in industry, in science, journalism, music, art, or any other field.

In 1900 only 8 percent of our high-school-age population graduated from high school. The high-school program was strictly college preparatory in nature. Yet only about 4 percent of the high-school graduates went to college in 1900. This was a situation the American public would not tolerate. They insisted then, as we insist today, on the democratic principle that every child have the opportunity for as much education as his ability permits him to absorb.

This caused a diversification of offerings in the high school. Instead of attempting to prepare all comers for college, even though those who go to college are a small percentage of that age group, the secondary schools have developed offerings in secretarial studies, vocational agriculture, shop and industrial arts. The schools recognized that for many pupils this would be society's only chance to educate them, not only for a job, but for good citizenship and for their personal living responsibilities.

By 1950 two-thirds of the children of high-school age were enrolled in school. This gain was not made entirely in the nonacademic or skill courses. In 1900 only 7 percent of the boys and girls of high-school age were taking courses in mathematics and science. In 1950, 35 percent of them were doing so.

In other words, there are more boys and girls enrolled in mathematics and science today than there were in 1900, a greater percentage of children of high-school age enrolled in these subjects, and both enrollments and percentages are increasing rather than decreasing.

We must remember that we are created equal, before the law. We have equal privileges, responsibilities and opportunities. But let us not confuse equal with identical. Courses in science have always been offered in the better equipped modern schools, but they are not designed for all pupils. School counselors advise those who are not interested in academic things or ideas, but who are interested in doing things with their hands, to take skill subjects that will prepare them for trades and immediate employment. We must remember that we need the skilled artisan and that good workmanship at any level has dignity.

Unfortunately, some who have the ability for dealing with ideas rather than things have not been challenged or been shown the need for putting forth the effort necessary to succeed in academic subjects. School counseling is not able to accomplish this alone. School administrators have found that by working consistently and continually through the PTA, they can get parents to understand why certain pupils should be encouraged to take science courses. The pupils then get guidance at home around the dinner table, as well as in the classroom, and from the counselor. One school principal reported that whereas he had had only enough pupils for one half section of high school physics, the next year he had four sections. And where he had had only 3 sections of chemistry, the next year they had 13 sections of chemistry. Obviously pupils will take these courses if challenged and if properly guided by both the school and the home.

Further studies indicate that the schools are today doing a somewhat better job at teaching than they have in the past, as measured by student performance on standardized achievement tests. Let me give you an example from the elementary school. A midwestern university gave a reading test to the elementary pupils in the city of Indianapolis, and repeated the same test 30 years later. They found on the average that third-grade pupils read better today than did fifth-grade pupils at the earlier date. In the past the retarded reader dropped from school. Today we know how to help him. Scores made by third-grade pupils today should have been held down by the fact that the pupil who would have been retarded in the past and maybe dropped from school is in school today because of compulsory attendance laws if for no other reason.

I had a colleague who told me that he graduated from elementary school in west Florida nearly 50 years ago. The school term was 5 months a year. On graduation from the eighth grade he passed an examination given by the county which enabled him to start teaching immediately in the school from which he graduated. From his teaching he earned the money necessary to pay his way through high school which was on a 4 months' term. Since then he has not only completed college, but has gone on to earn a doctor of philosophy degree and is still devoting his energies to improving our schools. But I ask how many of you today would be willing to have your children attend elementary school only 5 months of the year, and be taught by a person with no other

preparation than graduation from the eighth grade? How many of you would be willing to have your children attend high school only 4 months of the year?

Similar statistics can be cited to show similar gains made at the collegiate level. Between 1900 and 1950, for example, the college age population of the United States about doubled, but the undergraduate enrollment in our colleges and universities jumped almost 1,000 percent and the graduate enrollment increased almost 4,000 percent.

At the same time the curriculum has been pushed downward through the colleges and schools. My father and I attended the same college, but 40 years apart. He majored in mathematics and got to calculus in his senior year. I majored in mathematics and got to calculus in my sophomore year. Not because I was smarter. More and better mathematics was taught to me in high school, and the college curriculum had been pushed downward by 2 years. Today many college freshmen take calculus.

Some people have been so impressed by the sputniks that they want us to install the Russian school system. Enough Americans have visited Russian schools and universities for us to know rather well what they are doing. For example, the programs in mathematics and in the physical sciences are very good. These were encouraged by the Czarist regimes and they are encouraged by the Communist regime today. Other programs are not given so much encouragement. To be admitted to a university the candidate must come from the family of a common man. The candidate must be politically reliable. A high quality program may be followed in science, but along with it each student is required to study Marxist-Leninist philosophy. And they are required to study a history that is so distorted it is hardly recognizable by our western historians.

Others say one of the western European school systems that has produced great scientists would serve our purposes better. Let me describe parts of the French system, since it is reasonably typical. To go beyond elementary and vocational schooling the child must come from the right family and must decide between ages 10 and 14 to take the school program that will lead to the university. Should he decide not to take that program and later with growth and maturity he discovers he would like to go on to the university and study academic subjects, he finds the way is blocked. There are no transfer points between the two routes.

Dr. Byron Hollingshead has reported on his 5½ years' of work assisting universities in western Europe that there are as many students elected to the three top American honor societies of Phi Beta Kappa, Sigma Xi, and Phi Kappa Phi as there are students in the total enrollment of all of the colleges and universities of western Europe.

In America about 10 to 15 percent of our college-age population graduate from college, and about 1 percent complete college with superior records that cause them to be elected to the top honor societies. This means that in France, for example, only about 1 percent of the college-age population is enrolled in college or university. This is a high quality program in France. And the program completed by members of Phi Beta Kappa, Sigma Xi, and Phi Kappa Phi in American colleges is equally high in quality. But we in America have a dual program. One in which educational opportunity is open to all who can profit by it, and a program within the first that is for superior students. In a democracy such as ours is, we have no alternative but to make some educational system, such as this, work and work well.

It is reported that in France there are not enough people educated to high enough levels to fill the positions in business, industry, and government that require college education. It is reported that a minister of finance in the French Government did not know even the rudiments of money, banking, finance, or even tax collection. If France has had a serious Communist Party, I believe it can be attributed in part to its educational system and its limited opportunities. If we in this country have not had a "serious" Communist Party, I believe this can be attributed in part to our educational system.

Remember that our educational crisis did not begin with Sputnik I, nor will it end when and if we are the first to send a rocket to the moon. Our educational crisis arises because to maintain our economic and political system, we in America must educate more people to higher levels than any society ever attempted before in all of history. Unfortunately during our growth in numbers we have not always had a similar development in intellectual standards. To this problem we must give immediate attention.

However, we do not do this by copying the Russians. They have built a system to serve the needs of their state. I do not believe the French educational system has served that state well. We in America have built a system to free the minds of 175 million people. And a democratic society with free and well-trained minds need not fear any challenge. We must be sure that our educational system really aids and stimulates its students to use their minds to full capacity.

To many of our people have gone under the illusion that you could get a good educational system for practically nothing. We thought that paying a few dollars school tax on our property and sending a $10 check to our college alumni fund every year was all we had to do. We seemed to think that the Government or some philanthropist would somehow do the rest. It is not so easy. Our less than adequate support of our schools to date causes me to question whether or not we really want better schools. It is typical to place a limit on the tax millage that can be assessed by local government for schools when there is no millage limit for other Government services. Have you been willing to authorize bond issues for new school buildings needed to avoid double sessions?

We are the ones who must pay the bill. And we can do it quite readily by increasing our total support of education, through taxes and gifts, from 2 percent to 3 percent of personal income. We are finding that local and State taxes have not been enough, and now it is proposed that the Federal Government use its taxing power to help out. But if you will hurry home to vote quickly for higher school taxes, and send twice as much to your alma mater, you can keep Uncle Sam from getting deeper into the educational business. If we do not, then the Government will do it for us, for Uncle Sam cannot afford for America not to have a first-class educational system.

Finally, our schools and colleges must demand the best from their students. We must never make the degrading assumption that young people unfitted for the highest levels of intellectual endeavor are incapable of meeting some sort of standards. Too many have assumed that those who are incapable of high level intellectual activity are incapable of any standards and can be exposed to shoddy and trashy educational fare. We recognize individual differences in aptitude or ability and at the same time we must expect every level of education to stretch the individual to the utmost of his particular potentialities.

"And," as John Gardner of the Carnegie Corp. has said, "we must expect that each student is striving for excellence in terms of the kind of excellence that is within his reach. Here again we must recognize that there may be excellence or shoddiness in every line of human endeavor. We must honor excellence in every socially accepted human activity, however humble the activity. There may be excellent plumbers and incompetent plumbers, excellent philosophers and incompetent philosophers. An excellent plumber is infinitely more admirable than an incompetent philosopher. The society which scorns excellent in plumbing because plumbing is a humble activity, and tolerates shoddiness in philosophy because it is an exalted activity will have neither good plumbing nor good philosophy. Neither its pipes nor its theories will hold water."

The Enemy We Face

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article should be widely read, but especially it should be read by every Member of Congress.

We have got to recognize the fact that we face an enemy who is implacable and bent on our destruction. The time is growing short, and we are going to be destroyed not only by the men in the Kremlin but in our own lack of knowledge and our desire not to face up to anything unpleasant.

Mr. Wolfe is right when he says:

Our policy of containment has not contained; and our policy of liberation has not liberated; as our acceptance of the poison semantics of peaceful coexistence and the propaganda circus of summit conferences has given us neither genuine conferences for agreement on anything, nor peace, nor coexistence.

We must wake up, shatter our rosy, silly dreams and face reality.

[From the New Leader, Jan. 26, 1959]

THE ENEMY WE FACE

(By Bertram D. Wolfe)

The Soviet system of power, which is the enemy we face, can only be understood properly with the help of certain theoretical criteria of a sociohistorical nature. Very briefly, we may say that the Soviet system is a closed, single-centered, modern totalitarian society, as distinguished from an open, multicentered society. A closed society is one with built-in staying powers which enable it to endure for a very long period of time; it is a self-conserving society, in that any changes that occur are within-system changes that leave the basic structure of power untouched. A single-centered society is one in which there is only one focus of power, the state, which does not tolerate the diffusion of power among any other relatively independent social institutions or groups. Finally, a modern totalitarian society, as distinguished even from an old-fashioned despotism, is one in which the state seeks to be coextensive with the whole of society and the whole of life, a society that is perpetually at war with its own people and with the rest of the world, and which uses modern technology and widespread literacy as weapons in that war.

Now, the Soviet Union is truly a great power—great in population, great in resources, great in technology, and great in

military strength. Secondly, it has a great state machine which is in a condition of permanent semimobilization, and which attempts to keep its people mobilized. Finally, it is an enemy which is resourceful enough, wealthy enough, and determined enough to do what we have not had the determination to do (although we have had the resources in the West in much greater abundance): namely, to keep simultaneously an atomic striking power and a massive conventional striking power in being. It has a definite advantage over us at this moment because it is geared to both types of warfare. It believes that both types are necessary and that they must be integrated into a single plan.

At the beginning of the 19th century, one European in seven was a Russian, or under Moscow rule. At the beginning of the 20th century, one European in four was under Moscow rule. At the middle of the 20th century, approximately one European in two is under Russian rule. This in itself is enough to give us pause—especially if we remember that there are 125 divisions in being in Russia, while we have approximately 15 and are engaged in cutting our forces further.

It is a deadly enemy. It is a deadly enemy because never for a moment does it abandon its two basic aims: to remake man, and to conquer the world. It is particularly our enemy—not because we so choose, but because it has chosen. It regards the strength and the way of life of the United States as the chief obstacle to its plan to remake its own people and to remake the world in the image of its blueprint. We have been picked as enemy No. 1.

No matter what Eisenhower says or does, no matter whether Dulles conducts himself with tact or tactlessness, no matter how well the tourist behaves when he goes to the Soviet Union for his 3 weeks—we will still be enemy No. 1. Whether our working class is prosperous, or hungry and jobless, or jobless and not hungry, we will still be enemy No. 1. Whether we treat American Negroes decently, or indecently—or somewhere in between, as we are doing at present—we will still be enemy No. 1. Whether we pull out of Berlin or Quemoy or do not pull out of Berlin or Quemoy, we cannot disengage ourselves from this enemy.

Let us not listen to the siren song of those who tell us that we can get a release of tensions and a little peace in our time if we only disengage ourselves. If we disengage ourselves, we leave another strip to be occupied, a new place from which battle will begin.

They know, to be sure, that they cannot conquer us. They know something about our strength. They do not covet for a moment the risks of all-out war with us. There are two things that they are determined with all of their might to avoid: one is all-out war, the other is all-out peace. They will keep us in between as long as they have the power to do so. They do not wish all-out war because they believe that time and history are on their side. When they consider how their system has been expanding, I must say it seems to them that they have some empirical confirmation for their belief that time is on their side.

Of course, they do not want all-out peace, for their two fundamental aims do not permit them to be at peace either with their own people or with the rest of the world. If our statesmen and experts wish to make a test of any fresh proposal of theirs to see whether it really intends peace, there is a simple test. When they are ready to make peace with their own people, then we will know—and only then—that they are ready for real peace with their neighbors and with us. Otherwise, when they use the word "peace" it is just one of the gimmicks in their waging of war. It is well to remember that Soviet Premier Nikita Khrushchev is said to have two sets of teeth, one to smile with and one to bite with. And the more dangerous of the two is the set with which he smiles.

My next point is that "by the enemy we face," I do not mean the Russian people. The Russian people are not and have never been our enemies. They have not chosen and they do not choose their Government. They do not control its policies—except by their mute and silent pressure. And those who tell us that when the Russian people mature they will be able to control their Government and its policies, are deceiving themselves and us. No mere maturing of the Russian people will change their system, nor does their system allow them the organizational scope and independent activity, the genuine information and the right to judge which alone permit of maturing.

The Russian people are not unfriendly to us, only ill-informed, deeply curious, well-disposed toward us, and a little envious. If the gates were opened, they would vote with their feet by the millions in favor of our system. In fact, wherever they have had a chance to cross the line, they have crossed by the millions. Two-thirds of all the Chinese volunteers whom we took as prisoners during the Korean war refused to return to their native scenes, families, and lands, preferring the half-world of barbed-wire camps to returning to a country where their Government makes unending war upon them.

The real reason for the Kremlin's endless hostility toward the United States, regardless of what we do, is that they regard us, and rightly, as the main obstacle to their underlying plan. This will not be changed if Khrushchev should come to New York and see our skyscrapers, or if he should then go to Detroit and see how many automobiles our workingmen have. The Russian leaders are ruthlessly friendly. They talk of easing of tensions. In our society, tension is a bad word. We can thank the Freudians for that, I suppost, for they talk of the age of anxiety and the age of tension. To anybody who comes with a panacea for easing tensions, we open our arms and our hearts. However, if every time they speak of easing of tensions you would substitute for the word "tension" the word "concern" (which is a more neutrally or differently colored word), you would see that what they are asking us to do is to stop concerning ourselves with the freedom of the world and with our own freedom. Then you would realize that we must hug our tensions to our breasts as long as the dangers exist which have caused the concern.

When I say that nothing we can do will change this, I do not mean to say that it makes no difference whether our workingmen are prosperous and employed or not, or that it makes no difference how we treat our colored population, for it does make a difference. But the difference is in the winning of allies, not alienating them; in winning the secret support of the Russian people; in strengthening our prestige with neutrals. However, we will not disarm or change the philosophy or the goals of a mortal enemy. Nor do I believe with those who think that if we but disarmed everything would be easy (of course that sentence is not complete: it would be easy for the men in the Kremlin). I have never believed that the best way to get thieves to reform is to remove the locks from our doors.

The world is in serious and even mortal danger now, as it was in Hitler's day. Every country in the East is in mortal danger from China, with its huge population. Every country in Western Europe, the cradle of modern thought and liberty, is in mortal danger. Every country on the Mediterranean, which was the cradle of Western civilization and culture, is in mortal danger. The Near East, which was the cradle of our faiths, in in mortal danger at the present moment.

We have tried the gesture of "Let's be friends and see if that won't work"—we have tried it more often than our historical memories permit us to recall. I remember when Franklin Roosevelt said to Frances Perkins: "I really believe that I can get Uncle Joe to go along with me." Well, we tried it. So, at the end of the war, it turned out that there were three kinds of occupation zones. There were countries which Russia occupied ("liberated") exclusively—they lost their freedom and were sucked behind the Iron Curtain. There were the countries which were jointly occupied—all of those except one have been partitioned, and the Soviet-occupied half of each is behind the Iron Curtain (North Korea, East Germany, and so on). One country was occupied exclusively by us, Japan, and there the occupied country is free to criticize and disagree with its occupiers and liberators. If the experience of those three types of occupation does not teach us not to play this costly game of seeing if we cannot hypnotize the men in the Kremlin into abandoning their blueprint or into just being nice, then nothing will ever teach us. In the end we will perish, and deserve to perish, for being fools incapable of learning.

They are now proposing (and have been proposing for some time) a unification of Germany. Unification consists, as they have made abundantly clear, in having the two Germanys linked together and then in seeing how Communist Germany can gradually take possession of West Germany as well. We tried that before, too. We tried it with the two Chinas during World War II, and we see how it turned out. We tried it with the two Koreas, and we also see how that worked out. Some poor fellows tried earnestly to cooperate with them in Eastern Europe. But the Communists took the key posts in the cabinets and popular-front governments; they took the Ministry of War, the Ministry of the Interior and the Ministry of Propaganda (Education); and, in the end, they took the country, by what former Hungarian Communist boss Mathias Rakosi called "salami tactics," in which you slice off one slice, then another slice, and then another slice, until you have the whole salami sliced up.

If we are still tempted by poisoned semantics (one of their deadliest weapons) to believe that the word "peaceful" means peace; and that coexistence means mutual tolerance and live and let live, I don't know at this late date what I can say, except perhaps that I might offer a homely metaphor: The farmer is perfectly willing for the turkey to coexist with him until Thanksgiving Day. If we keep that in mind, we will have a general notion of what they mean by peaceful coexistence.

The mistakes which our public figures have made, our statesmen, experts, journalists, diplomats—and our military men as well when we were in a joint military effort with Russia—have all sprung from the same thing: the virtual incapacity of a people brought up in an open society to understand the nature of the system we have been examining, and the aims and plans of its rulers. I could illustrate that with errors made throughout the last 41 years, since 1917. But let us start with World War II and the grand alliance. Not understanding that our ally of the moment had been, was then, and at the war's end would be also our enemy, we did not plan the peace during the war. We did not make it a self-enforcing peace, which we could only have done by planning our military conduct of the war to insure a decent peace by the position of our armies at the war's end. Therefore there has been no peace.

We have failed to understand that agreements with such an unrelenting and continuing foe are carried out only if there are deliberate provisions to make them self-enforcing. Such provisions involve the proper disposition of our military forces to insure enforcement.

Thus, when we say free elections for Germany, and they say free elections, it behooves us to remember that the elections they have in the Soivet Union are what they call free elections. We must spell out any agreement on free elections so as to include multiple parties, a press owned by individuals, associations and parties not controlled by the government, empty prisons and closed concentration camps, and the like, and joint occupying troops in quantity in all sectors, to enforce the rights and liberties we mean by the thus-defined free elections.

When they say peaceful unification arranged between the East and West German Governments, we must remember that that is what they said of Korea, of Vietnam, of wartime China. Agreements that are not spelled out and self-enforcing are merely semantic poison to prepare and justify conquest.

Above all, we are not giving our own people a clear vision of this opponent, and the nature of our struggle. How often have I sat down in taxicab or train and been asked: "What is your racket?" I answer, "Russia." Invariably the taxi driver or traveling companion follows up with: "Tell me, is Russia really as bad as our newspapers say it is?" Always I must answer, "Much worse, man. Our newspapers are not doing a good job." That depressing and forever recurring question shows how our leaders have failed to make our people understand—because they do not really understand themselves—the nature of our self-appointed opponent. Since both our political parties must appeal and do appeal recklessly and demagogically to a people to whom they have not given decent leadership and proper political education, each party poses as the party of peace while the enemy chooses to continue to make war on us. This is the most dangerous feature in our political life.

At the war's end, we demobilized our troops too soon, because we had not prepared our own minds or our people to remain mobilized until a decent peace was assured. We failed to make effective use of our then-monopoly of atomic weapons in ways which would have furthered a decent peace and effective and controlled disarmament, not because this could not have been done—it probably could—but because we were not sufficiently aware of the need to do so, and too frightened by our awful preponderance of power to make wise and restrained use of it for bringing about genuine peace and genuine liberation of the liberated countries.

We left Korea without adequate defenses because we were afraid that the Koreans might use our arms to unify their country, and we did not have the understanding to realize that the puppet government of North Korea would surely use Russian and Chinese Communist arms and forces for the peaceful unification of Korea, and the liberation of Korea from its independence. We even withdrew our troops and made the fatuous and inviting statement that Korea was not part of our essential defense perimeter. What could be expected from such a foe under such circumstances? When we finally had to fight to save Korea, we did an inspiring job. But under such self-imposed limitations that it was easy for Communist China to reconquer the northern half of the country, and restore the same impossible conditions that had brought us into war.

Our policy of containment has not contained; and our policy of liberation has not liberated; as our acceptance of the poison semantics of peaceful coexistence and the propaganda circus of summit conferences has given us neither genuine conferences for agreement on anything, nor peace, nor coexistence.

All these errors—and, alas, I could enumerate many more like them—come from a failure to understand the difficulties and intricacies of the problems, because of a failure to understand the nature of our enemy, his system, his power, his ruthlessness, and unscrupulousness in negotiation and action, his aims, his determination, and the role of his ideology in his efforts to conquer the world and remake man. This failure of vision or understanding is at the root of our failures in action and omission and negotiation.

I have used the word enemy and I should like to explain my choice of this word. I recognize that it is not a nice or a pleasant word. But we ought not be afraid of it. We did not pick the men in the Kremlin as enemies; they picked us. We have not tried to believe their statement of their aims. They said "world revolution," but we preferred not to believe they meant it. We have tried many times to show our good will and friendship. We offered to help them with arms in 1918 to reestablish a front against the invading Germans, but all that came of it were the misunderstandings of intervention. During the so-called intervention, we helped them to get back Siberia after they had lost it, and we forced the Japanese by our pressure to give up their occupation of Siberia. When war and civil war and the follies of their socialization of every grain of wheat and every inkpot brought on universal famine, we helped to save millions of Russians from starvation by our generous famine relief. In the period of their forced industrialization, we sent them technicians and engineers, whole factories and machinery, and helped them to build dams and powerhouses.

In World War II, after they had made their pact with Hitler to divide Europe, and Hitler turned on them, our help was generous and unstinting. Instantly, not after Pearl Harbor, but as early as June 1941, Harry Hopkins flew to Stalin to offer planes and tanks and trucks and guns, and wool and meat and fuel and bread. When Stalin asked Harry Hopkins quite naturally: "What do you want in return for all this?" Again came the failure of vision and understanding. Harry Hopkins boasted: "I told him we were not interested in conditions. All we were interested in was getting them the planes, the guns, the tanks, and the other things they needed."

They have picked us as the enemy of the things they are trying to do to their people and to their neighbors. If we forget that for a moment, in any one of their maneuvers, we fail in leadership. Yet always, with each maneuver, we are prone to forget afresh. We have failed to learn from a monotonous multitude of repetitions. We have failed in understanding. We have failed in leadership and enlightenment of our own people and other peoples. We have failed in political courage. Above all, we have failed in vision—and here, truly, where there is no vision, the people perish.

I would not have you understand that we have done nothing right in these 40 years, or recently. We have done many fine things. I do not count generosity among our errors, only the generosity which defeats and undoes itself.

A power which wishes to preserve peace and prevent an upsetting of the status quo by force is always at a disadvantage when dealing with a revolutionary power. I recognize that. Moreover, our life in this recent period has had its great moments: The first stage of the Korean war; the Berlin airlift; the Marshall plan—in which we even offered to include Russia if she would use it for genuine healing of the wounds of war. These have been noble moments, and there have been others like them.

But our vision is faltering, our understanding blurred; we are too easily deceived and too ready to deceive ourselves, to the world's detriment. My purpose in this analysis has been only a single one: To give such awareness of the nature of the Soviet system that the hand can be steadier, the vision clearer and more unflinching, so that each new maneuver of a tactical nature which the Soviet Government undertakes can be appraised in the light of a deeper, overall understanding of the nature of the system that torments its own people and is vowed to our destruction.

Moral Re-Armament in Africa

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the CONGRESSIONAL RECORD, I include a letter to me from my esteemed friend, Mr. Oliver W. Saul, together with two most interesting statements.

The Moral Re-Armament group is composed of citizens from over 40 nations, who have dedicated their lives—and without pay—to the task of bringing Christianity to the world in the most interesting and effective ways.

Moral Re-Armament is a great force for world peace. Their only purpose—prayers and every act—is to bring God and peace and good will to the people everywhere.

The letter and articles follow:

JOHANNESBURG, AFRICA,
January 19, 1959.

Hon. BEN F. JENSEN,
Washington, D.C.

DEAR FRIEND: The enclosed report is by a leading British lawyer. It was in Washington that I first met him when he joined the statesman's mission.

At the assembly here the decision was made to start, at once, an all out offensive to do in Africa just what Sir Roy makes clear we must do.

In Lagos Nigeria performances of the play "He Was Not There" begin on February 6. A cast for the play "The Next Phase" assembling from all parts of Africa will be trained there, and will soon be in action. You may have seen both plays in Washington. The film "Freedom" will be shown throughout Africa. Commercial showings will begin here February 2. We are securing 16 mm. copies of this film in order to reach the masses in the heart of the African reserves.

Businessmen of South Africa are out to raise the funds that will be needed for the complete task. However, I am sure we will need considerable help from Europe and America.

Yesterday, over 200 gathered here to welcome the Colwell brothers who have arrived to join the 5 young men from America who have been with Moral Re-Armament in Africa for the past 2½ years. You will know if there is any way whereby Washington can give financial backing to these effective young ambassadors.

My son, Don, will be traveling right with the Colwells to introduce them. The other Americans will be scattered from here, through central and east, to west Africa. I can always be reached at the above address.

With very best wishes and kindest personal regards.

Sincerely yours,

OLIVER W. SAUL.

[From MRA Information Service]

BRITISH M.P. ON MIKOYAN'S VISIT TO U.S.A.

"Deputy Premier Mikoyan of Soviet Russia has been sent to America to pull the wool over our eyes and to trick the free world with the greatest phoney peace offense that has even been seen," a leading member of the British Parliament said today in a speech which was reported in the Los Angeles Herald Express.

John McGovern, member of the British House of Commons for 28 years, told the Moral Re-Armament Assembly for America and the Pacific Nations that Mikoyan's job is to sell America on trading with the Communists so that their revolution can be financed by the free world.

To make his point Mr. McGovern quoted the greatest authority on world communism, Mihaillovich Lenin, and Dimitri Manilski, president of the United Nations Security Council in 1949.

Mr. McGovern said that Lenin told the Communist International in 1920: "On the day that capitalist countries purchase our products, they begin their own change to communism. And they provide us with the financial means to wage the internal struggle for world communism."

He quoted Manilski who said, "To win, we will need the element of surprise. The bourgeoisie will have to be put to sleep, so we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures, and unheard of concessions. The capitalist countries will leap at another chance to be friends. But as soon as their guard is down, we shall smash them with clenched fists."

Mr. McGovern continued, "That is the job of Mikoyan at this moment. It is part of the old idea of coexistence—you feel nice, cozy, and comfortable, but the real purpose is for mental and physical disarmament.

"I have been shattered at the American attitude to a man who 2 years ago proposed an agreement with the Hungarian revolutionaries and then broke it to allow Russian tanks and armies to sweep in and start that nightmare of a blood bath. That is the real Mikoyan. But now he comes to America and all that is forgotten. People wine and dine with him and say, 'He's not such a bad fellow as he's made out to be.'

"I am not surprised to see certain people in the film industry meeting Mikoyan, because we hear Russia has great difficulty in getting her films accepted in Poland and other Iron Curtain countries. Therefore they want something from America, but also to find a market for their own spurious films by unloading them in the West.

"My earlier Marxist training taught me that the extreme left and right would both sell their country to communism—one in the pursuit of world control and the other in the pursuit of profit."

Mr. McGovern is one of the most colorful figures in British politics. He has led hunger marches from Edinburgh to London. "Once I was a Marxist," he said, "but now I am fighting all out for the revolution of moral rearmament not solely because it is answering communism on a world scale but because it is the only answer I have seen.

"The Communists see in MRA the one force that can meet them on more than level terms. It is God-guided and deals with men and women on a moral and spiritual basis. Every day more and more people in authority are beginning to turn to MRA as an answer to the world's problems. They are going on steadily in every single field, in trade unions, labor organizations, among Conservatives and Socialists, and even bringing doubt to and winning numbers of Communists. They find in MRA an alternative to the brutal lies and system of deceit that this Communist philosophy has developed."

Mr. McGovern said the man in America who is "the clearest brain in the international field is John Foster Dulles. In spite of attacks that have been made on him right and left, he is still the one man that knows the Marxist aim. He knows how to take a stand to prevent its expansion. He could be the greatest figure in the entire world today if he could understand that moral rearmament is the positive answer to communism."

Mr. McGovern said, "Before I met MRA I was violently anti-Communist, but now I am in agreement with Chancellor Adenauer's adviser on East European affairs and communism, Dr. Hans Koch, who stated, 'We should go to the countries, the people behind the Iron Curtain and say to them, "We are not coming to you as anti-Communists, we are coming to you with moral rearmament, a superior idea to create a new world. We seek your liberty and ours, your freedom and ours." '"

WHICH WAY AFRICA?

(By Sir Roy Pinsent, Bart.)

Will Africa be another China? In recent weeks there have been held three conferences—in Ghana, Nigeria and South Africa—which raise the issues involved. The Pan-African Peoples' Conference was held at Accra in December last. A close friend of mine attended as a press represenative. As is well known, the conference was chaired by Mr. Tom Mboya, the ardent African nationalist from Kenya. The moving spirit behind the conference was Mr. George Padmore, who is Dr. Nkrumah's adviser on African affairs. One of the two joint secretaries was a Nigerian of great ability, Mr. Fred McEwen from Lagos, whom I have known well since 1956. The conference was attended by responsible leaders from all parts of Africa, and several governments made substantial contributions to the cost.

The theme of the conference was "Africa for the Africans," but as to the means by which this objective was to be reached, a compromise resolution was passed, laying emphasis on the use of nonviolence in territories where democratic means are available and giving its blessing to the use of violence only in retaliation. In a leading article in the Times of January 14, Dr. Nkrumah's visits to Delhi and Cairo are described as symbolical epilogs to this conference, and taken together amounting to a formal declaration of war in the all-out thrust against colonialism and white domination in Africa. Dr. Nkrumah, in Delhi, stated that in Ghana, while they were inspired by Gandhi's policy of nonviolence, they also believed in positive action.

It was noticeable at the Accra conference that large delegations came from Russia, China and the United Arab Republic, but little interest was shown by the West. Messages of support from Khrushchev and Chou-en-lai were announced at the opening and received prolonged applause. The delegations from Russia, China and the United Arab Republic went out of their way after the conference to assure the secretaries of their wholehearted support and help. The only message from the West was a brief message of good will which Mr. NIXON sent toward the end. The conference made it clear that the floodgates of African nationalism have been opened and cannot be closed. Its spirit was expressed in the chairman's closing remark: "The whistle has blown and we are on the march."

The second conference, in the preparations for which I was clearly concerned while I was in Lagos, was held over the New Year at Onitsha, Dr. Azikiwe's home town, on the banks of the Niger in the eastern region. There leaders from all sections of Nigeria and other West African countries met to prepare "a bold heave forward" in the moral rearmament of their nations.

Mr. McEwen, who is General Secretary of the National Council of Nigeria and the Cameroons, called for "men of destiny" to lead Nigeria into independence. "Such men of destiny," he said, "will be men who sacrifice everything for an idea big enough to heal the hurts, relieve the fears, answer the hates and meet the needs in human nature."

Describing the upsurge of nationalism and the need to rid Africa of imperialism, he said that nationalism "needs to be purged of bitterness, hate, jealousy, ambition and corruption. The reason why democracy has not worked in certain countries of Asia and Africa is because nationalism was not purged of these things," he said.

Mr. McEwen appealed to the leaders of the Western democracies to study and understand the force of African nationalism. "This force," he said, "may be sentimental or emotional, but men are ruled not by cold reason and logic, but by those very emotions and sentiments which the Western democracies tend to despise and which the Communist countries exploit."

Describing Nigeria's role in the development of Africa as a whole, Mr. McEwen referred to its population and resources, which will make it the largest independent country on the continent, and also to the links Nigeria has with the Arab countries to the north. "Nigeria can be the key to the whole of Africa," he said. In building unity out of the diverse peoples of the country, Mr. McEwen said, "The patience, tolerance and understanding developing in Nigeria stem out of our conviction for Moral Re-Armament, and we are beinning to find the way to unity."

Mr. McEwen called for a bold heave forward where people will be prepared to risk everything to get Moral Re-Armament into the hearts and minds of the masses, so that each man can take on the struggle with his own human nature and then affect his family and create change throughout the nation. "For me," he said, "the demand is total. It means the willingness to surrender pleasure, sex, ambition, alcohol and purposeless living, and let God rule my life.

"I am optimistic about the future," Mr. McEwen concluded, "because Frank Buchman, the initiator of Moral Re-Armament, his given us this message that produces the answer. It is for us to be bold to apply this answer to every situation as it arises, and we will turn the tide."

Professor Ita, who is an action group member of the eastern parliament, as chairman of the gathering, issued a new year cali to Nigeria to become "a listening nation, to realize God's purpose for Nigeria in 1959." In this way, he said, Nigeria would achieve "complete liberty and the fullest development of the best in us and of our nation's resources.

"Above the shouts of battle in politics, above the sordid squabbles at home, wranglings in the market and industry," Professor Ita said, "we must hear the voice of God. His wavelength is absolute honesty, absolute purity, absolute unselfishness, and absolute love. We must listen and obey."

His Highness Okosi II, Obi (King) of Onitsha, received the entire conference at his palace. After hearing from representatives of the different regions, the Obi spoke of his part in the making of the film "Freedom" here in 1956. "I and my red-capped chiefs have studied Frank Buchman's work and message," he said. "We are happy to follow the same steps."

A South African farmer, Mr. Roland Kingwill, speaking with his wife and daughter, said, "I am glad to be here to apologize and to find the way to restore for the way people like myself have lived in South Africa. People often come to South Africa and attack our political problems," he continued. "Dr. Buchman came and saw that our problems had to be tackled deeper down—they were the moral problems of men like me, bitterness, resentment, greed, and fear. The

issue is not between black and white but between those who decide to obey God's will and those who live for their own self-will."

The Nigerian leaders who convened and carried the Onitsha conference are men of action, and immediate plans on a national scale are in hand to give practical effect to their convictions.

The third conference, at most of which I was present, was held at the Moral Re-Armament center between Pretoria and Johannesburg from January 1st to 8th to plan South Africa's part in making Africa the answer continent." Over 300 people from all parts of South Africa, including leading people from law and education, businessmen, sheep farmers, revolutionary African political leaders, and students, were there. Also present were two chiefs from Basutoland, one of whom had just returned from the recent constitutional talks in London.

Dr. William Nkomo from Pretoria, first president of the revolutionary African National Congress Youth League, opening the conference said, "This conference will formulate a strategy for our continent. All of us are thinking on a Pan-African basis. There are people who are thinking on an ideological basis to change Africa and make it another China. People want to know—will Africa be another China? It depends on whether you and I by our living allow it.

"African nationalism moving side by side with white supremacy and domination will lead to clash and unprecedented bloodshed. Either there will be catastrophe tomorrow and our children will not know the new Africa that we want, or we hand our lives over to God and live as God directs. It rests on you and me being prepared to live by absolute moral standards. It isn't what the white man or the black man wants, or what both want, but only what God directs. In the words of Dr. Frank Buchman, Africa can be the answer continent."

Responding on behalf of the white South Africans, Mr. Roland Kingwell, who had just returned from 5 months with the Moral Rearmament force in Europe and West Africa, said, "If we don't think in terms of the whole of Africa we are living in an unreal world and we need to wake up and rise to our destiny." He continued: "I love this country. For many years I talked about loving it and just took out of it, and it was only after I had seen what I had been doing and where we were drifting that I began to understand what patriotism really meant. We are being called to the deepest patriotism today. God can give an answer to the people who listen. I am committed to bring that answer to Africa, because I believe that Africa can bring the answer to Russia and China. We haven't much time to grasp that opportunity, but if we do we have the greatest destiny as a nation."

Speaking in Afrikaans and standing with other Afrikaner leaders, Advocate John Trengove of Pretoria said, "We represent the first white settlement of the southern tip of Africa. We feel that we have come here with a special destiny, and we have discovered afresh through Moral Rearmament what that destiny is. We are grateful for the contribution which our forebears have made toward the development of South Africa, and where we have caused hurt to other races in this country, or where we have been indifferent to the real interests of other groups in South Africa, we want to accept responsibility for that and ask forgiveness from the other races.

"We believe that a new South Africa and a new Africa cannot be built on the superiority of any one group," continued Advocate Trengove, "whether that be in South Africa or Ghana or Egypt or anywhere else. As Christians we are called to serve our fellow human beings in South Africa and Africa. That is why we stand here today and commit our lives to this struggle, to fight with representatives of all races of Africa for what is right in our country and throughout the continent of Africa according to the plan of God. To that we wish to commit our lives and submit our wills to the will of God."

Two weeks after Basutoland had received its new constitution, two senior chiefs motored several hundred miles to this assembly because, said Chief Mopedi Jonathan Molapo, "We are in a state of transition and Basutoland needs this answer most." Chief Molapo, who had recently returned from the constitutional talks in London, continued: "The people I have seen here have shown us the way which God would like us to follow. I want to be a changed man in order that I should play my part with this big force that is going out to the world."

Mr. Benjamin Angoma, revolutionary African leader from Johannesburg, said, "We Africans, particularly in South Africa, live at the crossroads with offers of different ideologies. Being desperate, we will accept anything that will mean freedom for us in our own country. Now we as a black race are being offered communism. Society cannot live without an ideology. You refuse an offer because you have something better. Can we really repel that offer of communism because we have not seen it at work? We accepted the Western way of life but in it saw hatred, selfishness, and impurity at work.

"We can only refuse communism if a change of heart takes place. From both black and white in this country we need a change of heart through moral rearmament. So under the guidance of God I have decided to throw in my lot with this new ideology with its absolute moral standards."

I am convinced that Africa need not become another China and will not do so if the tide of nationalism can be guided into positive and creative channels, along lines which the new leadership so much in evidence at these New Year conferences is determined to pursue.

I am convinced that we in Britain can do much to help this new leadership to achieve its goal, if we approach the situation realistically but humbly with open heart and mind and a real caring for the African people.

I am convinced that what happens on this continent in the next few years will profoundly affect the course of history.

Tight Money Millstone

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial from the current issue of the Reading (Pa.) New Era:

TIGHT MONEY MILLSTONE

Now that the reactionary press is aiding and abetting President Eisenhower's campaign against important social legislation by attacking spenders who advocate such measures, we'd like to call attention to one of the biggest budget items which proves who the real spenders are.

Syndicated Columnist Sylvia Porter points out that at the end of the Korean war our national debt was close to $280 billion. The interest we taxpayers kicked out to carry this debt was about $4.7 billion.

The President's latest budget, with the national debt standing at $282.7 billion—or just about the same as at the close of the Korean conflict—provides for interest payments of $8.1 billion, or nearly twice as much as during Truman's days.

Why are we paying so much more—almost $4 billion more—in interest on the national debt? Sylvia Porter says, "it has been the result of deliberate policies adopted at the highest policymaking levels in Washington."

This is the real spending waste in our national life, because this interest goes into powerful investment trusts. It is paid to the banks, the big businesses, the insurance companies that already control most of this country's wealth. Very little reaches ordinary consumers who spend what they get and keep the wheels of the economy moving.

This is the tight money policy we have been writing about ever since the Eisenhower administration arbitrarily began to encourage higher interest rates to discourage expansion.

Isn't it about time—especially in view of rising unemployment which has sent unemployment compensation claims beyond the 10,000 mark right here in Berks County—that this story of tight money and anti-expansion policies of the Republican regime in Washington is told forcefully to the people?

A stabilized dollar at high interest rates doesn't mean a hoot to people who can't even get a job.

Did Mr. Mikoyan Get the Message?

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. ROBISON. Mr. Speaker, the recent holiday by Soviet Deputy Premier Mikoyan evoked interesting reactions in this country. Though I do not approve of egg throwing or other forms of hooliganism, such actions did, nevertheless, serve to show Mr. Mikoyan that we are not fooled by phony overtures of friendliness by the Soviet Union.

I must admit I was not impressed with the actions of some of our business leaders who seemed to think Mr. Mikoyan was a happy dispenser of good cheer and small jokes. Politeness is one thing, but when it can be misinterpreted for weakness and a desperate desire to concilate, then perhaps etiquette must be modified. One of my constituents, in a letter to the editor of the Binghamton (N.Y.) Sun, set out what I think should be our correct attitude toward Mr. Mikoyan.

If Mikoyan took back any impression that this Nation is going to lie down and let the Soviets fool us and milk us of technical know-how and strategic goods in the next few years, I hope he will now realize that the attitude expressed in the following letter is indicative of general public opinion throughout the United States.

Under unanimous consent I include the letter, as follows:

HE ASKED FOR IT

EDITOR, THE BINGHAMTON STAR:

I sincerely wish that reality were such that I could conscientiously commend your January 12 editorial, "Bad Behavior." Reality forbids it.

The only reason any United States citizen or refugee from Communist atrocities should feel humiliation in connection with the Mikoyan visit would be because our high Governnment officials allowed themselves to be sold this Communist propaganda visit to build up their prestige and because so many big businessmen and bankers, following the Eric Johnston line fall all over themselves to show they will do anything to make more dollars. Yes anything, even to sit down and break bread with this moral leper at dinner parties, "ih his honor," not realizing that you cannot honor an object which has no honor. I say object, because other than his physical shape, on his record no one can consider him to be a human being.

Naming the Communists with political parties and religious faiths is grossly misleading to many people because communism is neither a political party nor a religious faith, but an atheistic conspiracy—the most vicious the world has ever known.

Comparing the Mikoyan visit to the United States with Vice President and Mrs. NIXON'S visit to South America is absurd. The NIXON visit was definitely a good-will tour to countries where the United States has given millions of dollars in aid, both cash and credits, and has never mistreated a single citizen. On the other hand, Russia imprisons our citizens on the slightest trumped up pretext and still holds thousands of our civilians and servicemen in their slave labor camps. They collaborated with Red China in holding 944 of our servicemen illegally after the ill-advised Panmonjom armistice, besides the hundreds transferred to their Siberian salt mines during the war in Korea and some probably as far west as their slave labor camps in Solevetski islands in the White Sea, not far from Leningrad, which they started as far back as 1920. It was Russia's Communists and their dupes who did the atrocious things to the NIXONS on their South American trip and most assuredly on the orders from this same Mikoyan, who also gave the orders for the slaughter in Hungary. Now, to a small degree, it's backfiring and he and his dupes don't like it.

His mission here was not a "holiday," but a trip planned to spread more propaganda, to build up Communist prestige, to buy strategic machinery and other strategic materials that Russia needs, and that on credit which we United States taxpayers will pay for, as it is certain Russia never will.

How long do you think Teddy Roosevelt or Grover Cleveland would have put up with such asinine nonsense, from any country, especially while they were holding thousands of our citizens in their slave labor camps?

Please, fellow Americans, wake up, it's later than you realize.

FORD M. SPERRY.

The National Debt: Cheaper To Pay Than To Owe

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. WRIGHT. Mr. Speaker, our national debt stands today at $283 billion.

In the new fiscal year we shall be paying $8.1 billion in interest.

The trend toward higher interest indicates clearly that the Government soon will be paying 3.5 percent on all its obligations, or a total annual interest of $9.8 billion, assuming the total debt remains unchanged.

This means that, of every dollar paid in Federal taxes, approximately 11 cents must go for carrying charges on the debt.

It means also that, if things go along exactly as they have been going, without any change in the total debt and with the Government having to pay 3.5 percent interest on its borrowings, in 28 years we will have paid the total amount of the debt, but we will still owe all of it.

This is a tremendous amount to pay in interest, for which our Government and our Nation get nothing in return. It is the price we are paying simply for the privilege of owing this huge debt.

Of course, so long as we have the debt, the carrying charges must be paid. There is no alternative, unless we were to mimic the Soviet Government and repudiate our obligation to those of our citizens who have loaned money to their Government. This would be so utterly unthinkable that it shames us even to mention it.

HOW MUCH IS $9.8 BILLION?

But the interest charges on our public debt have grown so large that they constitute today an immense burden upon the taxpayers of our Nation. They amount to almost $10 billion annually in dead weight.

As we struggle this year to strike a precarious budget balance in face of national needs, inflationary pressures and high taxes, anyone can think of a thousand beneficial uses for this $9.8 billion annually.

It could build some 15,000 miles of superhighways of the most modern design each year, and thus complete the entire 41,000-mile Interstate Highway program in less than 3 years.

Or, applied to development of the Nation's water resources, it could complete in 1 year three times as many flood control and navigational projects as have been authorized for the next 10 years.

Applied to soil conservation for the saving of our Nation's most indispensable wealth, it could perform more useful works in 1 year than we have devoted to this awesomely important task in the past 25 years inclusively or perhaps in the entire history of our Nation.

It could purchase some 700 B–58's, more than we would ever need of the world's best, most sophisticated and most costly weapons system; whereas we are struggling along today purchasing between 30 and 40 a year and wondering nervously if these are enough to serve their minimum purpose of deterring aggression.

Or, considered another way, this $9.8 billion if returned to the taxpayers on an equal prorata basis would mean that the average taxpaying family head could pay some $275 less in taxes every year.

LET'S MAKE A PLAN TO PAY IT OFF

In the interest of our own generation and of generations yet to come, I believe we should make a positive resolution and develop a definite plan of systematic debt retirement. I firmly believe the American public expects such leadership from the national Congress and will be disappointed if we fail to provide it.

I have today introduced a concurrent resolution which would set forth such a plan. It would express the sense of Congress that in each succeeding year we should pay on the principal an amount equal to not less than 1 percent of the present indebtedness.

In other words, the present Congress would be pledging ourselves—and insofar as it is within the power of this Congress we would be calling upon the Secretary of the Treasury and future Congresses—to pay an amount not less than $2.8 billion annually to the reduction and eventual retirement of this burdensome national obligation.

Such payments, of course, would be in addition to the interest payments which we are obliged to pay and over which we seem to have no control. But as the principal decreased, the interest would decrease. In 100 years, the debt would be completely paid and the slate wiped clean.

Under this plan, as I shall point out, we would actually pay many billions of dollars less over the next 100 years, in both principal and interest, than we shall be compelled to pay in interest alone if no such course is embarked upon.

In the beginning, to be sure, it would be an additional burden of expense. But it would be an honest burden, honestly assumed. It shall have to be undertaken someday, and the sooner we face up to it, the less costly it will be to our progeny.

CHEAPER TO PAY THAN TO OWE

If we can demonstrate the self-discipline, Mr. Speaker, to chart such a path and stick to it, we can reach a point in 29 years at which we shall have reduced the debt to a level where we will be paying no more in both principal and interest than we now are being called upon to pay in interest alone.

For the basic figures upon which I found this approach, I am indebted to a man named R. S. Shade who lives in Tulsa, Okla. He has worked out a table of payments based upon a $2.8 billion application to principal and allocation of interest at 3.5 percent on the unpaid balance.

In profound but simple terms, these figures reveal the amazing and yet inescapable fact that it is more than $485 billion cheaper to pay off the debt in 100 years than it would be simply to continue paying the interest for that period of time.

In 100 years we could completely retire the debt by paying $495 billion in interest and $283 billion of principal, or a total of $778 billion. But if we pay nothing on the debt itself, the interest alone for 100 years will be $980 billion, and we will still owe the debt of $283 billion, or a total of $1.263 trillion.

During the past 4 years we have three times extended the temporary debt ceiling and once increased the permanent ceiling. Since the end of World War II, there has only been one brief period—during the Truman administration—when our Government has made any reduction whatever in the national debt.

Yet these years have been years of comparative national prosperity. If it has not been possible for Congress during these years to reduce the indebtedness, we must wonder seriously if ever in the future we shall find it either expedient or even possible to do so without a definite commitment to some systematic plan.

We have had emergencies during this period, to be sure. But can anyone honestly contend that there exists any realistic prospect for the lessening of these tensions and critical demands in the foreseeable future?

Our Nation is engaged with Russia in a titanic competition which may not be resolved for a generation or more. And we fully intend and expect to be in business at a nation after this period of recurrent crises and ideological conflicts shall have ended.

CHALLENGE TO STATESMANSHIP

Why then, does it not make sense to gear ourselves to the long pull and begin facing in earnest the challenge of true fiscal responsibility which seems so clearly to demand such a course?

It would be a demonstration of our faith that this Nation expects to continue in operation for at least 100 years and are conducting our business with no other end in view.

It should provide a good example of resolution and sound economy to the families of our Nation who must of necessity make plans for the eventual retirement of their private debts. And 100 years in the life of a nation is not so long as it may seem.

Such a plan should have a salutary effect upon the inflationary spiral of cheap money and increasing indebtedness. It should revive confidence both in our own land and throughout the world in the stability of our dollar.

Perhaps more basic than any of this, however, it would constitute a simple act of good faith with those generations of Americans yet to come.

This is a challenge to our vision and to our statesmanship. It will require discipline and self-restraint of both the Congress and the American public. But I believe the American Nation is equal to it. Let it not be said that the Congress lacks the courage or the faith to put it to the test.

North Dakota Representatives Urge Removal of Excise Taxes on Telephone Service

EXTENSION OF REMARKS
OF
HON. DON. L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. SHORT. Mr. Speaker, the excise taxes upon local and long-distance telephone service were imposed during World War II and the original justification for these taxes no longer exists.

In this connection the House of Representatives of North Dakota has passed a resolution which I commend to my colleagues. The resolution follows:

HOUSE RESOLUTION 4

Resolution memoralizing the Congress to remove the wartime excise taxes upon local and long-distance telephone service

Whereas a Federal excise tax of 10 percent upon the charges for local and long-distance telephone service was passed in 1941 as an emergency wartime measure to provide needed funds to support the war effort and to discourage the use of telephone service during the war period; and

Whereas telephone service is an essential part of our way of life and cannot under any circumstances be considered a luxury item to be taxed in the same manner as furs, jewelry, liquor and other luxury commodities; and

Whereas other household and business necessities, including electricity, water and gas are not taxed in such a manner; and

Whereas the placement of high excise taxes upon such a necessity of life as telephone service results in the taxation of those citizens who can least afford to pay in the same manner as those of unlimited financial means; and

Whereas the wartime emergency requiring the special additional revenue and restriction of the use of telephone service has long since passed: Now, therefore, be it

Resolved by the House of Representatives of the State of North Dakota; That the Congress is urgently requested to remove the unfair and unequitable tax upon telephone service during the current session of Congress; be it further

Resolved, That copies of this resolution be forwarded without delay by the chief clerk of the house of representatives to the President of the United States, the Vice President, the Speaker of the House of Representatives and each member of the North Dakota congressional delegation.

HJALMAR NYGAARD,
Speaker of the House.
GERALD L. STAIR,
Chief Clerk of the House.

National Science Foundation

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. LINDSAY. Mr. Speaker, some of the excellent mail that I receive from my constituents is worthy of far greater notice than the confines of my office. With the permission of the writer, I am inserting in the RECORD an excellent letter written by Dr. Serge A. Korff, professor of physics at New York University. Dr. Korff points out the importance of support of the National Science Foundation and the pure science aspects of our various science programs.

The letter follows:

NEW YORK UNIVERSITY,
DEPARTMENT OF PHYSICS,
New York, N.Y., January 5, 1959.

The Honorable JOHN V. LINDSAY,
Congressman from New York,
House Office Building, Washington, D.C.

DEAR MR. LINDSAY: There will presently come before the House various measures sponsored by the administration for the financial support of science in general and the National Science Foundation in particular. Such bills will presumably have Bureau of the Budget support and will, in my opinion, represent a minimum that should be done for science.

Further, it is often argued that other agencies, including the NASA, the AEC, and the research branches of the armed services, as well as other organizations, support research in basic science. It is, of course, true that they do, yet their budgets must principally cover applied science and development work. In this area the principal problem is one of semantics, for there are many pure scientists who would call much of the work those agencies support applied science, technology, or, indeed, development of military hardware. Now certainly applied science and technology and the development of military hardware are necessary, and should also be supported. It is not my view that these should be reduced. Actually, after pure science has uncovered new facts, it often takes a long and costly period of passing first through applied science and then through development before the new fact or idea is useable in a practical way. Therefore, the second and third steps must be supported also; but the main purpose of my argument is that sometimes the use of words is such that the considerable outlays for applied science and development are considered as being spent for pure science and that, therefore, science gets shortchanged.

In this complex technological world, the role of the pure scientist, and indeed often the lone investigator remains the principal spring from which flow the ideas which later make up our technology. The new ideas and facts of nature, which it is the job of the pure scientist to unearth, represent the capital upon which the system functions. These are the ideas which the applied scientist applies, and which later the technologists develop for industry. It is vital to the functioning of industry that this orderly progression in the flow of ideas continue uninterrupted. Among the newest of the ideas there must necessarily often be many that don't work, or that turn out to be impractical, or indeed wrong. And yet if we do not continue to stimulate the flow of ideas, our subsequent technology dries up.

It is often impossible for a pure scientist to say where a given study may lead, or indeed if it will lead anywhere. He may, of course, guess, but one should not be surprised if the actual direction of subsequent events is quite different. For example, if someone were seeking to find a better way to help surgeons set bones, who would think of studying the passage of electrical discharges through a rather bad vacuum? Yet this way X-rays were discovered. The great advances in technology spring often from quite unexpected facts found by pure science. No man has ever been wise enough to foresee all the ramifications. Science is, as Dr. V. Bush has so ably put it, our "endless frontier." This is so because science is knowledge, especially knowledge of nature, and many more facts remain to be discovered. Once discovered, how to apply them is sometimes obvious. But none can say what they will be before they are discovered.

The reason I am laboring the point is that the difference between pure and applied science is often not understood in this country. Our great genius here is in taking the second and third steps. We can take fission, discovered in Germany, and build the large plants needed for the next step in harnessing the process for useful ends. We can consider penicillin, discovered in England, and build the plants to produce it in quantity. But it seems poor public policy always to await the discovery of new facts by Europeans. In the long run we must learn to take the first step here also. This, in turn, means build-

ing up a vigorous and healthy basic science, and a climate in which this science can grow. To do this we must continue to build and back an increasing effort in pure science. Frankly, I do not think that this country has as yet done this on a scale required by our world leadership.

While I dislike to use the Russian argument to favor increasing our support of science, for I think that it should need no such prop and that it can be shown to deserve support in its own right, nevertheless the argument is cogent today. We are facing an increasing challenge, and whether we like it or not are in a race for the control of our environment. Science will give us the facts needed to control nature and to build an advancing technology. But if we cut down on science, then the flow of new ideas dwindles, and soon our applied scientists will be out of new ideas to apply. With new ideas shut off the technology too will cease to advance. The process is a slow one due to the time taken in the intermediate steps, but it is inevitable. It seems today hardly necessary to point out that the fruits of niggardly support of pure science in the past have been the striking relative advance of Russian technology.

I am well aware of the economic problems which are relevant and of the difficult task of the Bureau of the Budget. Nevertheless, we must not starve the goose that lays the golden egg, lest the supply dwindle below the levels we already know to be dangerous. For these reasons I urge support of the money bills for the National Science Foundation and for the pure research portions of the budgets of the other agencies.

Very sincerely yours,

SERGE A. KORFF,
Professor of Physics.

Mr. Hoover on Delinquency

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mobile Register of January 19, 1959:

MR. HOOVER ON DELINQUENCY

Representative HALE BOGGS, of Louisiana, has appropriately called attention in Congress to a lengthy article written by J. Edgar Hoover, Director of the Federal Bureau of Investigation, and published in This Week magazine.

This article by Mr. Hoover was entitled "Counterattack on Juvenile Delinquency."

In this article, which appeared in three parts, the Director of the FBI recommended that the counterattack against juvenile delinquency should include these points:

"1. Accenting the responsibilities of parents.

"2. Improving our juvenile courts and juvenile-aid facilities.

"3. Stopping the coddling of young criminals.

"4. Stopping the protection of juvenile hoodlums by secrecy.

"5. Cracking down on the corrupters of youth.

"6. Attacking delinquency at the local level."

Mr. Hoover pointed out that "fighting existing delinquency, however, is only half the problem. At the same time, we must also begin today to reestablish a firm moral structure to prevent future delinquency. We must stop sowing the seeds for more frightening delinquency in the years to come."

In emphasizing that the problem is not limited to dealing with current cases of juvenile delinquency but also involves a need for more effective action to prevent future delinquency among the young, Mr. Hoover is, of course, correct.

In commenting on the punishment of juvenile offenders, Mr. Hoover pleaded against undue leniency.

"In dealing with juveniles, it is essential that the punishment fit both the offense and the offender," he wrote.

"* * * Six boys in Virginia were convicted of savagely beating and mistreating a mule * * * The judge who heard the case ordered that the boys be given what many may regard as an appropriate punishment, a good, sound, old-fashioned whipping by their parents.

"In addition, each of the six was released to the custody of his parents on strict injunction of good behavior until he attains the age of 18.

"In another case, a 17-year-old boy who had committed extensive acts of vandalism in a high school was placed on probation under the provision that he find a part-time job after school and make restitution at the rate of $20 per month for the damage he had done.

"If, as a result of their sentences, the six Virginia youths learn to respect the feelings of animals and the teen-age vandal learns to value the property of others, the courts will have helped them to become better citizens."

Mr. Hoover has made extensive and intensive study of the juvenile delinquency problem in this country. What he says on the subject is worthy of thought.

Extending Universal Military Training Act

SPEECH
OF
HON. NEAL SMITH
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 2260) to extend until July 1, 1963, the induction provisions of the Universal Military Training and Service Act; the provisions of the act of August 3, 1950, suspending personnel strengths of the Armed Forces; and the Dependents Assistance Act of 1950.

Mr. SMITH of Iowa. Mr. Chairman, as we are called upon to vote upon H.R. 2260, which will extend the draft for 4 more years, I find myself in the position of being dissatisfied with the operation of the draft in some respects and at the same time reluctantly concluding that voting against the bill is not the way to correct the matters to which I object. I have read the testimony before the committee word for word and all of the reports. I have very seriously considered voting against this bill and for that reason spent about 14 hours carefully reading every piece of material and chart available. The statistical matter confirms conversations and communications which I have had from persons in the district I represent, to the effect that the military has been reducing the number of Ready Reserves and in some instances refusing to take men into the Ready Reserves when at the same time they are drafting new men into service who do not want to leave their civilian pursuits. It seems inexcusable to me that someone who wants to serve and be a minuteman, is refused the opportunity to do so; at the same time someone else is refused the opportunity to stay out of the service. Another thing that I dislike is not having a program for selectees where they can take about 3 months of intensive training and return under a Reserve obligation to become a part of the Ready Reserve. Many of these boys have an extreme hardship when taken away for a 2-year period, but almost all of them could be away for a 3-month period and then come home and remain in the Ready Reserve without nearly so much sacrifice. The other reason I feel so strongly about this is that many of these young men that were drafted for a 2-year period have told me that only the first 3 months of their tour of duty was spent learning how to be a soldier. Too many of these who are inducted spend most of their 2-year period either doing nothing, or cooking, chauffeuring, or doing something unrelated to the defense of our country. I object to inducting young men for these kinds of jobs. There are civilians who would like to have a job cooking in Army camps and my experience has been that no matter how much experience young men have at cooking with military recipes, the food still is no better.

I am very much impressed, however, with the figure shown in the report which indicates that of the men who reach 26 years of age and therefore have graduated from the 8-year period during which they were liable under the Selective Service Act for military obligation, over 70 percent received military training of some kind and that 286,000 were inductees, 467,000 were volunteers, and 17,000 had entered the Reserves or National Guard. It is very clear to me from these figures that even if the military would keep everyone who wants to stay in the Ready Reserves and even if it did not waste men, it still would be unable to maintain the forces that the experts conclude we need. I was also informed upon questioning the gentlemen from Texas [Mr. KILDAY], a long-time member of the Armed Services Committee and regarded as an expert on personnel matters on the committee, that I am not alone in feeling that the Military Establishment has not done the best job that it could in all of these matters, however, it has been brought to my attention that when the appropriations for the military are brought before the Congress there is some opportunity to review these matters and Congress can make some qualifications in expenditures in the fields which may help in the situation. It is a very bad situation when we try to administer as well as legislate, but it is also recognized as a fact by many of us that too many of the military are not as imbued with the necessity of avoiding waste in the military as most of us are and if the administration is unwilling to do

anything about it then there is no choice but for the Congress to do everything it can. I am voting for the 4-year extension of the draft but I am also going to go to work to do what I can to help reduce the number of selectees that are inducted to take the place of other young men who are refused the opportunity to be a member of the Ready Reserves. We must do this even if it requires placing qualifications on the appropriations for the military.

It seems to me that we must vote for an extension of the Military Training and Service Act today and then continue to do all that we can to alleviate the necessities for using it to the extent that it has been used in the past.

"Spain's Struggle for Freedom"

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, we know too little of modern Spain. A book that deserves close attention from Members of Congress and others who wish to know more is "Spain's Struggle for Freedom," by Lawrence Fernsworth. His experience qualifies him to write a book on this struggle which is still in progress and to which our contribution has been entirely too negative.

By unanimous consent I am inserting two reviews of his book, one from the Christian Century, September 10, 1958, and one from the St. Louis Post-Dispatch, September 16, 1958:

[From the Christian Century, Sept. 10, 1958]

FULL SWEEP: "SPAIN'S STRUGGLE FOR FREEDOM," BY LAWRENCE FERNSWORTH

(Review by W. Stanley Rycroft)

The time has come when the complete story of Spain, and especially its glorious but tragic struggle for freedom, must be told. This book does just that in a moving and convincing way. Lawrence Fernsworth gives us the full sweep of the drama of a people struggling to be free; it is a drama of heroism, disillusionment and tragedy. The author has been a student of Spain for almost 30 years. As a reporter for the Times of London and a special reporter for the New York Times, he has been an eyewitness of many tragic events, for he has lived for long periods in Spain, particularly during the civil war.

It should be pointed out that the struggle for freedom in Spain did not begin with the birth of the Second Republic in the thirties; it is "the oldest thing of its kind in Europe." Prof. Trend of Cambridge University is quoted as saying, "It is seldom remembered that democratic government began, not in England, but in Spain," the principle being established in that country, before Magna Carta, that the king could not take action against the person or property of any of his subjects, "except by process of law."

The author's thesis is that Spaniards live in two Spanish worlds: one the world of individual freedom and human equality, an urge deeply implants in the hearts of the masses; the other an absolutist, privileged world, the kind of world that imposed the deadly Inquisition and brought on political and religious wars. The upholders of this absolutist world consider individual liberty and equality very un-Spanish. The watchword of the former world is "toward happiness from below" and of the latter "revolution from the top."

During the past hundred years the forces that have withstood the demands for human freedom are the thorne, the altar, and the army, or in other words, the monarchy, the political church, and the political generals. Sometimes there was a partnership between two of these, sometimes between all three.

Out of the turmoil and confusion of the Napoleonic wars, the political generals emerged; at times some stood with the throne and others with the people, but largely they have been motivated by personal power. "The word 'General' became synonymous with ambition, opportunism and treachery." One of the main purposes of the partnership of the Spanish throne and the Roman Catholic Church was the isolation of Spain from modern liberal culture. The dual nature of the Roman Catholic Church, that is, the spiritual church and the political church, is seen in Spain as in no other country, although often it has been impossible to draw a sharp distinction between the two.

At the end of a period of repression under the throne-and-altar partnership lasting over 200 years, came the Peninsular War against Napoleon which seemed to awaken the Spanish people and give rise to popular resistance movements. A new constitution approved in 1812 played an important role because it symbolized the democratic yearnings of the people. In 1873 the First Republic came into being as a result of 30 years of efforts by the Republican Party, but it lasted only 11 months.

A considerable part of this book is devoted to the rise and fall of the Second Republic, which the author considers the greatest moment in Spanish history. The Second Republic, which came into being in April 1931, is termed "the fifth phase in [Spain's] struggle for freedom. It was a gallant adventure." In this Republic the 1812 Constitution of Cadiz provided a basis for the new constitutional government. There were, however, two important changes: the king was no longer recognized and separation of church and state was proclaimed. Two criticisms that have been leveled against the Republic—that it was anticatholic and that it brought communism into Spain—are dealt with in detail. The author brings out the fact that Alcalá Zamora, the first president, was a stanch Roman Catholic and that the government never intended to be anticatholic. Rather it sought to hold the political church within reasonable bounds.

The story of how the Republic was destroyed within a few years from both within and without, is told graphically and forthrightly. Hand in hand the church and the political generals plotted and maneuvered. During a period of conspiracy some of the reactionary and treacherous generals were exiled. Says the author, "This was the Republic's worst and most fatal mistake." Francisco Franco was one of these. He and other exiled generals made contact with the agents of Hitler and Mussolini through General Sanjurjo who had been sentenced to death for treason but had later been pardoned and allowed to cross over to Portugal. The Republic was deserted in its hour of need by those who should have been its stanchest friends—Great Britain, France, and the United States.

The charge that the Republic was pro-Communist cannot be substantiated. As the author points out, until the rebellion broke out the Republic refused to establish diplomatic relations with Russia and it was not until 2 months after the outbreak of civil war that Russia decided to send badly needed arms. If Communists fought in the ranks of the international brigades, it is also true that Mussolini sent many thousands of Fascist soldiers to Spain. Fernsworth learned by questioning prisoners after 30,000 Italians were routed at Guadalajara that many of them had been duped into thinking they were going to Abyssinia to settle. The defeat of the Republic was brought about by the sheer weight of arms and men from Germany and Italy and massive bombing raids on defenseless towns. History will show that the civil war in Spain was the prelude to World War II.

However, the civil war is not the end of the story told in this book. The United States tripartite military pact, usually known as the bases agreement, is examined carefully. The author states that of all the European countries, Spain is the least communistic, but points out that the United States seems to have done about all it could to disillusion the liberal democratic people of Spain and "drive them toward communism, however they hated it."

By placing an embargo on arms to Spain in the thirties, the United States contributed to the downfall of the most democratic government Spain ever had. The bases agreement seemed to say to the rest of the world as well as to Spain that we put expediency before ideals and principles by giving aid to a regime which was once the close ally of Hitler and Mussolini. Says Lawrence Fernsworth: "All the evidence points to the conclusion that the move [the bases agreement] has earned for the United States suspicion and ill will in many places; that it has lessened its moral authority."

Fernsworth ends on an optimistic note. "The dictatorship will collapse," he says. "Every Spaniard knows that." There is hope in the fact that there are still liberal Spanish Catholics such as the Jesuit priest, Laburu, who told the Mexican newspaper Excelsior: "I prefer the authentic catholicism of the Republic to the formless catholicism of this present time. * * * The young priests do not hesitate to express their disconformity with the formula that 'state equals church.'"

[From the St. Louis Post-Dispatch, Dec. 16, 1958]

TERRORISM IN FRANCO'S SPAIN

Soviet Russia, unfortunately, is not the only country in the world where a Boris Pasternak is unwelcome. It is not the only land which does not allow its people to read such a book as "Doctor Zhivago," that is a book that is critical of the ruling power. Spain today is such a country.

The cartoon on this page shows Spain's dictator, Francisco Franco, twirling the keys to a cell door that locks away Spanish citizens who have committed the offense of thinking and speaking for themselves. They are representatives of the 80 or more young scientists, doctors, lawyers, factory leaders, and students who have been put behind bars for daring to criticize Franco's totalitarian regime.

Iberica, the monthly magazine published in New York by friends of Spanish freedom as a means of spreading facts about Franco's terrorist rule, shows that the new prisoners range all the way from sympathizers with the idea of an eventual democracy in Spain, to some who seek the return of the old monarchy of which the late Alfonso XIII was the last king. To a Franco it makes little difference what the dissent is or where it originates; there is only one allowable view, and that is the view of the controlling authority. Developments in the post-war world led the United States to work out defense arrangements with respect to an elaborate and costly system of air bases in Spain. This does not require anyone to admire or support Franco's iron-handed rule. Countless Americans who have agreed to sending defense funds that have propped up the Franco economy, hate his every terrorist act.

Meanwhile the United States has gained little in good will in Franco's Spain. As Lawrence Fernsworth, long a New York Times correspondent in Madrid, reminds us in his excellent book, "Spain's Struggle for Freedom," the dictator's regime has caused its tightly controlled press to denounce the United States for not pouring in still more money. When a Spanish newspaper speaks it is Franco speaking, for in Mr. Fernsworth's words, "the press gets its orders every day concerning what it must say and must not say." It is no wonder that many new political prisoners are in jail.

Playing With Economic Disaster

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following article by David Lawrence, "Playing With Economic Disaster," which appeared in the Evening Star, Washington, D.C., February 6, 1959:

PLAYING WITH ECONOMIC DISASTER—VOTE TO INCREASE HOUSING FUNDS FEARED AS FIRST STEP TOWARD INFLATION DEBACLE

(By David Lawrence)

An economic debacle is in the making. Can it be avoided? Both Houses of Congress took on Wednesday a step that may hasten its coming. The American people may learn sooner than anybody has believed possible that a blunder was made in the election last November by giving the Democratic Party control of Congress.

For the threat now is that if the budget is unbalanced higher taxes for everybody will have to be enacted. And if the revenues to balance the higher spending begun by the Democrats are not to be collected by the Government, then the American people are in for an era of inflation that could send the cost of living upward and eventually bring the dollar down to a 10-cent purchasing power. This would mean international danger. For the weakness in the American dollar would have a far-reaching effect on the currencies of Western nations.

The vote in the House and Senate this week on the Federal housing program is significant. It was a bold defiance of budget balancing and an invitation to higher and higher taxes. President Eisenhower has said frankly that if the budget is unbalanced he will demand the passage of higher taxes.

The Democrats lined up almost solidly for budget busting and disregarded the inflationary dangers. Of the 282 Democrats in the House, 257 voted to authorize $300 million to provide direct loans to veterans for housing whenever they cannot borrow from private institutions. Only two Democrats voted with 121 Republicans against the measure. Just why any group of American citizens should be given such an advantage—especially in these days when there are outcries about second-class citizenship and discrimination—is not clear to anybody except the politicians. They think the relatively small number of veterans in the country who can't borrow from private loan institutions is a big enough vote to go after in disregard of the interests of all other voters. But that's selfish and misguided politics.

Democrats cast 51 of the 58 votes in the Senate against the administration's housing program, and in favor of more money than the budget provided. Only 7 Democrats voted with 25 Republicans to support the President's budget. This shows plainly that in both Houses of Congress, the Democratic Party has become the party of the spenders and looks with scorn on the savers.

There are several bills coming up for consideration in Congress involving the expenditure of more billions than the budget provides. If the Democrats think the country is back of them, they'll make a shambles of the President's budget. There is a feeling on Capitol Hill that the country doesn't care and that the sky is the limit on public spending if a "welfare" label can be pinned on it. Indeed, there are many so-called economists who say that the more spent, the more the country will prosper. No private individual has ever been able to get by on a doctrine that favors spending more than one earns or borrowing more than one can pay back.

The only reason the Government can borrow large sums of money while its tax receipts are down is because people have confidence in the ultimate capacity of the Treasury to pay back what it borrows. Once this confidence is shaken and Government bonds depreciate in value, the Government has to pay higher and higher interest rates. The price of everything else goes up correspondingly.

The biggest worry in America today is how long public confidence will stand up against the spending orgy that has now begun in Congress. Doubtless, the labor unions will begin a new series of demands for higher wages if prices of the articles the workers buy start going up. It's an inflationary cycle often called the wage-price spiral. Before it runs its course, nations generally do not realize the perils ahead. Only when the shock comes and it is almost too late to apply the brakes is there a popular revulsion.

Many countries in the world have had what is termed a "runaway inflation." Before it reaches that stage, the argument is made that a collapse can't happen. Today there are many economists who are arguing that inflation has been stopped. But what happened on Wednesday of this week is proof that, despite all the debate about how inflation is being held in check, an overwhelming majority of both Houses of Congress—particularly the Democratic Party—now votes to ignore the President's plea for a balanced budget and to plunge the country into more and more deficit spending.

Nothing would please the Kremlin so much as to see the economy of the United States weakened from within by unsound fiscal policies. For an inflationary trend would make necessary even bigger spending to pay higher prices for the same armament planned many months ago.

This week was a critical one in American history, and the die seems to have been cast by the Democratic Party in favor of inflation, which means a further devaluation of the purchasing power of the dollar.

One Hundred and Fortieth Anniversary Commemoration of Abraham Lincoln's Birth—One of History's Greatest Men

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to again present a few remarks, further and again, affirming the great inspiration the life and the sacrificial death of the great commoner has always been to me.

The last occasion, a couple of years ago, when Mrs. Doyle and I again stopped at the dirt-floored, one-windowed cabin at Hodgenville, Ky., where he was born, which is being so nicely and appropriately preserved, it was borne upon me again that his life had not only been one of extreme hardship and trial, but had in fact been one in which there had been a fair share of romance.

Then we continued to travel during the following few weeks the full length of the Lincoln Trail through Kentucky, Indiana, and Illinois. I respectfully suggest it would not be amiss for many American parents to take the young folks of their family and spend some of their vacation time in taking this same trail. Increasingly I appraise as accurate and correct the statement of Secretary Stanton at the bedside of Lincoln about 94 years ago when he said, "Now he belongs to the ages."

So, Mr. Speaker, so much will be written and said of him by others more talented and gifted than I during these next few days that I will close these remarks by repeating the significant and historical, true and correct statement, which has been frequently stated before, which is to the effect that more books, both foreign and domestic, have already been written about Abraham Lincoln than any other civil ruler of government in all the world's history.

When I was a lad in the fifth grade of elementary school I used to draw the outlines of the birthplace cabin of Abraham Lincoln on my school slate when I should have been applying myself to my studies to be recited upon yet that day. I now realize I was doing in those very early years of my young life, in a very meager way, what the brilliant, informed brains of men and women of many lands have done in a truly magnificent manner in these subsequent years to the days when I drew the cabin on the slate and then tried to wash it out with the sponge before the teacher caught me violating her edict to study instead of wasting my time.

Resolution by State of Texas Opposing Increase in Federal Gasoline Tax

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. THORNBERRY. Mr. Speaker, under clause 4 of rule XXII of the House of Representatives, I respectfully submit the attached resolution adopted by the Senate of the State of Texas, expressing opposition to further Federal invasion of the gasoline tax:

SENATE CONCURRENT RESOLUTION 9

Whereas the President has recommended that Congress increase the Federal tax on gasoline by 1½ cents per gallon; and

Whereas the Federal Government is annually diverting more than $1½ billion of Federal highway user taxes into nonhighway channels; and

Whereas it has been estimated that the addition of the 1½ cents to the present 3-cent Federal tax on gasoline would result in Texans sending $137 million more in highway user taxes per year to Washington than would be returned to the State for highway purposes under the present aid formula: Now, therefore, be it

Resolved by the Senate of the State of Texas (the House of Representatives concurring), That the Congress be respectfully requested to oppose further Federal invasion of this gasoline tax which should be reserved for the use of the States, and that the use of such present highway user taxes be restricted to highway purposes only; and be it further

Resolved, That a copy of this resolution be mailed to each member of the Texas delegation in Congress.

BEN RAMSEY,
President of the Senate.
WAGGONER CARR,
Speaker of the House.

Lincoln Penny Changes Garb First Time Since 1909

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I make these brief remarks about the brandnew Abraham Lincoln penny which penny makes its bow to the public commemorating the birth of Abraham Lincoln.

You will recall that President Dwight D. Eisenhower of the United States of America approved the new design of this historic penny on December 20, 1958, and that same cannot be changed except by law; if it is changed at all; and then only by congressional authority after 25 years. This, of course, will make it very, very difficult for so many counterfeiters to profit off of the theme and extensive daily use of the penny. My reading indicates that the Abraham Lincoln penny as we have known it, until the birth of this new penny in commemoration of the 150th birthday, was designed and created by Frank Gasparro, an employee of the Philadelphia, Pa., Mint.

This new penny is quite different, because it will have on its reverse side for the first time a very legible, discernible view of the magnificent Abraham Lincoln Memorial, situated right here in our Nation's Capital. On the several occasions, I have already spoken in commemoration of Abraham Lincoln, I have on each occasion, and I do now, urge every Member of this great legislative body to visit the Lincoln Memorial both in the daytime and during the nighttime as well. It is closed, by the way, at 9 o'clock sharp at night. The motto "E Pluribus Unum" also appears on the new penny below the designation of the penny as "One Cent." However, the original front of the penny with which we are all familiar, and which was designed by Mr. V. D. Brenner, remains as it has been.

In connection with the issuance of this historic penny, the National Geographic Society gives us some interesting facts about the history of the penny as we have known it. Here are those facts:

At least 25 billion cents have been produced since 1909, according to Geographic. Each day, mints produce about 15 tons of cents worth $43,500, but costing only about $10,396. Each coin contains 45.6 grains of copper, mixed with 2.4 grains of zinc and tin. Precise minting lightens the chore for those handling pennies by the thousands. They weigh them instead of counting, since there are exactly 145 cents to the pound.

Truth Must Prevail for Krebiozen

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. LIBONATI. Mr. Speaker, I have had hundreds of requests for copies of the CONGRESSIONAL RECORD—Appendix, page A7780, presented on August 25, 1958, on the subject "Truth Must Prevail for Krebiozen." There have also been hundreds of requests for the material inserted, by me, in the CONGRESSIONAL RECORD, on the dates hereinafter listed in the aforesaid article.

In view of the great importance of the public interest in this issue and the fact that nothing has been done, to date, although conferences are presently being perfected between the U.S. Public Health Service and Dr. J. R. Heller, Director of the National Cancer Institute, and the Krebiozen Research Foundation, and Dr. Andrew C. Ivy, the Research Adviser of the Foundation, on the proposal of Senator PAUL DOUGLAS of Illinois, giving Krebiozen a fair test, as set out on the floor of the U.S. Senate in August 1958, I hereby acquiesce to this request of hundreds of Americans who are acquainted with the same, by republishing the remarks made on August 25, 1958, touching upon this important subject.

TRUTH MUST PREVAIL FOR KREBIOZEN

(Extension of remarks of Hon. ROLAND V. LIBONATI, of Illinois, in the House of Representatives, Saturday, August 23, 1958)

Mr. LIBONATI. Mr. Speaker, the story of Krebiozen is a sad one, and by their unfounded opposition, several past officials of the American Medical Association have been guilty of heinous actions against a great scientist in the medical profession, Dr. Andrew C. Ivy, who presently holds the high position of distinguished professor of physiology and head of the Department of Clinical Science of the University of Illinois College of Medicine. Because of the actions of these men, Dr. Ivy lost his position as vice president of the University of Illinois, as well as his membership in the Chicago Medical Society.

A true scientist is a man who seeks the truth, and Dr. Andrew C. Ivy exemplifies that type of man. In his experimentations with 250 other physicians, all members of the AMA, he has proved that there is biological activity in the use of this drug.

Dr. Stevan Durovic and his brother, Marko Durovic, have spent large sums of their own and their friends' money in Argentina in the development of the discovery of Krebiozen as well as thousands of dollars to the Krebiozen Foundation, to place the drug at the disposal of cancer victims, terminal cases, who were doomed to die.

Personally, I am well acquainted with the whole story in view of the fact that I acted as vice chairman of the committee and the commission, duly appointed by the Illinois Legislature, to conduct an inquiry to determine whether or not there was a conspiracy to prevent freedom of research at the University of Illinois, a tax-supported institution. A great deal of testimony given by many expert witnesses at those hearings proved beyond a doubt that false reports were released to the public by medical stooges of the AMA to destroy public confidence in the scientific findings conducted by Dr. Ivy and his fellow medics. This subject was in controversy for a period of 5 years, and still continues today in spite of the reports that have been released showing favorable results in certain phases of cancer study listed in the reports made by those individual doctors on their own cases.

Material has been inserted by me in the CONGRESSIONAL RECORD on May 29, 1958, page A–4957; June 12, 1958, page A–5370; July 25, 1958, page A–6712; and August 5, 1958, page A–6986. The subject matter and testimony, together with conclusions thereon, were masterfully presented in the two books written by Mr. Herbert Bailey, K-Krebiozen, Key to Cancer? published in 1955, and A Matter of Life or Death recently published by G. P. Putnam's Sons, a concern that is very selective on printing any books, and especially those touching on scientific subjects, as to their value and veracity.

I am very pleased to note that the very distinguished Senator, PAUL H. DOUGLAS, of Illinois, being a person of substantial reliability in dealing with matters of public import, has advanced proposals for controlled tests for Krebiozen. He has every reason to be concerned in view of the fact that he has studied this question thoroughly. It is to his credit that he deals with the subject with a highly constructive sense of justice. He avers that mistakes were made by both the AMA and the scientists interested in the Krebiozen study, and yet he does not lose the mental grasp that there is a high sense of public obligation to be considered and, therefore feels that in view of the favorable reports of the doctors working with Krebiozen, the merits of the drug should be inquired into officially on a purely scientific basis, to determine its medicinal value for public approval.

Senator PAUL H. DOUGLAS is a man of important stature in America. His background is one of high intellectual training as a professor in our colleges and universities. He shows no dispositon to dillydally with words, but gets at the meat of the problem and presents a complete picture of the controversy and its shortcomings.

His stand should be considered by the AMA as a warning that if they persist in their present attitude to belittle and devaluate the results and published findings in the experiments presently being conducted, that there is no question that the public health services and the National Institues of Health will be drawn into the picture through congressional enactment in the nature of a thorough investigation of this subject.

I stand firmly behind Senator PAUL H. DOUGLAS in his position in this matter and, unless something is done to remedy the present unfortunate standoff situation preventing an authentic test of Krebiozen, I will proceed in the 86th Congress, God granting

my presence, to introduce a resolution to investigate those elements that are preventing the carrying out of such a test, on the grounds that the public interest demand such action. It is fundamental that a conspiracy to prevent scientific research is in itself within the congressional prerogative to protect the welfare of the people of the United States.

No organization can defy or deny the right of justice to be meted out to honest men and their works, especially in this case, directly affecting thousands of unfortunates, who die every year with great suffering and at great cost to their families, or the charitable institutions which are established throughout the land for this cause.

I am warning the American Medical Association at this time, as I did before in the Illinois State Assembly, to pay heed to Dr. Ivy's appeal for fair play and give Dr. Andrew C. Ivy a fair chance to prove what he contends is of benefit to mankind.

The Chicago Daily Tribune article touching on the Krebiozen proposal, by Senator DOUGLAS, appearing in that paper's issue of August 23, 1958, follows:

"SENATOR DOUGLAS PROPOSES TEST FOR KREBIOZEN

WASHINGTON, August 22.—A secret scientific test of the merits of Krebiozen as a cure for cancer was proposed in the Senate Friday by Senator PAUL DOUGLAS, Democrat, of Illinois.

"DOUGLAS said in a Senate speech that the public is bewildered by the conflicting statements regarding the preparation. Dr. Andrew C. Ivy has reported Krebiozen to be helpful, DOUGLAS said, while the American Medical Association has denounced it and the National Research Council has found on the basis of the AMA report that there is no evidence of curative or palliative effects from use of the drug.

"DOUGLAS called for tests to be conducted by the United States Public Health Service and the National Institutes of Health. Under DOUGLAS' plan the Institutes would conduct a sample test upon 200 more or less terminal cancer cases of patients who had applied to the Institutes for help.

"ONE HUNDRED WOULD GET KREBIOZEN

"Of these, 100 cases would be treated with Krebiozen while the other 100 would be given mineral oil instead.

"The Institutes and Ivy would choose an outstanding biostatistician who would help design the tests and would be the only person knowing which patients had received Krebiozen treatment.

"The lists of those who had and had not received the treatment would be placed in a sealed envelope in a safe, to be opened later by the biostatistician and two advisers, Dr. Ivy and a representative of the medical profession chosen by the Public Health Service. The advisers would not know the identity of the patients.

"WOULD REVIEW HISTORIES

"At the conclusion of the test-treatment period, the case histories of all 200 in the test would be submitted to Ivy, and he would be asked to identify the 100 cases in which Krebiozen had been administered. DOUGLAS said Ivy would naturally select those showing the most improvement or pain alleviation.

"The sealed envelope would then be taken from the safe and the lists would be compared with Ivy's list. A comparative study would be made of the cases of the patients who did and did not receive Krebiozen.

"The degree of agreement or disagreement between Ivy's list and the other lists would then be announced.

"WOULD PUBLISH FINDINGS

"Finally, if Ivy requested it, the Public Health Service would examine records compiled by Ivy of other cases treated with Krebiozen, appraise the results, and publish the findings.

"DOUGLAS said the organized medical profession disparaged the discoveries of Pasteur, Lister, and others, and sought to defame the discoverers."

Library Services Act

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mrs. GREEN of Oregon. Mr. Speaker, one of the achievements of the 84th Congress was the enactment of the Rural Library Services Act of 1956. Members of the Congress have supported appropriations for the library services program beyond the timid and inadequate figures recommended each year by the administration. Each year, the appropriated funds have been put to good use by the participating States.

This year the President's budget looks generous, at first blush. It appears, before one gets to the fine print of which the Budget Bureau is so fond, that $6 million are programed. This is still 20 percent below the authorized amount, but it exceeds past requests, and seems a step in the right direction.

However, when one does get to the fine print, Mr. Speaker, one finds a different picture. The $6 million programed includes $850,000 of funds left over from last year. If this year's request is not increased, it will mean that in 4 years only 60 percent of the total amount of funds authorized will have been appropriated.

The library services program is a good one. It is one of which the Congress can be proud. It is my hope that the distinguished Appropriations Committee will recommend, and that the House will approve, an appropriation of sufficient magnitude to enable the librarians throughout the Nation to do the job which this act was designed to make possible.

In this regard, Mr. Speaker, under leave to extend my remarks, I ask that the following editorial from the New York Times of February 7 be inserted in the Appendix of the RECORD:

LIBRARY SERVICES ACT

Ten years of effort for Federal aid to libraries culminated June 19, 1956, in the Library Services Act. The benefits derived are available only to libraries in rural areas of 10,000 population or less. This legislation was backed by the American Library Association, public librarians and library trustees throughout the United States. When President Eisenhower signed the bill he said, "It shows promise of leading to a significant enrichment of the lives of millions of Americans."

The act calls for annual grants of $7,500,000 for 5 years. The moneys appropriated have yet to equal the amount authorized. This year's budget recommendation is $6 million and, like last year's appropriation, still falls short of the allowable fund necessary to provide minimum service.

One of the important library services is that of continuing education where circumstances prohibit formal schooling. When the Health, Education, and Welfare Department appropriations are considered this year it is hoped that the grants will be raised to the full amount of $7,500,000.

Address by Commissioner Armand D'Angelo

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by Commissioner Armand D'Angelo of the department of water supply, gas, and electricity of the city of New York at the installation dinner of the American Trade Union Council for Histadrut at the Astor Hotel in New York City on January 28.

Commissioner D'Angelo is recognized as an outstanding labor leader. His address relates to his recent visit to Israel as a guest of the Republic of Israel through the invitation extended to Mayor Robert F. Wagner, of New York.

ADDRESS BY COMMISSIONER ARMAND D'ANGELO AT THE INSTALLATION DINNER OF THE AMERICAN TRADE UNION COUNCIL FOR HISTADRUT AT THE ASTOR HOTEL, NEW YORK CITY, JANUARY 28, 1959

I am very happy to be here this evening and to have this opportunity to share with the members of the American Trade Union Council for Histadrut on this very wonderful occasion.

For although my name is D'Angelo—and although my own family background reflects a heritage which stems from an area of the Mediterranean many hundreds of miles from the shores of Israel—I, too, rejoice, as you do in the birth, the early struggles, and the growing maturity of the great, young, vibrant land which has benefited so greatly from your dedication.

Indeed, it would be very strange if any American—regardless of religious creed, national background, or any of the social and cultural differences which distinguish one man from another—could remain unmoved by the saga of Israel by the breadth of the human concept which is Israel, by the courage of its people, or by the devotion of its friends in other lands.

It would be stranger still if I—as a lifelong trade unionist—could fail to take great inspiration from the magnificent work which my fellow trade unionists throughout our country have contributed to the development of a strong and vigorous labor movement in Israel.

For me, it is a very great privilege to participate in the activities of an organization such as the American Trade Union Council for Histadrut, and to contribute in some small personal measure to the material and moral support which are so vital to the democratic tradition which the people of Israel today are building for the spiritual nourishment of future generations.

As some of you may know, I had the opportunity last year, through our mayor, Robert F. Wagner, to visit Israel and to see at firsthand many of the astonishing economic, industrial, and agricultural develop-

ments which her people have fostered during the past decade.

I wish that everyone could be as fortunate as I; for the experience of witnessing at firsthand all of the modern miracles that the sons and daughters of Israel have wrought in their homeland, is something that will remain in my memory for the rest of my life, as proof of man's faith in his fellow man and of the reality of courage and vision in our troubled times.

A decade ago, the vision of Israel shone as a beacon of freedom which promised light and hope for Jews throughout the world—comparable only to the lantern uplifted toward heaven by our own Statue of Liberty to guide oppressed people of all nations to America's shores.

The vision of Israel today has been transformed into the achievements of courageous pioneers, of men and women—yes, and of children, too—who have labored, with love, with devotion, and with sublime faith, to recreate a nation that first rose to greatness thousands of years ago.

The story of Israel today is an inspiring account of the establishment of a democratic nation where men and women and children live without fear—secure in the knowledge that they may worship God, each according to his own conscience and heritage—and pledged to protect and to advance the welfare and well-being of his neighbors.

Many of the brightest chapters in that story have been penned by the men and women of the General Federation of Jewish Labor in Israel, by the Histadrut.

This community—for it is just that—of more than half a million workers in every phase of labor, in every part of Israel, so thoroughly permeates the life of the nation that it is literally impossible to think of Israel without immediately recalling the incredible achievements of Histadrut.

Throughout the land, the living, functioning monuments to the concept of Israel which have been lovingly created by Histadrut, bear witness to the strength and vitality of the organization. Modern hospitals, medical clinics, trade schools, cultural centers, youth centers, housing projects, consumers' societies, agricultural developments—all strength—and owe their very existence to the dynamism of Histadrut.

And in a very large measure, to a very great extent, the dynamic success of Histadrut stems from the financial, moral, and political support lavished upon it by the American labor movement through the American Trade Union Council for Histadrut.

The great fraternal relationship between labor in Israel and labor in America has been permanently recorded in the roll of institutions erected and maintained by Histadrut.

The William Green Cultural Center in Haifa, the Philip Murray Cultural Center in Eilat, the ILG Hospital in Beersheba, these are just a few of the monumental Histadrut edifices which bear the names of revered American labor leaders and prominent American labor organizations, in testimonial to the warm spirit of friendship which exists between the working people of these two great nations.

And it is you, my good friends—the officers and members of the American Trade Union Council for Histadrut—who have helped to build these monuments, who have breathed life into them, and who have helped to transform a great dream into a still greater reality.

Your unselfish, your openhearted—your immensely generous—gifts of time and effort and money to the cause of labor and social justice in Israel certainly have made possible the greatest national success story in modern history.

Tonight, as we accept the new and renewed pledges of faith in this great humanitarian enterprise of the new and reelected officers of the American Trade Union Council for Histadrut, let us pause, too, with gratitude and happiness in our hearts, with prayers on our lips, and with fervent hope that Almighty God will continue to bestow His benediction upon us, upon our brethren in Israel, and upon all workingmen and women, upon all of our fellow human beings who share our faith in His power and His love.

It is now my privilege to introduce the following newly elected officers: honorary chairman, Claude Jodoin; honorary vice chairmen, George M. Harrison, Donald MacDonald, and David J. McDonald; and cochairmen, Bernard Shane and Harold Hanover.

The following newly elected members of the national executive committee: Shelley Appleton, William Collins, Steve Federoff, Samuel H. Friedman, Samuel Herbst, Samuel Kraisman, Joel Menist, Jack Paley, Frederick H. Siems, and David Weisman.

And the following officers, all of whom have been reelected to their present posts: Chairman, Moe Falikman; cochairmen, Joseph Gold, David Siegal, and Norman Zukowsky; national executive committee chairman, David Gingold; administrative committee chairman, I. H. Goldberg; treasurer, Philip Lubliner; associate treasurer, Nathaniel M. Minkoff; financial secretary, Frank Brown; associate financial secretary, Murray M. Kolker; and recording secretary, Max Goodman.

My friends, it has been both a pleasure and a very great honor to join you here this evening and to pay tribute to the wonderful work that you are doing.

Thank you and God bless you all.

Community Development and Korea

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. COHELAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely article by Prof. Paul S. Taylor, chairman of the University of California Institute of International Studies and a distinguished economist. Notwithstanding the fact that the Public Printer has advised the cost of including the article will be $486, I ask unanimous consent that this item be inserted in the RECORD:

COMMUNITY DEVELOPMENT

(By Paul S. Taylor, Community Development Consultant, ICA Office of Technical Cooperation, Community Development Division, and Chairman, Institute of International Studies, University of California, Berkeley, Calif.)

I

In the 13 years since World War II a succession of Asian nations have established their independence, one after another. Having thrown off the yoke of colonialism, following an American precedent dating from 1776, the governments of these young nations now carry the responsibilities of power that formerly rested on other shoulders. They have said to the world that they are capable of self-government, and are now engaged in demonstrating it. They have told their own people that independence is superior to colonialism, who now expect visible evidence of the validity of that claim. Korea is one among these new nations. Although handicapped by a cruel severance, by the ravages of a recent war, and by the uncertainties of an uneasy cease-fire, its political independence still stands after 10 years.

Most of the people of the Asian nations are farmers, living in villages. They live according to the customs of their ancestors handed down from time immemorial. However familiar and even cherished the customs themselves, the conditions of their daily lives are beginning to change. For the idea is reaching even the countryside that poverty, disease, and misery are not inevitable. Through advertising, movies, the sights in the cities, the vehicles that pass on the roads, political propaganda, and every other form of communications, they are subjected to a bombardment saying in myriad ways that old burdens can be lightened, that there are practical alternatives to acceptance and resignation.

These voices that penetrate into the villages are long familiar to the Western World. They represent the forces that create and are created by the city, the influences of a money economy that binds ever more remote areas of the world together, the spread of a technology that reduces distances and lightens labors and if experienced, even in the farm of a modern war machine, leads young men at the end of their soldiering to seek escape from the drudgery of their ancestral farming occupation. Korea now hears these voices, and feels these forces and influences.

Community development in the villages is among the most conspicuous and important of the domestic programs adopted by new Asian nations. It is founded on recognition of this urge toward a higher level of living, of the forces that portend the flight of farm youth to unprepared cities, of the subtle penetration of money economy into an economy based for ages upon ownership of land, of the impending urbanization of rural life itself through the spread of modern technology and widening of markets. Community development seeks to meet these forces in conscious ways guided by aspiration for the future and by reason, rather than in ways prescribed by tradition and the precepts of the past. Community development assumes a willingness to accept guided change as a political responsibility. It chooses democratic methods of stimulating change in preference to totalitarian methods.

India began a program of community development in 1952. There it carries the blessing of the followers of Mahatma Gandhi, the prestige given by gestures of presidential approval and the power accorded by the Prime Minister's personal assumption of chairmanship of the commission in charge of community development.

The Philippines followed in 1955 under the vigorous leadership of their President, who placed the program in the hands of a presidential assistant. The political leaders of both India and the Philippines felt a challenge to their leadership in the villages, coming from supporters of totalitarian programs of development. They found community development an effective answer. People generally choose progress by democratic methods with the aid of their own government.

When democracy was new in the modern world, it was regarded by monarchies as an untried experiment. In the 1830's a Frenchman, Alexis de Toqueville, went to the United States to examine the nature of the new phenomenon called "democracy." There he went from city to city, farm to farm, seacoast to wilderness frontier. His report, entitled "Democracy in America," has become classic. At one point he said:

"These Americans are the most peculiar people in the world. You'll not believe it when I tell you how they behave. In a local community in their country a citizen may conceive of some need which is not being met. What does he do? He goes across the street and discusses it with his neighbor. Then what happens? A committee comes into existence and then the committee

begins functioning on behalf of that need, and you won't believe this but it's true. All of this is done without reference to any bureaucrat. All of this is done by the private citizens on their own initiative."

Popular vigor, initiative, and participation are not only the strength of democracy; they are the antidote for authoritarianism whether in India, the Philippines, the United States or anywhere else, whether in the 1830's or in the 1950's. They are also instruments of progress.

II

Now the Government of the Republic of Korea, following India, Pakistan, the Philippines, and Indonesia among others, has decided to inaugurate its own program of community development. This program is to begin soon in rural areas selected for pilot demonstrations; it includes a training project and carries a prospect of expansion as availability of qualified personnel and other resources in the future may permit.

This decision rests not only on high policy, but also upon solid, earthy grounds. About 70 percent of the population, living on farms and in 20,000 villages, produces only about 40 percent of the gross national product. This maladjustment between human and material resources bears familiar symptoms of underemployment, unemployment, inefficiency, a low level of living, and a flooding of people from the villages into the cities faster than these can absorb them. An early 1958 document from the file on community development contains this passage:

"Korea has two acute rural problems. The first is a considerable degree of overpopulation in relation to the available land base, with the probability that increase will be more rapid than can be absorbed by industrial employment. The second is the potentially dangerous timelag in bringing to rural communities the technical knowledge and training needed for improved use of present resources and development of new sources of wealth. Population pressure makes the speedy and fullest utilization of present resources and the introduction of new ones a vital necessity. The alternative is a declining rural living standards, accelerated flight to the cities, and the aggravation of urban unemployment and overcrowding with its threat to internal order and security."

This is not to say that until now the Government has wholly ignored the existence of these problems. On the contrary, as Dr. Kyun Hi Tchah, economic planning officer in the Ministry of Reconstruction, told the Philippines-Korean Community Development Conference on May 26:

"The development of our industries, creation of an agricultural extension system, establishment of a special bank of agriculture, encouragement of farmers' cooperatives, a cottage industry program, reforestation program, and public works program are designated to solve these problems in these lines."

The Korean Government has been doing even more—by promoting improved agricultural practices, expanding irrigation, encouraging fisheries and better housing, assisting resettlement, and extending education and health, sanitation and other services of government into rural as well as urban areas. But the pace of these programs needs to be accelerated. Time presses, the resources of manpower technically trained in the specialties still are insufficient to meet the need, while unused resources are at hand in the villages themselves, and experience with community development elsewhere holds promise of its usefulness as a means of accelerating and amplifying the effectiveness of the substantive programs in rural areas.

The document of early 1958, quoted earlier, states this clearly:

"Community development does not provide the solutions to these problems but is a method, successfully tested in other countries with similar problems, whereby the timelag in providing means for the development of rural communities can be materially shortened, and the underemployed manpower of the villages can mobilize itself to improve the utilization of present resources and to discover new ones."

In preparation for this decision on program, and for undertaking operations, international experience has been shared directly through joint conferences in both Korea and the Philippines. These have been followed by preliminary domestic conferences bringing together officials from participating ministries, provinces, and guns (counties), and including staff members who will be responsible for the success of the community development program when it is launched.

The present, as a time of beginnings, is an appropriate occasion to restate soberly the concept of community development, to take stock of its tools and its relations with other programs that also seek to stimulate a development within the same communities, to weigh the conditions peculiar to Korea that affect the prospects for achievement in this country, and to relate rural community development to other processes directed at developing the greater community which is the Korean Republic.

III

Since community development became a self-conscious device for rural improvement in less-developed countries more than a decade ago, there have been innumerable attempts at definitions, with varying emphasis on this or that facet. The 1948 Cambridge Conference gave this as a definition:

"A movement designed to promote better living for the whole community, with the active participation and, if possible, on the initiative of the community, but if this initiative is not forthcoming spontaneously, by the use of techniques for arousing and stimulating it in order to secure its active and enthusiastic response to the movement." [1]

This definition developed from an effort by British administrators to prepare colonial people for impeding self-government, a status that some of these have now achieved.

In October 1955, a team of consultants to the International Cooperation Administration, after visiting India, Pakistan, and the Philippines, found that community development in each country expressed itself as "a concrete program of action" with "administrative structure," "budget," "personnel," "material resources," "plans," and "goals." [2]

The team described community development as "an operation whereby the technical government services * * * are channeled to and coordinated at the community level," and as "a method and an operation designed to complement the improvement of conditions from above, by the improvement of conditions through the initiative of the people themselves."

Later in the same year the United Nations defined community development as "a process designed to create conditions of economic and social progress for the whole community with its active participation and the fullest possible reliance upon the community's initiative." Community development "implies the integration of two sets of forces making for human welfare, neither of which can do the job alone: (i) the opportunity and capacity for cooperation, self-help, ability to assimilate and adopt new ways of living that is at least latent in every human group; and (ii) the fund of techniques and tools in every social and economic field, drawn from worldwide experience and now in use or available to national governments and agencies." [3]

More recently Prof. Irwin T. Sanders, of the University of Kentucky, has pointed out that community development may be viewed in any or all of four ways, viz.:

1. As a process of change from a condition in which, e.g., a few make decisions for all about matters of common concern, to a condition in which many participate in the decisions.

2. As a method, or way of working to achieve a goal.

3. As a program, or set of procedures for accomplishing a set of activities, e.g., improvement of health, welfare, agriculture, education, recreation, etc.

4. As a movement, or crusade, dedicated to progress as its supporters define progress.

Viewed as a process, the emphasis, or focus, is upon what happens to people, socially and psychologically. Viewed as a method, the emphasis is upon some end, or ends, to be achieved, i.e., as a process with an objective. Viewed as a program, emphasis is upon method and content, i.e., upon activities to accomplish results in respect to specific matters of health, welfare, agriculture, education, recreation, etc. Viewed as a movement, emphasis is upon a program and its emotional content, i.e., upon an idea, as interpreted by its adherents. Sanders remarks in reference to community development as a movement that it is "a special kind of program that holds unusual promise and one worthy of unabashed commitment by those * * * who want to see poverty and illness alleviated among the great masses of underprivileged humanity." [4]

Community development, then, is something to be perceived whole. Its full meaning can be understood only by viewing it in many ways, not like the elephant in Aesop's fable that was examined by blind men carefully in separate parts—trunk, tusk, ear, leg, side, and tail. The blind men, never having seen the animal whole, but each having touched only its nearest part, naturally were left quarreling among themselves after the elephant passed by. One maintained an elephant is like a snake, another that it is like a bone, a third that it is like a fan, and the others, respectively, that it is like a tree, wall, and rope. We could quarrel among ourselves endlessly and futilely over the nature of community development like the blind men unless, in addition to studying the parts, we can see the living whole of a creature that is more than the sum of the parts of its anatomy.

IV

The tools and procedures of community development are neither mysterious nor unique. They are familiar, many of them, to those who engage in the usual forms of group work, or seek to establish cooperative relations with communities in order to attain specific ends such as better practices in respect to agriculture, health and sanitation, education, etc. They are known also to administrators and others who work with groups of people in a variety of relationships, other than authoritative, to achieve practical purposes. The adequacy of the tools and procedures is the subject of inquiries by social scientists seeking to understand social attitudes and structures, or to refine methods in group dynamics, community activities, etc.[5] The methods most suitable in any specific country or situation will depend much upon the attitudes of the villagers in the particular society. They can be anticipated best by those who understand the purposes of community development and know the local situation. Tools and procedures should be reviewed carefully in the light of early experience, noting the circumstances under which failures and successes occur.

The community development program of India has made at least one significant contribution to the tools of community development that can be useful for administration everywhere.[6] This is the creation of a very small group, separated from any responsibil-

Footnotes at end of speech.

ity for decisions or operations of the program, with responsibility for observing continuously, for supplying a running account of program operations, and for making periodic evaluations of methods and results. A recent survey of the Indian program by Ernest Witte states:

"The evaluation reports are tremendously interesting and valuable and this seems to be a unique contribution to Government. No other major ongoing independent governmental agency seems to exist which devotes itself to measuring the effectiveness of an operating program in which it has no authority. Its findings (not its running reporting) are public." [7]

Even the evaluation itself needs recurrent reevaluation; Witte continues:

"Although this evaluation program is a positive contribution, it has some potentially dangerous aspects of concern to a program like community development."

"Naturally, it is easier to measure progress in things than the progress of people and the two do not necessarily go together. Thus in the early reports emphasis was placed upon such things as the number of acres reclaimed, the miles of roads built, and so forth. But these are only the byproducts of real community development. Its real objective is to change people so that they will think and act for their own and their communities' improvement. Fortunately, the evaluation staff is understanding more of the real objectives and is striving for more adequate measurements by which to judge results."

This hazard is faced not only by evaluation teams; it confronts all who bear any responsibility for program operations. Witte points to dangerous pressure for early visible results that is characteristic of every country with a community development program, and can be sensed already in Korea. He says:

"District or other officials want to make a good comparative showing and sometimes understand the physical evidences of progress better than the more intangible ones. Thus in a number of instances (and in the other countries as well) there was unmistakable evidence of what might be termed 'authoritative community development.'"

The distinguishing essence of community development, in my opinion, is that it assumes a responsibility for approaching a community whole, for eliciting popular participation in selecting goals and planning projects, as well as participating in their execution, and for developing the practices, attitudes, and initiative through experience that will continue indefinitely to generate guided change:

"The study of human wholes lies today on the borderline between science and art," says Robert Redfield of the University of Chicago in his "Little Community." Fractional analyses are useful but, as Lawrence K. Frank of Massachusetts Institute of Technology cautions, these cannot be "safely used for dealing with an organized whole, as we see in medicine which must integrate all the separate findings of the life and medical sciences when it approaches the single, identified organism—personality." [8]

The necessity for viewing a community whole, as well in its parts, is matched by the necessity for shaping a program so as to create impact on a community as a whole, not simply on its parts. There is no competition between parts and the whole, either as the subject of analysis or in the structure of program. The Korean Government, as noted earlier, already has initiated a number of programs aimed at improvement of one phase or another of rural community life; viz, health and sanitation, agriculture, education, etc. This is beneficial and there must be no slackening of these programs.

In examining community development in India, Pakistan, and the Philippines in 1955, a team of consultants of which I was a member reported:

"When we examined community development activities as programs of action we found elements not expressed in definitions of community development as concepts and processes. There is a substantive content in all such programs which lies beyond the resources of individual groups, without which 'better living for the whole community' remains an idle phrase. This substantive content consists of the traditional Government services in agriculture, medical care and public health, education, the building of roads, etc. In large measure the programs we examined are based upon the idea of strengthening these Government technical services, and of stimulating local community organizations to make the most efficient use possible of them.

"Community development programs are based upon the twin principles of (a) strengthening and coordinating Government technical services in agriculture, public health, education, etc., and (b) stimulating an awareness within the village of needs and group self-help potential in attacking these needs, in cooperation with Government." [9]

This is to say that a community development program and educational, health and sanitation, agricultural or other programs that touch rural communities are mutually interdependent. Separate substantive programs and community development programs in the same village are not competitive, but complementary.

Experience in other countries corroborates this; in recogniton of the importance of the whole, the practical trend is toward recognition of a mutuality between single-purpose and multi-purpose programs. The United Nations reported in 1955:

"A trend toward comprehensiveness or multiplicity of function in programs that originated for a single purpose in a specialized field characterizes recent programs of rural improvement in economically underdeveloped areas. A single purpose project may in many cases take root most quietly and easily, and can therefore serve as a spearhead of wider community development. However, the relationship of the various aspects of life especially in the rural community require that the concept of multipurpose development be introduced as soon as possible in the programs." [10]

V

Community development proceeds on the assumption that people who live in the same village constitute a community which will act together for common purposes. This may or may not be true. Caste, religion, faction, and class create serious cleavages within the same village in some countries, that resist the unified approach of community development and prevent villages from becoming a social unit.

In Korea, fortunately, villagers are a relatively homogeneous people. Castes are absent, religious differences are not seriously divisive, recent land reform has weakened class lines, and family overrides faction. Marcus Scherbacher says:

"With this very broad family system you have a natural feeling of family and community responsibility because you have whole villages with the same name, of the same family. And although you still find villages of only one family, the great majority (72 percent or even 80 percent) of a village will carry the same name." [11]

Anyone who has set foot in a Korean village can testify that the people are friendly and frank, ready to discuss their problems without waiting upon lengthy preliminaries to disarm suspicions, overcome barriers, or even conform to ceremonial codes prescribing how interviews or business relations shall be conducted.

Korean villages have strong traditions and much experience in sharing and in cooperation. Some of these are deeply rooted in the past as well as flourishing in the present. Group warehouses date from at least the 17th century. There are innumerable kaes, or groups, organized for savings, public works, farming, recreation, health, mutual help, meeting the occasion of marriage and funerals, and a host of other purposes. In 1937 some 480 different kinds of kaes were distinguished in Korea.[12] Bands of farmers weeding rice to the encouraging chant of a leader like a crouching football team responding to the urgings of a coach, dot the landscape in season.

These and other forms of traditional cooperation among villagers have not added up to community development in the past, for they have been directed mainly toward making life flow more smoothly in traditional channels, rather than toward the production of development and change. Yet they are favoring elements in a society seeking consciously to make its way in new directions.

The regeneration of rural society itself, with modest help from outside, is an idea not wholly new or foreign to Korea. The recent land reform had its precedents in past centuries. During the era of Japanese domination thoughtful studies were made and proposals advanced to guide action. From one of these, published in 1931, I note among "Proposals for Some New Institutions" the following items:

1. Institutes for headmen and their leaders of the villages.
2. Institutes for keywomen of the villages.
3. Culture centers in the villages.
4. A rural worker-training center, which included improved agriculture and home economics schools in its program to aid poor farmers, elevate their living level, and enrich the cultural life of the entire rural population.

A passage on village leaders is still worth quoting:

"We have seen what one man can do in the villages. These village headmen are usually the most respected men, with a high degree of culture and refinement, but usually they belong to the old schools of thought, admitted to be inadequate to meet the new day. With a little help for them in seeing and understanding the new day with all its complicated problems, they can become unparalleled leaders to regenerate rural Korea. Why not help them? They are the shortcuts in making over the rural communities. Their services are generally gratuitous. All the expenditure involved would probably be the financing of two or three leaders and their travel expenses until the institutes can be organized and managed by the village leaders themselves. It certainly is very little compared to the great good that can reasonably be expected to ensue. Present-day social, economic, and political high spots and their relations to their own villages are probably all that needs to be pointed out to them. Democratic ideals and a scientific attitude toward life will need emphasis. When once started, it is reasonable to expect that they themselves will make their own adjustments. All they need is a little help to make a turn * * * the point I want to stress is that all this does not require an expenditure of a big sum of money. It is within the reach of the people's ability." [13]

This, written more than a quarter century ago, has a very modern and timely ring.

Its thesis is confirmed by contemporary studies exploring foundations for the present program.[14]

VI

"First of all, the Korean culture needs to be emphasized to bring the Koreans to their own, as in the case of the discouraged Danes. Then there is the need to recognize the

Footnotes at end of speech.

equality, if not supremacy, of the Korean culture in the past and to let it develop as a part of the integrated whole of human culture; the emphasis is legitimate and right."[15]

The prospects of community development for Korea, like any other program, rest upon the potential resources, material and spiritual, of Korea. There is ample reason, as has been pointed out, to launch a program here with confidence. Great need, technical knowledge, local leadership and resources are present. These are substantial ingredients that justify an effort and hold promise of success. Community development can produce better living and more active citizenship.

It is useful to temper our optimism, nevertheless, with realism. Rural community development can stimulate agricultural, livestock, fishery, and forest production, cottage industries, health and sanitation, education, cultural activities, and recreation. It cannot be expected to set up great industrial enterprises, nor to substitute for great national public works like railroads, main highways, or large reservoirs.

Community development can contribute toward a more favorable balance between people and resources, but there are limits; a too rapid increase of population can be one.

The census of 1949 reported that 42 percent of the population of South Korea was under 15 years of age. This is extreme. In Norway and Switzerland the proportion was around 24 percent, or less than three-fifths that of Korea. The list of nations with any higher proportions of youth than Korea—and these only very slightly higher—included 15 Asian, African, and Latin American countries that, with scarcely an exception, face seriously unfavorable relations between resources and population. In all these nations, including Korea, steps are being planned and taken to lower the death rate. Meanwhile the birth rate in these nations, including Korea, remains high. As a matter of plain arithmetic this sets the stage for a population explosion.[16] Can community development, or indeed any other form of economic development, keep pace in Korea?

In India, family planning is at least nominally a point in the community development program. In Japan, where no community development program exists, a family planning program in the hands of welfare and home demonstration agents apparently is being pushed much more effectively than in India. For a variety of reasons, national population policy among them, the birth rate in Japan fell from the high rate of around 33 per thousand in 1949 to a low of around 18 in 1956, making the current birth rate of Japan comparable to that of France.[17] So great a decline within 7 years is history-making.

Two-thirds of Korean farmers in 1949 cultivated farms of less than 1 chungbo (1 hectare) in size.[18] To what extent increase in production (agricultural and otherwise) can outpace the growth in numbers in Korea is a grave question. The time to consider this problem is now, while the country engages in heroic endeavors to raise the level of living of the Korean people.

Korea, like many other nations, faces hard facts of geography. Among such countries are Finland, the Scandinavian countries, and Switzerland. Those countries have been obliged to balance population and resources, and to build their futures on the foundations of their heritages, geographic, economic, political, and cultural. They are doing so with a success that yields a high material level of living and a rich cultural life to their people. Their achievement and their stability command the respect of the world, and—not to be overlooked in a paper on ddevelopment—attracting an enlarging flow of foreign visitors that enriches private and public coffers while it promotes amity and enriches the cultural life of many people. Korea might wish to consider inclusion of such aims in her community development program, for she still possesses priceless resources in cultural treasures, landscapes of extraordinary charm and beauty, and an hospitable and responsive people.

Community development is at the center of one of the great problems of our day. The basic problem of people everywhere is how to maintain continuity or persistence of their cultural group and their community organization while changing.[19] Community development rejects the view that blind forces alone control our social life and govern the direction of change; it is founded on a belief in change guided by human choices and human strivings. Community development is designed to produce change without social disintegration by binding the people into the making of their own future.

History has thrust Korea into a political limelight, separated from an opposed system by a thousand yards—or by a river. Even within the Republic itself is a restored area north of the 38th parallel, many of whose present inhabitants lived for a time under the other system, affording them a basis in personal experience for balancing life under one system against life under the other.

This location presents Korea with great problems. It also presents Korea—and the United Nations—with great opportunity. There are factors favorable to grasping it. The size of the Republic holds the conception and operation of national programs within manageable scope. The Government and people are willing to make efforts and to advance in new directions, and to demonstrate here the fruits of freedom in a small nation.

In my opinion, although Korea is starting later than other Asian nations, it has a chance to make itself a leader and showplace before the world of what rural community development can do materially, politically, and culturally. Such a prospect is capable of evoking dedication to a national effort as to a moral crusade. By requiring participation of people in working out their own problems and destiny, it can cement people and government together through a common effort. It can generate stability while it generates progress.

Is it really possible to do this in Korea? I have been told here, as elsewhere in Asia, that I do not know Asians, including Koreans; they have to be told. They have been told for centuries, they say, and can learn no other way. Although I have had my feet on the ground in the villages of five Asian countries, I am not an expert on Asia. So I shall give not my own reply, but that of a Korean general in the military zone when I asked him recently if this description of Asians is true. His reply was simple; he said the Korean people want government of the people, by the people, and for the people.

The U.S.S.R., by its statements to the United Nations, regards community development as unnecessary, not to say undesirable, where a strong central plan governs a nation's economy. It has no place in its economy for popular participation in making as well as executing the plans. It wants the labors of the people and their acquiescence. Community development, on the contrary, invites the participation and initiative of the people in both planning and execution. Therefore, it poses an issue that Koreans, with others, understand, an issue above and beyond the material products that community development is capable of creating.

The Real Basis for the Foreign-Aid Program

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. BOLAND. Mr. Speaker, the recent column by Walter Lippmann, "The Duty of Rich Nations," which was inserted in the CONGRESSIONAL RECORD by Senator CASE of New Jersey on Thursday,

January 29, 1959, contained an effective and reasoned argument for placing our foreign-aid program on a moral basis instead of on the basis of self-interest and power politics.

Mr. Lippmann's views, of course, are not new. I was present on the floor of the House on June 6, 1956, when THOMAS J. DODD, then a Representative from Connecticut's First Congressional District, made an unforgettable plea that we revive the effectiveness of foreign aid and rekindle public support of it by placing it on the right basis.

Senator DODD has continued over the years to advocate a foreign-aid program that adequately expresses the highest traditions and principles of this Nation. Mr. Speaker, I would like to have inserted in the Appendix excerpts from Mr. DODD's speech on the floor of the House, a speech which so eloquently defines the moral basis for foreign aid:

Our foreign-aid program should not be based solely on expediency, self-interest, Communist competition, or the cold war, but rather upon conviction and principle.

We have discovered in the last century one key to a shared sense of moral solidarity in the principle of the general welfare. This is the principle upon which our entire foreign-aid program should properly rest, for involved in it is the idea of universal brotherhood of men.

Over and over again we have heard it said that the problem of coping with communism is primarily an ideological or a spiritual one. And this is why we must found our foreign-aid program on a great moral principle.

If the basic cause of communism and its threat to our society is on a spiritual and ideological plane, the missing element in our policy of copying with it must be spiritual and ideological.

We can find this missing element in our foreign policy by rediscovering why we hold our democracy so dear and why we should endeavor to share its underlying principles and beliefs and blessings with our fellow men. Democracy is based on a Judaic-Christian ethic concerning the nature of man, his essential worth and dignity, and his inherent God-given rights and freedoms. Man is a valuable being.

Here is where we find the real reason for a foreign-aid program. Thus, we understand that we are engaged in this tremendous project not only because we must resist communism, not only because we must make ourselves secure, not only because we must have strong defenses, but more importantly, because it is the right thing to do.

This is what actually motivates us in the conduct of our affairs at home.

This is why we will not discriminate on the basis of race, creed, or national origin in our immigration laws.

We will oppose segregation in all its forms as a violation of the basic rudiments of Christian charity and another form of Hitler-like racism.

We will support measures to eradicate slums from our large urban centers which to our friends abroad are incomprehensible in the light of our high standards of living.

If God has blessed us with fertile land and a population with a high degree of technical skills and initiative, we shall recognize our responsibility to find ways and means of sharing our surpluses and skills with other peoples of the world who are less fortunate.

Thus, in our foreign aid programs, we should be prepared, when asked, to tell our foreign neighbors who need assistance why we want to help them—that one of our principal motives is to help them establish and maintain a free society. We should be able to tell them why we attach such importance to freedom, and why we are interested in sharing it with them; that it is the nature of man which is at issue.

We should discuss these matters in our churches and civic groups, in our schools and universities.

We should call for volunteers and, like the Communists, develop cadres of young people to dedicate their lives in whole or in part, to serve these ends, both here and abroad. We have never lacked for volunteers when wars, in the traditional sense, have broken out.

But this is a new kind of war—the cold war—but a war nonetheless. And it is a war to the finish between freedom and tyranny.

The American people should realize that these problems are not to be confined to Government action only; we all have a stake in the outcome and we all have a role to play.

Those who recognize these things, have a responsibility to act and to give leadership to others.

We need bold and imaginative leadership to infuse and permeate our foreign policy with this vitalizing element. The people of the United States are ready for it. For this is not a suggestion to introduce an element not already existing on the American scene. It is rather a suggestion to recognize it, and to draw more heavily from our spiritual ideals in the shaping of our foreign policies and our objectives, in the conduct of our foreign-aid programs, and in the content of our propaganda. Let us not be ashamed to explain our ideals publicly, and, above all, let us act as though we really believed in them.

If such a dynamic or positive element were infused into our national thinking on foreign policy it would tend to emphasize the quality rather than the quantity of our assistance programs.

The magnitude of aid would not be so much the measure which is often based on immediate threats of loss to the Communists.

The measure would rather be the economic and social needs of the country or area and our own ability to help on a long-term and consistent basis.

The people who receive our cooperation would not be made to feel that they are simply pawns in an international power struggle between the East and the West.

They should feel that we are doing these things because it is the right thing to do.

And I suggest that the American people and their representatives in Congress would be more willing to appropriate the necessary funds for these programs if they had sufficient confidence that those in charge of our foreign policy had clear objectives and knew what they were doing.

What these people need above and beyond all the technical skills we can give them is to find a way of life which will have some meaning and idealism in it.

They need to discover the essential worth and dignity of the human person, to develop a sense of self-respect as well as earn and receive the respect of others.

The personnel which we send abroad either under Government programs or through private organizations should be carefully selected on the basis of their suitability and capability to express and demonstrate these ideals to the people in the underdeveloped countries.

If we continue to flounder and drift in the conduct of our foreign affairs, we shall ultimately lose all the respect which our present position of leadership requires.

Should this happen, the cause of freedom and justice in the world will be lost.

I earnestly and devoutly believe that we of the United States have the greatest responsibility in this struggle. We are on the right road, and the legislation which is before the House will assist us in reaching our proper objective.

That objective is a world at peace under law. A world in which free men use and enjoy the blessings of creation and live in harmony with God and each other.

Plea for Conversation—I

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mrs. DWYER. Mr. Speaker, I desire to call the attention of our colleagues to two of the most significant statements I have read in some time.

In addition to the sincerity of purpose and the generosity of spirit they both manifest, they are unusual in that they each reach the same conclusion and make the same suggestion from positions which too often in the past have seemed irreconcilable.

The first is a brief address delivered by Mr. Lansing P. Shield, president of the New Jersey State Chamber of Commerce, before that organization's annual congressional dinner here in Washington.

The second is an article prepared by Mr. Arthur J. Goldberg, special counsel of the AFL–CIO, which he adapted from an address delivered at the University of Wisconsin and which appeared in a recent issue of the Commonweal, a leading Catholic magazine.

Both Mr. Goldberg and Mr. Shield are deeply disturbed that American labor and industry have allowed themselves to harden into positions of hostility and have failed sufficiently to recognize their mutuality of interests and the need for unity in facing the economic and political challenge from Soviet Russia.

Both men see the urgent need to reestablish channels of communication between management and labor, to encourage them to listen to each other. And both men propose as a means of accomplishing this that a national conference or assembly be called of responsible leaders in business, labor, and government for the purpose of discussing—away from the tensions of the bargaining table—some of the issues of mutual interest and of great concern to all our people and to the safety of our country.

In the past, Mr. Speaker, I have enjoyed substantial and pleasant relations with both groups. But this fact has enabled me to appreciate the truth of the analyses of Mr. Shield and Mr. Goldberg and the wisdom of their suggestion.

They are especially important, I believe, since neither gentleman—so far as I know—was aware of the other's proposal.

Both statements represent a high degree of statesmanship and of clear-sighted objectivity, and I recommend them to the thoughtful study of our colleagues.

Mr. Speaker, under leave to extend my remarks, I include at this point in the RECORD the remarks of President Shield. The article by Mr. Goldberg will be included at a later point.

REMARKS BY LANSING P. SHIELD, PRESIDENT, NEW JERSEY STATE CHAMBER OF COMMERCE, 22D ANNUAL CONGRESSIONAL DINNER, HOTEL STATLER, WASHINGTON, D.C., FEBRUARY 5, 1959

An unusual gathering of leaders of government, organized labor, and industry such as this provides an opportunity for all of us to achieve a better understanding. In these critical times, is there anything more urgent than the development of teamwork between these three important segments of our society? And this applies particularly to New Jersey—the most highly industrialized State in the Union.

Despite unparalleled prosperity and spectacular achievements in mass production and mass distribution, our economy in New Jersey and throughout the Nation is labeled as a high-cost one—and as each month rolls by, the break-even point of both industry and government rises. We are living in a plush economy. Because of high costs, world markets are slipping away from us.

Within the last 12 months, Khrushchev, Mikoyan and company have made trade agreements with 11 countries. During that same period we haven't signed a single agreement. The cold war with our adversary overseas has turned into a hot economic war and it's no wonder he already claims certain victory. As a Nation we are losing out to a competitor who has a built-in, low-cost austerity program. His economy, contrasted with ours, has a constantly lowering break-even point and the cost of living in Russia is being steadily reduced.

The colmplete answer to the dilemma in which we find ourselves does not lie solely in reducing Government spending, freezing prices and wages nor in further mechanization. We already lead the world in that area (I'm referring to mechanization—not spending) and it's ironical that the more we mechanize, the higher go our costs. The President has warned us that unless we reverse this trend which is weakening us both internally and externally, it may be necessary to put our economic body into a straightjacket in the form of wage and price controls. It is up to us to choose now between teamwork and dictation or the freedom of choice may be taken away.

As leaders in Government, business, and labor, we have been fighting small battles among ourselves instead of presenting a united front to our enemy.

As an example, industry and organized labor meet annually or biannually at the bargaining table and then withdraw until the next battle. Between political campaigns the liaison between government and industry also leaves much to be desired.

In our preoccupation with the problem of integration in race relationships probably unconsciously we have been practicing segregation in our economic relationships.

A form of class warfare is adding fuel to the flames that are licking at the foundations of our society. A columnist in the New York Times recently pointed out that "both political parties seem to be solidifying along the lines of class interests."

Can anyone say there is a conscious, common effort to promote integration and understanding between organized labor and management—and to a somewhat lesser degree, between government and industry?

Recently, recognizing my own shortcomings in this area, I invited to lunch a well-known labor leader in a neighboring State and a U.S. Senator. After 2 hours in which we exchanged views (no holds barred) all three of us came away with a better understanding of the problems of the others and we all wanted another meeting.

This week one of the top labor leaders in New Jersey told me the time was overdue for management and labor to bury the hatchet, particularly in view of the international situation. It is heartening to find that leaders in every field are becoming aware of the necessity for government, labor, and industry to close ranks.

May I respectfully suggest to the representatives of Federal and State Governments present here tonight that industry would be glad to join any effort to bring about a closer working relationship with government and labor. Perhaps a better relationship might be stimulated by a conference of leaders in Washington, followed by meetings at the State level. Such action would not only be good business and good politics, but would be a definite first step toward the objective of developing unity.

I am sure every member of the New Jersey State Chamber of Commerce is ready and eager to develop closer relationships and teamwork with all groups which are interested in strengthening our economy. We must have unity to be productive—we must be productive to be strong and we must be strong to remain free.

A Sane and Strong Defense

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1959

Mr. DEROUNIAN. Mr. Speaker, David Lawrence's article of February 5 is an effective, sober reply to those Democrat presidential hopefuls who are perpetually endeavoring to undermine the faith of the American people in this Nation's military defenses.

It is interesting to note that these same critics of this administration's accomplishments in maintaining an effective defense were also here, on the Capitol scene, during the Korean fiasco, but had no comments then on the measure of the effectiveness of the Democrat administration's military preparedness at that time.

The article follows:

U.S. POWER SEEN SUFFICIENT TO DETER A RUSSIAN ATTACK

(By David Lawrence)

WASHINGTON, February 4.—Despite a concerted effort to scare the Congress into appropriating more money for intercontinental missiles, and the apparent attempt to play politics with national defense, the truth is that a world war is less likely today than it has been at any time since the close of World War II.

The outstanding fact is that the United States has sufficient military power today to deter the Soviet Union from making an attack. The price of such an attack is too big for the Kremlin to pay—for this would bring in retaliation the almost total destruction of all its major cities and the death of millions of people from one end of the Soviet Union to the other.

The average man is a bit confused by the persistent propaganda that tells him, "the Russians are ahead." But it is important to keep in mind these points:

1. The Soviets must go great distances across oceans with their missiles to hit at us.

2. The Soviets, in delivering their first blow, must simultaneously knock out every missile base and every air base in this country and in the territory of our allies in Europe and north Africa as well as in the Far East. It must be a 100-percent score.

BOAST HELD EMPTY

3. The Soviets must also knock out every U.S. submarine that is armed with missiles and every American or allied aircraft carrier at sea than can launch bombers carrying nuclear weapons. This, too, must be a 100-percent score.

4. The Soviets boast they can strike at targets with pinpoint accuracy, but one wonders how at a given moment a missile is going to find the exact spot that each submarine happens to be or the exact location in the air of each plane of America's fleet of heavy bombers. The unknown location of American warships is a deterrent, no matter how many missiles Russia has. The U.S. Air Force, moreover, here and overseas, keeps in the air in periods of crisis a certain number of nuclear bombers.

5. The Soviets not only must time their attack so it will knock out every allied base in Pakistan, Turkey, Italy, Spain, North Africa, as well as in Britain and France, but must make sure at the same time that all bases in this country are completely destroyed.

REPRISAL CONSIDERED

6. If the Soviets should miss any of these targets, they would promptly receive in reprisal a sweeping attack with H-bombs that would cause incredible devastation. It probably would take only 50 missiles or bombs to knock out 50 of their cities.

All these points, summed up, merely mean that the United States and her allies today still have the deterrent power they have been depending on for several years now. President Eisenhower at his press conference emphasized that the United States has a "balanced" defense. But the words "equivalent" or "balanced" do not convey the total significance of America's power to deter an enemy from attacking.

It is being said that the United States is failing to match each weapon now being produced by the Soviet Union. But the Soviets have need for more long-range weapons than America, because the Western allies have bases which are a short distance from the targets in Russia, whereas the Soviet air forces and missiles must travel across the Arctic or span the Atlantic or Pacific Ocean to reach America.

REDS' OBJECT: FRIGHT

There are, of course, many boasts being made nowadays by the leaders in Moscow. The purpose is to frighten America and her allies into submission to Soviet demands. But, as Mr. Eisenhower recalled at his news conference, the Soviets have bragged falsely in the past that they invented the flying machine, the automobile, and the telephone, and there's no reason why their claims about the performance of other inventions in the weapon field now should be accepted.

The United States Government has taken what is termed a "calculated risk." This means that it assumes the impracticability of any such simultaneous attack by the Soviet military machine as would destroy the American capacity to retaliate on a massive basis. The Kremlin would be taking a dangerous risk—the risk of terrible destruction—if they miscalculated in the use of their attack weapons.

HELD A STALEMATE

So the military situation is truly a stalemate in the sense that both sides have enough power to deter the other from initiating a war. Under the circumstances, there is little point in adding lethal weapons on a quantity basis merely to make sure that

the rubble and masses of dead people in cities in the Soviet Union are pounded to smaller pieces by more missiles.

America's position is secure primarily because the Soviet leaders are never expected to favor the suicide of their nation. Meanwhile, improvements in technology can add little to the security of either side—for the power to destroy another nation now is as efficient as it ever needs to be.

Plea for Conversation—II

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Plea for Conversation," by Arthur J. Goldberg, of the AFL–CIO, which should be read in conjunction with an address by Mr. Lansing P. Shield, president of the New Jersey State Chamber of Commerce, which appears at an earlier point in the RECORD.

The article follows:

PLEA FOR CONVERSATION
(By Arthur J. Goldberg)

Sidney Hillman of the Amalgamated Clothing Workers of America made a profound contribution to the philosophy of labor-management relations by recognizing the inter-relationship of the workers' welfare and of the union's welfare to the well-being of the entire industry. In itself this recognition of mutuality of interest was not foreign to the philosophy of the American labor movement, which has fortunately been free of theoretical class-warfare ideology. But Hillman's contribution was to pay more than lip service to the idea: to set up institutional forms and to mold the thinking of his associates and others in the labor movement, and of his and other managements, to this concept of interdependence.

It is more than thirty years since the Hillman approach to mature labor-management relations became established and accepted in the clothing industry. How widespread has its acceptance been in the entire labor-management scene?

Superficially, the portents in this field are good. Labor unions are strong in membership and resources, and they have weathered the recession without fundamental organizational weaknesses. Despite widespread unemployment and underemployment, unions are negotiating new contracts which provide higher wages and improved benefits. Big strikes are few; major setbacks even fewer. Spokesmen for both major political parties, when they are overseas and therefore not campaigning, boast of our free democratic trade unions. Even at home—and even when campaigning—both parties extol free collective bargaining, and only the most neanderthal among them attack the concept of trade unionism. Each year the Bureau of Labor Statistics adds more collective-bargaining agreements to its already bulging files. Nonetheless, I suggest that if we probe beneath the surface we will find that we are a long way from universal achievement of the Sidney Hillman type of labor-management relations.

One large geographical area—the Deep South—has eluded organization by unions in many industries. The southern textile industry functions in large part on a nonunion basis, as it has for many decades. Great sectors of the clothing and garment industries in the South are also nonunion. So, too, are much of the construction industry and broad areas of the service trades in which various unions have jurisdiction. Even in organized industries the South has become increasingly a haven for runaway shops and factories. To say that the state of labor-management relations in the South is by and large unsatisfactory is an understatement.

Or take the problem of the white-collar workers. The technological revolution in America is producing a constantly smaller number of blue-collar workers in relation to an increasing proportion of technicians and subtechnicians, engineers, and subengineers, management and administrative people of various kinds. Yet, with few exceptions, unions have not found the technique with which to bring the increasingly large number of this type of industrial personnel into the labor movement. And, with few exceptions, managements have resisted the organization of these workers.

Even more serious than this resistance to the organization of white-collar workers is a hardening of attitudes in areas already organized. This intangible factor is, in my opinion, the most serious problem of all. After some 20 years of responsible collective bargaining in the major industries, we might reasonably expect a certain measure of understanding and goodwill, of ability to see the problem of the other side, of mutuality of efforts to reach solutions satisfactory to both. Indeed, 10 years ago we seemed to be on the road toward achievement of mutual respect and understanding in our major industries; the Wilson-Reuther agreements at General Motors, the Murray-Fairless agreements in steel, and others that could be mentioned, all pointed to an era of maturity in labor-management relations. But in the recent past I see a hardening of attitudes, and retrogression rather than progress in understanding. Management is tougher, unions are tougher, and the results are not good for either side.

Throughout American industry there is a widespread movement away from genuine acceptance of and cooperation with unions. In their place we see a philosophy of labor-management relations that aims at keeping unions at arm's length and seeks, wherever possible, to go around the union to its members. This philosophy treats unions as necessary evils; it does not see them as constructive partners in achieving harmonious and productive labor-management relations.

What reasons can be given for this polarization of viewpoint? I do not believe that it can fairly be attributed to an overreaching on the part of the American labor movement.

Of course, situations can exist where the comparative bargaining strengths of unions and employers are not in balance. There are situations in which a labor surplus exists, union loyalty is small, and the market is such that the employer can afford to forego production for a period of time; there are also situations where the opposite is true. Economic injury can occur when too great bargaining power exists on either side, although it is one of the essentials of our free economic system that we do not interfere to redress every individual instance of economic disequilibrium so long as there is no general pattern of imbalance.

The real question, however, is whether it can be said that on the whole labor exercises too great economic power vis-a-vis the employers. Here I would unhesitantly say that in the total picture greater strength is still on the side of the employers. The American industrial scene is certainly not one in which poor, downtrodden, profitless business enterprises have every last penny extracted from them by powerful labor unions. Wage and profit statistics do not paint such a picture, either for the economy as a whole or for those industries in which the large unions—usually denounced as "monopolies" by labor critics—exist.

If the hardening of attitudes which I see is not due to economics, then, what is its cause? I am not sure that I know, although I know that something has happened. Perhaps the change in climate is largely a by-product of our political scene. However successful collective bargaining may appear on the surface in organized industries—and I am, of course, questioning even this—politically, legislatively, and philosophically labor and management today stand apart, and the degree of polarization of viewpoints in these areas is far greater than in collective bargaining.

If we were to believe the political spokesmen of industry, for example, labor and its allies are determined to socialize America, a claim which everyone should know is plainly nonsense. And, to be entirely fair, I recently read a speech by an outstanding and respected labor leader charging a great American corporation with seeking a Fascist America—a charge which, in my opinion, is equally nonsensical.

In some measure the current hardening of attitudes is certainly due to the philosophy behind the Taft-Hartley Act, which speaks of encouraging both collective bargaining and individual bargaining—a complete contradiction in terms. Then, too, there is the fact that today we have a new generation of leadership in business, and, to a lesser extent, in labor. The generation passing from the scene developed mutual understanding and sometimes even friendship from their wartime experiences in governmental posts such as the War Production Board and the War Labor Board; on both sides those of the present generation are more inclined to be organization men, with all of the parochial characteristics of that breed.

Whatever the causes, the opportunities for conversation, for a sensible and realistic exchange of views between the leaders of labor and the business community, are becoming fewer and fewer. And the stereotype images, indeed the caricatures, are taking the place of reality. When the two sides meet, as they do now more and more infrequently, they meet almost solely at the bargaining table.

The bargaining table, of course, plays an indispensable and essential role in our labor-management scene, but it has never been known as a place where one could think out loud about basic problems: every word counts too much. Thus, in the period of growing estrangement between labor and management, one of our most conspicuous lacks is an area where men of divergent viewpoint can meet and exchange ideas, rather than make debating points, and where they can think realistically about our common future.

Take the question of old age as an example. The collective-bargaining table has obvious limitations as a forum for providing an adequate contribution, both by management and labor, to this complex problem. If a union in the course of collective bargaining raises the question of developing a program for retired employees, the discussion is likely to revolve around the narrow point whether, in law, the union has a right, and the company the obligation, to bargain for workers already retired. But, putting the legal question aside, can there be any doubt that both industry and unions have an obligation toward employees and members who have devoted long years of their lives to their respective interests? I have the deep feeling, unsupported by evidence, that if we could discuss this problem frankly and mutually, outside the collective-bargaining table, joint programs could be evolved which would have a beneficial impact both within and without the framework of collective bargaining.

Save for the collective-bargaining conferences, however, there is little joint exchange

of opinion. Where, then, do management and labor express their views? The answer is clear: Almost everywhere except together.

The Business Advisory Council of the Department of Commerce, composed of our leading businessmen, migrates to Hot Springs, locks itself behind closed doors and unanimously assures itself that labor is ruining the counrty. The National Association of Manufacturers and the U.S. Chamber of Commerce go respectively to New York and Washington for annual conventions, at which a host of the participants are already convinced that the labor movement and liberal politicians are the root of all evil.

The labor movement does essentially the same thing. We talk to ourselves in our conventions and in our executive council meetings, we adopt our maximum positions and we hurl these neatly mimeographed resolutions over the fence at the opposition, which picks apart the commas and semicolons and answers them.

There have been occasional efforts, of course, to bridge this gap. Back during the war some leaders in the CIO proposed an industrial council plan. Many people in management saw it as a blueprint rather than an idea, and promptly proceeded to tear it to bits. Perhaps to industry the phrase connoted a sort of codetermination. If so, I would say, let us forget the name.

American labor has not the slightest interest in codetermination. While it recognizes the right of our European colleagues to proceed by their own lights, American labor has considered the European experience and has concluded that it infinitely prefers to make its gains through collective bargaining rather than through any joint control of industry. No responsible American labor leader wants to take over management's prerogatives. American labor completely respects management's rights and regards it to be not only the right, but the responsibility, of industry to manage its plants. Only out of well-managed, profitable enterprise can American labor expect to make the gains in wages, hours, and working conditions which it desires.

Even where the term "industry council" was not used, however, and hence where there was no chance that the phrase itself produced misunderstanding, recent attempts to reach a rapprochement between labor and management have failed. In 1955, for example, the National Association of Manufacturers invited George Meany to address its convention. When he accepted in all good faith, he was subjected, as he sat on the platform, to a barrage of critical oratory that certainly did not contribute to mutual understanding. Is it surprising that he replied in kind?

The problem is that a philosophic chasm separates labor and management in America. Instead of narrowing, this chasm widens every year. It is essential therefore that we search for honorable methods of bridging this gap. As one step in this direction, I would propose a labor-management assembly, modeled after the United Nations Assembly, to serve as an instrument for bringing together the leading figures in American industry and the American trade union movement for periodic examination and discussion of the issues which affect us all and in which we find so little common ground.

I suggest that this labor-management assembly be convened under the auspices of the Government of the United States and that the Secretaries of Commerce and Labor act as cochairmen. But I immediately add that this need not and should not be a Government-dominated organization, any more than the ILO, on the international level, is a government-dominated institution, although government participates along with labor and management representatives in its functioning. I view the role of government as providing prestige, of supplying facts, and of bringing together a secretariat for the conduct of the meeting.

To achieve any beneficial results, the labor-management assembly I am suggesting would have to meet at regular intervals with top-level attendance and top-level thinking from both sides. It would have to be attended by the chairman of the board and the presidents of representative big and small corporations, and by the presidents of trade unions, both accompanied by adequate staffs. I would propose that the present membership of the Business Advisory Council, enlarged by representative small businessmen, constitute the industry representation. The general board of the AFL–CIO, on which sits at least one representative from each affiliated union, large and small, would constitute labor representation—with the proviso that respectable unaffiliated unions should of course be invited.

I would hope that the labor-management assembly issue no statements unless they were unanimously agreed upon and unless the common denominator achieved was higher than agreement that sin is bad and morality good. If the labor-management assembly is to be successful, it must be a place to discuss and think about important issues in the labor-management area on a broader basis than is possible in collective bargaining—not to fight and bicker over the words of a contract or a resolution. If the discussions are to be profitable, they should be off the record except for agreed upon statements, so that no one need be concerned that his remarks will be cited against him. Indeed, I visualize more and greater benefits from small discussion groups under the auspices of the labor-management assembly than from general plenary sessions.

Finally, I would hope that at the periodic meetings ample opportunities would be provided, as at international assemblies, for social intercourse between individuals in the respective groups—something that has been increasingly lacking since the wartime agencies functioned and the importance of which cannot be overestimated. I believe that our top level labor and management representatives must be brought together for a period of as long as 2 or 3 weeks, once or twice a year, under circumstances in which they have no alternative but to talk; and when they are through talking, they should talk some more.

Participants would have plenty to talk about. A good example of a problem we are all concerned about is inflation. If one reads the industrial press, inflation is caused solely by rising wages. If one reads the labor press, inflation is the end result of superprofits and administered price policies. Is either side right, or are they both wrong? If each is right, why is inflation a worldwide problem—in underdeveloped countries, in countries that are primarily agricultural, in countries that export, in countries that import more than they export, in countries with effective labor movements and in countries with quite passive, or nonexistent, labor movements? Whatever the answer, if there is an answer, the problem is rarely discussed by responsible leaders of labor and management sitting together.

And what about automation? How often do the top leaders of labor and management get together to discuss all of the implications of automation, except for the very limited treatment that can be given to this all-important subject by their representatives trying to hammer out a collective bargaining agreement before a strike deadline? Even the whole issue underlying the "right to work" laws has never been adequately discussed except in a political setting. It is ironical that in the recent political campaign, "right to work" laws were supported by many companies whose industrial relations would be fearful of the stability of their personnel relations if they did not have a union shop.

What about the problem of corruption in the labor-management field? It is no secret that many businessmen have gloated over Dave Beck and Jimmy Hoffa and consciously or unconsciously cast them in public speeches as symbols of all labor leaders. On the other side of the fence, many labor leaders are happy about the revelations concerning Nathan Sheffermann and the businesses represented by him, and they label them as characteristic of all businessmen. Yet businessmen and labor men both know better; they deal with each other, and they know that the vast majority of both groups are honest. Should not this be talked about frankly and candidly so that legislation in this most important area can be based upon facts rather than slogans?

The questions could be multiplied. What about our educational system, in which both labor and management have a vital stake? What about national defense? Is it too much to hope that a labor-management assembly, with the help of academicians and public figures, could discuss the implications of John Galbraith's thesis that we have reached the state of an affluent society and must seek goals other than steadily increasing production of consumer goods? The list of subjects which could be discussed and which are not now being discussed is endless.

I am, I believe, a realist. I know that creating a forum such as I propose will not solve, and could even aggravate, the problem of reaching mutual understanding. I am aware that at a meeting such as this men will read prepared speeches, setting forth their maximum positions and that the pressure from their own side against concessions may dim the chance of fruitful discussion. But I am similarly aware of what the General Assembly of the United Nations, with even greater problems, has accomplished, as well as what it has not accomplished, in relaxing international tensions.

Without expecting too much, and without even hoping for too much, I believe that a labor-management assembly would be good for labor and management and the American public. For if we make no effort, the alternative is a widening of the chasm, a hardening of attitudes, and eventually the development of a militant class consciousness—the absence of which has been one of the strengths of democratic America.

What is called for is a greater recognition of mutuality of interest. Mind you, mutual respect does not mean artificial unanimity of thought. Within the framework of mutual acceptance and mutual respect, there is wide room for diversity of opinion. But can we not work, labor and management alike, to solve common problems through the development of a program which will promote the Nation's economic health, and will advance the growth of both business enterprise and labor? It seems to me that in both management and labor there must be the vision and imagination needed to develop a program based on the premise that what is good for America is good for those who own and manage and for those who belong to our free trade unions.

Gen. William Donovan

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. REED. Mr. Speaker, Gen. William Donovan, a lifelong friend of mine,

passed away yesterday at the Walter Reed Army Hospital where he had been a patient for a long period of time. Only a few days ago I sent my dear friend of football and first World War I days a message through a mutual friend. No man could know "Wild Bill" Donovan, as he was affectionately called, without respecting and loving him as a man. One of the great contributions which my friend made to his country was the fine example of patriotic citizenship that he set before the youth of our country. His was a life dedicated to the service of the United States. Few men have honored and ennobled his country in the field of patriotic service in the U.S. Army and in the diplomatic service to the extent that he has honored and ennobled it.

Bill Donovan, you have honored your country and your fellow citizens beyond any words of mine can adequately express. The heartfelt sympathy of Mrs. Reed and me are extended to Mrs. Donovan.

As a part of my remarks I insert the following excerpt from the Washington Evening Star of February 9, 1959:

HONORED AS ATHLETE

He was honored in quite another field in 1955 when Columbia University presented its athletic award to him to commemorate his days as one of the university's great quarterbacks and his 50 years of devoted service as an alumnus.

The general was one of the founders of the American Legion, although he differed with the Legion when it sought special benefits for able-bodied veterans.

Throughout the postwar years he often asserted that the United States was losing the cold war with the Soviet Union and called for stiff measures to combat it. He urged use of the best brains and most courageous spirits to wage an economic, political, and psychological counteroffensive to Soviet subversion throughout the world.

He also called for a just and reasonable security program in government and warned against "muddle headed" thinking on the subject.

C. R. "Pink" Gutermuth

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. METCALF. Mr. Speaker, last Wednesday night the National Association of Soil Conversation Districts conferred another honor upon one of this Nation's great conservationists.

At the annual banquet in Houston, Tex., the association gave C. R. "Pink" Gutermuth its distinguished service award.

NASCD President Nolen J. Faqua cited Gutermuth for his long years of successful effort in promoting management of the Nation's soil, water, wildlife and related sources. The award is given in recognition to soil conservation districts and in dedication to their principles of "Conservation—development—self-government." The association represents the more than 2,700 farmer-supervised soil conservation districts throughout the United States and its Territories.

Former recipients of the award include Ervin L. Peterson, Assistant Secretary, U.S. Department of Agriculture; Dr. Hugh H. Bennett, first Chief of the U.S. Soil Conservation Service; and Donald A. Williams, present SCS head.

Gutermuth has been the vice president of the institute, an influential private organization with headquarters in Washington, D. C., since 1946. Prior to that he was secretary of the American Wildlife Institute. He currently is a trustee and the secretary of the North American Wildlife Foundation, vice chairman of the Natural Resources Council of America, and a trustee of both the Wildlife Society and Stronghold, Inc. (Sugar Loaf Mountain, Md.).

He is chairman of the steering committe for the annual National Watershed Congress that is sponsored by more than 20 leading industrial, agricultural, and conservation organizations. From 1934 to 1942 he was first director of education and then director of fish and game of the Indiana Department of Conservation.

In 1957 he received the Leopold Medal of the Wildlife Society, the highest award of that professional organization of wildlife scientists.

Hawaiian Statehood

EXTENSION OF REMARKS
OF
HON. JOSEPH M. MONTOYA
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. MONTOYA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution of the State of New Mexico:

HOUSE JOINT MEMORIAL 5

Memorializing the Congress of these United States to extend the fullest rights, duties, and blessings of statehood upon Hawaii by admitting her to the Union of the United States of America

Whereas over 99 percent of the pupils in the in the public schools of Hawaii are citizens of the United States; and

Whereas the half million people of the islands include among their members large numbers of three great racial groups who speak five of the greatest languages heard around the world; and

Whereas members of nearly 50 language and racial groups and subgroups have long been associated together in amity and mutual esteem in the public schools of the Territory; and

Whereas as long ago as 1851 the islanders secretly petitioned these United States to be taken under our protection; and

Whereas the islands of Hawaii were annexed by joint resolution of Congress in 1898 and established as a Territory by law in 1900; and

Whereas the people of the Territory have amply demonstrated their capacity for self-government and self-reliance; and

Whereas the people of the United States must demonstrate to the world that our published ideals of liberty, fraternity, and equality are in truth a living creed to which we adhere: Now, therefore, be it

Resolved by the Legislature of the State of New Mexico, That the Congress and President of the United States be respectfully petitioned to admit Hawaii to statehood without delay; and be it further

Resolved, That copies of this joint memorial of the Legislature of the State of New Mexico be sent to the President of the United States, the President of the U.S. Senate, the Speaker of the U.S. House of Representatives, and to the members of the New Mexico delegation to the U.S. Congress.

ED V. MEAD,
President of the Senate.
HAL THORNBERRY,
Chief Clerk of the Senate.
MACK EASLEY,
Speaker of the House of Representatives.
ALBERT ROMERO,
Chief Clerk of the House of Representatives.

Washington: A City in Trouble

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 19, 1959

Mrs. DWYER. Mr. Speaker, I have throughout my legislative career, been intensely interested in the problems presented by the rapid growth of our metropolitan centers. I have also keenly felt the need of having our Nation's Capital as the showplace of our great country. It is for this reason that I was extremely interested in a recent article appearing in Changing Times concerning the critical municipal problems facing the District of Columbia.

This article is all the more interesting in that it points up the fact that the voteless citizens of Washington are forced to look to Members of Congress from all areas of the Nation as their representatives. Because the District of Columbia has for many years been denied its right to local self-government, we are compelled to be members of their city council. I do not think that it is any reflection on our services to say that part-time attention by an overworked Congress is no substitute for a vigorous, locally elected municipal government. The serious problems the District now faces reflects this fact.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the article "Washington: A City in Trouble."

WASHINGTON: A CITY IN TROUBLE

A pilgrim to our Nation's Capital comes to behold the Lincoln Memorial's brooding majesty and the classic grandeur of the Capitol. He sees these noble sights and is proud. But occasionally a visitor turns away from Washington the Capital to inspect Washington the City. What he discovers then may damage his patriotic pride. Washington is a city in trouble. Our "showplace of democracy" has some shocking shoddy exhibits on display.

Suppose, for example, that you pass up the tourist shrines for a look at the principal downtown shopping area in this capital of the free world. You expect something impressive of the core of a city of 2 million, our 11th largest metropolis. But what do you find?

"Downtown" is a characterless conglomeration of obsolete, narrow-fronted struc-

tures along a scant half-dozen blocks of F Street and G. Most of the buildings are three or four stories high, their upper floors blank and grimed from long disuse. There is nothing here that the citizen of Omaha, Kansas City or Duluth could not match or surpass right at home.

You think, perhaps, that you have missed the main stem? Then roam farther. You may happen upon Connecticut Avenue, known in the travel literature as "fashionable." Here there are a number of shops of modest distinction. Still, not even the most provincial visitor would mistake it for Fifth Avenue.

Wandering in the opposite direction from downtown is even more distressing. Quickly you encounter the welter of cut-rate retailing establishments that line Ninth Street and Seventh, many of them quite shabby and all of them cluttered.

The culture-minded might note in passing the absence of that standard ornament of great capitals, an opera house. Washington has a local operatic troupe of some merit—three productions a year—but no opera house. When New York's Met comes here on its annual tour of the provinces, it holds forth in a movie house. There is no adequate home, either, for ballet, orchestral concerts or chamber music. Congress recently authorized construction of a National Cultural Center in Foggy Bottom. Money to build it, however, will have to be raised by public contributions.

WHAT'S GOOD ENOUGH FOR HOGS

Painful as these observations may be to the out-of-towner, more and worse spectacles await. Just outside the business zone lies a morass of classic slums, acres and acres of them—starkly ugly, desperately overcrowded and dilapidated.

"The hog house on my farm," a western Senator recently declared on the Senate floor, "would be a much better place to house families than many of the places within sight of the Capitol."

His indignation caused no stir. Washington is inured to such protests, heard whenever legislation concerning housing in the city is considered. Inevitably, there is a picture in the paper showing the distinguished lawmaker gingerly eyeing a tottering privy in a trash-heaped backyard with the Capitol dome looming in the background. The periodic reappearance of this photographic cliché evokes little comment. There is silent disapproval but no sense of outrage.

Perhaps a tourist compound ought to be established, bounded by the White House, the Capitol, the Jefferson Memorial and Arlington Amphitheater. No special penalty would be necessary for border violations. What you would see would be punishment enough.

Yet, not even the most discerning tourist can begin to plumb the depth of Washington's troubles. He may observe that a great deal of the Northwest section bears the scars of creeping blight. But he could only guess that this area contains the city's "wickedest precinct," where many hard-working, struggling families live surrounded by disease, crime, and delinquency. Here more than a quarter of the homes are deficient in three or more respects, such as being overcrowded or lacking adequate plumbing or water supply. Incomes average less than $250 a month, although even modest family living here calls for about $400 a month. During the past year, schoolteachers were buying lunches out of their own pockets for hungry children, and 1,300 children were absent from school because they had no shoes.

This area has been staked out for a renewal program featuring demolition of hopeless buildings and rehabilitation of those worth salvaging. How successful this effort will be remains to be seen. Bad as conditions are, they are better than those that existed until recently in the Southwest quarter. There, behind the stately Government buildings on the Mall, housing was so far gone that it was leveled to the ground. It will be replaced with handsome town houses and luxury apartments that few of the area's former residents can afford to occupy.

Clearing Washington's slums is complicated by the fact that it is becoming a black city. Already 48 percent of the District of Columbia's residents are Negroes, and soon they will outnumber whites.

The colored Washingtonians are not shiftless Uncle Toms. A high proportion are well schooled and hold white-collar jobs. But the low-income slum dwellers also are predominantly Negro. And, unlike their white neighbors, they cannot escape the city by moving to the suburbs. By and large, the Maryland and Virginia suburbs do not welcome Negroes.

The inevitable, unanswered question is, How can the city's congestion be eased when so many of its people have no other place to go?

THE PENALTIES OF GROWTH

But Washington's woes are not just the worries of its colored residents. White Washingtonians are bedeviled by dilemmas, too.

Take traffic. Washington's big industry, government, is not on the rim of the business district but smack downtown. Over half a million people fight their way into the heart of the city every morning and back out again at night. Some 400,000 come by car, nearly 200,000 more by public transit, mainly buses that vie with private autos for street room. There are five private transit companies, regulated by four public agencies.

The ebb and flow of this mighty tide produces monumental, snail-paced traffic jams on the arteries leading north and east to the Maryland suburbs. Traffic to the Virginia suburbs is bottlenecked at the Potomac bridges, which bear the frightful burden of one of the world's heaviest traffic concentrations. Six solid lanes converge on one span that, alas, has room for only three and built for two.

Or take the water supply. The city proper quaffs the Potomac. So do some suburbs. Others are supplied by private wells, subdivision wells, and several systems tapping nearby streams. Some water systems are publicly owned, others are private utilities. Twenty-five different water rate schedules are in effect. What you pay depends on where you live. The cheapest rate applies in the District. In some suburbs, water costs nearly four times as much.

So far, there has been enough water to go around, despite occasional droughts in the suburbs. But the region's thirst has grown stupendously. The water table has dropped and already dependence on wells is risky. Competition for the Potomac's bounty has become so keen that someday the river could be drained dry before it reaches Washington.

The suburbs are clawing each other in their anxiety to preempt future water supplies. One Virginia suburb, Falls Church, makes a tidy profit peddling water to its neighbors.

Or take the Potomac itself. To the casual visitor, this watery expanse looks like an elegant recreational resource. But no Washingtonian would willingly dip a toe into it. The Potomac is scandalously polluted. Its waters are thick with debris and silt and fouled with raw sewage. Only 32 percent of the solids are removed from sewage before it is dumped, so to speak, in the front yard. If it rains too hard, however, untreated sewage overflows directly into the river. The situation is most noisome in midsummer. Then the Potomac's flow becomes so leisurely that a drop of water takes 40 days to pass the city. In the meantime, tides slowly swish the accumulated filth back and forth before the city.

Washington's problems, of course, are not novelties. Every big city worries about stagnation downtown, the traffic buildup and the drain of vitality to the suburbs. These are repercussions of explosive growth. Washington has earned its growing pains by doubling in size since 1940. A decade ago, it was solemnly foreseen that the population would reach 2 million by 1980. It has hit that mark already.

IS ANYBODY IN CHARGE?

The real puzzle is why this city, so much more fortunately situated than some, should be so helpless before its problems. Much of the time it appears to be apathetic to the point of criminal negligence. On other occasions, as when a proposal for a new Potomac crossing was stalled in a dispute over the comparative esthetic merits of a bridge versus a tunnel, it simply looks inept. Shouldn't a city whose one big industry is government do a better job of governing itself?

One basic trouble is that the power to govern is Balkanized. The city proper is no city at all, but a compact Federal enclave of 70 square miles known as the District of Columbia. The real Washington is a metropolitan area covering nearly 1,500 square miles. While the District of Columbia is under Federal jurisdiction, the actual city also embraces two Maryland counties, Montgomery and Prince Georges, two Virginia cities, Alexandria and Falls Church, and two Virginia counties, Arlington and Fairfax. In total, counting all units from the U.S. Government and two sovereign States down to the smallest trash-collection district, some 79 governments have a finger in running Washington.

Still, one can't put all the blame on the multiplicity of jurisdictions. Washington would be in trouble if it never had outgrown the District of Columbia. Its local governments is an anomalous freak unlike anything else in the land.

The District, remember, is neither city nor State. It isn't even a Territory. Its citizens have no governor, no council, no mayor. Like convicted felons and mental incompetents, they have no vote in either local or national affairs.

In the first half of the last century, Washingtonians did elect a city council and for a period chose their own mayor. As late as the 1870's they were choosing members of one house of a local bicameral assembly and a nonvoting delegate to Congress. Since 1878, however, the District has been run by a three-man Commission appointed by the President. Two are civilian residents of the District, the third an Army officer chosen from the Corps of Engineers.

Structurally, the local government is an administrative hodge-podge. An issue of land-use planning, for instance, is likely to be caught in a snarl involving the National Capital Planning Commission, a Federal body headed by a resident of St. Louis, Mo.; the Redevelopment Land Agency, an independent Federal body; the National Capital Housing Authority, still another independent agency; the highway department, a division of the District Government; the National Park Service, a Federal agency with duties all over the United States, its Territories and possessions, perhaps even the Commission of Fine Arts and the Bureau of the Budget, which has global worries.

There is a body known as the National Capital Regional Planning Council intended to provide a meeting ground for these diverse interests and their Maryland and Virginia counterparts. But it has neither money nor power.

FIVE HUNDRED MAYORS TOO MANY

For that matter, even the proconsular District Commissioners have little final author-

ity. The actual seat of power is on Capitol Hill, in Congress. Both Senate and House have standing committees to make law for the District of Columbia. In effect, the city has two separate but overlapping city councils. The current mayors are elected by voters of South Carolina and Nevada. Since few Congressmen or Senators are anxious to lavish their eminence on municipal matters of no consequence to their constituencies, assignments to the District committees are not eagerly sought.

A national legislature of 531 members makes a cumbersome town council. City ordinances have to run through the same legislative mill as multibillion-dollar measures affecting the security of the Nation and the peace of the world.

Under such conditions, Washingtonians themselves hardly can be blamed for not running a more efficient city. They are alert, intelligent and perhaps more solidly organized into vocal neighborhood associations than the people of any other city. But their disenfranchisement obliges them to focus on neighborhood concerns. They wind up obsessed by petty problems, often apathetic to big ones.

At the same time, a high proportion of Washingtonians are transplants from elsewhere in the Union. They tend to consider themselves citizens of Kalamazoo or Keokuk, or wherever they hail from, who are temporarily resident in the Capital. This is license for indifference to local issues, except when a local matter touches some sensitive nerve. Then they needle their Senators and Congressmen from back home into backing their individual views. Sometimes this bigtime lobbying on smalltime matters reaches ludicrous proportions, as when almost 100 separate bills were introduced in Congress to block the Government from obtaining a needed building site that happened to be owned by a farflung and politically hep organization.

Washington's lack of control over its civic destiny produces a curious lack of local leadership, too. There are no industrialists of the stripe whose zeal for civic betterment has meant so much to other cities. Washington's businessmen are limited primarily to real estate, retailing, and local banking. There have been some recent stirrings of civic consciousness, but so far few men of vigor and vision have emerged to tackle the city's problems.

Able men who live beyond the city limits find ample uses for their talents in their own bailiwicks. Washington's homegrown leaders meet one of two fates. Either they make a bid for national stature, trading on opportunities that naturally abound in a national capital, or they attain some innocuous local celebrity such as becoming chairman of the Cherry Blossom Festival. But their chances of becoming effective city leaders are slight.

So here bumbles your Nation's Capital, a city more populous than 17 different States, with nobody in charge and everybody hobbled. If George Washington could return today, he might be amazed to see how the city he and Major L'Enfant conceived had outgrown their vision. Yet, one wonders. Would Washington just sleep here?

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Four Hundred Million Dollars To Be Spent—But Where and for What?

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 21, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, I have introduced a bill, H.R. 286, at the request of the Department of State, which provides for the appointment of an assistant to the Secretary of State to assure joint policy and planning and equitable budgeting of exchange-of-persons program and administrative cooperation between staffs engaged in carrying out such programs.

Senator J. WILLIAM FULBRIGHT, distinguished chairman of the Committee on Foreign Relations of the U.S. Senate, has introduced the companion bill, S. 455, for himself and Senator HUBERT H. HUMPHREY, in the other House.

I include here the text of two letters I have received from the Department of State, together with information on progress made to date in the coordination of the international educational and cultural relations of the United States.

I include here the text of my bill, H.R. 286, which the gentleman from New York [Mr. WAINWRIGHT] has cosponsored with me as H.R. 1987.

Finally, I include here the text of a splendid background article from the St. Louis Post-Dispatch by Raymond P. Brandt, chief Washington correspondent of that great newspaper. This article shows conclusively, I think, that this legislation is long overdue and, further, why it must be enacted without further delay.

DEPARTMENT OF STATE,
Washington, December 8, 1958.

The Honorable FRANK THOMPSON, Jr.,
House of Representatives.

DEAR MR. THOMPSON: Last year the Department endeavored to obtain, through legislation which you sponsored, the establishment of the position of a Special Assistant to the Secretary for International Cultural Relations. As you know, the Department has for some time recognized the need for the creation of such a high level position, to be filled by Presidential appointment by and with the advice and consent of the Senate, in order to achieve the important objective of having a coordinated, governmentwide effort in the field of our exchange-of-persons and other cultural programs with foreign countries.

In the last session of Congress S. 3112 (companion bill to H.R. 10031), providing for the establishment of such a position, passed the Senate but was not acted upon by the House. The urgent need for having a Special Assistant to the Secretary, however, remained.

In order to deal with the problem on an interim basis, and until legislation can be obtained which will give this position the status which the Department believes it should be accorded, there has been created within the Department by Executive order the position of Special Assistant to the Secretary for the Coordination of International Education and Cultural Relations at the GS–18 level. The Honorable Robert H. Thayer, former Minister to Rumania, who has more recently served as special assistant to the Director of the Bureau of Intelligence and Research in the Department, has been selected to fill this position.

It is our hope that legislation similar to S. 3112 can be obtained in the next Congress. Knowing of your deep interest in this matter, I hope that we may continue to look to you for assistance in this regard.

If you should wish to discuss this matter at further length, I shall be happy to meet with you at your convenience.

Sincerely yours,
WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

SPECIAL ASSISTANT TO THE
SECRETARY OF STATE,
Washington, February 2, 1959.

The Honorable FRANK THOMPSON, Jr.,
House of Representatives.

DEAR MR. THOMPSON: I enjoyed very much listening to your speech at the panel on the performing arts during the IIE Conference last week and only regret that a meeting with the Under Secretary at 4 o'clock made it impossible for me to stay until the end of the meeting and take the opportunity of meeting you. I am taking the liberty of enclosing a copy of a progress report which I sent the Secretary recently and hope for an early chance to meet with you and discuss the increasing number of problems with which I am necessarily confronted in this job.

Sincerely yours,
ROBERT H. THAYER.

To: The Secretary of State.
Through: S/S.
From S/IC—Robert H. Thayer, Special Assistant to Secretary of State for Coordination of International Cultural Affairs.
Subject: Progress Report on Coordination of International Educational and Cultural Relations.

Since I have assumed the position of Special Assistant for the Coordination of International Educational and Cultural Relations the following actions have been initiated:

1. A meeting has been held, called and chaired by Under Secretary Herter, of representatives at the Under Secretary level of 15 Government agencies engaged in the field of exchange of persons, technical assistance, etc., to explain the basis for the creation of the position of Special Assistant. The minutes of this meeting are attached (tab A) together with a copy of the charts used by Under Secretary Herter at the meeting (tab B).

2. At Under Secretary Herter's request, these agencies have designated individuals at the Assistant Secretary level upon whom I have personally called to discuss preparations for the issuance of questionnaires in the conduct of a survey of what those agencies are doing in this field. A list of these agencies with the name of the individuals designated is attached (tab C).

3. Questionnaires have already been forwarded to IES, ICA, USIA, and the Department of Defense with the request that this information be provided by the end of this month, if possible.

4. A task force has been organized at the working level to set up and staff a clearinghouse of information which will be kept current and maintained as a basis for planning the coordinated U.S. effort, country by country; a brief prospectus of this clearinghouse is attached (tab D).

5. I am making personal calls on the Presidents of the principal foundations to try to persuade them to conduct their own survey on what all non-Government agencies are doing in this field and to set up a celaringhouse for this information. I have had encouraging reactions from Dr. Heald of the Ford Foundation and particularly from Dr. Gardner of Carnegie Corp.

6. In cooperation with ICA, I hope to organize a 2-day seminar of seven or eight leading university presidents at some such place as Arden House for the purpose of discussing with appropriate representatives of State, ICA, USIA, and Defense the problem of whether the type of education being given to foreigners visiting the United States annually is appropriate to the objectives of our overall foreign policy.

7. In cooperation with ICA, I am discussing the assignment of a research officer to make a study of whether, in carrying out our programs of exchange of persons and technical assistance, we are making appropriate use of the available facilities of the universities of the United States.

8. I am preparing a cabinet presentation of plans for the coordination of the work of all U.S. Government agencies in this field, including a draft of an Executive order to be signed by the President directing that such coordination be the responsibility of the Secretary of State.

9. I am under continuous pressure from various parts of the Department to name a specific date on which I shall be prepared to take over the operating functions of the sections of the public affairs area now engaged in the exchange of persons and international, educational, and cultural field. These sections include the International Educational Exchange Service, East-West contacts staff, UNESCO relations staff, cultural presentation staff, arts and monuments adviser, cultural planning and coordination staff, and the Executive Secretariat of the U.S. Advisory Commission on Educational Exchange. However, until my functions as coordinator have been more fully developed, and the above described coordinating plans further advanced, I believe that I should devote all of my time to this larger and more important effort and postpone the transfer of operating functions. In any event, I would expect the actual operation of the various sections of the public affairs area to be carried out by a deputy under by general supervision, and I believe it most important that this deputy should be selected with particular care.

REPRESENTATIVES OF U.S. GOVERNMENT AGENCIES ENGAGED IN INTERNATIONAL CULTURAL RELATIONS PROGRAMS

Department of Health, Education, and Welfare: Robert A. Kevan, Assistant to the Secretary of HEW for International Affairs.

U.S. Information Agency: Saxton Bradford, Deputy Director, Policy and Planning.

Department of Labor: George Lodge, Assistant Secretary.

National Archives and Records Service: Dr. Robert H. Bahmer, Deputy Archivist.

Department of the Interior: Royce A. Hardy, Assistant Secretary for Mineral Resources.

National Science Foundation: James M. Mitchell, Associate Director (Management and Public Affairs).

Library of Congress: Rutherford D. Rogers, Chief Assistant Librarian.

Department of Agriculture: Clarence L. Miller, Assistant Secretary.

Department of Defense: Charles H. Shuff, Deputy Assistant Secretary for Military Assistance Programs (Office of Assistant Secretary for International Security Affairs).

Smithsonian Institution: Mrs. John A. Pope, Chief, Traveling Exhibition Service.

Department of Commerce: Ralph Homan, Special Assistant to the Assistant Secretary for International Affairs.

Department of the Treasury: T. Graydon Upton, Assistant Secretary of the Treasury.

U.S. Atomic Energy Commission: John A. Hall, Assistant General Manager for International Activities.

International Cooperation Administration: James H. Smith, Jr., Director, ICA.

PROPOSED CLEARINGHOUSE OF INFORMATION ON THE INTERNATIONAL EDUCATIONAL AND CULTURAL ACTIVITIES OF AGENCIES OF THE U.S. GOVERNMENT—A PROSPECTUS

THE OBJECTIVE

To make it possible for those planning a program of educational and/or cultural activity in any foreign country to be accurately informed concerning existing U.S. programs in that field in order that such planning can take its appropirate place in an effective, coordinated U.S. effort.

THE PROBLEM

To set up an organization with modern, mechanical facilities adapted to maintain information on activities of U.S. Government agencies in the international educational and cultural field; to keep such information current in the various categories appropriate for use in coordinated planning; and to maintain evaluated information on the tools necessary for the conduct of such programs.

DISCUSSION

This clearinghouse should be charged with maintaining current information on all U.S. activities, country by country, in a form usable at any time for general information purposes. The clearinghouse should be appropriately staffed, not only to catalog existing activities of Government agencies, but also to keep information on the tools useful to the conduct of these activities by the agencies concerned, such as an evaluated list of area specialists, teachers of English and individual foreign languages, up-to-date methods of language teaching, current educational and cultural needs of individual countries, etc.

The clearinghouse should be charged with the responsibility of disseminating to various Government agencies detailed information regarding related activities of other agencies and should be prepared to issue upon request special reports covering information in its files or from other sources. All interested agencies should be represented directly or indirectly in the clearinghouse to keep their agency currently and appropriately informed of its resources.

The clearing house should be charged with the responsibility of maintaining a public bureau of information which would answer requests for information from private, nongovernment individuals and institutions with legitimate interests.

It should be emphasized that this information clearinghouse is not intended to be a place which would contain only an inventory of activities, but is to be a center where readily available information can be collected, processed, and disseminated as an aid to the general coordinating problem. Its existence is based on the theory that complete knowledge of all programs in the educational and cultural field being conducted by U.S. agencies in any one country will enable agencies to fill existing gaps, prevent duplication, and generally facilitate effective, coordinated action in that country.

It is understood, of course, that the maintenance of such a clearinghouse will require a substantial staff and the annual expenditure of considerable sums of money for maintenance and servicing. This staff should consist of an adequate number of technicians to operate the most modern machinery for making the information contained therein available in its most usable form, as well as individuals qualified to process the information and do such evaluation as may be possible. Research and reports personnel should also be attached to the clearinghouse.

It is hoped that nongovernmental institutions can be induced either to set up a similar clearinghouse of activities in the educational and cultural field in which they are engaged, in which event a close liaison would be maintained between the two clearinghouses, or else to participate in the U.S. agency clearinghouse in whatever manner may be appropriate.

H.R. 286

A bill to provide for the appointment of an assistant to the Secretary of State to assure joint policy and planning and equitable budgeting of exchange of persons programs and administrative cooperation between staffs engaged in carrying out such programs

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) there shall be in the Department of State an assistant to the Secretary of State to be known as the Assistant for International Cultural Relations (hereafter referred to in this Act as the "assistant"), who shall be appointed by the President by and with the advice and consent of the Senate.

(b) The annual rate of basic compensation for the position of assistant created by subsection (a) of this section shall be established by the Secretary of State in an amount not to exceed the annual rate of basic compensation established by section 106(a) of the Federal Executive Pay Act of 1956 for Assistant Secretaries of State.

SEC. 2. It shall be the duty of the assistant, under the general direction of the Secretary of State, (1) to coordinate the international exchange programs of the Department of State under section 32(b)(2) of the Surplus Property Act of 1944, as amended, the United States Information and Educational Exchange Act of 1948, as amended, the Mutual Security Act of 1954, the International Cultural Exchange and Trade Fair Participation Act of 1956, or other provisions of law relating to the exchange of persons, with a view to assuring joint policy and planning and equitable budgeting of such programs, and administrative cooperation between staffs engaged in carrying out such programs, and (2) to perform such other functions as may be assigned by the Secretary of State or prescribed by law.

[From the St. Louis Post-Dispatch, Feb. 1, 1959]

FOUR HUNDRED MILLION DOLLARS TO BE SPENT—BUT WHERE AND FOR WHAT?

(By Raymond P. Brandt)

WASHINGTON, January 31.—This year the American Government and American private institutions will spend more than $400 million on educational, cultural, and technical exchanges of persons with free and neutral nations, yet no one knows exactly where the money goes or can estimate the value of these programs to this and the other countries.

An attempt to correct this situation has been made in the appointment of Robert H. Thayer, former minister to Rumania, as Special Assistant to Secretary of State John Foster Dulles for Coordination of International Educational and Cultural Relations.

His selection last month followed Senate passage last session of a bill jointly sponsored by Democratic Senators J. WILLIAM FULBRIGHT, of Arkansas, and HUBERT H. HUMPHREY, of Minnesota, calling for the appointment of an Assistant Secretary of State to do this needed job. A similar bill died in the House but legislation to make Thayer an Assistant Secretary of State is expected to be approved this session.

The need for a high-level official to study, coordinate, and subsequently perhaps to supervise more than a score of major exchange projects, was emphasized in a recent report by the International Operations Subcommittee of the House Government Operations Committee. The report said in a forward:

"Government programs in international education are both extensive and varied. In view of their cost, their worth is a matter of concern to the U.S. Government and the American taxpayer.

"A major obstacle to appraising their value has been the fact that nowhere has it been possible to find an ordered body of information of how many programs and of what kind are currently in operation."

The 251-page report was the work of five experts on the subcommittee staff and in the Legislative Reference Service of the Library of Congress. The report itself said in part:

"Although some informal and irregular intra-agency relationship exists, no single executive or legislative agency or committee has an overall responsibility for coordination of these programs. * * *

"An accurate calculation of total expenditures by the U.S. Government for international educational activities cannot be made from data presently available. Not even estimates of some of the costs are available."

The report, both a survey and a handbook, is the most definitive study yet made of these programs, yet it lacks timely information about the system the Soviet Union uses to get greater returns for the money it spends on similar exchanges.

Thayer doubts that his or any other Government agency can get adequate information about the Soviet system of educational, technical, and cultural exchanges. Both the Communist government and the Communist Party have had for 30 years a worldwide system of recruitment for young people and technicians to come to the Soviet Union, later to its satellites, for education and indoctrination. This enables the Kremlin to use the services of Russian-trained nationals in local revolutionary and subversive activities.

It is known that last year at least 654 young people from the free world went to Russian schools, whereas only 19 Russian students enrolled in free world educational institutions. It is not known how many students the Soviet bloc nations exchanged among themselves.

It is not known how much the Kremlin spends annually on its entire international educational, cultural, and technical exchange program. It may be more or less than the amount spent by Americans.

Thayer, who has been on his new job for about 6 weeks, estimates roughly that the Government and American private organizations will spend a total of $429 million this year on about 250 exchange programs. The general breakdown follows:

	Million
Nongovernmental—$215 million International Cooperation Administration	$129
State Department	20
Defense Department	35
U.S. Information Agency	10
U.S. share of multinations agencies	20

The nongovernmental institutions include such famous and respected names as the Carnegie, Rockefeller, Ford, and Guggenheim Foundations, which consider improvement of public-health conditions as part of the educational and technical programs. Their lesser operations extend down to the internal programs of American universities and religious organizations.

Far more information is available about nongovernmental projects, individually, by countries, and even continents, than about the Federal programs. There is considerable cooperation among the larger foundations to avoid duplication and competition.

The International Cooperation Administration's part in the Government's share is mostly for technical assistance. It was not until this week that the ICA made public its outlays by countries for its overall economic and military aid. For much of its technical and educational activities the ICA uses the equivalent of millions of dollars in local currencies it receives from the sale of surplus agricultural products abroad. The House report estimated these technical assistance programs provided training and teaching opportunities in the United States and abroad for about 11,800 persons in fiscal year 1958.

The State Department's operations are mostly for the Fulbright scholarships which the Arkansas Senator initiated in 1946. They are financed chiefly by local currencies and credits obtained from the sale of American wartime materials. Later laws provided additional funds in local currencies running into the equivalent of unestimated millions of dollars. The $20 million listed for the State Department is an annual appropriation in American money for supplemental payments to Americans abroad and, in exceptional cases, to foreigners studying in this country. There were more than 6,000 participants in these programs in 1957. About a third were Americans studying or teaching abroad.

The Defense Department expenditures, roughly estimated, range from the cost of American military advisory missions in allied and neutral countries down to the training of foreign noncommissioned officers in this country.

Similar but far smaller unlisted expenditures are made by the Atomic Energy Commission, the Public Health Service, and others.

The U.S. Information Agency's $10 million quota covers libraries abroad, its educational broadcasts and distribution of books, magazines, and motion pictures.

The multinational agencies' outlays go mostly to the United Nations educational, scientific and cultural organization and the Organization of American States, formerly the Pan-American Union.

The House committee report hit only the high spots of the problems faced by Thayer. Although the five experts had unusual access to all Government departments and agencies and worked for more than a year, they made no positive recommendations. Their criticisms were by implication.

Thayer told the Post-Dispatch he thought it would take more than a year for him and his small staff to assemble the basic information essential for policy recommendations to Federal agencies. He emphasized that the Federal Government could not dictate to the private groups, only suggest informally the benefits of cooperation and coordination.

"The first step," he said, "is to establish a clearinghouse of all pertinent information, governmental and private. * * * Once we have the basic information, the next step will be to keep it current and available. We shall start with about 15 agencies and 10 countries. We hope to have the latest IBM machines to keep track of every exchange activity, including the nongovernmental, in every country.

"Such complete information about the major programs in all countries would enable the American agencies to coordinate their programs and avoid duplication. It might be found that we were doing enough in one country and that new efforts could be more advantageously put in some other country."

Thayer said he thought such information should be available both in this country and the other participating countries. One unanswered question is whether lists should be kept of individuals benefiting from the exchanges. The theory advanced by opponents of lists is that if a participating country came under control of the Communists, the participants would be among the first to be liquidated.

Persons advocating the individualists idea argue that the local Communists would have such information anyway and that it is desirable to follow up the careers of the participants to determine whether the programs are worthwhile. The follow-up process is just getting started in some Government agencies.

Once the information clearinghouse is established. Thayer said, there could be a coordination of Government expenditures and policies and closer cooperation with the private agencies.

Eventually, it is believed, it would be more efficient if a single section of the State Department had overall policy control over the governmental exchange programs, comparable to the direction given American foreign aid by C. Douglas Dillon, Under Secretary of State for Economic Affairs.

Thayer's experience has been chiefly as a lawyer and foreign service officer. He is 57 years old, a son of the headmaster of St. Mark's preparatory school in Massachusetts. He attended Amherst College and Harvard University, where he was a member of the exclusive Porcellian Club. He was in the New York law firm of Cadwalader, Wickersham and Taft.

In 1926 he married Virginia Pratt, whose family fortune stemmed from the Rockefeller oil interests. He was an assistant district attorney for New York County from 1937 to 1941, when he entered the Navy as a lieutenant commander and emerged in 1945 as a commander. He was an assistant to John Foster Dulles at the San Francisco U.N. conference in 1945. He lost his contest for a seat in the House from Brooklyn in 1946.

From 1951 to 1954 he was assistant to the American Ambassador to France, in charge of SHAPE relations. In 1955, he was appointed American Minister to Romania. He returned to this country to serve in the intelligence and research division of the State Department.

Let's Hope the Flagmakers Get Another Job Real Soon

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial from the Reading (Pa.) Times:

LET'S HOPE THE FLAGMAKERS GET ANOTHER JOB REAL SOON

We hope the flagmakers will take it a bit slowly in the production of the new 49-star flag dictated by the admission of Alaska into the Union. For we hope by the time the 1st session of the 86th Congress completes its chores, Hawaii will be the 50th State.

We are impelled to this thought by the news in the papers the other day that the first session of the Legislature of the State of Alaska got underway and we fell to wondering whether a similar conclave might not be getting into action in Honolulu about this time next year.

The State of Alaska has many problems before it. It will have to evolve its own way of life and legislate accordingly. And Alaska's way of statehood is bound to be quite different, up there close to the Arctic, close to Red Russia, and still fairly close to the main body of the States, from that of other States. We in the older 48 States must not expect miracles day after tomorrow. We must let Alaskans feel their way and if they occasionally do something which we do not see eye to eye with, as fellow Americans we must try to understand them.

In the meantime Hawaii has made its big pitch for statehood. Since Alaska has now been admitted, it is our view that not a single argument against Hawaiian statehood can hold water any more. What's sauce for Alaska should be sauce for Hawaii, too.

Address of O. R. Strackbein, Chairman, the Nationwide Committee on Import-Export Policy, Before the National Wool Growers Association, Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FISHER. Mr. Speaker, under leave to extend my remarks, I include the following speech made by Mr. O. R. Strackbein, chairman of the Nationwide Committee on Import-Export Policy, before the National Wool Growers Association at its annual convention in Portland, Oreg., on January 28, 1959:

Woolgrowers in the United States have been interested in tariff protection for many years, going back several generations. It has been a continuing fact that the leading wool-producing countries of the world have been able to produce this fiber at costs well below our own; and wool production in this country could not have survived without tariff protection.

Of course there are those esteemed academic economists who say that any industry that cannot compete with imports should be rooted out. Inability to compete with imports without a tariff, they say, is convincing evidence of inefficiency. These economists, socalled, are wholly unrealistic, however, in their stubborn oversight of the factors that make for higher costs here, some of them the direct result of national legislation. They also do not say to what use the range lands of the West should be put if they were no longer to grow wool. But for wool growing millions of acres of land would go to waste and presumably should be left to the coyotes and jackrabbits.

Unfortunately, the free-trade philosophy as expounded by the economics professors not only took hold in Washington 25 years ago, but it has become deeply imbedded there. This intrenchment, of course, is not all to be attributed to the power of the professors. They gained some very powerful allies who had a financial stake in exports, and without whom the professors would have been helpless. We have only to mention the automobile, the electrical, the steel, international oil, rubber and farm implement industries in the industrial field; and cotton, wheat, tobacco, rice, soyabeans, and a few other farm crops in the agricultural field, in order to understand the strength of their allies. The industries that have become interested in exports in the past 25 to 40 years number among them the largest in the United States, and, of course, wheatgrowing is one of the leading farm operations in the country in terms of acreage. Cotton, tobacco, and rice, though planting lesser acreages than wheat, are also important in some sections of the country, particularly the Southern States.

Then, too, there are the industrial importers who seek a low tariff or a complete removal of the tariff so that they may obtain their raw materials at the lowest prices. The largest importers today are the international oil companies. Petroleum and petroleum products have taken the lead in our import trade, having recently surpassed coffee beans.

Together with those who believe that freer trade will lead to peace of the world, such as the League of Women Voters, various religious associations, etc., these various allies make a formidable combination and wield tremendous influence in Washington. It was they who supplied the State Department economists with the powerful support they needed.

Strangely enough, the wheatgrowers, flour millers, and cottongrowers, who have been so ardent in their support of the trade-agreements program and GATT (the General Agreement on Tariffs and Trade), are themselves thoroughly protected against import competition by restrictive import quotas. They seem to see nothing illogical in advocacy of freer trade for everyone else while insisting upon and getting extreme protection for themselves.

It is no exaggeration to say that these highly protected agricultural groups have wielded a great deal of influence toward the extension of the trade-agreements program from time to time since 1934. Under it, as you know, there has been carried out a relentless reduction of tariffs. Since its beginning in 1934, our protection in general has been reduced a full 75 percent, mostly through actual tariff cuts, but also by following a policy not to raise specific duty rates as a means of keeping in step with increasing prices. Today the United States is one of the low tariff countries of the world.

Well, what has all this come to?

It has brought us to an unfortunate situation indeed. It has brought us to the point where Congress has in effect lost its power to make the tariff and to regulate our foreign commerce.

You may well wonder how this could have happened here in the United States; and may rightly ask, are we not a free people? Do we not have constitutional government? Do not our elected representatives carry out the will of the people?

If so, and if the Constitution places the responsibility for our tariff and for the regulation of foreign trade on Congress, as indeed it does, very clearly and unmistakably, how could it come about that Congress has lost its control in this field?

This is a natural and a logical question.

Let me bring the situation home to you in a little more concrete form. During the past year there has been a great interest in the import of meat, both in the form of dressed lamb, live cattle, and beef. In both instances the mounting imports add up to a considerable threat to prices, e specially in some parts of the country. Therefore, it would seem logical to put on some restrictions, even if only temporary, as a means of regulating imports in such a way that they would not inflict serious injury on the growers and producers of lamb and beef in this country.

Very well, what steps should be taken?

To answer this question it now seems necessary to ask another: Who regulates our foreign commerce or who adjusts the tariff?

It should not be necessary to ask such a question, since everyone, or nearly everyone, whose affairs bring him into contact with such matters, knows that Congress is responsible for the regulation of foreign commerce and for making the tariff. It says so in the Constitution as plainly as anything can be said in English. No one disputes it; not even the free traders.

Yet, something has happened. Something has indeed operated to turn the power of Congress to regulate foreign commerce into a fairytale, something to tell little children.

Today the chance of obtaining legislation to put down the threat of dressed lamb imports or of live cattle and beef imports is about as good as siphoning dry the Pacific Ocean with a soda straw.

What, indeed, has happened? Several things have happened.

The combination of export industries, import interests, free-trade theorists, etc., already described, among others, has been in support of State Department trade policies. This support made possible heavy majorities in Congress for the trade agreements program.

This fact, in turn, made it possible for the State Department to take the power delegated by Congress to the President to enter into trade agreements and use it as a means of dealing Congress itself out of its own power, and setting that body aside, like a useless and helpless assemblage.

Not only was it possible for the State Department to do so but it accomplished the feat so thoroughly that even today Congress seems to be unaware that it is tied hand and foot; and is just as free to carry out its constitutional mandate as is any man at any time to dishonor himself, to break his word, and to run out on his commitments.

That is how free Congress is in the field of its original jurisdiction and direct responsibility, i.e., in the field of tariffs and trade.

This is so because the State Department, practicing a brand of statecraft of which Machiavelli himself might have been proud, put Congress neatly into a box and nailed down the lid.

You are entitled to ask how the State Department could accomplish such a feat. The answer is that it could do so only because Congress itself was willing or indifferent; but, whatever the blame upon Congress, the Department succeeded.

How?

It used international executive agreements as its instrument. Mind you, Congress authorized such agreements in the Trade Agreements Act of 1934, which it subsequently extended each time it expired, until today; but it did not authorize some of the far-reaching provisions inserted in such agreements, especially in GATT, the master agreement made in Geneva in 1947.

Like the serpents or pythons seen in the Laocoon statue, the State Department threw its coils around Congress in the form of international commitments. Before Congress knew it, the coils had gained a deathly grip that bade fair to paralyze the whole body, so far as tariff legislation is concerned.

For example, the State Department agreed in GATT (General Agreement on Tariffs and Trade) to the renunciation of import quotas; in fact, proposed this ban to the other countries. As a means of persuading them to accept this provision the Department agreed to three exceptions, designed to accommodate the other countries. Only one of these exceptions applied to the United States, namely the use of import quotas to protect agricultural products if a government program called for crop restriction. In this country this exception was recognized in section 22 of the Agricultural Adjustment Act, and it was under this section that the import quotas on wheat, wheat flour, cotton, peanuts, and a few other crops were imposed. Thus was gained the support of these agricultural groups.

Other countries could use import quotas if they suffered from balance of payment difficulties, i.e., dollar shortage; and they have used this exception extensively to restrict imports from this country. It is not available to us. Underdeveloped countries also may use import quotas to protect their industries. We, of course, cannot.

Now, in agreeing to the renunciation of import quotas as a means of regulating trade, the State Department was committing the future Congresses of the United States not to use one of the important and effective means, and sometimes the only effective means, of regulating foreign commerce. What did this do to the constitutional power oc Congress to carry out such regulation? The State Department had deprived Congress of a very important instrument.

Beyond that the Department also bound a number of products on the free list and numerous tariff rates at existing levels. This was the same as a commitment that Congress would leave these items alone and in fact, retire from the field.

To say then as the State Department has often said, echoed by other executive officials, that Congress is still free to legislate in this field is, to repeat, the same as saying that Congress is free to repudiate the State Department and therewith the international commitments of this country.

A more pernicious and morally repugnant interpretation could hardly be contrived. If Congress is free to act only by violating the international commitments of this country then it has no freedom at all, unless we want to go to bed morally with the Russian dictatorship.

This is the point of degradation to which the State Department has brought our Congress, so far as its constitutional function of regulating foreign commerce and shaping the tariff is concerned. Thus has been destroyed the responsiveness of Congress to the electorate. It is no longer of avail to you to vote for a Congressman or Senator if you have in mind his doing anything for you by way of regulating imports. You may not know it but you have been disfranchised as effectively as if your vote had been taken away or the ballot boxes closed.

And let me tell you that it will stay this way unless a lot of people open their eyes and do it soon; and then do something about it.

This is not all.

You have perhaps heard of the escape clause of the Trade Agreements Act. It has been sold to the public through all means of communication as a remedy against serious injury from incerased imports resulting from tariff reductions. From 1934 to date every President has said clearly and emphatically that the trade agreements program and the tariff reductions made under it will not be allowed to injure or jeopardize domestic industry. Every Secretary of State since 1934 has likewise gone to Congress and testified before the House Ways and Means Committee and the Senate Finance Commit-

tee, not only confirming the Presidential statements but emphasizing and reinforcing them. Other public officials have done the same, not only once but numerous times.

I am sorry to have to say that either the level of official integrity in the highest reaches of our Government is shockingly and unacceptably low, or the right hand does not know what the left one is up to.

No decent citizen can read the record with respect to the escape clause, comparing the solemn Presidential assurances and those of Cabinet officials over the years, on the one hand, with the actual record of performance, on the other, without a blush of shame. It is as clear a case of roughriding over principles and noble professions, from what is no doubt regarded as a safe position of strength, as can be found anywhere.

The Presidents since 1951, when the escape clause was first made a part of the law, after having existed in the form of an Executive order, have refused upon one pretext or another to put into effect 7 unanimous decisions of the Tariff Commission; and out of some 28 total affirmative recommendations where serious injury or a threat thereof was found by the Commission, the President has proclaimed only 10, and these were largely small cases. The Tariff Commission itself has failed to find injury in over half the cases coming before it. Across the board, therefore, the number of cases that succeed in getting through the Tariff Commission and the President represents a low batting average, indeed; and the President has in nearly all the cases in which he has accepted the Tariff Commission's recommendations and proclaimed an increase in duty or imposed a quota on crop imports watered down the Tariff Commission's recommendation.

Altogether, the record comes close to nullification of the statute.

It is not as if the congressional intent were unknown. Congress has successively amended the escape clause to make its meaning clear and to tighten its provisions for more sure protection of American industry, agriculture, and labor. Yet the output at the other end of Pennsylvania Avenue has remained the same. Congress might as well have saved its breath.

The only remedy to this incredible situation lies, and must lie, in Congress itself. Certainly the State Department will not surrender the power that it has become accustomed to exercising. Quite the contrary. It has sought to make its grip permanent by negotiating the articles of a new agreement for an international trade organization in which it proposes U.S. membership. It is known as the OTC, or Organization for Trade Cooperation, and would sit in Geneva. In time the OTC would perform the broad control over our trade, as was proposed for the ITO (International Trade Organization), which failed to gain congressional approval in 1950.

Should Congress approve our membership in this new organization (the OTC) it would represent a final bowing out by that body from its responsibilities to the people. In the field of tariffs and trade, not only in policy-making but in administration, our form of Government would be changed without a constitutional amendment and without recourse. Congress would have blessed its own burial.

This must not come to pass. I hope that you will take very seriously the situation as it has developed and that you will lend a vigorous hand in helping to set Congress in an upright position once more in this field.

The ultimate fact is that all these usurpations of power by the executive have been and are being justified in the name of international relations. The contest with Russia has in recent years been used as justification for almost anything. Yet the fact is that the ousting of Congress from its seat of constitutional power in the regulation of foreign commerce was well launched and solidly anchored before our cold war with Russia began. The cold war is therefore only a handy way of justifying what had already been done for other reasons.

The truth is that the Russian military challenge, if anything, makes it all the more necessary that we preserve our industries as a matter of public policy. Congress has, indeed, recognized this through the national security amendment of the Trade Agreements Act. This amendment, like the escape clause, however, has also become a virtual dead letter in operation. Not one order has been issued under the amendment by the President although about half a dozen cases have been heard by the Office of Defense Mobilization.

As for the Russian economic challenge, it should be clear that we cannot meet it through tariff reductions, GATT Conferences in Geneva or anywhere else. If we are really concerned over the Khrushchev trade challenge we must set up a government trading corporation that can import and export quite outside of the considerations that guide private international trade.

We must be able to meet prices in competition with Russia without regard to profits. We must be willing to practice dumping where this would become necessary. We must be willing to offer higher than the market price for imports in order to prevent Russia from forcing certain shortages of raw materials on our industries, by forestalling her preclusive buying. We must be able to do many things that do not go with private export and import trade carried on for profit.

GATT would certainly take exception to any such actions by us and might hobble and hinder us. We should therefore be looking after our freedom to act according to Russian moves; or to forearm ourselves by making ready our own governmental machinery to meet any developing Russian trade challenge, rather than going before GATT with hands extended for more snug-fitting manacles.

The notion that Russia's economic challenge is an argument for freer trade is a mark of upside-down thinking. The trend will be the exact opposite since all Russian trading is done by the state without regard to profits.

What the Nation-Wide Committee on Import-Export Policy seeks is a remedy against serious injury from imports on the grounds that it was never the express policy of the Trade Agreements program to reduce tariffs to such a point. Quite the contrary. We fully agree with the reduction of unnecessary barriers to trade but vehemently deny that inability of an American industry to compete with imports is any indication of either inefficiency or uneconomic status. Our industries carry cost burdens that are the result of public policy, such as high wages, farm price supports, social security, etc. These cost burdens represent an outright interference with the free market and, further, represent the opposite of free trade. Yet they appear to be here to stay, or at least for an indefinite period, rightly or wrongly.

Foreign countries with which we have trade agreements know that we entered the agreements with the reservation that any duty reduction could be modified or withdrawn if imports seriously damaged a particular industry in this country. Therefore there is no proper ground for complaint by any country if we raise the duty on imports of a product or put on a quota that prevents or remedies the injury. It is understood all around that that is our right, just as other nations have the same right. There would be room for complaint only if we should make the changes in duties or quotas capriciously or without proper investigation of the facts.

To prevent such capricious action we have hearings and investigations by the Tariff Commission. Their findings should, therefore, be the end of it (1) unless someone could successfully impugn the fairness of the hearings process or upset the factual basis of their findings; or (2) unless the Commission recommended duty rates or quotas more restrictive than the level from which they had been reduced.

If we gain recognition in actual practice of this simple principle you will be able to go before the Tariff Commission and have your case resolved on the facts; and that, I am sure, is all that you are entitled to and that is all you ask. Until that day arrives you will have to fight for your rights, and I am sure you will do that too.

Hon. R. Walter Riehlman

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. McCULLOCH. Mr. Speaker, we learn with a great deal of regret that our distinguished colleague, the Honorable R. WALTER RIEHLMAN, of New York, has reluctantly decided to relinquish his membership on the House Select Committee on Small Business.

Mr. RIEHLMAN's recent appointment to the very important new Committee on Science and Astronautics and his continuing membership as the second ranking Republican member on the Committee on Government Operations and ranking Republican member of the Subcommitte on Military Operations of the Committee on Government Operations, makes it virtually impossible for him to give the required time and attention to the duties involved in the Small Business Committee.

As I have said, we as Members of the House on both sides of the aisle regret to learn of Mr. RIEHLMAN's decision, but we bow to the inevitable since we realize the vast amount of time which would be required in his new committee assignment on the Committee on Science and Astronautics. Our colleague's interest in national defense has long been well and favorably known and the kindred duties in connection with the national defense on the two committees which he retains are of the utmost importance.

Mr. RIEHLMAN has said that his interest in small business and small business problems will not be diminished and I know we will call on him for the advice and counsel which he is so capable of giving after 12 years of outstanding service on the House Select Committee on Small Business.

At this point I would like to include Mr. RIEHLMAN's announcement in which he sets forth the several reasons for giving up a committee service in which he has always shown selfless and dedicated service.

Mr. RIEHLMAN's statement follows:

RIEHLMAN ANNOUNCES TERMINATION OF SERVICE ON SMALL BUSINESS COMMITTEE

WASHINGTON, February 11, 1959.—Congressman R. WALTER RIEHLMAN announced today

that he has reluctantly decided not to accept appointment to the House Select Committee on Small Business for the 86th Congress. RIEHLMAN has served on the committee for 12 years and, due to the retirement of Representative William Hill, of Colorado, would have been the ranking Republican member. RIEHLMAN stated, "It is with a great deal of personal regret that I turn down reappointment to the Small Business Committee of the House of Representatives. During my 12 years' service on the committee many accomplishments have been achieved in the interest of small business.

"I have had a vital interest in the affairs of the small businessman for many years," RIEHLMAN continued, "and I do not intend to let that interest lie dormant as a result of this decision. I shall continue my efforts in behalf of small business and I shall continue to cooperate with every proper movement in the interest of our small business economy."

In emphasizing his recent appointment to the Committee on Science and Astronautics, RIEHLMAN said, "this committee will undoubtedly become one of the most important in the House of Representatives, not only because of the tremendous responsibility it will have in keeping America in the foreground of scientific research and astronautical development, but also because of its close relationship with the development and maintenance of our national defense. Committee activities will encompass relatively new fields and hearings will be quite extensive."

RIEHLMAN pointed out that the Science and Astronautics assignment, in addition to those as second-ranking Republican on the Government Operations Committee and ranking Republican on the Military Operations Subcommittee, would require a great deal of time and effort.

"I am convinced," he continued, "that there would not be enough hours in the day to do an efficient and effective job on all three committees. It was a question of time and I came to the conclusion that I had to give up something. In the final analysis, I decided to concentrate my efforts in the fields of space development and national defense.

"The small businessman in America is faced today with countless difficulties. A great responsibility lies with Small Business Committee members in this 86th Congress and I hope, for the sake of the small business community, that it will be fulfilled with sincerity and objectively.

"My membership on the committee has been both enjoyable and profitable over these past few years. I have been afforded a chance to see this important area of our economy in operation and have gained a much more extensive knowledge of its conditions and requirements as a result. I leave with reluctance and I want to emphasize the fact that I do so only as a result of my increased assignments in other areas."

Churches and Synagogues in the National Capital Area

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary prepared by the department of research and church planning, Council of Churches, National Capital Area, Washington, D.C.:

A STATISTICAL SUMMARY OF CHURCHES AND SYNAGOGUES IN THE NATIONAL CAPITAL AREA

DEFINITION OF "NATIONAL CAPITAL AREA"

The National Capital area includes the District of Columbia, Montgomery and Prince Georges Counties, Md.; the cities of Alexandria and Falls Church, Va.; and Arlington and Fairfax Counties, Va.; Loudoun and Prince William Counties, Va., are being included in the classification as they are becoming more urbanized.

COUNCIL OF CHURCHES NATIONAL CAPITAL AREA

The Council of Churches, National Capital Area, is an interdenominational, ecumenical Protestant agency through which 300 churches representing 30 denominations express themselves in service to the community. Departments of the council are Christian education; institutional ministry; radio and television; research and church planning; social welfare; youth and young adults; and united church women.

In addition to the departments listed there are many active committees, a few of which are Boy Scout advisory; campus ministry; churchmen; civil defense; community life; ecumenical relations; evangelism; public meetings; and Government personnel.

Number of churches by religious groups in the National Capital area

Churches	District of Columbia	Prince Georges County	Montgomery County	Arlington County	Fairfax County	Alexandria	Total
Protestant	451	187	165	70	166	69	1,108
Roman Catholic	41	31	15	6	8	5	106
Jewish	16	2	5	1	0	2	26
Eastern Orthodox	7	0	0	0	0	0	7
Other	3	0	0	1	0	0	4
Total	518	220	185	78	174	76	1,251

COMPOSITION OF RELIGIOUS POPULATION

On the basis of surveys and censuses made by Jewish, Roman Catholic, and Protestant research organizations of the population in the National Capital area, it has been found that approximately 5 percent of the total population is Jewish and 13 percent Roman Catholic. The estimates of Protestant membership range from 40 to 50 percent.

According to a study of church membership in the States and the District of Columbia made 3 years ago by the National Council of Churches, the District of Columbia ranked third highest. The proportion of church members in the total population of the United States is 61 percent.

On the basis of the population of the National Capital area, which is now slightly in excess of 2 million, the Jewish membership estimate will range from 85,000 to 100,000; the Roman Catholic membership would be approximately 260,000, and the Protestant membership would be estimated from 800,000 to 1 million.

The largest Protestant denominations in the National Capital area are Baptists, Methodist, Episcopalian, Presbyterian, Lutheran, Disciples of Christ, Seventh-day Adventist, and the United Church of Christ (formerly Congregational-Christian and Evangelical and Reformed).

Nine Baptist bodies have a total of 300 churches, 7 Methodist groups have 243 churches, the Protestant Episcopal Church has 109 churches, three Presbyterian denominations have 70 churches, 4 Lutheran bodies have 61 churches. The Disciples of Christ have 23 churches, the Seventh-day Adventists have 21 churches, the United Church of Christ have 14 churches. There are 15 Christian Science Churches, the Church of Jesus Christ of Latter-day Saints have 8 churches, the Unitarians have 8, the Church of the Brethren have 7, and the Evangelical United Brethren Church have 6 churches.

SOURCES OF INFORMATION ON RELIGIOUS BODIES

Questions concerning religious bodies and organizations can be directed to the Council of Churches, National Capital Area, 1751 N Street NW., Decatur 2-3132, for answer or referral.

The National Council of Churches of Christ in the U.S.A. maintains a Washington office at 122 Maryland Avenue NE., Lincoln 4-2350.

The international headquarters for the Seventh-day Adventists is located in Takoma Park, Md.

Other Protestant groups which maintain headquarters offices with regional or national functions are:

Baptist, 1626 16th Street NW., Columbia 5-1526.

Disciples of Christ, 212 Maryland Avenue NE., Lincoln 6-9156.

Episcopal, 1702 Rhode Island Avenue NW., Executive 3-7878.

Lutheran, 2633 16th Street NW., DE 2-1910.

Methodist, 100 Maryland Avenue NE., Lincoln 3-5038.

Presbyterian, United States, 22d and P Streets NW., North 7-7747.

United Presbyterian, U.S.A., 1229 Connecticut Avenue NW., Executive 3-4526.

Marine Combat Strength

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. WILSON. Mr. Speaker, together with so many of my distinguished colleagues I have been seriously disturbed over the actual effects of the cut in the Marine Corps strength to 175,000. As you know, this is 25,000 marines below the figure this Congress considered to be the minimum necessary to provide on an austere basis the three Marine divisions and three air wings required by law.

We are now beginning to be told by the Pentagon what we tried to impress upon them in the last session of Congress. The three full divisions and three air wings required by law cannot be maintained by a 175,000 man Marine Corps.

A recent article in the New York Times by the able military reporter of that newspaper, Mr. Hanson W. Baldwin, describes the effects of a cut to 175,000 Marines in terms of lost, deactivated combat units. Six of the twenty-seven infantry battalions of the corps and the equivalent of six air squadrons will be deactivated by July.

This latest cut then can only come from the combat strength of the divisions we tried so hard to establish as the

Nation's force in readiness. I commend this sobering fact to the Members as a matter for serious concern.

Mr. Speaker, under leave to extend my remarks, I insert this brief analysis of the Navy budget by Mr. Baldwin in the RECORD. It includes a concise statement of what is happening to the combat strength of the Marine Corps:

THE NAVY BUDGET: FLEET WILL REMAIN AT CURRENT SIZE BUT AIRCRAFT INVENTORY WILL BE CUT

(By Hanson W. Baldwin)

The Navy's share of the administration's defense budget for the fiscal year 1960 will maintain a fleet of approximately the present size.

Some 864 ships, the same number as are now in service, are scheduled to be in commission in the next fiscal year; 389 will be warships and 475 will be supporting vessels, amphibious craft, and so on. The Navy's active aircraft inventory will drop to 9,117 by June 30, 1960, compared with 10,533 on June 30, 1958. Only some 7,200 of these will be operational. Forty-seven percent will be jet-powered.

Fourteen attack aircraft carriers will be maintained instead of the 15 of last June, but new Forrestal-type carriers are replacing the old wartime Essex class.

SUBMARINE WAR STRESSED

The 1960 budget will maintain 16 carrier air groups—2 of them replacement groups—the same number as this year. More than 600 antisubmarine aircraft will be modified with new radar, and 2 new antisubmarine warfare task forces will be organized.

Patrol and warning squadrons will increase from 39 to 42 and the reorganization of the Naval Air Reserve, to orient it toward an antisubmarine mission, will continue.

The manning level for the active fleet will average about 81 percent of normal war strength per ship and squadron, about the same as this year.

With new procurement funds the Navy will buy 668 aircraft, which is less than one-half of the annual procurement needed to maintain an active operating naval air arm of 7,200 planes.

AIR ARM SHRINKING

Officials believe that given the present rate of procurement of piloted aircraft, the naval air arm will decrease to 4,000 to 5,000 aircraft by 1963–64.

There is also considerable concern about the growing obsolescence of the fleet. The 1960 shipbuilding program provides for 18 new ships, including a conventional-powered aircraft carrier of the Forrestal class, 6 guided-missile destroyers and frigates, 3 more nuclear-powered submarines and 8 other vessels.

Nine Polaris missile-firing submarines had been provided prior to the 1960 budget, but the administration has withheld funds for some of them and has adopted a building program of about three a year and one aircraft carrier every other year.

The 1960 budget contains funds for long leadtime items for three more Polaris submarines, in addition to the nine already provided, but does not authorize or provide funds for the full costs of the three additional submarines.

The building program also includes the conversion and modernization of 13 old ships, including a cruiser, 8 destroyers, and 4 other vessels.

The present naval construction program of about 20 new ships a year is less than half the number needed to replace overage ships if the operating fleet's present size of 864 vessels is to be maintained.

The Marine Corps is already undergoing a reduction from an authorized strength of 200,000 to 175,000 during the current fiscal year; its strength is to remain at the 175,000 level in the fiscal year that begins next July 1.

President Eisenhower's budget message declares that "the Marine Corps will continue to support three divisions and three air wings in their traditional state of high combat readiness."

MARINES DEPLORE CUTS

The Marine Corps flatly disputes this. Gen. Randolph McC. Pate, the commandant, has testified that the current reduction to 175,000 men will mean the elimination of 6 battalion landing teams out of the corps' current 27, and the elimination of 6 air squadrons.

The Marines will activate additional antiaircraft battalions to operate the Army-developed Hawk missile, designed for use against low-flying aircraft.

During the next 18 months an old aircraft carrier—the *Princeton*—is earmarked for use as a Marine helicopter landing ship. The use of this carrier, which will be operated with no material physical alterations, will give the Marines three ships from which to practice the technique of helicopter assault. Two have already been specially converted.

The administration's 1960 budget provides funds for maintaining a total of 1,030,000 Reserves, both Army and Air National Guard, in a paid status, as compared with 1,082,000 this year.

The President's budget envisages funds during the fiscal year 1960 for 330,000 Army reservists, 360,000 in the Army National Guard, 75,000 in the Air National Guard, 145,000 in the Navy Reserves, 48,000 in the Marine Corps Reserve, and 72,000 in the Air Force Reserve.

The Army National Guard will man an increased number of Nike antiaircraft battalions, and the Naval Reserve will provide at least cadre crews for 48 destroyers or destroyer escorts by the end of 1960.

The Air National Guard, its aircraft already 90 percent jet-powered, will be furnished more modern types in 1960.

The average cost of maintaining a Regular serviceman in uniform increases from $3,885 annually in 1958 to $4,150 in 1959 and to a figure estimated at $4,220 in 1960. This is chiefly due to pay increases and other added costs.

Address by Hon. Stuart Symington, of Missouri, Mississippi Valley Association Banquet, Chase Hotel, St. Louis, Mo., February 2, 1959

EXTENSION OF REMARKS

OF

HON. EDWIN E. WILLIS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. WILLIS. Mr. Speaker, on February 2, 1959, I had the privilege of listening to an address by Senator STUART SYMINGTON at the 40th annual convention of the Mississippi Valley Association in St. Louis, Mo. This distinguished American is particularly qualified to discuss water resources and water utilization problems. While Chairman of the National Security Resources Board, Senator SYMINGTON suggested to President Truman the idea of creating the Materials Policy Commission, headed by Mr. William Paley. The Commission made an excellent projected survey of the general resources requirements of this country over the next few decades. It made a stern warning of the ever-increasing need for better water management in this country, necessitated by the great growth of our population and the tremendous and growing demand of industry for fresh water. In fact, to the great surprise of those who take water resources for granted, the Commission stated that by 1975, of all our resources, the No. 1 American shortage by that time will be fresh water. In his address before the Mississippi Valley Association, Senator SYMINGTON gave graphic examples of the ever-increasing need of fresh water and the insatiable thirst of such industries as the chemical and atomic and aluminum industries for phenomenal additional quantities.

Senator SYMINGTON made an earnest plea for a national water policy, and his seven-point program in that connection deserves national attention and consideration and for that reason I, under unanimous consent, insert in the RECORD a copy of his address for useful reference and research material in connection with water resources, water management and water utilization legislation:

Thank you very much for the honor of being with you at this 40th annual convention.

I have followed the activities of the Mississippi Valley Association for many years.

Your work in developing a consistent and intelligent policy for the use of water in the vast subcontinent of this valley area is of vital importance to the entire country.

As a Senator, my particular interest has been the State of Missouri and the development of its water resources. The work you have done for this State has been outstanding.

Many thanks for the advice and cooperation you have given to me and my State over the past years, and I look forward to many more years of our working together.

No river valley has played a more important role in the history and growth of this country than has the Mississippi Valley.

Exciting images of the past are evoked by the names: Lewis and Clark, DeSoto, Marquette and Joliet.

Picturesque days are recalled by the names Mark Twain, Mike Fink, memories of the sidewheelers, and Abe Lincoln's float trip to New Orleans.

Since the days when the wilderness was conquered and the great steamboats became queens of the river, the Mississippi Valley has been settled.

Thanks to the efforts of many of you here tonight to a large extent, the rivers themselves, either have been or are being tamed.

But these rivers are not only a part of our history. They are vital to our present. The Mississippi Valley is the heartland of America, and its rivers the great arteries of commerce.

Their great past and present is to be followed by an even greater future.

For they are the most vital resources of the decades ahead.

Too many people take water resources for granted. They believe we will always have an abundance.

This is dangerous thinking, for without an adequate supply of water, our civilization and our industry will not be able to expand to meet the needs of tomorrow.

Tonight I should like to discuss briefly two recent developments which show the ever-increasing need for better water management in this country.

Both have occurred since the end of the Second World War.

One is the great growth of our population.

The other is the tremendous and growing demand of industry for fresh water.

Many people have studied the population explosion now taking place in this country and the rest of the world.

But it has been studied primarily in terms of its effect on schools, on cities, and on industrial production.

Comparatively little attention has been paid to how this population increase will strain the water supply of our country.

In 1952, the President's Materials Policy Commission, headed by Mr. William Paley, issued an excellent survey of the resource requirements of this country over the next few decades.

This study was based on what we would be most short of 25 years from 1950—16 years from now.

To my great surprise, as well as that of many others, the No. 1 American shortage in 1975 will be fresh water.

The study pointed out that between 1900 and 1950, per capita water consumption in the United States has doubled.

Because our population has also doubled in that period, the demand for water had thus actually increased four times.

The Presidential Commission predicted a similar doubling of per capita consumption over the period from 1950 to 1975, as the Nation's standard of living rose; and with it the use of such luxury items as air conditioners, automatic washers, etc.

This famous report issued a stern warning that steps should be initiated now to assure an adequate water supply for the growing population.

The warning was based on a 1975 population projection of 193,400,000.

But this 1950 estimate has turned out to be far too modest. Our country is growing so fast that, under present projections, the 193 million point will be reached, not in 1975, but in 1965.

By 1975 we will have in America a population of more than 230 million, perhaps more than 240 million.

This would create an immense water supply problem even if the per capita consumption remained constant.

But it will rise with our standard of living, and therefore become even greater.

This country, and the Mississippi Valley in particular, is blessed with a large supply of fresh water. Properly utilized, it cannot only support this huge population but give the people an ever-increasing standard of living.

The Nation as a whole, however, has certain water problems, posed by nature.

Many areas have insufficient water supplies; and because of maldistribution of both rainfall, and access to water supplies, increasing control must be exerted over our water.

Such control will involve a conscious choice on our part. If we are willing to spend the effort and the money, however, the years ahead can see better living for all citizens.

If we do not heed the warnings of such studies as the one referred to above, the consequences are equally clear.

Now as to the increasing use of water by industry.

Since the war, such industries as the chemical and atomic and aluminum industries have grown tremendously.

And they have an insatiable thirst.

The amount of water consumed by an atomic energy plant is classified. But public figures do exist on some of the other industrial plants.

1. Water and oil may not mix, but 10 gallons of water are required to refine 1 gallon of gasoline.

2. Three hundred gallons of water are needed to turn out one barrel of beer.

3. With the growing interest in paper and steel mills in Missouri and the Mississippi Valley, it is significant to note that 64,000 gallons of water are needed to make 1 ton of sulfate paper; also 65,000 gallons to make 1 ton of steel.

4. A pulp mill requires more water each day than does a city of 50,000 people.

5. The Fairless works of the United States Steel Corp. on the Delaware River uses as much water daily as the cities of Buffalo and Boston combined.

In 1950, not counting the streamflow used mechanically to generate hydroelectric power, the water used by industry weighed almost 50 times the total of all other used materials combined.

Industrial consumption can only increase with our industrial growth; in fact, the President's Commission predicted that the total amount of water used would nearly triple in the 25 years from 1950 to 1975.

But even more important is the percentage share of all water used in the United States which goes for industrial use.

In 1950, it was estimated that industry withdrew 43 percent of all water used.

In 1975 estimates are that this percentage will be increased to 62 percent.

Is it not rather startling to realize that, during the Second World War, plans for building at least 300 industrial or military establishments had to be abandoned or modified because of inadequate water supply.

In the opening of the President's Materials Policy Commission report, it was stated that by 1975 access to good water might become the most important factor in deciding where to locate industries.

This is most significant for us here in the Mississippi Valley. It presents both a challenge and an opportunity, for we are blessed with an abundance of water.

If we shape our water management plans to provide an adequate industrial supply, the areas along the rivers of this valley will be able to attract more and more industry.

Associations such as yours will continue to play a key role in seeing that these Federal and State plans are best suited to developing the industrial potential of the areas served by our rivers.

If we plan wisely, we need never fear the ever growing thirst of industry.

If we do not, some of our brightest hopes for industrial development will be snuffed out before we know it.

Civilizations have always been dependent on water.

Early civilizations flourished on the banks of the Nile, the Tigris, and the Tiber.

Though our cities no longer need lie on the banks of our rivers and lakes, we are no less dependent on water.

In a sense, our dependence is even greater, for as these studies show, water is no longer as abundant as it was to the ancients.

The supply is not shrinking. But we use it more.

As our population and industry grow, we must think in terms of the very real possibility that, unless we plan wisely today, we will have a water shortage tomorrow—even in our now water-abundant areas.

To meet the demands of the future, therefore, it is imperative that we adopt a national water policy which will provide an adequate supply of this vital natural resource.

I present seven proposals.

Some are now being taken haltingly, some not at all.

All of them should be followed resolutely:

First. We must have a coordinated program of flood control, water storage, and power development through the construction of multiple-purpose reservoirs, wherever feasible, on the rivers of the Nation.

In this connection, I second the proposals General Itschner made earlier today in regard to the preservation of future project sites.

Second. I support the program of cooperation between Nation and States for organization and development of local watershed districts to control water runoff at its source.

This program has run into unnecessary delays. These must be overcome.

As the program is expanded, we will be better able to conserve and preserve a supply of fresh water on the land where it falls.

Third. Our stream-pollution-control programs should be accelerated.

We should place first priority on interstate cooperation in the control and prevention of pollution; second priority on Federal grants-in-aid to towns and cities for the construction of sewage-treatment plants, along with other water-purification facilities.

Fourth. There should be a cooperative national and State program for the reclamation of used water by the removal of waste, and through the use of purification processes.

Fifth. We should have a cooperative national and State program for the development of new ground water reservoirs, including the presently unavailable underground lakes and streams.

Sixth. We need a national research program designed to investigate the possibility of inducing rainfall through artificial means; and also to consider the development of a practical method of removing salt from sea water.

Seventh. Finally, a coordinated program is necessary to assure proper navigation of our water arteries wherever economically feasible, so as to provide the fullest utilization of these natural streams of commerce.

These programs cannot be carried out without the sympathetic aid of groups, such as yours, people with interest in, and devotion to, the cause of water resource development.

In establishing the details for this water management program, particular attention should be given to the problems of geographical distribution of our water resources.

As the Materials Commission stated: "If a single word were used to sum up the water problems of the United States, that word would be maldistribution—maldistribution in regard to time and geographic areas."

In the past, maldistribution was not a great problem because the center of our population was always near the Atlantic Ocean.

This center has been moving steadily westward, however; and indications are that it will continue to do so for the foreseeable future.

With reference to the point of navigation in this program, may I comment on the situation here in the Mississippi Valley.

In this connection, we know that the potential of our valley has not been fully utilized.

The upper Mississippi, Ohio, and Illinois have been dredged to a depth which allows full utilization of their navigation potential. Annual traffic on these rivers ranges from 20 million tons on the Illinois to some 80 million tons on the Ohio.

By contrast, with a record volume last year, the Missouri River carried only a little more than half a million tons.

The Missouri is the poor relation when it comes to navigation. It is the only major segment of the Mississippi River system lacking a 9-foot channel.

This association has been a strong proponent of a 9-foot channel for the Missouri.

I have consistently supported such a channel in the Congress, and I intend to continue to do so, because this channel would bring more industry and prosperity to our State.

Yes, the great volume of water in the Missouri can be used to attract the water consuming industries of the future, and if it is a fully navigable stream the attraction will be twofold.

In recent years it has been disturbing to see how our national policy toward rivers and harbors has been deteriorating.

As example, the President's budget for the fiscal year 1960 did not request a single dollar for either new construction or new planning.

This is false economy.

Such public dollars as are saved by eliminating dollars for water control and utilization can result over the years in heavy losses to private enterprise and our communities.

In addition, each year that we postpone the benefits of flood protection, we increase the danger from annual floods.

Recent disasters in Pennsylvania, Ohio, and West Virginia underscore this fact.

None of us will ever forget the flood tragedy of the Kansas City area at the start of this decade.

Planning and construction to correct and improve our water position should be continual and orderly. It should not come in uneconomic spurts.

For it does not make much sense, when building a house, to put the roof on a bit at a time.

And so, my friends, this national problem involves the interests of all our States, and all our people.

In the future, as in the past, the Mississippi Valley Association can play a vital role in striving for a successful solution to this problem of fresh water.

Such a program will bring greater prosperity, not only to this rich valley, but also to the entire country.

The future of our society depends on our ability now, to plan wisely for coming generations.

What a tragedy if future growth is stunted by any failure on our part to plan against water shortage.

It is written in the second chapter of Genesis: "The Lord God took the man and put him into the garden * * * to dress it and to keep it."

Let us all band together to keep this garden in which God has placed us, and make it even richer for the generations to come.

Coast Laboratory Is Dedicated to Learning More About Universe

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. WILSON. Mr. Speaker, all San Diegoans are very proud of the rapid advancements we have made in our scientific and industrial community. The varied and highly specialized talents required in the complex technology of the scientific and industrial world in nearly all fields are today found in San Diego. The companies and organizations situated in San Diego enjoy the reputation of being recognized leaders in their respective fields.

An important contributor to scientific advancement is the John Jay Hopkins Laboratory of Pure and Applied Science, which is located in La Jolla. This organization, also known as the General Atomics Division of the General Dynamics Corp., is researching all areas of science with a dedication to make our country a better place in which to live.

Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following article by Mr. William Hinds, science writer for the Washington Evening Star. I heartily recommend Mr. Hinds' article as interesting and informative reading.

COAST LABORATORY IS DEDICATED TO LEARNING MORE ABOUT UNIVERSE

(By William Hines)

LA JOLLA, CALIF.—In an industry so hectic that its leaders frequently complain that "practice has outrun theory," it is refreshing to find a place dedicated to helping theory catch up.

Such an establishment is the John Jay Hopkins Laboratory of Pure and Applied Science, also known as the General Atomic Division of the General Dynamics Corp. An out-of-this-world sort of place atop a sun-drenched mesa in one of the pleasantest parts of the globe, Hopkins Laboratory is dedicated to learning more about the universe man is already beginning to explore and exploit.

Supervised benignly by a roly-poly young genius named Frederic de Hoffmann, about 300 scientists and 250 helpers search for truth in every state of nature man can reproduce in the laboratory. They heat thin gases to a million degrees and accelerate shock waves up to 100 times the speed of sound. They chill materials down to within a few degrees of absolute zero and then bombard them wtih radiation.

Why? To see what will happen; to learn more about the nature of things.

RESEARCH EXPENSIVE

That this kind of scientific doodling costs money can hardly be doubted. General Atomic officials concede they haven't made any money yet and probably will operate in the red for another 5 or 6 years. But they point out that you can push basic researchers only so hard, and they are content to wait for something to turn up.

"Something" in the missile area already has turned up, in the form of a $1 million (first year) contract from the Pentagon's Advanced Research Projects Agency. The only public knowledge about this feasibility study contract is that it is related to the possible development of a new concept of propulsion of controlled nuclear explosions.

Beyond this, the Pentagon has muzzled GA so thoroughly that its officials decline even to discuss the scientific theory behind controlled explosions—despite the fact that theories are nonsecret.

This is not GA's first incursion into the missile field, though the company has no production contracts. It is, however, looking into the behavior of materials under the sort of radiation conditions that might be encountered in space.

FINDS LIMITATIONS

"It's getting to the point where electric circuits can't stand as much total radiation as a man can stand," Dr. Victor Van Lint observed. Dr. Van Lint, a lanky Indonesia-born, Netherlands-raised physicist who speaks with only the wisp of a Dutch accent, is a GA specialist in solid-state physics. One of his chief projects is investigating how transistors, diodes and other semiconductors behave in the presence of radiation at temperatures around 200° below zero Centigrade.

They don't behave well. "I've made it a rule that there are to be no transistorized components in our electronic measuring devices when we run these radiation tests," Dr. Van Lint said.

In his work, Dr. Van Lint—like the other scientists here—has access to some of the finest equipment available. One of the features of the laboratory is a powerful linear accelerator, a kind of a straight cyclotron, that kicks subatomic particles up to speeds near that of light.

The laboratory was a dream of the late John Jay Hopkins, who created General Dynamics out of a series of mergers of smaller companies. GD is now headed by Frank Pace, a former Secretary of the Army.

UNUSUAL PLANT

A striking thing about the Hopkins Laboratory is the physical layout. The chief feature is a circular building surrounded by two larger arc-shaped buildings rather as the orbits of electrons circle the nucleus of an atom in the classic atomic conceptions. The buildings are extreme in their architecture, apparently hanging from exposed steel girders.

The effect, while avant-garde, is pleasant, as are the carefully tended gardens, the building fountains, the splashing reflecting pools, and the trees. Next year there will be a swimming pool.

As might be expected, worker turnover is low, notably among the scientists.

"I'm here to stay," said Dr. Van Lint. "This is the finest compromise I can imagine between academic research and industrial compensations."

Which seems to mean they pay him well and leave him alone—and who could ask more of a boss?

Federal Education Plan Popular With Students

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to an editorial in the Clarksburg (W. Va.) Exponent of February 7, commenting on the National Defense Education Act of 1958, which was approved in the 2d session of the 85th Congress.

The editorial follows:

FEDERAL EDUCATION PLAN POPULAR WITH STUDENTS

The college student-loan plan written into the National Defense Education Act last year has turned up a major surprise in popularity.

It was substituted for a $75 million scholarship program after an intellectual wrestling match in the closing weeks of the last Congress. The lawmakers in their infinite wisdom killed the scholarship plan and put a $295 million, 4-year loan program in its place.

Few educators thought it would work. For, as Dr. Arthur Flemming, former president of Ohio Wesleyan and now Secretary of Health, Education, and Welfare declares, up until recently, college-loan funds had gone begging.

The most optimistic prediction was that not more than 800 of the 1,950 U.S. institutions of higher learning would take part in the new Government student-loan program.

In the first 4 months, 1,230 colleges and universities have applied for participation, asking for $62 million in Government money for this year.

This figure is double the amount Office of Education now has in sight. Congress appropriated $6 million to get the program started this year. A supplemental $25 million is being asked to run the program until June 30. Unless the colleges are being overoptimistic in estimating student demand, it won't be enough.

Loans applied for now are expected to be small, to run students short of cash through this college year. For the next college year

beginning in September, it is believed that loan applications will be larger, to cover a full 9 months. But Office of Education has so far requested only another $31 million for the year beginning July 1.

Congress originally authorized, but has not appropriated for the student-loan program, $47½ million for the first year, $75 million the second, $82½ million the third, and $90 million the fourth. This $295 million total would take care of 590,000 1-year loans of $500 average.

No student will be permitted to borrow over $1,000 a year, or $5,000 over 5 or more years. Interest is 2 percent while the student is in college, and 1 year thereafter. Then the interest rate goes to 4 percent. The loan must be repaid in 10 years.

There is a 10 percent forgiveness every year for 5 years to students who go into grade- or high-school teaching. To this extent the loan program is a scholarship.

Also, the law offers fellowships to graduate students preparing for college teaching. They will provide grants of $2,000 for the first year, $2,200 the second, $2,400 the third, plus $400 a year for each dependent.

One thousand such fellowships were to be granted the first year. But in the first 4 months of the program 6,000 applications have been received. This response is likewise far heavier than was anticipated. Commissioner of Education Lawrence G. Derthick will make the first 160 grants early in February.

Last October DHEW Secretary Flemming declared that scholarships would still be needed, in addition to the loan and fellowship programs. The original plan was to give up to $1,000 a year for 4 years to exceptional students who could not pay for a higher education.

Unexpected popularity of the loan program, however, has shelved the scholarship idea. It is not mentioned in President Eisenhower's new budget. The administration's austerity program may have had something to do with killing it.

If the loan program turns out to be as good as it now looks, Secretary Flemming is of the opinion that corporations and private foundations which have granted most of the scholarships in the past may change their programs.

An Up-To-Date Farm Program

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. DEROUNIAN. Mr. Speaker, the following editorial which appeared in the Washington Daily News on January 30 is a clear statement on the value of President Eisenhower's recommendations for a realistic agriculture program.

The President's program would protect the farmer from an abrupt drop in income as well as relate his parity to present day prices and cost, rather than those of a period long past. If parity for the 12 major commodities was set at 75 percent to 90 percent based on average market prices of the past few years it would cut the annual $5.4 billion price support expenditures approximately in half. In these times of excessive Government spending, such potential Government savings should be considered in legislation which will also free the farmer from his Federal chains:

JUST A START

President Eisenhower's farm message proposes to start the country, including the farmers and taxpayers, out of the unholy mess resulting from 25 years of Government giveaway to a minority of farmers—most big, factory farmers.

Consider the record, as revealed by the message:

Only 12 of the 250 farm commodities share the subsidies which this year will cost $5.4 billion, a sum equal to nearly a third of all the income taxes paid by all the corporations in the country.

Half the wheat farmers (the big ones) get 90 percent of the wheat subsidy. Twenty percent of the cotton farmers (the big ones) get 75 percent of the cotton subsidy.

The average subsidy to a rice farmer with 100 acres or more this year is $10,000. Same for cotton.

By July 1, the Government will have $9.1 billion tied up in surplus crops, most of which it cannot sell, some of which it can't even give away. All but 15 percent of this is in three crops—wheat, corn, and cotton.

It might not be so bad, as the President says, if this were a temporary helping hand to needy farmers, if it were helping to solve any problems. But it isn't. It's making them worse by continuing artificial incentives to create surplus crops.

The President had a word for it: "Intolerable." Instead of outmoded parity he would link price supports to recent average prices and thus protect the farmers from abrupt catastrophic price drops. Or, if Congress wants to stick to parity, he asks for a flexible system with a lower floor, encouraging crop planning to respond to the market.

His plan doesn't contemplate abandoning the subsidies but merely urges, in the name of commonsense, that they be cut down a little. But from the partisan outcries with which vote-conscious Congressmen have greeted the suggestion, you would think he was out to ruin agriculture.

Pentagon (AFL-CIO) Union Group Suggest Drastic Change in Civilian-Military Staffing

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. BROYHILL. Mr. Speaker, recently the AFGE Council of Defense Lodges of the District of Columbia area made up of 18 AFGE locals representing civilian employees of the Army, Navy, Air Force, and the Office of Secretary of Defense, proposed changes in the civilian-military staffing in a special report prepared by its research committee. The report was approved by the delegates and sent to the national president, James P. Campbell, of the American Federation of Government Employees, AFL–CIO. The council has outlined what it considers are key weaknesses in the Department of Defense personnel and manpower administration which are causing waste of both defense funds and manpower.

It is my belief that this study, coming from a combined group of career civilian employees, working at the Pentagon, contains substantial ideas and proposals for badly needed improvements in defense manpower and personnel policies. In the coming space age we need to develop more imaginative ideas and proposals for personnel administration which will at least keep pace with modern developments in missiles and airpower weaponry.

Although many committees of Congress and special commissions appointed by the President have studied this problem of dual staffing and employee utilization in the Department of Defense, there has been little progress by military and civilian leaders in facing up to needed changes in personnel administration. We, in Congress, the union leaders, the veteran organizations and others are besieged with countless individual cases involving often tragic personnel problems created in the first place by ineffective Department of Defense personnel management. Dual staffing and civilian-military conflicts have often been the primary cause. To solve such a problem, case by case, as we in Congress try to do, is costly and time consuming. It does not get at the root of the basic problems. It is for this reason that we should carefully study the proposals that this combined group of Department of Defense employees have so courageously offered. It should be clear to many of us that basic and far-reaching policy changes in Department of Defense personnel administration are long overdue.

Mr. Speaker, under leave to extend my remarks I am inserting in the RECORD at this point the report of the Council of Defense Lodges. The officers of the council are: Mr. A. E. Casgrain, of the Department of the Army, president; Mr. Walter M. Siesko, Naval Research Center, vice president; and Mr. Richard Raymond, OQG, secretary-treasurer.

The report of the Council of Defense Lodges—AFGE—outlined:

1. Under present organizational structure, civilian control of Department of Defense activities is largely a myth. The transient nature of appointive officials at top DOD levels has created a situation where for practical purposes, operational control, particularly in manpower and personnel matters, has been defaulted to the military.

2. Promotion and career opportunities for career civilians in DOD and throughout the services, has largely been stagnated by continual placement of fulltime active duty, military personnel in civilian-type jobs in spite of the recommendations of the Hoover Commission, and congressional and other committees.

3. Directors of civilian personnel at all echelons, and particularly in the support services at headquarters, are subordinated to, influenced, and coerced by numerous layers of unnecessary military supervision.

4. The assignment of retired military personnel is constituting a direct infringement upon the spirit and intent of the civil service system. If pending DOD legislation is endorsed, many retired military personnel will be collecting two incomes from the Government for doing jobs they should not have been assigned to in the first place.

5. Military personnel, in many instances, is being sent to colleges or universities, at taxpayers' expense, not to train for defense readiness, but to prepare for retirement and better civilian jobs in business and industry. By comparison, civil service employees in DOD receive little or no extended training or career development opportunities.

6. Domination of the civil service system by military officials and control, particularly in DOD, is creating a militarized executive branch. The defense council officers, the Members of Congress from the metropolitan area, and even private lawyers have received an endless flood of personal grievances as a result of dual, or military supervision, causing tragic personality conflicts. The councils' recommendations include:

(a) That in the future, all personnel exercising responsibilities for the selection, promotion, retention, and discipline of civilian employees within the support services be composed wholly of status civilian supervisory employees, and that the military have no voice whatever in such matters.

(b) It is believed that the influence and pressure exerted by highly placed military personnel, or by civilian cliques dominated through military pressures derives from the fact that the military is in almost 100 percent control of the position of higher supervisory management in all of the permanent supply and service type bureaus, even though the permanent personnel of such bureaus are composed entirely of civilians. This undemocratic and managerially unsound situation can be corrected only by the replacement of the military chiefs of all of the civilian bureaus under the Department of Defense with high caliber career civilians, and by restricting the military to positions of an advisory nature and to positions essential for the conduct of liaison with the offices of the several Chiefs of Staff.

(c) These and similar suggestions have been offered in the Hoover Commission report and in many, many other studies. The Government unions and many Members of Congress believe that it is time for action on this situation. It is our understanding that the British have already civilianized their support agencies. In this space age we should follow the lead of the best personnel management in our great American business enterprises.

Mr. Speaker, the results of this comprehensive survey of personnel conditions in the Department of Defense is strong confirmation of my contention, made in a recent letter to Chairman Murray of the House Post Office and Civil Service Committee, that the interests of the Nation would be best served by removing military jurisdiction from civilian employees in the Government service.

Do Drafts Work?

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. WOLF. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include two pieces of extraneous matter.

I am inserting two articles that appeared in the February 5, 1959, Denver Post. One article, by Norman Thomas, raises certain basic and provocative questions about military conscription in a democracy. His remarks should be seriously considered by Members of Congress. The other article is an editorial that also raises certain questions about the draft which, I do not think, were adequately answered in the debates last week. I hope that Members of Congress shall have a chance to reconsider these problems again as a result of a less hurried look by the Senate:

[From the Denver Post, Feb. 5, 1959]

DO DRAFTS WORK?—AN OPEN LETTER TO CARL VINSON, CHAIRMAN OF THE HOUSE ARMED SERVICES COMMITTEE

(By Norman Thomas)

This morning I heard Gen. Lewis B. Hershey argue briefly for a 4-year extension of the Selective Service Act. His arguments, as I understood them, confirmed my opinion that the act should not be thus continued.

The weight of his argument was not the necessity of conscription to fill the diminishing size of the army in the age of nuclear warfare, but its value in giving a Government agency control over the lives of all our young men: who should be deferred and what they should do to keep a deferred status; what scientists may have to be called or recalled by peacetime conscription into military service which at present does not pay enough to attract them, etc.

I am a Socialist believing in social planning, but I am a democratic Socialist who considers this degree of control over all our youth far more consonant with communism or fascism that with any sort of democracy of free men. It is to be justified, if justified at all, only by the magnitude of a danger that can be met in no other way. And that has by no means been proved.

Gone from General Hershey's statements were the familiar arguments of advocates of compulsory military service. No longer is such service commended for the impartiality of the burdens it lays on all youth. As for the old argument of the character-building effects of compulsory military service, that is conspicuously refuted by the growth of crime, juvenile delinquency, and the general cult of violence.

Neither is there any evidence that Selective Service stimulates interest in a foreign policy which would give us a security that no armament in a nuclear age can provide.

On the contrary the fatalistic acceptance of an indefinite continuance of the military cold war is evident in the demand for a 4-year extension which automatically discourages an intelligent drive for universal disarmament.

What General Hershey asks is relief for taxpayers who don't want to pay for the kind of expert military forces nuclear warfare demands. I question, however, whether even here our present system does not add to total costs. Has your committee inquired?

To be sure the general also incidentally mentioned good guidance his system gave young men. (So did the Germans laud their system in the days of Kaiser Wilhelm and Hitler.) My own contacts with outstanding young men confirm Adlai Stevenson's statement: "Every young man who has served in our Armed Forces knows the incredible waste of our present system of forced but short-run service." There are better ways.

[From the Denver Post, Feb. 5, 1959]

IS THE DRAFT DOING THE JOB?

There seems to be little doubt at this time that Congress will vote to extend the draft law, known as the Universal Military Training and Service Act, beyond June 30, the date when it would expire if no extension were provided.

Secretary of Defense McElroy and Charles C. Finucane, assistant secretary in charge of manpower, are quite insistent that a continuation of the draft is necessary—although only 8,000 men a month are now being called and the armed services are in the process of trimming their strength by 250,000 men, to make a total of about 2¼ million by June.

Concern over national defense, stimulated by Russian success with space devices, is such that Congress will not take too critical a view of the request from the Pentagon. Chairman VINSON, of the House Armed Services Committee, has said the hearing on the draft extension bill will be brief.

The draft has now been a part of our national life since 1940, except for a brief recess of 17 months in 1947–48. It is the first peacetime draft the United States has ever had—a byproduct of the cold war.

Only the Army is now making use of the draft, but military leaders and most Congressmen are convinced that the importance of the draft is the incentive that it gives to young men to enlist "voluntarily" in the services of their choice.

But for the draft, the flow of "volunteers" would dry up quickly.

Any battles that may develop over the extension bill probably will relate to the length of the extension, whether for 2 years, as advocated by some Democrats, including Adlai Stevenson, or for 4 years, as advocated by military chiefs.

There may be some effort to alter the draft age limits (now 18½ to 26 years) to 19 to 25. The practice of deferring fathers, which has seemed to be a stimulus to early marriages, may be questioned.

Unfortunately, there is little inclination in Congress at this time to give the whole manpower problem the kind of thoughtful study which Mr. Stevenson and others would like to see it receive.

Is the draft wasteful of manpower, as some claim it is? Would a "professional" defense force of experts in scientific weapons provide better protection for less money than the draft system, under which men are "lost" to the services as soon as they have received 2 years of technical training? There are widely divergent views on these questions, as indicated in the adjoining column by Norman Thomas.

Is there any connection between juvenile delinquency and the outlook on life which youngsters subject to a draft law acquire, as some fear, or does military service give youth a greater sense of responsibility, as certain military leaders contend?

These are serious questions. The answers will not be easy to get, but a Congress which finds time to investigate so many subjects, profound and trivial, should try.

Federal Aid to Airports

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. DEROUNIAN. Mr. Speaker, in view of the pending legislation on Federal aid to airports, the following editorial which appeared in the Washington Evening Star on February 5, 1959, is most timely and pertinent:

SAFETY IS PARAMOUNT

The American Airlines crash in New York City, with its loss of 65 lives, underlines the importance of President Eisenhower's proposal that all future Federal aid to airports be used exclusively to improve flying safety. The plane might not have crashed had a safety beam guiding rate of descent been available on the runway approach which was being used. Such a beam is available on the opposite approach.

In the past some Federal airport money has gone for waiting rooms, baggage depots and other terminal facilities. There are bills before Congress to continue this diversion of funds into what the President described at

his press conference yesterday as "nice, lovely administration buildings." But safety should be the paramount consideration in allotting Federal money for airport construction.

Mr. Eisenhower's statement to reporters brought into the open a clash of philosophies between the budget-conscious administration and congressional sponsors of legislation to increase Federal spending for airports—including terminal buildings. Bills before the Senate and House Commerce Committees would not only extend Federal aid for up to 5 years but would authorize a jump in annual allotments to the States (on a 50–50 matching basis) from this year's $63 million to $100 million a year. And a portion of the money could be used for buildings to shelter and serve waiting passengers, provide ticket offices for the airlines and otherwise to afford comforts and conveniences to the public and business interests. Yet, as the President stressed, the Federal Government does not build depots for railroads or buslines.

Under the administration bill no Federal funds would be available for anything but such safety-promoting facilities as runways, control towers, taxiways and the like. And appropriations would taper off in the next 4 years from the present $63 million to $35 million a year. Administrator Quesada of the Federal Aviation Agency recently told a Senate Commerce subcommittee that facilities "beyond the gate" having nothing to do with public safety should be the responsibility of the State or local authorities. Surely, when there still is so much to be done to make flying safer, it is wrong to use Federal funds to provide for the comfort and convenience of passengers rather than for protecting their lives.

Birthday of the Mountaineers

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HECHLER. This month my home State of West Virginia observes the 92d birthday of one of its proudest and noblest institutions, West Virginia University at Morgantown.

The university was chartered February 7, 1867, in the fourth year of our State's existence. It was born from a merger of Monongalia Academy and Woodburn Female Seminary, and was at first known as the Agricultural College of West Virginia. It assumed university status and its present name in 1868.

The university is one of the cultural and educational centers of our State. It has grown from humble beginnings to a giant institution which dominates the city of Morgantown. Its enrollment has climbed markedly to the neighborhood of 8,000 full-time students, and an additional 6,000 in its various extension services.

The university now has 17 separate divisions and is fully approved by accrediting institutions. It enjoys a reputation for academic excellence.

This month brings more than a birthday anniversary to the university. On the first day of February, the office of the president of West Virginia University was filled by Dr. Elvis Stahr. Dr. Stahr is uniquely qualified by way of education and experience to administer the affairs of our university. His arrival has been welcomed by alumni and other West Virginians as the opening of a new era in the steady growth of the university.

Dr. Stahr succeeds another admirably qualified and able man, Dr. Irvin Stewart, who is returning to the classroom at his own request. Dr. Stewart steered the university through its difficult and hectic period of explosive postwar growth, and the present quality of the University will stand as a monument to his skill, resourcefulness and determination.

The proudest new achievement of the university is a vast new medical school, now being completed. The center, which cost many millions of dollars, is one of the largest, most up-to-date and completely equipped centers in the United States. Its benefit to every West Virginian will be of lasting significance.

In a less-serious vein, it should be pointed out that the university's football and basketball squads have enjoyed great success in recent years, and have attracted much favorable publicity to our State. Both football and basketball squads have long records of being undefeated in play within the southern conference, of which the school is a member. The West Virginia gridiron forces have contributed many players to professional ranks in recent years, and the basketball teams have numbered no fewer than three men selected for All-American mention in the past decade. The 1958 basketball squad was chosen national champions by the Associated Press, and this year's squad is again given high ratings.

Every school and college within the university has produced graduates who have attained leadership and outstanding recognition in their chosen fields; this is a tribute to the high quality of instruction which the university maintains. As the university moves into another year, plans are already laid for new growth, for new advances. I believe the university merits fully the words expressed in one of the school's marching songs, "It's West Virginia, It's West Virginia, the Pride of Every Mountaineer."

Educators Support Amendment to National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. ROOSEVELT. Mr. Speaker, on January 15 of this session I introduced H.R. 2437, the purpose of which is to amend section 1001(f) of the National Defense Education Act of 1958. Under title X of the act, section 1001(f) now reads:

(f) No part of any funds appropriated or otherwise made available for expenditure under authority of this act shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods, and (2) has taken and subscribed to an oath or affirmation in the following form: "I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of American and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic." The provisions of section 1001 of title 18, United States Code, shall be applicable with respect to such affidavits.

My bill proposes to delete section 1001(f)(1), so that the negative disclaimer affidavit would be written out of the law; the section as thus amended would then concern itself only with the oath of allegiance as it now exists in section 1001(f)(2).

I am pleased to report, Mr. Speaker, that my position in this matter has the support of a goodly number of educators and college administrators.

Under unanimous consent, I place in the Appendix of the RECORD a letter from Mr. Donald M. Love, secretary of the faculty of Oberlin College in Ohio, wherein he expresses the views of the faculty in this matter:

LETTER FROM DONALD M. LOVE, OBERLIN COLLEGE, ON DISCLAIMER AFFIDAVIT IN NATIONAL DEFENSE EDUCATION ACT OF 1958

DEAR MR. ROOSEVELT: I am writing for the faculty of Oberlin College to express strong opposition to title X, section 1001(f)(1), of the National Defense Education Act of 1958, which reads:

"No * * * funds * * * shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in and is not a member of and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

Our opposition is not directed against the oath of allegiance (title X, sec. 1001(f)(2)) which the act includes, but only to the foregoing quoted provision, which is, in effect, a test oath. Such test oaths have aroused resistance many times before in the course of English and American history. An individual is compelled to make a statement disclaiming objectionable associations and beliefs in order to gain the benefits of the program. In our view, this is unnecessary and unreasonable.

The provision of the oath concerning belief is particularly repugnant. We object to the notion that an individual should be penalized because of a mental state where no overt act has occurred. We fail to see how justice can be done in any proceeding to enforce this provision concerning the content of a human mind. We agree heartily with the late Justice Jackson, who said:

"Our forefathers found the evil of free thinking more to be endured than the evils of inquest or suppression. They gave the status of almost absolute individual rights to the outward means of expressing belief. I cannot believe they left open a way for legislation to embarrass or impede the mere mental processes by which those expressions of belief are examined and formulated. This is not only because individual thinking presents no danger to society, but because thoughtful, bold, and independent minds are essential to wise and considered self-government."

Suspicion directed at the students and teachers in our colleges and universities is completely unwarranted. Their understanding of and devotion to freedom and the cause of democracy is not surpassed by any other group in our society. We concur in the statement of Mr. Bentley Glass, president of the American Association of University Professors, who commented on the test oath as follows:

"If an individual refuses to sign, he raises a suspicion that he is unworthy of public trust or benefit. If he signs, he endorses the pertinency of the general suspicion about him and his kind which is embodied in the requirement."

The stand now taken by the Oberlin faculty against the test oath in the 1958 act is fully in accord with its proudest traditions. In 1952 the faculty unanimously adopted a resolution which included these statements relevant to the present issues:

"Times of crisis present sharp challenges to the professed values of a democratic society. At such times it is tempting to measure all things by the rough standards of unity, loyalty, and orthodoxy. The inevitable tendency is to restrict such fundamentals of democracy as discussion and debate, and even to make divergence of opinion appear dangerous.

The Oberlin College faculty regards all forms of interference with intellectual freedom, discriminatory loyalty oaths, censorship, and other restrictions on free speech and thought as inimical to the democratic way of life."

In view of the objections and considerations stated above, we earnestly request that the test oath incorporated in title X, section 1001(f)(1) of the National Defense Education Act of 1958 be immediately repealed.

Sincerely yours,

DONALD M. LOVE,
Secretary of the Faculty.

FEBRUARY 6, 1959.

As another example, Mr. Speaker, I bring to my colleagues' attention a communication from President Courtney Smith, of Swarthmore College in Pennsylvania, who, on February 5, wrote to me:

I was pleased to learn of the position you have taken, in H.R. 2437, in opposition to the disclaimer affidavit * * * and am hopeful that this requirement will be repealed by the Congress.

Accompanying this letter was a statement indicating Swarthmore College's position.

Mr. Speaker, under unanimous consent, I place in the Appendix of the RECORD the Swarthmore College statement:

FEBRUARY 4, 1959.

SWARTHMORE COLLEGE STATEMENT TAKES COLLEGE OUT OF STUDENT LOAN PROGRAM UNDER PRESENT LAW

Swarthmore College, on the action of its board of managers and faculty, has voted not to participate in the student loan program of the National Defense Education Act of 1958 unless title X, section 1001(f)(1) of the act is repealed. The college does not find unacceptable the loyalty oath, or affirmation, of allegiance required of all students receiving loans under the program, but it does oppose the disclaimer affidavit of belief as being contrary to American principles and to the principles of sound educational procedure.

Swarthmore College is opposed to the requiring of any commitment from students as to belief or disbelief as a condition to their receiving loans made in aid of their education. The freedom, privacy, and integrity of individual beliefs is a crucial aspect of America's constitutional tradition, and these aspects of belief were precisely what the men who wrote the Constitution and the Bill of Rights intended to protect.

As an educational institution Swarthmore College believes that strong citizens in a democratic society are produced in an atmosphere of freedom where ideas do not need to be forbidden or protected. The college has confidence in its students and in the educational process itself, confidence in the efficacy of free inquiry and debate to reveal error.

In view of its action Swarthmore College will, as proves necessary, provide loans to students with established need at the same rate of interest contemplated in the Government's program.

COURTNEY SMITH,
President.

Remarks by Gen. T. D. White, Chief of Staff, U.S. Air Force, Chamber of Commerce Dinner, Lubbock, Tex., January 23, 1959

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. MAHON. Mr. Speaker, on January 23, 1959, the last of the B–25 aircraft were phased out of the Air Training Command inventory at Reese Air Force Base in Lubbock, Tex., Gen. Thomas D. White, Chief of Staff of the Air Force, upon the invitation of the city of Lubbock, attended the celebration commemorating the occasion.

The people of the Lubbock area were highly honored by the presence of General White. General White is a distinguished American, an officer of real stature in the field of aviation and national defense. He has made, and is making, a tremendous contribution to the cause of peace and security. The people of the Lubbock area were deeply grateful for the recognition which was accorded to them and to Reese Air Force Base by the Chief of Staff of the Air Force.

The people of the Lubbock area were also honored and pleased to have in attendance at the ceremonies in Lubbock on January 23 the able commanding general of the Air Training Command, Lt. Gen. Frederic Smith. January 23 was a red letter day for aviation in the south plains area and a memorable day in the life of Reese Air Force Base.

Mr. Speaker, I insert in the RECORD at this point a speech delivered by General White at the chamber of commerce dinner in Lubbock upon the occasion of his visit to that area:

REMARKS BY GEN. T. D. WHITE, CHIEF OF STAFF, U.S. AIR FORCE, CHAMBER OF COMMERCE DINNER, LUBBOCK, TEX., JANUARY 23, 1959

Ladies and gentlemen, it is a distinct pleasure to be here this evening and I wish to thank the members of the Lubbock Chamber of Commerce for inviting me to join in the observance of this very significant event.

The keen interest and enthusiastic support which the citizens of Lubbock have consistently extended to the Air Force is a matter of record. I want you to know that all of us in Air Force blue deeply appreciate the fine relationship which exists. I am sure that those individual members of the Air Force stationed here at Reese Air Force Base particularly value the warm atmosphere of cooperation and understanding which prevails between the Air Force and your community.

The event which has brought us together today marks the end of an era here at Lubbock and in the Air Force. The graduation of the last class of pilots to be trained in conventional aircraft at Reese Air Force Base is another milestone in Air Force history, and another rung in the ladder of progress which has become an Air Force trademark over the years. Since the establishment of Lubbock Army Air Field during the early days of World War II, Lubbock has been constantly associated with the growth of this country's airpower. Thousands of pilots have received flying training here in bomber, fighter and transport aircraft—more than 7,000 of these pilots during the war years alone. With the exception of the 4 years between 1945 and 1949, when the base was on an inactive status, the sound of aircraft has been very much a part of your life here in Lubbock. You can be justly proud of the very significant part which the citizens of Lubbock have had in the rapid growth of this Nation's air strength.

Actually, I would be remiss if I did not take this opportunity to expand this thought to include the whole State of Texas, and to give well deserved recognition to its remarkable place in Air Force annals. I doubt very much if there are many pilots in the Air Force today who have not, at some time or other, served at a Texas base and enjoyed living in a Texas community. Military aircraft have been operating in the skies over Texas since 1910 when the Army's first machine—known as Aeroplane No. 1, Heavier-Than-Air Division, U.S. Aerial Fleet was flown by Lt. Benjamin Foulois from the drill field at Ft. Sam Houston. We have certainly come a long way since that time to the jet aircraft now operating out of Reese Air Force Base and other bases throughout the world.

The significant factor in the changeover here at Lubbock lies in the fact that the class which graduates tomorrow from the B–25 basic training course, is the last group of Air Force pilots to take their basic-flight training in conventional aircraft. All of our basic and advanced training bases, and half of our primary training bases have now converted to jets. This, I feel, is an excellent indication of the depth of the modernization of our training equipment, and of the extent of the progress which has been achieved. I do not want to give the impression that the Air Force has now achieved an all-jet status. This is not true. We still have several thousand conventional support aircraft in our inventory, and will continue to have them for some time to come. However, all of our combat aircraft in the Strategic Air Command, Tactical Air Command, and Air Defense Command are modern jet aircraft—B–52's, B–47's, F–100's, F–102's, F–104's, and F–105's—to name but a few of our primary operational aircraft. The record of the last 50 years in the development of airpower is one of tremendous advances; and one of which our country can indeed be proud.

Daily, we are reaching—and passing—milestones in the Air Force—some, as is the case here at Lubbock, with a momentary pause as we prepare to take the next step forward; others, as routine transitions from one phase of Air Force growth to the next. Actually, there is no single day that passes in which, somewhere in the farflung activities of the Air Force, some significant event is not taking place—the opening of new installations and incidentally the closing of bases—a necessary concomitant of change and progress, the conversion to new aircraft, the achievement of new aeronautical records,

or the demonstration of new heights of readiness. I think it is good, when time permits, to highlight these achievements, rather than let them slip by unnoticed. In this way, we in the Air Force, and you, the people of our Nation, are constantly reminded of the continuous effort—day and night, 365 days a year—which is being expended toward providing a modern, capable Air Force second to none.

I sometimes think that we, as a nation, have come to take such progress for granted because of the fantastic age in which we live. Very little surprises us any more; we have become almost inured to the unbelievable technical developments which have been occurring in recent years. Perhaps, if we were to pause here for just a moment and consider the speed with which we have been traveling along the road of scientific progress during the past 50 years, it would be easier to grasp the impact of the great changes which have taken place.

If one were to attempt to choose a field of activity most symbolic of the great industrial and scientific progress of our Nation over the past 50 years, I think you will agree with me that airpower would be a logical choice. The development in airpower reflects the magnificent scientific and industrial achievements which have contributed so much to our present national stature, and it is, I think, indeed symbolic of the remarkable growth of our Nation during this period of time. I would like to cite three specific examples of the amazing progress which has occurred in modern aviation, examples which, I think, are a measure of the scientific and industrial advances of our Nation during this period.

In 1903 the Wright brothers achieved man's first powered flight at Kitty Hawk, N.C.—a flight which lasted 12 seconds and covered a ground distance of 120 feet. Compare this to the flight made in 1956 by B–52's of the Strategic Air Command, which with the aid of air-to-air refueling techniques, circled the globe in 45 hours, flying 24,325 miles without landing.

In 1909 Glenn Curtis set the world's speed record for aircraft in his *Golden Flier*—a startling 46.8 miles per hour. In 1956 Capt. Milburn Apt flew the X–2 research aircraft to speeds up to 2,100 miles per hour, and last year Capt. Walter Irwin flew an operational fighter interceptor, the Lockheed F–104, at over 1,400 miles per hour.

In 1911 Gen. Hap Arnold set an altitude record of 3,260 feet. In 1956 Capt. Ivan Kincheloe flew the X–2 to an altitude of 126,000 feet—nearly 24 miles.

These are, of course, but a few of the many examples of rapid progress which could be cited in both military and commercial aviation, but they are indicative of the giant technological steps which have been taken during this relatively short period of time. They are admittedly taken from the spectacular, but are nonetheless typical of our direction and our rate of travel in that direction. They symbolize the rate and extent of progress achieved by this Nation.

It has not been an easy task to adjust to such rapid and continuous progress. The Air Force must not only be constantly looking into the possibilities of the future, but must also shoulder the equally grave responsibility of maintaining our day-to-day capability at peak performance. This is no simple job considering the rapid rate at which scientific barriers are being overcome. It is entirely conceivable that a breakthrough in certain critical development areas could render a modern force obsolete within a few years. The tried and true weapons of the past—the spear, the bow and arrow, and gunpowder—lasted for centuries as useful weapons. On the other hand, the conventional aircraft is now, for all intents and purposes, obsolete as a combat weapon—its service life, about 50 years. The operational life of each new development has been less enduring than the one before. Each new improvement has brought us closer to and made us more dependent upon science and industry. I might add here, that as each new weapon system is developed, the dollar cost of the high performance and complexity which must be engineered into that system is also progressing upward at an alarming rate.

The value of, as well as the necessity for, progress has become ingrained in our day-to-day thinking and actions—not progress for the sake of progress alone, but progress to maintain the best in airpower for our country's security. The rapid succession of scientific achievements by our own country—and we cannot overlook the recent remarkable scientific exploits of the Communist powers—has established time as one of our most valuable and critical resources. An environment of haste and urgency imposes grave responsibilities on those who chart the future of this Nation. It makes doubly important the requirement for clear undertsanding, correct decisions and decisive action, and it places a premium on obtaining maximum efficiency and effectiveness from every ounce of resource invested in the security of our country. No possibility should be overlooked which would contribute to our national security. At the same time, cool and steady judgment is required to stay on the straight path and to avoid the dangerous detours which overenthusiasm and premature optimism can bring.

In this respect—and this, I feel, is a very appropriate example of the need for cool heads and clear thinking as we rush toward new goals—there have been many predictions that unmanned, automatic super missiles will soon dominate the earth, while orbiting platforms dominate outer space; or perhaps, more modestly, that some new kind of conventional projectile, or some remodeled surface or subsurface vehicle, will soon make everything else out of date. I am not implying that fulfillment of any of these predictions is impossible—or even improbable. However, it should be noted that they all contain a time equation that is not solved by the free use of the word soon. Further, it has not escaped my attention—nor, I daresay, yours—that most of these predictions are heralded as promising to make one military vehicle obsolete. That vehicle is always the manned aircraft. Older vehicles and ways of war appear in these vague prophecies as somehow more useful than ever. Before I can be persuaded that the airplane is finished as an effective weapon system, other arguments must be used than those filled with phrases like in the near future, in the not too distant future, and just over the horizon.

The key to the Air Force approach to its job lies in mission performance. To do our job well, we must invariably select the best weapon systems—regardless of any emotional relationship to the traditional weapons of war. If missiles, for example, can do the job better, they will be used. If manned aircraft can do the job better, they will be employed. Thus far, critical examination of the various possibilities before us indicates that our weapon systems of the future will be mixed—that is, we will need a force of both manned and unmanned systems. This conclusion is based upon the simple fact that there are certain advantages and disadvantages to both systems. We intend to exploit the best features of each to obtain the best results. You can be assured, however, that if future developments indicate that man is no longer a required item in our weapon systems—we in the Air Force will be the first to admit this—loudly and enthusiastically supported, I am sure, by our combat aircrews who daily are faced with the grim possibility that the next takeoff may be all the way. There are no more ardent supporters of unmanned vehicles than those combat experienced airmen who have fought their way to and from targets.

Despite the great advances in unmanned systems, however, I feel that manned aircraft will be a vital contributing factor to national security for some time to come, and also that its logical successor, manned spacecraft, will assume equal importance in the future role of aerospace power. The judgment and reasoning ability of man have been required for many years to assure complete accomplishment of the Air Force mission, regardless of the sophistication of the equipment. I do not think that this will change in the future. Man and his powers of decision and his ability to reason will continue to be paramount—perhaps decisive—in space.

As the development of airpower has progressed through the years, each new step taken to improve our air capabilities has led to, and through new problems in technology and survival. The one common denominator which has existed throughout the whole history of this development is man—man in an airplane, man at altitude, man at high speed, man under extreme g. forces. Thus our energies and efforts have been oriented in a clear and direct line toward the ultimate goal of man in space. Unfortunately, man is the one facet of our program whose basic design is not readily subject to engineering changes. Therefore, it is necessary to design around him as the weakest structural link—albeit, the strongest intellecutally—in the overall chain.

In this connection, I am again reminded of the many and varied conrtibutions to the growth of airpower which have their roots here in Texas. In the summer of 1926, for example, the now famous School of Aviation Medicine was established at Randolph Air Force Base in San Antonio—by Texas standards of measurement, a neighboring community of Lubbock. The establishment and remarkable growth—both in size and stature—of this institution is another striking illustration of the Air Force's long-term interest in manned space operations.

Although the Air Force space medicine program can actually be traced back to the first Aviation Medical Center at Minneola, Long Island, in 1918, I feel certain that this center originally did not concern itself to any great degree with the problems of manned satellites and spacecraft. It was here, however, some 40 years ago, that the original seeds of the aeromedical program were sown. From that time on, aviation medicine has been geared to the problems encountered by aircrews as aircraft attained greater speeds and higher altitudes. The primary concern of this program was to engineer man into an environment which was not basically favorable to his well being. This was true in the early program and it is still true, culminating in our extensive efforts to place man in space—not man who, like some of our experimental animals, is thrown out into space momentarily and recovered alive, a passive passenger in a space vehicle, but thinking, reasoning, useful man—man who is fully operational in his new environment. This has been and continues to be the ultimate goal of our biomedical program.

The official space program began when the Air Force School of Aviation Medicine established its department of space medicine at Randolph Air Force Base in San Antonio in 1949. It was here that earnest research was initiated into the technical aspects of manned space flight. In conjunction with other more recently established Air Force human factors laboratories, problem areas related to the task of placing man in space have been constantly under investigation by Air Force research teams. Today, the School of Aviation Medicine is recognized as the unquestionable leader in its field. Its contributions to Air Force space programs and

to the national space effort are widely recognized and acclaimed, and its unique status as one of the few complete in-house research capabilities in the Air Force today is indicative of the imagination and foresight that has marked the work of the pioneers in this field. Although we fully recognize the fine contributions of other interested agencies in this field, there is no doubt in my mind that the Air Force has the finest space medicine program in existence. This is, I am sure, an extremely comforting thought to those airmen who will eventually be manning our spacecraft and whose lives will be dependent upon the results of the long years of research conducted by these aeromedical teams.

It has been a privilege to talk to you tonight. Although my discussion has dealt primarily with the progress and growth of the Air Force, let me reiterate that this is only one phase—albeit, a very typical and significant phase—of the advances in our national defense strength. It is extremely difficult, if not impossible, to measure in simple terms the contributions of each of the services—plus those of science, education, and industry—to the overall defense posture of our country. The Army, the Navy, the Marines, and the Air Force all hold complementary roles in preserving the security of our Nation and that of the free world. Daily these roles are becoming more and more interdependent, and the achievement of an integrated national defense team has become a reality. Never before has the word "teamwork" carried such a significant and vital meaning.

While I have taken the opportunity tonight to talk primarily about the Air Force, let me add before closing, that many of the factors which have been contributed to our progress have been the direct results of the teamwork between the services and the scientific and industrial talent this country is so fortunate to possess. I am confident that the integrated power of our military services—complemented by the knowledge, skill, and experience which science and industry constantly invest in the national defense effort and backed up by understanding and interested citizens such as yourselves—comprise a truly formidable force which will serve our country well in the accomplishment of its aims for lasting peace throughout the world.

New York Times Urges Equalization of Military Retirement Pay

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. COHELAN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New York Times which calls attention to an oversight in the Military Pay Act of 1958. January 26 I introduced a bill, H.R. 3284, which is one of a number of bills designed to correct that oversight. This article explains why this legislation is necessary:

TO RIGHT A WRONG

The military pay bill enacted by Congress a year ago established two groups of retired personnel. Those members of the armed services who retired prior to the passage of the legislation received a 6-percent retired-pay increase; those who retired after the legislation was enacted are receiving a considerably higher pay—for the same rank and the same length of service.

In the case of the former group the historic principle of keying retired pay in proportion to active pay was violated; in the case of the latter group it is retained. In other words, last year's military pay bill created two classes of military citizens—first and second grade.

This discrimination was voted by the last Congress despite the recommendations of the Cordiner committee, which made a comprehensive study of means of increasing the attractiveness of a service career. The committee explicitly stated that "military retirement and its firm tie-in with active-duty compensation is perhaps the most powerful long-term career incentive existing within the military compensation system * * *. The incentive value of [the] military retirement program depends to a major degree upon its integral relationship with active-duty compensation and the confidence which has been built up in the military body that no breach of faith or breach of retirement contract has ever been permitted."

To many retired personnel, the 1958 Pay Act appears to have broken faith. Congress owes it to men who have served long and well to right a wrong.

The South Ward Boys' Club of Newark, N.J.

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. WALLHAUSER. Mr. Speaker, today in this great city of Washington, we are honored to have visiting us a fine group of children from the great city of Newark, N.J.

Their visit magnifies for me the importance of the youth of America and the role many of our adults are taking to help prepare them for the future when from among their numbers will come those who will take our places as guardians of our Nation.

The children—numbering 50—here today are enjoying the sights of our Capital City because of the efforts of a civic minded and determined group of men. What these men have accomplished should be a shining beacon for all adult Americans. I would like to give a brief outline of their activities.

Led by Mr. David L. Warner, a successful Newark businessman, this group formed the South Ward Boys' Club of Newark, N.J., in January of 1956. Within a few months, the club, because of its outstanding accomplishments, gained affiliation with the Boys' Club of Newark, N.J., and the Boys' Club of America.

Joined with Mr. Warner in this very worthwhile endeavor, both in its inception and through its 4 years of activity, are many of the leading business and professional men and public officeholders of the area.

In 1957, two new and very important divisions of the South Ward Boys' Club were founded. They are the Mothers' Club and the Fathers' Club. More than 600 parents are enthusiastic and hard-working members of these divisions. They are interested in the welfare and future of their children.

The youth membership in the South Ward Boys' Club has grown steadily. From a handful in 1956 it now numbers close to 1,500. Significantly, I think it should be pointed out that membership is open to all children regardless of race, creed, or color and that the membership represents all walks of life in the highly populated south ward of Newark, N.J., which is a part of the 12th Congressional District which I have the honor to represent.

In helping prepare our youth for the future, the South Ward Boys' Club engages in many educational and recreational endeavors. Today's visit to Washington is the fourth annual trip to the Capital City sponsored by the club. Each year a different group of children make the visit. And as he did on the first three occasions, Mr. Warner again is chaperoning his flock.

Today's tour will cover visits to the White House, my office in the New House Office Building, the Capitol, the House of Representatives, the U.S. Senate, the Supreme Court, Lincoln Memorial, Arlington Memorial Cemetery, and Mount Vernon.

I know today's visitors will be awed by the things they observe, just as their predecessor visitors were awed. And, I know also, that they, like their predecessors, will leave Washington with a great respect and reverence for the Nation which is their own.

The Washington tour is only one of the major activities of the club. Since its inception, the club has provided a varied and extensive educational and recreational program for its youthful members.

This has included visits to the U.S. Military Academy at West Point, N.Y.; historic shrines in the State of New Jersey, special children's theater shows in Newark and at the New Jersey seashore; sporting events in Newark and New York City, and in particular baseball games of the world champion New York Yankees; outings to the many fine amusement and recreational parks in the New Jersey-New York area.

There also has been a wide range of participation sports for the youngsters, such as swimming, golf, baseball, basketball, track, and field. Many of the youngsters have become very proficient in the sports of their choice. In 1957, the club's basketball team won a statewide tournament.

Presently, the club is conducting a drive to build a modern headquarters where there can be a further expansion of the activities of the youthful members. I know the drive will be successful, for the men and women have the determination to bring to success any undertaking in which they participate, particularly when it affects our youth.

Through all of its activities, the club has geared itself to one aim—building character in the youth of America and to prepare them for adulthood when they can take their places as dedicated and responsible Americans. Each one of these people who have made the South

Ward Boys' Club and its activities possible deserve the resounding applause of all Americans. As one who has had the opportunity of observing first hand their activities and the fruits of their efforts, I salute them.

Through my observations, I have become fully convinced that the boys' clubs have become the greatest organization for the building of character outside of the church, and in closing I would like to recite the boys' club code:

I believe in God and the right to worship according to my own faith and religion.

I believe in America and the American way of life * * * in the Constitution and the Bill of Rights.

I believe in fair play, honesty, and sportsmanship.

I believe in my Boys' Club which stands for these things.

Certainly, it is a code that might well be recited time and again by all Americans.

A Definition of Freedom

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. LINDSAY. Mr. Speaker, on January 31, 1959, Dr. Charles Malik, President of the General Assembly of the United Nations, and the Honorable John Foster Dulles, Secretary of State, addressed the New York State Bar Association. I commend both speeches to all interested persons.

The following three paragraphs from Dr. Malik's remarks are particularly noteworthy. They state, simply and clearly, a definition of freedom:

The cause of freedom, my friends, is identically the cause of free institutions. Fundamentally these free institutions are seven: the family as the inviolate group unit of society; the free press, including freedom of expression in general; free political activity, including independent political parties; freedom of association, including inviolate clubs, societies, trade unions, circles of friends; free but fully responsible economic enterprise; the university as an independent citadel of truth; and the church in its absolute autonomy as the custodian of supernatural truth. It is these seven free institutions that make America.

The battle of freedom is more than the battle for national independence and self-determination; it is more than the battle for free international association in accordance with objective interests; it is more than the battle for freedom from want; it is more than the battle for freedom from the softness and degeneracy of materialism. The authentic battle of freedom is the battle for the freedom of the human person, and the human person is really free only where and when these seven institutions are free and vigorous.

It can be shown that it belongs to the nature of things that there be just these seven free institutions and none other.

I was pleased that the Secretary of State indicated that the administration is closely examining the question of this country's relationship to the International Court of Justice. Mr. Dulles stated:

There is a serious need for all of us to develop a respect for law as a basis for stability and confidence. Those nations which do have common standards should, by their conduct and example, advance the rule of law by submitting their disputes to the International Court of Justice, or to some other international tribunal upon which they can agree.

As I have recently indicated, we are closely examining the question of our own relationship to the International Court of Justice with the view of seeing whether ways and means can be found to assure a greater use of that Court by ourselves, and, through our example, by others.

Here is a major way by which the rule of law, about which we hear so much, can be advanced. I sincerely hope that the Department of State will speed its examination of this question.

If Only the Justices Had Been in Moscow

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. SIKES. Mr. Speaker, I would like to take this opportunity to call to the attention of my colleagues an editorial which appeared in the Florida Times-Union, Jacksonville, Fla., in its February 4, 1959, issue entitled, "If Only the Justices Had Been in Moscow." I believe that the subject of this editorial will be of interest to this body and should be called to your attention. The editorial follows:

IF ONLY THE JUSTICES HAD BEEN IN MOSCOW

It is wished that every Justice of the U.S. Supreme Court and the judges of the Federal Appeals Court in New York could have been in Moscow to hear James E. Jackson, Jr., the U.S. Communist Party's secretary for Negro and southern affairs, sing the praises of Premier Khrushchev. Perhaps that would have opened their dreamy eyes to the Communist menace in this country.

The courts have been duped into the false logic that American Communists do not plot to overthrow the Government by force, that they simply intend to exercise peaceably their right to vote and thereby influence the form of government. If they had been in Moscow this week, their unrealistic views would have exploded in their faces.

Jackson once was tried for advocating the forcible overthrow of the Government. He and other Communists were freed by the New York Appeals Court on the almost unbelievable logic that they taught revolution in theory only, not in practice. Similarly, the Supreme Court's decisions in subversion cases have taken a soft approach to the Communist threat.

Now Jackson praises the Soviet Union which, incidentally, is dedicated to destroying the United States. Now he publicly vows "to follow firmly the Marxist-Leninist line." Can there be any doubt that Jackson and his kind are guilty of the most infamous form of treachery? Can there be any doubt as to where his loyalties lie in the life-or-death struggle with communism?

Until the U.S. Supreme Court recovers its senses and awakens to the real threat of communism it shall remain this Nation's secondary enemy in its efforts to maintain freedom in the world. Oh, how it is wished that the Justices could have been in Moscow to hear Jackson's confession.

Strong Leadership for Economy

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. DEROUNIAN. Mr. Speaker, the Democrat Party has asked for strong leadership from the President and here they have it. The following editorial by Gould Lincoln, which appeared in the Washington Evening Star on February 5, 1959, is an excellent discourse on President Eisenhower's fight against further deficit spending by the Federal Government:

PRESIDENT CARRIES ECONOMY FIGHT
(By Gould Lincoln)

Democrats in Congress who are rushing bills for greatly increased housing funds and for airports—increasing the President's budget by hundreds of millions—have had the responsibility for big and irresponsible spending thrown directly in their faces by Mr. Eisenhower. Furthermore, this issue of big spending, with increased danger of inflation and a weakened dollar, will be hammered home by the President throughout this session of Congress and the session which will run next year at least until the national conventions are held for nomination of Democratic and Republican presidential candidates. If big Government appropriations and authorizations for future expenditures increase the cost of living and devalue the dollar in the next 18 months, the Democrats will have to bear a good part of the responsibility—if they persist in their present course.

PRESIDENT'S WARNING

President Eisenhower at his press conference yesterday pertinently commented that the Democrats—who are galloping toward a further unbalanced budget and big deficit spending—have made no suggestion for increased taxes to meet this situation. That, he said, would be the courageous thing to do. But, he continued, the American people do not want increased Federal taxes. He might have added that the Democrats are equally aware of the fact. The President did point out that the Federal Government relies on the income tax for the great mass of its receipts or collections from the taxpayers. These income taxes, ranging up to 92 percent of big incomes, soaring through many brackets, are a continuing and heavy burden, from which all relief will be effectually shut off by big spending and unbalanced budgets.

This economic issue, the President insists, will be fought relentlessly by him. He has warned that he will press it again and again. Whether it calls a halt to big Democratic increases in his $77 billion budget is still to develop. From the speed with which the Democrats have put forward the big spending housing and airport bills it could be predicted that the Eisenhower balanced budget will be swept aside.

The weapons of the President against the big spenders is his veto power. While he has repeatedly pointed out he does not say whether he will veto a measure until it is actually before him, the President has been so forceful in determination to hold the line there seems no doubt he will use the veto when the time comes. It takes a two-thirds vote of both Houses of Congress to override a Presidential veto. Despite the big Democratic majorities in Senate and House, a combination of Democratic conservatives and

Republicans may make it difficult to press the big spending bills to final victory.

ROCKEFELLER ASKS NEW TAXES

Gov. Nelson A. Rockefeller, of New York, considered a probable contender for the Republican presidential nomination next year, is going ahead with big spending plans for the State. Unlike the Democrats in Congress, however, he is proposing increases in taxes to pay for the big new items of expenditure. This is the crux: he seeks a balanced budget by increasing taxes, while the Democrats in Congress do no such thing. Further Governor Rockefeller bars any compromise on his tax plan. In other words, if the citizens of New York are going to have increased facilities and a continuance of other facilities on the same scale they now have, they must pay for them—not in some dim, distant future, but now.

President Eisenhower, if you listen to the Democrats, is proposing nothing for housing in his budget, or for airports and safety of air passengers. The truth of the matter is that the Eisenhower housing program calls for Federal expenditure of $1.6 billion as compared to the Democratic program of $2.9 billion, a difference of $1.3 billion in expenditures over a period of years. For air travel safety, the President has included in his budget $375 million. The Democrats have increased this to $575 million, and they provide money for building administration buildings and facilities at airports—the same kind of thing the railroads built when they constructed depots. As the President pointed out, the Government did not build depots, either for the railroads or the buses.

The Eisenhower airport bill, on the other hand, directs itself to one factor and one factor only—improving the safety of flying, in the air, the takeoff, and the landing of airplanes and their passengers. In the President's opinion, the localities should look after the handsome airport buildings which so many desire—instead of having that cost put on the Federal Government. This, however, does not appeal to the big spenders.

The Democrats may bust the President's budget wide open. That may not be the only thing they bust open, if they succeed.

Soviet Subs Increase in Numbers and Require Early Completion of Intracoastal Waterway System in the United States

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. BENNETT of Florida. Mr. Speaker, according to our best information, the Soviets have many more submarines than we do and have been rapidly increasing their numbers. According to a recent dispatch, Adm. Arleigh Burke, U.S. Chief of Naval Operations, the submarine has progressed faster than the antisubmarine warfare capability to combat it. This underlines for all of us the necessity of early completion of the Intracoastal Waterway system in the United States by the construction of the Cross Florida Barge Canal. This link between the eastern seaboard route and the gulf and Mississippi portions of our U.S. Intracoastal Waterway is necessary if we are to have a protected course for the transportation of oil from the western oil-producing areas in the United States to the industrial northeastern areas of our country. It has been estimated that the cheapest method of insuring the availability of this oil is to build this canal. Congress should not let this year expire before it starts the construction of this congressionally authorized project. I include here two articles which have valuable information on this subject:

[From the Jacksonville (Fla.) Times-Union, Dec. 15, 1958]

SOVIET FLEET SECOND ONLY TO U.S. NAVY—HAS 500 SUBS, ACCORDING TO JANE'S REPORT

LONDON, December 15.—Russia now is a first-class naval power, second only to the United States, with a submarine force of 500 "its most formidable defensive arm," according to Jane's Fighting Ships 1958–59, published today.

The world-famous naval reference work says there is evidence Russian shipbuilding and marine engineering resources are being concentrated on nuclear-powered vessels, which involves the conversion of existing plants.

"In recent months it has become clear that the overall technological lead which the United States held over Russia is diminishing."

The activities of the major naval powers "points to the certaintly of intensive submarine warfare in any future hostilities."

Naval administrators the world over had been shaken out of the orbit of conventional ships, conventional propulsion and conventional weapons.

REVOLUTION IN STRATEGY

"Naval architects and maritime experts are becoming increasingly aware of the revolution in naval strategy and thinking and in global sea warfare that the advent of the nuclear-powered submarine has caused.

"With their increase in size, propulsive power and destructive power, submarines are coming to be regarded by the principal naval powers as the capital ships of the future."

There have been notable advances in the technical development and operational capabilities of American submarines and the U.S. Navy's atomic submarine lineup now is very formidable.

"The concentration of undersea power has been reflected in the composition of fleets," Jane's says.

BATTLESHIPS OUTDATED

Battleships are rapidly becoming extinct, cruisers are following them into obsolescence (except in the United States and U.S.S.R.) and there has been a great resurgence of specialized warships of the destroyer or frigate size.

Among the nuclear powers there was little reason to expect the aircraft carrier to disappear yet, but the carriers of the future probaly would be limited to about half the size of the existing largest vessels.

Aircraft carriers will continue to be the core of the new streamlined British Royal Navy.

Britain has ordered four guided missile destroyers of about 5,500 tons displacement each fully loaded, but it will be some years before they will join the fleet.

One feature of U.S. policy is the readiness with which warship construction programs are financed. Another was the tenacity with which they are holding on to various obsolete warships.

"But it is in future naval programs that the U.S. Navy shows such strength of purpose and technical foresight."

There had been two significant developments in Russian naval policy in the past year.

"The deadwood in the shape of obsolescent warships has been cut out and the men and resources needed to maintain the old ships have been diverted to the development of new weapons.

"And there has been a considerable increase in Russian naval activity on the high seas."

[From the Jacksonville (Fla.) Times-Union, Jan. 27, 1959]

NAVY RATES U.S. SUBS BETTER THAN RUSSIA'S, BUT REDS HAVE MANY MORE

WASHINGTON, January 26.—The U.S. Navy is satisfied that Russia's submarine cannot match the performance of American subs, boat for boat.

But the great and growing number of submarines that Russia could throw into action worries the Navy considerably.

This two-sided picture was given to the Senate Armed Services Committee today by Secretary of the Navy Thomas S. Gates, Jr. and Adm. Arleigh A. Burke, Chief of Naval Operations. They testified in a closed briefing session.

Part of the testimony was made public. It included the appraisal of the submarine situation and a discussion of the Navy's growing nuclear power. Burke especially sounded alarmed about the Red subs.

Gates said the Navy will be able to hit harder than ever with a nuclear punch, both from submarines able to launch Polaris missiles from underwater and from carrier-based jet attack planes.

Burke emphasized the Navy needs more missiles, jet aircraft, carriers and fighting ships in general.

The admiral said the Navy will have 113 active submarines by next July 1, but Russia will have about four times as many.

"Of greatest concern to the Navy is their submarine force numbering about 450," Burke said.

"Since World War II the submarine has progressed faster than the antisubmarine warfare capability to combat it," he said.

Here's the way Gates put it:

"Russia's submarines cannot match ours, boat for boat * * * (The great numbers that the Soviets have) impose a grave threat not only to our control of the seas but to our ability to defend the country against missile attack."

Gates and Burke were before the committee to supply a briefing on the condition of the Navy. Gates made it clear he is supporting President Eisenhower's defense budget. Burke did not challenge these figures in his statement, but made it clear he is not satisfied with the current rate of replacement for ships, planes, and weapons.

The Curtis Bill: Additional Tax Revenue

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to insert the following letter from a valued constituent and friend, C. Herbert Cornell, president, Fidelity Bank & Trust Co., of Minneapolis, Minn. Mr. Cornell calls attention to

H.R. 3149, believing it to be one source for additional tax revenue:

FIDELITY BANK & TRUST CO.,
Minneapolis, Minn., February 9, 1959.
The Honorable ROY WIER,
House of Representatives,
Washington, D.C.

DEAR ROY: You fellows in Congress are constantly looking around for additional tax revenue. Well, don't overlook the possibility of the Curtis bill, H.R. 3149.

Huge sums of tax free earnings are piling up in the big mutual savings banks and savings and loan associations. This money will never be distributed to the members in dividends. Do you know because of this tax advantage that the savings and loan associations have, that the Twin City Federal Savings & Loan Association has grown in a period of 4 years, from less than $100 million to over $300 million? My projection shows that within a period of sometime between 5 and 10 years, the savings and loan industry in the Twin City area will be bigger than the banking industry. This is possible only because of the tax advantage.

I do urge you to support the Curtis bill, H.R. 3149.

Very truly yours,
C. HERBERT CORNELL,
President.

William Mountjoy Garrard

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. SMITH of Mississippi. Mr. Speaker, death came last year to an outstanding American who had made one of the greatest contributions to the American cotton industry of any individual in our time. William Mountjoy Garrard, Sr., of Greenwood, Miss., was one of the founders and a highly successful general manager for many years of the Staple Cotton Cooperative Association. He made the Staple Cotton Association known throughout the cotton trade as the foremost organization of its kind.

Mr. Garrard's greatest contribution to cotton, however, was more than through his work with the Staple Cotton Association. His leadership in helping to formulate sound cotton policy throughout the cotton trade was vastly beneficial to the American cotton farmer and all segments of the cotton trade.

Under unanimous consent, I am including an editorial from the Memphis Commercial Appeal and a resolution by the board of directors of the Staple Cotton Cooperative Association in tribute to Mr. Garrard:

[From the Memphis Commercial Appeal]

WILLIAM MOUNTJOY GARRARD

The Mississippi Delta and the cotton world mourn the loss of an outstanding leader, a man who devoted the major share of his life to the improvement of conditions in the area in which he lived.

William Mountjoy Garrard was an inspired man whose devotion to an idea resulted in the development of the greatest cooperative cotton marketing organization in the country.

Yet that was only the beginning of his work and his responsibilities. Innumerable civic projects succeeded because he directed them. He gave of himself without reserve, and the results of his devotion to the delta are felt in the economic, cultural, and spiritual life of the community.

The bounty that he gave was returned to him in the form of the love and esteem of his friends, neighbors, and community.

He will be missed, but the memory of the man and his accomplishments will remain forever in the consciousness of the delta.

A TRIBUTE TO MR. WILLIAM MOUNTJOY GARRARD—RESOLUTION

Be it resolved, That we the members of the board of directors of the Staple Cotton Cooperative Association and the Staple Cotton Discount Corp., meeting jointly, wish to pay tribute to the memory, and to express our heartfelt grief at the passing, of our beloved Will Garrard, who joined his Maker September 8, 1958.

His hand more than any other guided this association through the rough road of its early existence.

His mind more than any other has directed this association through the narrow path of high standards and ethics for which it is known today.

His spirit, his determination, his drive, his enthusiasm, and his high optimism and confidence during times of adversity have been the leading factors in creating this association which stands today as a memorial to his lifetime endeavor.

For all of these the members and staff of this association will be forever grateful.

The longest shadow of his fine life, however, is cast upon our memory in a warmer and more personal way.

Any association member (and there were many) who through the years came to ask his advice will cherish the memory of a smile which bespoke of the joy of living—a sparkle of eye that indicated uprightness, honesty of purpose, confidence, and a lack of fear both physical and mental, a directness of nature and a warmth of personality which have endeared him and his memory to each and everyone of us.

We have lost wise counsel, it is true, but our greatest loss is that we have lost a friend.

May the lengthening shadow of his fine character and personality remain with our association through the years to come.

Be it further resolved, that this resolution be spread upon the minutes of this association and corporation and that a copy be sent to the family of William Mountjoy Garrard.

Martin Steps Down

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters and editorial:

HONOLULU, T.H., *January 8, 1959.*
The Honorable EDITH NOURSE ROGERS,
Committee on Veterans' Affairs,
House Office Building, Washington, D.C.

DEAR MRS. ROGERS: Would you be so kind as to have enclosed Honolulu Advertiser editorial inserted in body of CONGRESSIONAL RECORD?

It is the very least we Hawaii DAV's can ask, as Joe, like yourself, has been our good friend these many years.

With kindest personal regards and all good wishes, I am,

Sincerely yours,
JOSEPH CAPSIN,
Chairman, Committee on Employment Security, Department of Hawaii, DAV.

[From the Honolulu Advertiser, Jan. 8, 1959]

MARTIN STEPS DOWN

His full name is JOSEPH W. MARTIN, JR., but he is known internationally as JOE.

JOE MARTIN has been in Congress since 1925. In all those years he served the Republican Party and the Nation ably and with integrity.

Now, ailing at 74, he has been deposed as Republican minority leader in the House of Representatives where he used to be Speaker. JOE MARTIN, who won admiration and respect even from opponents, is saddened today. In time, when he realizes that his countrymen are proud of his record and envious of his reputation, that sadness should pass.

It has been a long and fine career for JOE MARTIN, whose father was a blacksmith. The son, eldest in a family of eight children, because a newspaper reporter early in the century and still publishes a newspaper in North Attleboro, Mass. He entered Congress when Nicholas Longworth was Speaker, becoming minority leader during the New Deal.

It has been said that he would rather have been Speaker, which he was, than President of the United States, which he might have been. Had he been more personally ambitious he could have quelled the Wendell Willkie boom in the 1940 Republican convention at which MARTIN presided. Had MARTIN done so he probably would have been the Republican candidate that year.

JOE MARTIN now has been replaced by Representative CHARLES A. HALLECK, a man still in his fifties, who was majority leader in the 80th and 83d Congresses. White House neutrality may have contributed to the downfall.

JOE MARTIN at 74 has nothing to be ashamed of, everything of which to be proud. He still retains his seat in the House of Representatives and probably can have it as long as he wishes. His work will be lonelier now, but he will be just as loyal, courageous, and wise as ever.

HONOLULU, T.H., *January 8, 1959.*
The Honorable JOSEPH W. MARTIN, JR.,
House Office Building,
Washington, D.C.

DEAR JOE: We [majority of Hawaii's DAV's] regret that you stepped down as Republican minority leader. And I, personally, cannot find the right word to express my deep regret.

In the last 12 years I have read practically all of your comments and speeches in the CONGRESSIONAL RECORD, and you have shown utmost consideration for the war-disabled, the small businessman, the 1-acre-and-a-cow farmer, and, not lease, the laboring man.

Anent enclosure, I am forwarding the original of this Honolulu Advertiser editorial (January 8, 1959), "MARTIN Steps Down," to Congresswoman EDITH NOURSE ROGERS requesting that she have same inserted in body of CONGRESSIONAL RECORD.

Also, I am taking the liberty of forwarding copies of this letter—with true copy of editorial—to department commander, DAV, Massachusetts; department commander, DAV, Hawaii; and, of course, to the Honorable EDITH NOURSE ROGERS.

With warm personal regards and every good wish.

Sincerely,
JOE CAPSIN,
Chairman, Committee on Employment Security, Department of Hawaii, DAV.

Gen. William J. Donovan

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. DULSKI. Mr. Speaker, the Nation and the world lost a great soldier, a great diplomat, and a distinguished citizen in the passing of Maj. Gen. William J. (Wild Bill) Donovan.

Under leave to extend my remarks, I include an editorial and article which appeared in the Buffalo Evening News, Buffalo, N.Y., February 9, 1959:

GEN. WILLIAM J. DONOVAN

William J. (Wild Bill) Donovan's life had most of the ingredients of a medieval legend in our time. He lived it to the full as soldier, adventurer, advocate and servant of his country.

One of Buffalo's most famous sons, he faithfully fitted the many roles in which he was cast in the past half century. Through World War I—in which he richly earned the sobriquet of "Wild Bill" as commander of "The Fighting 69th" of the Rainbow Division—he was a fearless fighting man; he practiced his profession before the courts of the land from the lowest to the highest tribunal; as chief of the shadowy Office of Strategic Services during the last war, he directed its almost incredible exploits of espionage and valor and gained his greatest fame.

Although he had all the appearance of the handsome, dashing hero of his lifelong adventure story, General Donovan shunned the reputation of swashbuckler. On the battlefield, he seemingly courted death but he was a clever tactician and strategist. He brought these same qualities to his practice of the law and put them to brilliant purpose in the hazardous works of the supersecret OSS. It was his skilled brain that masterminded sabotage and engineered the breathtaking escapes of thousands of allied soldiers from behind enemy lines.

General Donovan's career was studded with successes in every field except one—that of politics.. He was disappointed when he sought the governorship of his home State and even more so when he failed to be appointed Attorney General under Herbert Hoover. Perhaps it was as well that he didn't become bogged down in the jungles of the political life. It could very well have curtailed his services in other fields to which he devoted his unique skills. And besides he was not a practitioner of compromise, an art not wtihout its uses in politics. His country can be grateful to this man to whom the overworked description of dedicated must surely be applied. His is a monumental loss.

TYPICAL DONOVAN ACTION INSPIRED POEM BY KILMER

One of Maj. Gen. William J. Donovan's typical acts during World War I wasn't even mentioned in the day's dispatches. It was heralded, instead, in a poem by Joyce Kilmer, who had earlier written "Trees."

A lieutenant and his squad had been partially buried in a dugout by a shell explosion. General Donovan—then colonel of the "Fighting 69th" Regiment—helped dig them out.

Sergeant Kilmer witnessed the incident and it inspired him to write "Rouge Bouquet:" Several days later, Sergeant Kilmer was killed while serving as General Donovan's adjutant during the crossing of the River Ourcq under shellfire.

The poem was read publicly for the first time at Sergeant Kilmer's funeral. Republication rights have been purchased by the Buffalo Evening News. The poem follows:

"ROUGE BOUQUET

"(By Joyce Kilmer)

"In a wood they call the Rouge Bouquet
There is a new-made grave today,
Built by never a spade nor pick
Yet covered with earth 10 metres thick.
There lie many fighting men,
  Dead in their youthful prime,
Never to laugh nor love again
  Nor taste the summertime.
For Death came flying through the air
And stopped his flight at the dugout stair,
Touched his prey and left them there,
  Clay to clay.
He hid their bodies stealthily
In the soil of the land they fought to free
  And fled away.
Now over the grave abrupt and clear
  Three volleys ring;
And perhaps their brave young spirits hear
  The bugle sing:
'Go to sleep!
Go to sleep!
Slumber well where the shell screamed and
  fell.
Let your rifles rest on the muddy floor,
You will not need them any more.
Danger's past
Now at last,
Go to sleep!'
There is on earth no worthier grave
To hold the bodies of the brave
Than this place of pain and pride
Where they nobly fought and died.
Never fear but in the skies
  Saints and angels stand
Smiling with their holy eyes
  On this new-come band.
St. Michael's sword darts through the air
And touches the aureole on his hair
As he sees them stand saluting there,
  His stalwart sons;
And Patrick, Brigid, Columkill
Rejoice that in veins of warriors still
  The Gael's blood runs
And up to Heaven's doorway floats,
  From the wood called Rouge Bouquet,
A delicate cloud of bugle notes
  That softly say:
'Farewell!
Farewell!
Comrades true, born anew, peace to you!
Your souls shall be where the heroes are
And your memory shine like the morning-
  star.
Brave and dear,
Shield us here.
Farewell.' "

Whither Israel's Arabs?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 20, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues a most illuminating article on the Arab peoples who still live in Israel. The article was written by Gideon Weigert and appeared in the American Zionist, January 1959 issue:

WHITHER ISRAEL'S ARABS?

(By Gideon Weigert)

JERUSALEM.—Minorities all over the world to this day undoubtedly represent a thorny problem. If this is true of such states as the United States and Russia, where after long periods the minority questions are far from being solved, it is all the more true about Israel.

People tend to forget how young Israel is, for 10 years in the life of a nation is as nothing. In Israel, in addition to the usual problems presented by minorities, religion, race, and culture, another one—a unique one, it must be admitted—must be added in order to present a true picture of the situation in the country.

Those Arabs who remained in Israel in 1948 after the rest of their compatriots fled across the borders, suffered a sudden and enormous psychological shock. From being a large majority, they suddenly found themselves reduced to a very small minority, bitterly disillusioned in their former leaders, and yet sharing with them the hatred and bitterness against the new, young State of Israel. This is the dilemma, then, which only now is being about to be solved from within.

It is only at the present time that some of the Arabs themselves, and the intellectuals mainly, are beginning to profess openly a more pro-Israel attitude (and without the fear of being branded by other Arabs as traitors) and to understand that man lives not by bread alone, and that in addition to economic and social progress in the first decade of their new life in Israel, the striking of cultural and intellectual roots must follow.

Who are these Israel Arabs? Mostly rural folk living in over a hundred villages in Galilee and the little triangle they comprise 175,000 Moslems with their own religious courts, judges (kadis), court of appeal (Sharia), and about 200 clergymen; over 45,000 Christians of the various communities with 160 churches and full freedom to observe their religious doctrines; some 27,000 Druse, part of a small tribe living mainly in the Lebanon and Syria and known for their toughness and secret religion; and hundreds of followers of the Baha'i sect, as well as the Circassian community.

Thirty-five thousand Moslems inhabit the little triangle, that stretch of land only a stone's throw from the Jordan border, running from Jenin, in the north, and southward to Petah Tikva. In 1949 these people, living in 22 villages, were given the choice of staying on their farms in Israel or leaving for Jordan to become refugees. They decided to throw in their lot with the young State of Israel and stick to their farms for better or for worse.

Even the most pessimistic ones, those who have numerous complaints about the military rule to which they are subjected and which still requires them to carry permits for traveling outside their zone, will admit today that very few regret their decision of 9 years ago.

In 1949 the entire area had some 15 wells producing 1.5 million cubic meters of water, enough to irrigate about 2,000 dunams (500 acres). Today, 6 Arab villages have drinking water on tap, while 45 wells produce 22 million cubic meters of water, which irrigate 30,000 dunams (7,500 acres) or 80 percent of all arable land in the district.

In 1 village, Tirah, 700 new rooms were built in 9 years. There are 3 secondary schools with 170 pupils. Another 25 attend agricultural schools, while 30 attend Hebrew University, including 15 from 1 village alone, Taiyba. While during the mandate there was no local council, there are now four. Hundreds of radio sets, and gas cookers, electricity, drinking water on tap, roads, banks, clubs, and modern communication facilities have made their appearance in this exclusively Arab region.

Or take the case of Nazareth, the largest Arab urban center in Israel. For decades

this town had lain dormant and listless, its inhabitants coming to regard unemployment almost as a profession. The town was off the beaten track of civilization, and apart from a handful of pilgrims, arriving for Christmas, and Easter, there was little activity, with the people seeking work in Haifa, Jaffa, and Acre. When Israel took over control the population numbered 23,000 and employment presented a major problem.

Since then, the Government administrative center for the entire northern district has been moved to the capital of Galilee, as the town is now known. Hundreds of housing units have been built and local workers have experienced an unprecedented boom. Two major industrial enterprises have opened, and instead of there being surplus manpower, new labor must be recruited from the agrarian hinterland to meet the mounting demand for workers.

There are Moslem, Christian, and Druse volunteers in the Israel armed forces, ranging from privates to officers. Altogether 417 members of various minority groups serve in the regular police and in the border police. An Israel £130,000 housing project has been completed for Druse ex-soldiers who had flocked in 1948 from the nearby Jebel Druse in Syria to fight alongside the Israel army to beat off the armed invasion of Galilee by Syrian and Lebanese troops.

Another thorny problem dating back to the war of liberation is now being tackled. It involves the economic well being of 20,000 persons (about 3,500 families), all of them Arab displaced persons who at the height of the fighting had left their villages and whose houses were destroyed.

The Government has allocated £20 million to be used over the next few years to solve the problem by means of providing compensation for land abandoned, and/or new agricultural units in exchange, the building of housing projects in areas where these persons are mainly concentrated (mostly in Galilee) and the provision of long-term loans enabling them to acquire new livestock and equipment, as well as technical and professional assistance.

Many of these persons are refugees who were allowed to reenter Israel under a reunion of families scheme, in addition to infiltrators who had returned illegally and were later allowed for humanitarian reasons to remain.

The government policy toward the Israel minorities has foundered on several crucial issues. First, there is an urgent need for a thorough streamlining of procedure: there are still cases of abuse and overstepping of authority by both civilian officials and junior army officers working among the Arabs. The authorities have been slow to inform the Arab population that such conduct is not the official policy of the state.

Then there is the serious problem of hundreds of secondary school graduates who can find no employment open to them. One solution might be the establishment of a liaison office in Nazareth to help and advise graduates. As it is, many of them sit around idly in cafes, becoming easy prey to Communist propaganda.

But little has been done to eliminate one sore point—the dissatisfaction of the intellectuals among the minorities, a group which has been sitting on the fence for the past decade, not knowing to which side to extend its loyalties. Only toward the end of last year was a serious effort made, for the first time, to engage this class of Arab in a free and open exchange of views with key Israel officials dealing with Arab affairs in order to encourage them to come out with their grievances.

But apart from teachers and officials, the Israel authorities must reach in a similar manner a great number of Arab local and municipal councilors, members of the free professions, students at the Hebrew University. If activities in this field proceed at the present slow pace, however, it will take years to reach an average of 2 to 3 persons of this group from each of the over 100 Arab villages. The same holds good in the absence of any drive in adult education, eradication of illiteracy in rural areas, opening of clubs, lectures and the provision of mobile cinema units.

As in the wider sphere of Arab relations, where the main reason for the difficulties is the inner weakness and absence of any political, social, and cultural ideas which mark Arab nationalism, and this in turn leads to the gradual acceptance of Communist ideology, so too, do anti-Israel and Communist principles spread among Israel's minority group.

What remains to be done? It is certain that Israel can do nothing to isloate her own Arab minority completely from the ideology of Arab nationalism sweping the region today.

There are two signs emerging recently which show a gradual thawing in the frozen posture of fence-sitting of the past. One is the gesture made by Fares Hamdan, the Knesset member from the little triangle. At the time of the declaration of the United Arab Republic and the Arab Union, he openly declared himself for the Jews of Israel by signing a contract investing capital in a joint Jewish-Arab industrial enterprise in his native village. "I believe," he said, "that this is the only correct way open to us Arabs in Israel—confidence in the Jews and a deep conviction that our fate is joined together forever. Let us hope that there will be other such projects."

A second development, minor though it may appear, is no less significant. It is the emergence of a feeling among Arab intellectuals that the time has come to care for the welfare of the village and that they are the ones to initiate such a move. In various villages, Arab school principals have for the first time begun organizing their village communities on their own initiative.

Availability of Funds for Doing International Business—Address by Hon. George A. Blowers

---

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 5, 1959

Mr. SIKES. Mr. Speaker, I was very much interested in and impressed by a speech made before the World Trade Center Seminar in Boston, Mass., on January 29, 1959, by the Honorable George A. Blowers, Director of the Export-Import Bank, on the "Availability of Funds for Doing International Business." This is a subject of paramount interest to me and I am confident that my distinguished colleagues would benefit from the information in the address of Mr. Blowers and it is a pleasure for me to insert it in the CONGRESSIONAL RECORD. The address follows:

AVAILABILITY OF FUNDS FOR DOING INTERNATIONAL BUSINESS—ADDRESS BEFORE THE WORLD TRADE CENTER SEMINAR, BOSTON, MASS., JANUARY 29, 1959, BY GEORGE A. BLOWERS, DIRECTOR, EXPORT-IMPORT BANK

Because of the short time I have at my disposal, I shall without preliminaries jump right into my subject. I shall try to give you in broadest outline what the various national and international agencies are doing so as to have time to particularize on the activities of the Export-Import Bank in this field.

Right after the last World War it became obvious that if the economies of the various nations of the free world were to be rehabilitated and brought into production under a free enterprise system, by ways which would obviate the necessity of using autocratic means for forcing savings and capital growth, it would be necessary for the United States through public and private channels to create a huge outflow of investment capital. Such capital was needed not only to rebuild war damaged factories but to build whole new industries. In the developing economies the need was broader. Foreign loans were and still are required for the broad social overhead type of investment.

I need not recount for this sophisticated audience the steps which have been taken by our Government over the years to rebuild and rehabilitate war-torn economies on the one hand, and to speed the process of economic growth in the developing countries on the other. Recent events in Europe should be cause for great pride and satisfaction to our Nation. The Common Market and the general progress toward increased convertibility are evidence that through our efforts and the efforts of the people of Western Europe these economies have been restored to health and vigor.

In the underdeveloped economies progress and success are not so evident. Here the progress must be slower because it is a problem of developing human resources along with material resources. In spite of this, if we look at the statistics we find that the rate of growth has been rapid on every front. In most cases the increase in production has been at a more rapid rate than in the United States, while in Latin America it has been explosive.

International agencies and agencies of the United States Government have been making funds available for development purposes year after year and in the last few years at an accelerating rate. Last year alone the Export-Import Bank loaned and approved allocations under existing credits in the total amount of $1 billion. The International Cooperation Administration disbursed $1,219,000,000. The Development Loan Fund loaned $513 million. Public Law 480 surplus agricultural commodity sales were in the amount of $1.039 billion. The International Bank for Reconstruction and Development loaned $770 million, and transactions of the International Monetary Fund totaled $1.2 billion. It is true that the funds made available by the International Monetary Fund are not considered to be for development purposes, but they keep the wheels of trade turning and help the development process.

Judging from announcements made during the last few months, it seems to be evident that our Government intends to maintain or to step up Government assistance to the developing countries and to do whatever possible to stimulate an increased flow of private funds for investment abroad. The administration, in fact, is committed by public pronouncements to request of Congress increased funds for existing agencies and funds for agencies to be brought into being. So far, we have heard of such assistance for the International Bank for Reconstruction and Development in the amount of $2.6 billion, for the International Monetary Fund in the amount of $1.4 billion, a supplemental appropriation for the International Development Fund of $225 million, and a new appropriation of $700 million for fiscal 1960 with authority to increase their guarantee program to $1 billion. Funds will be required too, for the new Inter-American Development Bank and for a development bank in the

Middle East, if those countries should request such an institution.

Constant agitation from Washington for private enterprise or private lenders to become more active in this field and to take over a larger share of the burden does not mean that private enterprise has not been doing a magnificent job. Today, direct private investment abroad is estimated to amount to $25¼ billion. Total U.S. investments abroad are estimated at $54 billion. I think there is no doubt that private investors will invest abroad in increasing amounts as the host countries put out the welcome mat and convince American investors that the climate is healthy for such investment.

Having given you this very brief outline of what our Government, the international agencies and business have done in making money available, I should like, with your permission, to use the rest of my time to tell you about your bank—the Export-Import Bank, what it does and how it assists U.S. business while at the same time assisting our Government's foreign economic policy objectives. I say your bank because all of you as taxpayers are shareholders in the Export-Import Bank.

The $1 billion capital of the Export-Import Bank was subscribed by the U.S. Treasury. In addition to this, we are authorized by Congress to borrow from the Treasury up to an amount of $6 billion. This gives us a total lending capacity of $7 billion. The Bank was established in 1934 and its purpose from its inception has been to move U.S. goods into the export market without competing with private lenders and without making unsound loans. Those charged with its management soon discovered that the bank could best serve this purpose by assisting the borrowing countries to increase the productive capacities of their economies, thereby creating the means of repaying loans and at the same time increasing purchasing power for additional U.S. exports. This feature has given our loans a self-liquidating character as regards dollar costs. Since the emphasis is generally on projects which will either earn or save dollars for the borrowing country, it has had the additional effect of making our Bank a development bank from the point of view of the borrowing country. Even our balance of payments loans or so-called bail-out loans have served the purpose of keeping trade from stagnating and development from retrogressing. It is my firm conviction these loans have served a real developmental purpose in preventing financial and payment crises in developing countries from reaching the panic stage and the stifling proportions of our own growing pains crises of 1869, 1873, 1884, 1907, and 1929.

Over the years the Export-Import Bank as the principal lending agency of the U.S. Government has been able to bring sound financial judgment to bear on the problems of our trading partners. I believe this has been one of the Bank's greatest contributions and I am able to say this in all modesty because I am a relative newcomer to the board—actually the latest appointee.

Measured in dollar amounts, what has been the activity of the Bank? During its life, the Bank has authorized loans approximating $10 billion. The Bank has actually disbursed $6,586 million, of which $3,272 million have become due and have been repaid. During calendar year 1958 our Bank disbursed about $650 million. Let me, with a few figures, give you some idea of what the impact of our loans has been. During 1958 our board made every effort to stimulate exports—remember we were all fearful of what might happen to our economy that year. We estimate our loans helped move $1¼ billion of exports. Since total exports, excluding military hardware, amounted to about $16.5 billion, this means that the Export-Import Bank loans helped move about 7½ percent of our total exports for the year. Let me emphasize that the impact of our foreign loans is felt throughout the country. We have estimates which indicate that an order for one Lockheed plane creates business in 38 States. We have evidence that two credits totaling $16.5 million for power equipment generated orders of $24.9 million which were distributed among 40 companies in 15 States. Loans of $61.5 million for the development of a steel mill in Chile generated 7,807 orders with 780 suppliers, and a cement plant in Sumatra, 1,000 separate orders.

A fact about our operations which is not generally realized is that our loans offer a real stimulus to private investors to invest abroad. Estimates indicate that each $2 loaned abroad by the Export-Import Bank draws $1 of private investment. From 1952 to 1958 we authorized in round numbers $1½ billion in new credits, which were supplemented by commercial bank participations to the extent of $366 million. Let me point out that these participations were for the account and risk of the commercial banks and without recourse to the Export-Import Bank. In addition to these participations by commercial banks there were nonrecouse participations by suppliers and others to the extent of an additional $205 million, and there were equity investments in the enterprises financed to the extent of $265 million. These various participations add up to a total of $836 million of private capital, which accompanied our lending of $1½ billion. And I repeat, this private investment was without benefit of guaranties and entirely at the risk of the private investors.

I have not spoken of our so-called Cooley loans. At the risk of encroaching on Mr. Allison's subject, I would like to say just a word on this subject. This Cooley program was slow to get started, not because of problems within the Bank but because of the time necessarily required to agree on complicated details of sales agreements for agricultural commodities. After agreement is reached, considerable time is required to order and ship the grain before the money becomes available to the Export-Import Bank.

The result has been that in making loans we have kept pretty well abreast of the money at our disposal with the exceptions of India and Pakistan and we are willing to stand on our record. We have made to date 53 loans in 5 countries for a total equivalent of approximately US$24 million.

Time is getting short, so let me say just a few words as to what this means to you as a taxpayer. First, let me emphasize our activities have not cost you 1 cent! For the first half of this fiscal year net profits from our operations have amounted to $41.4 million. This, of course, is after paying all administrative expenses and $18.7 million to the U.S. Treasury as interest on monies borrowed from them. We estimate that for the full year our net profits will approximate $82 million. You might also be interested to know that during the 24-year life of the Bank we have paid to the U.S. Treasury $196 million in dividends on their equity investment in the Bank and we have paid to them a total of $238 million on money borrowed. I will not say that all the losses on our books are good, but to date the losses we have had to write off have been small, amounting to only one-twentieth of 1 percent of loans made. Against possible future defaults we have been able to accumulate out of earnings a reserve of $528.4 million, equal to just about 16 percent of outstanding loans. As a bureaucracy we have been a dismal failure. After 24 years of life in a climate conducive to expansion, we remain a small organization with only 224 employees.

I wish to apologize for the number of figures I have used but this is a broad field and in condensing it the fluff fell out and the figures remained. I shall be glad to answer any questions you may have.

National Security and Hydroelectric Equipment

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, during the past few days we have witnessed the strange spectacle of a foreign government launching a campaign of recrimination in the American press against our Government's award of a contract for two hydraulic turbines to an American company in preference to a British firm.

Letters have been sent to American newspapers by the British Information Service, an agency of the British Government, quoting the British Ambassador to Washington and the president of Britain's Board of Trade as, in effect, impeaching the honesty and integrity of U.S. Government officials.

The president of the British Board of Trade, a government agency similar to our Department of Commerce, the British Ambassador and the British Information Services speak for Britain and British interests, not for the United States.

The direct approach of a British agency to American newspapers, with its implied slurs at American officials and policy, has met with a mixed response. One segment of our press has been quick to echo the British position.

In sharp contrast, the Oakland Tribune, of Oakland, Calif., speaks up for America.

The Oakland Tribune published the following editorial on January 28 under the heading "British Campaign":

Attention was called yesterday in these columns to the unhappy state of mind of much of the British press over the awarding of a contract for hydroelectric equipment by the U.S. Government to U.S. firms in preference to lower priced British equipment.

Now we learn that the comments of the British press were government inspired, and that a campaign has been launched in this country by the British Information Service, an agency of the British Government.

The San Francisco office of the British Information Service is sending out letters to financial editors and the city desks of newspapers in this area, and no doubt elsewhere, referring to the preference for American equipment over British as a slap in the face for Britain.

It refers to a statement by Sir David Eccles, president of the British Board of Trade, also a British Government agency, in which he said:

"Rejection of this tender is hardly consistent with the ideas of interdependence and freedom of trade upon which the two Governments have agreed. The rejection came as a shock and nothing that the U.S. Government has so far been able to tell us in any way reduces my disappointment."

Then the letter refers to vehement protests made by the British Ambassador in Washington, who among other things said of the U.S. Government's explanation: "Tell that to the marines—sailors won't believe you."

It was not necessary that the United States give any explanation, but it did. It was pointed out there is a Federal statute known as the Buy American Act, designed to give preference to American products by the U.S. Government. It was also pointed out the purchase was made in conformity with requirements that Government expenditures be made, wherever possible, in areas of unemployment.

It aso was made clear that security requirements had to be met, in this case the availability of parts when repairs might be needed and the availability of the machine tools needed to turn out replacements in the event of a major emergency.

I am happy to see the Oakland Tribune speak up for America and American employment, security and interests, and I am not surprised. The assistant publisher of the Oakland Tribune is William F. Knowland, who served his State of California and the Nation with distinction in the U.S. Senate for 14 years and retired voluntarily at the close of the recent session as Senate Republican leader.

Mr. Speaker, in view of the clamor which has been raised over the rejection of this English company's bid on two hydraulic turbines I would like to present this case in its proper perspective.

There has been an obvious effort in some quarters to represent this action as having shut out all foreign competition for such contracts.

The facts are that foreign overseas manufacturers during the past 7 years have received orders from American governmental agencies for 14 giant hydraulic turbines totaling 1,526,000 horsepower, 24 hydraulic turbine driven generators with a combined rating of 1,295,210 kilovolt-amperes, and 399 heavy power transformers.

Each year increasing millions of American tax dollars have gone into procurement from foreign suppliers of heavy equipment for our expanding federally owned or publicly owned power production and transmission facilities.

All of the 14 hydraulic turbines above mentioned have been supplied or are on order from the English Electric Export & Trading Co., Ltd., of Stafford, England, the foreign bidder on the two turbines for the Greers Ferry Dam in Arkansas over which the present British-inspired controversy has arisen.

Of the 24 generators of foreign construction, this company has built or has contracts to build the 12 largest, and also a 13th generator of lesser rating. It also has received the contracts for 39 of the 399 heavy power transformers being supplied from overseas.

With reference to two of these transformers, the English quarterly review British Affairs, stated in March 1957, as follows:

Two of the largest transformers ever built have been ordered by the Tennessee Valley Authority from the English Electric Co. of Stafford. The transformers are for the Authority's new power station at Gallatin, Tenn. When they are ready they will form one of the heaviest loads ever shipped from Britain.

Fifty British heavy transformers for other governmental power systems in the United States were ordered from another English company, bringing the British total for this type of heavy electrical equipment to 89.

Governmental procurement of the remaining foreign-built electrical equipment is divided between Swiss, Austrian, Italian, and British firms other than British Electric. It is evident that the latter has not done badly in this overseas competition for our hydroelectric power generation and transmission equipment market.

Industry data submitted to the Office of Civil and Defense Mobilization shows, with reference to heavy power transformers, that in 1951 the Federal Government purchased none from overseas. In 1952, 27 percent of the purchases were from overseas, in 1953 50 percent, in 1954 40 percent, in 1955 60 percent, and in 1956 they exceeded 80 percent. This data applies to transformers only.

In 1956 the Corps of Engineers bought 26 percent of all its power equipment, which includes turbines, generators, and circuit breakers, from foreign sources, the Bonneville Power Administration 39 percent and the Bureau of Reclamation 47 percent.

The U.S. Corps of Engineers has installed or purchased 37 heavy power transformers with a total rating of 2,692,000 kilovolt-amperes in the Chief Joseph Dam, The Dalles Dam and the McNary Dam—

An industry statement filed with Director Leo A. Hoegh, of the Office of Civil and Defense Mobilization states.

Also the Corps of Engineers has two foreign manufactured hydraulic turbine-driven generators, each with a 73,684-kilovolt-ampere rating, in the McNary Dam.

Also the Bureau of Reclamation has three large power transformers (kilovolt-ampere rating totaling 130,000) and six sizable hydraulic turbine-driven generators purchased from abroad and installed in this area.

Also, 32 heavy power transformers of foreign origin have been installed or ordered by the municipal power systems of Seattle and Tacoma or by the public utility districts in the area. They have a combined kilovolt-ampere rating of 2,372,000. In the same category are 10 hydraulic turbines totaling 1,140,000 horsepower, and 10 large hydraulic turbine-driven generators.

The same report states that the Tennessee Valley Authority has purchased 45 heavy power transformers with a total of approximately 4,098,000 kilovolt-amperes from foreign sources and has issued a letter of intent for the purchase of three 60,000 kilovolt-amperes hydraulic turbine-driven generators, while the power authority of the State of New York has purchased some 32 foreign-produced transformers with a total kilovolt-ampere rating of 4,098,000, identical to that of TVA.

Mr. Speaker, when we consider these facts, particularly those which apply to Federal projects for which Congress has appropriated the funds, the question must arise whether these wholesale foreign purchases are in the interest of our national economy, welfare, and security.

Yet, when the question arises there is an outburst from British officialdom and the British press which is reflected in several of our own newspapers, and the occasion seized upon is the rejection of one award to a company which has received previously many awards from American governmental agencies involving millions of dollars. They would have us subscribe to the view that it is un-American to be for America.

I do not know of any prior occasion when an award of an electrical equipment contract was denied when an English company was the low bidder, although I do recall such an instance when a Japanese firm entered the low bid.

Now what are the facts in this most recent case which has so aroused our British friends?

The Corps of Engineers last July advertised for bids on two turbines for the Greers Ferry Dam in Arkansas. English Electric was the only foreign bidder. Four of the five American companies manufacturing hydraulic turbines entered bids. The bids were opened September 4. The English company's bid was $1,450,700. The lowest American bid, that of the Baldwin-Lima-Hamilton Corp., of Philadelphia and San Francisco, was, $1,757,210. The difference between the low foreign bid and the lowest American bid was $306,510 or approximately 19 percent.

May I say at this point that Federal Government specifications officially recognize that from 45 to 55 percent of the American contract price for the design and manufacture of hydraulic turbines represents the labor cost.

Baldwin-Lima Hamilton estimated that 207,250 man-hours of work were directly involved at its plant in construction of the two Greers Ferry turbines, and that an additional 81,000 man-hours would be provided by its immediate suppliers, a total of 288,250 man-hours.

I do not have an estimate of the total labor costs on this contract, but I do know that the construction of hydraulic turbines requires highly specialized techniques and skills, and that the average earnings for all labor in American manufacturing industries as of last October was $2.13 per hour.

On this basis, had the contract been given to the English company, which already has received many such contracts as I have pointed out, American wage earners would have lost $612,000, or double the difference between the English and the American bids.

Or, if we take the 45 percent minimum percentage recognized in Federal Government specifications as the proportion of labor costs to contract price in manufacturing hydraulic turbines the loss would have increased to $790,744 had the English company's bid been accepted.

The award of the contract, therefore, provided a net gain to the American economy of at least $300,000 and more than 7,200 weeks of productive employment to American citizens in an area where 6 to 8.9 percent of the total labor force is currently unemployed according to the January report of the U.S. Bureau of Employment Security.

The award of this particular contract to the lowest American bidder instead of to the foreign bidder was clearly justified, in my opinion, on economic and social grounds, in addition to that of national security expressed by Director Hoegh and upheld by Secretary Dulles.

American wage earners buy American goods in American shops and stores.

Foreign labor does not.

American wage earners pay Federal, State, and local taxes.

Foreign labor does not.

American employment and American households support our schools and colleges, our churches, and our civic and religious institutions.

Foreigners do not.

Americans man our military and industrial defenses.

Foreigners do not.

When Government tax money is paid out for Government projects and facilities American taxpayers are entitled, in my opinion, to have that money paid to fellow Americans with the realization that the benefits of these expenditures will accrue to all Americans in national security and an expanding economy, particularly where qualified American workers and taxpayers are unemployed.

Why should American jobs be sacrificed because British labor is content to work for one-half or one-third of our wage scales, thus permitting his employer to underbid American industry on public contracts?

I concede that this was not a factor taken into account by the Director of OCDM, but offer it as supplemental justification of his determination.

The decision was based solely on national security considerations.

Congress in 1933 passed the Buy American Act, designed to grant American producers a 25-percent differential over foreign suppliers on Government purchases on which both domestic and foreign bids were offered.

Written into that law was a provision that empowered authorities, regardless of any differential, "to reject any bid or offer for materials of foreign origin if such rejection is necessary to protect national security interests."

In 1954, the Buy American Act was superseded by Executive Order 10582 which, in effect, reduced the differential to 6 percent but retained the national security exception stated above.

It is, of course, the sovereign right and duty of any nation to protect its national security.

Director Hoegh's decision was consistent also with the national security provisions of the Trade Agreements Extension Act of 1958 which strengthened and expanded similar provisions in the 1954 Extension Act.

Section 8 of the 1958 act directs the Director of OCDM to investigate and determine the effects on national security of any article upon request of the head of any department or agency, upon application of an interested party, or upon the Director's own motion.

If, as a result of such investigation, the Director is of the opinion that the said article is being imported into the United States in such quantities or under such circumstances as to threaten to impair the national security, he shall promptly so advise the President.

Then, unless the President determines that the article is not being imported in such quantities or under such circumstances as to threaten to impair the national security he shall take such action as he deems necessary to adjust the imports of such article and its derivatives so that they will no longer threaten to impair the national security.

A definite standard and criteria were written into the law to guide the Director and the President in arriving at a determination.

Congress directed that the Director of the OCDM and the President consider:

First. Domestic production needed for projected defense requirements.

Second. The capacity of domestic industries to meet the projected defense requirements.

Third. Existing and anticipated availabilities of the human resources, raw materials, and other supplies and services essential to national defense.

Fourth. The requirements of growth of such industries and such supplies and services including the investment, exploration, and development necessary to assure such growth.

Fifth. The character, use, and quantity of the imported articles under investigation as they affect industry in the United States and the capacity of the United States to meet national security requirements.

These considerations are not optional with the Director of the OCDM or the President. They are statutory requirements and not subject to the whims of foreign trade expansionists or foreign press releases.

These provisions were written into the Trade Agreements Extension Act of 1958 by the House and retained by the Senate. The Senate added a further consideration to be recognized by the Director of the OCDM and the President in arriving at a determination of the impact or effect of imports of a given article on national security.

I quote:

In the administration of this section, the Director and the President shall further recognize the close relation of the economic welfare of individual domestic industries; and any substantial unemployment, decrease in revenues of government, loss of skills and investment, or other serious effects resulting from the displacement of any domestic products by excessive imports shall be considered without excluding other factors, in determining whether such weakening of our internal economy may impair the national security.

Thus the authority of the President to deal with imports which threaten to impair our national security is unequivocal.

Nor is the question of reciprocity involved where a nation's security is at stake.

Britain drastically restricts imports which compete with British industries which she considers essential or strategic.

She does this under the Safeguarding of Industries Act of 1921 as extended and amended.

She does this through a rigid system of import licenses and exchange permits.

She does this through her British token import plan, described by our own Department of Commerce as follows:

The British token import plan, established with the United States in 1946, enables eligible U.S. manufacturers or other eligible U.S. firms to export to the United Kingdom token shipments or specified commodities whose importation from other dollar sources is otherwise generally prohibited by the British Government.

Participants are permitted to make shipments under the plan in an amount not exceeding 30 percent of the individual certified firm's average annual exports of specified commodities to the United Kingdom in the base years 1936, 1937, and 1938.

The years 1936, 1937, and 1938 were depression years in which the total exports of the United States to all countries averaged less than $3 billion. The British token plan permits slightly over 500 American firms which were exporting to Britain in those depression years to export annually now 30 percent of what they exported to Britain then.

I am informed that there is no record of any heavy electrical equipment—generators, hydraulic turbines, transformers, or circuit breakers—having been supplied to British industry by any American manufacturer in recent years.

In fact, according to testimony presented before the Ways and Means Committee at the hearings held last year on renewal of the Trade Agreements Act, such export would be impossible even if American manufacturers were able to overcome the British low wage differential and enter competitive bids. I quote from the testimony cited:

Since its creation in 1947, the Central Electrical Authority of Great Britain has limited the procurement of power and transmission equipment to domestic (i.e. British) suppliers because, as its official report to a parliamentary committee of inquiry states: "It would be unwise for the electricity supply industry (of England) to be dependent upon foreign manufacturers for spares and maintenance."

Mr. Speaker, I submit that if it is unwise for England to be dependent on American or other foreign suppliers for spares and maintenance, it is unwise for the United States to be dependent on British suppliers for spares and maintenance of power and transmission equipment.

Britain's own policy and enactments demonstrate that when the President of Britain's Board of Trade speaks so glibly of interdependence and freedom of trade upon which the two governments have agreed, his statement, like many British products, was made exclusively for export.

I am not aware of our Government having ever formally acceded to the doctrine of interdependence with any nation, although I know that some lip service has been given to that concept in the executive branch.

In any event we are not dependent on Great Britain for hydraulic turbines, generators, or heavy transformers, although we might well be if we continue to rely largely on foreign sources for such equipment.

There are, as stated previously, five companies in the United States that manufacture hydraulic turbines, three of them located in areas that presently have a labor surplus, frequently referred to as distressed areas.

There are five companies manufacturing hydraulic turbine generators; synchronous condensers above 10,000 kilovolt-amperes, two of them located in labor surplus areas.

There are six companies manufacturing power transformers above 10,000 kilovolt-amperes, five of them in labor surplus areas, and only three companies manufacturing power circuit breakers of 1 million kilovolt-amperes interrupting capacity and above, two of them located in labor surplus areas. Governmental agencies have purchased 81 circuit breakers from foreign countries.

Should the foreign manufacturers elect to bid on all Federal Government jobs, they could, if present policies are continued, take over the bulk of production of all heavy power-producing equipment purchased by the agencies of the Federal Government—

The industry brief filed with the Director of the OCDM tersely states.

Since 1953, 70 percent of the hydraulic turbine generator business in the United States has been placed by governmental agencies, Federal and State, and the industry estimates that 60 percent of hydraulic turbine business is affected by policies of the Federal Government.

In brief, the Federal Government has become the principal buyer of heavy power-producing and transmission equipment, all highly vulnerable to disaster or sabotage.

It can buy foreign at the risk of many months delay in the event of breakdowns requiring repairs or replacement, or it can buy American with necessary parts and repair skills readily available.

It can buy foreign at the risk of increasing unemployment and the loss of specialists and technicians through shutdown of our own strategic industries, or it can buy American and assure our continued security in this highly important field.

Let us not be overwhelmed by the protestations of foreign agency leaders that we are breaching ideas of interdependence and freedom of trade when we endeavor to safeguard our own national security.

Tadeusz Kosciuszko and the American Revolution

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. MULTER. Mr. Speaker, tomorrow, February 12, marks the birthday of Tadeusz Kosciuszko.

Tadeusz Kosciuszko was one of many distinguished and gifted Poles who played a signally important part in our War of Independence. Today in observing the anniversary of his birth we once more pay our respects to his memory and express our gratitude for his great services.

Kosciuszko was born into a middle-class family on February 12, 1746, 213 years ago. In his early youth he showed unusual liking for books and study, and his relatives—his father died when he was 13 years old—did everything in their power to educate him. After he finished the Royal School in Warsaw, he earned a scholarship to study in France where he entered the famous Mezieres Military School, specializing in artillery and engineering. While in Paris stories about the American Revolution fired his imagination. He decided that this was a fight on behalf of a good cause. He borrowed money from friends, sailed for America, and arrived in Philadelphia in August of 1776. There he applied for military service; immediately he was admitted and charged with the drawing up of plans for fortifying the Delaware. His success in this first assignment earned him a colonel's commission. From then on, a high place in our Revolutionary War was assured him. Everything he did was done with distinction, and in October 1783, Congress made him a brigadier general.

With the end of the fight for our cause here, he sailed to Poland, to engage there in the fight for Polish freedom.

Unfortunately all his efforts to that end were unsuccessful. He ended his gallant career in exile in Switzerland, where he died on October 15, 1817.

Today Americans of all rank and creed solemnly observe the anniversary of his birth and do homage to his memory.

Forty Million Frenchmen Can Be Wrong

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HIESTAND. Mr. Speaker, at yesterday's press conference President Eisenhower very ably summed up the disastrous consequences of profligate spending and urged the practice of frugality to avert the shrinkage in the value of the dollar.

Recent history has recorded many examples of these disasters in other nations, in addition to the 52-percent decrease in our own dollars' purchasing power. A recent example, but by no means the only one, is the tragic example of the great nation of France which is now struggling desperately to salvage what it can out of the wreckage of inflation. This story is ably set forth by Herbert Bratter in the current issue of Banking. Under unanimous consent, I include the article in the RECORD at this point:

In France, a wealthy land with socialized basic industries and banking, we have seen in recent years a Laocoön engaged in an endless struggle with the seemingly unconquerable serpent, inflation. In the early postwar years, inflation in France drew its strength from the concentration on investment and construction, rather than on production of consumer goods. In the early 1950's investment was again stimulated by the Korean war. Foreign aid in big amounts has been obtained from the World Bank and Fund, the Eximbank, and other sources. At home the successive governments have sought to check inflation with everything in the book: price rollbacks, materials allocations, price controls, forced loans, recall of 5,000-franc notes, a free gold market, indexed bonds, exhortation, new forms of taxation like the value-added tax, support prices, subsidies, general monetary controls, devaluation, and other measures.

Still we have seen French governments determining the prices of scores of manufactured products, apart from the products and services sold by the nationalized enterprises: railroad, subway, and bus fares; gas, electricity, coal, and gasoline. We have seen a three-man official committee with wide powers—the Action Committee for the Defense of Purchasing Power—created to police the national price structure. Yet, at least until DeGaulle, there has been no sign or hope that France can for long get out of inflation's grip. The nation seems only to have got mired ever deeper in the economic slough which makes its appearance when manmade regulations are substituted for the free play of the marketplace.

Too many groups in France, as pointed out by former Premier Mendes-France, think they can beat inflation by creating more of it. And, when not engaged in getting a group advantage at the expense of the total community, the Frenchman of today concentrates on group and personal hedges against inflation rather than exhibiting a determination to see the evil exterminated.

We could, if we would, learn something from others' experiences with inflation. History is replete with innumerable stories of nations brought to ruin by currency corruption. The trouble with history is only this: No one pays any attention to its lessons when the group to which he belongs—labor union, farm organization, veterans group, pension lobby, Government employees, construction industry, shipping, producer of foreign-aid goods, or whatnot—sees an immediate group gain to be got.

Nonetheless, it may be instructive and constructive here to turn the spotlight on some of the complications of life under intermittent and almost chronic inflation in our own times in France, using that country not at all as the worst exhibit that could be found in our time, but rather because of the great importance of France to Europe and the West.

One may see what has been happening to the franc over the years by comparing that unit with its former self. By 1954 in terms of purchasing power a franc was equal to only 1.163 part of a 1914 franc. An item which in 1914 could be bought with 100 francs, by 1938 cost 675 francs; by 1949 it cost 1,220 francs; and by 1954 it cost 1,630 francs. Since 1954 the process of shrinkage in buying power has continued.

Reflecting the economic, financial, and social problems generated by this dwindling of the franc's value are the following headlines taken at random from a file of 1957 newspaper clippings on France. They could be readily duplicated for other years:

"French Austerity Spurred"; "France Fires on Inflation—Blank Cartridges?" "Paris Price Curb Meets Hostility"; "French Miss Target in Price Fixing"; "France Freezes Prices in Fight on Inflation"; "French Labor Unrest"; "French Drive on Prices Jolted"; "Price-Wage Curb Baffles France"; "Rich France Economically Sick"; "French Exhorted to Tighten Belts"; "Inflation Wrings France"; "Sliding Wage-Scale Dilemma."

As every traveler knows, the ailing franc, with its foreign exchange value artificially pegged almost continuously until the last devaluation of December 1958, has fostered a widespread black market. Flouting the official exchange rates under the very eyes of the police in Paris and almost everywhere else have been those "furtive men in their

all-weather uniforms of shabby raincoats who lurk in the streets," importuning male tourists with their offers of spicy post cards and cheap francs.

For all that French central bankers and successive finance ministers could show in the way of accomplishment, the disease that was consuming the franc was beyond their power to cure. All sorts of official devices were resorted to with the aim of checking the decline and the loss of public confidence in the currency. Many of these devices, indeed nearly all of them, dealt with symptoms rather than fundamental causes of the inflation. Repeated periodic doses of inflation, brought about not only by war and its aftermath but as well by inadequate official economic and fiscal policies, wrought their effect not only on the economic and political life of the nation, but on social behavior and morals. Every Frenchman, almost, seems to have devoted a large part of his thought on how to save "his."

Should he hoard gold coins? Could he evade the tax collector? Was there some way to send capital to safety abroad? Were ordinary stocks and bonds any longer wise investment media?

ENDLESS INDEXES

Such have been the questions being asked daily in France. When no one knows what bread will cost tomorrow and when the price of a subway ride or a newspaper is subject to change by bureaucratic edict, the cost of living becomes a preoccupation for everyone. As Finance Minister Ramadier told the National Assembly in 1957, "It is no exaggeration to say that the value of the franc is tied to the cost-of-living index." And—he might have added—vice versa. In fact, the supposedly logical Frenchman has painted himself into a corner; for money, which the dictionary calls the measure of value, in France has its own value measured by the things it is supposed to measure. Here, indeed, is a pretty mess.

EFFECTS IN A NUTSHELL

"In inflation," remarked a former resident of France, "everyone in business makes money, even if he is not smart. The smart ones, of course, make a lot of money. But there is no competitive weeding-out of weaker businesses. Inflation leads to big profits, which are reinvested in the business—retained earnings, self-financing. This can have bad effects, the consumers' interests tending to be neglected. Also, the influence of the central bank is weakened. Thus, when in 1957 the Bank of France took steps to tighten credit, it took a considerable time before you could detect a slowdown in investment. That is, business investment was not heavily dependent on borrowing. So inflation, which is a bad thing from a monetary standpoint to start with, compounds the evil. Monetary controls tend to be undermined.

"An outstanding weakness in the French economy is the budget," this observer continued. "Why? Because so many activities which formerly raised their own revenues are now under the government's wing. For instance, housing used to be built for rental. Because of inflation, however, rent controls were instituted years ago and building for rental is no longer economic. So what happens? The government, of course, steps in and finances residential construction. It may do this by paying subsidies, or by guaranteeing mortgage credit, or in other ways. At any rate, the government has to garner the people's savings for this purpose, by taxation or borrowing. In the latter, the budget tends to become unbalanced and the deficit gives rise to more inflation. That is an example of an inflation spiral, the original inflation indirectly causing another round of inflation later.

"Whereas in years gone by savings banks lent on mortgages, now the savings they garner are collected in turn by the Caisse des Depots et Consignations, which lends them to the Treasury. The latter, in turn, uses the money to finance housing loans or to invest in nationalized enterprises. France's budget trouble is largely a matter of investment not being channeled normally."

In describing what four decades of creeping inflation had done to thrift habits in France, the U.S. News and World Report in 1957 (Aug. 23) quoted a French banker as saying: "I bought an annuity before the war that should pay me $2,000 yearly. It pays only $60 a year now. I don't even bother to collect it." The current income on $10,000 worth of war bonds bought at par in 1914 was only $1.80 a year. The cost of clipping coupons on bonds—which by law must be deposited with banks for this purpose—exceeded the value of the coupons in many cases of prewar bonds, because of inflation.

PENSIONS—11 CENTS

Similarly, the magazine further reported, the cost of maintaining files for paying pensions was greater than the pensions themselves. Some 160,000 World War I pensioners were collecting monthly pension payments worth but 11 cents; 500,000 collected 25 cents; and the rest, 75 cents a month. That was in 1957. Since then the real value of the pensions has further shrunk.

Where there is a prolonged and certain decline in the value of money, all that a businessman needs to do to keep in the black is to maintain his inventory. In France this fact helps explain the large increase in retail stores since 1945. Prices have kept creeping up despite all official price controls and subsidies. Periodically the official foreign exchange value of the franc has been adjusted, always downwards, and generally only after its value has already been lowered de facto.

Succoring groups victimized by inflation had posed grave problems of public finance. Taxes have had to be raised repeatedly and deficits have had to be financed by borrowing from the public on more and more onerous terms and from the central bank, with additional spurs to the inflation process. The Frenchman is notorious for his aversion to direct taxation, as witness the Poujadist movement of small shopkeepers a few years ago. In 1956, as one of the steps to find money for the new old-age pensions, the Government resorted to a 2 percent levy on the reserves of corporations—a capital levy.

INDEX-TIED BONDS

In its efforts to attract buyers for its bonds the Government has resorted to index-tied issues, notably in the cases of the two Pinay loans of 1952 and 1958, with their gold-price clauses. These issues have been very successful. Other governmental and private bond issues have employed the index device in a variety of forms. Moreover, commodity and service price controls have been widely employed in the Sisyphean task of stabilizing the cost of living, including rents and wages. What this tremendous task costs the Nation in terms of economic waste is anyone's guess.

In 1956 France was reported to be spending 70 billion francs a year to keep consumer prices under control. This sum did not include the payroll for officials, but rather the budgetary cost of tax exemptions, food subsidies, the sale of gas at low prices, the removal of import duties on meat, eggs, vegetables, potatoes, etc.

The variety of controls and the minutiae of official interferences in the economic process make French life today seem complicated, indeed, to an outsider, as some examples will make clear.

A decree published in the Journal Officiel last March tied rents for buildings used for commercial, industrial, or handicraft purposes to the index of 250 consumer articles instead of that of 213 such articles previously used. To link the 2 indexes a coefficient of 1.4793 was applied. Likewise, by this decree, all public and private contracts bearing an index clause are carried out on the basis of the 250-commodity index. For joining the old and new series different coefficients apply to the old and new index series for foodstuffs, light and heat, manufacturers, and services, respectively.

Determining which index number gives the best measure of the declining purchasing power of the franc gives rise to long arguments in France; and it is reported some juggling of the indexes has taken place. Thus, by substituting in the index the price of one kind of wine for that of another, it is claimed inflation has been concealed. An article in Le Monde in March 1958 challenged the validity of the index of 179 commodity prices at retail to which the guaranteed minimum wage was tied.

In France, as elsewhere, farmers have a powerful political voice and farming plays an important role in the economy and cost of living. Controls, therefore, are exercised over farm rents and agricultural prices. Indeed, control over prices of industrial products and over wages in industry to an important degree is motivated by the desire to placate the farmer.

Last May the French Government raised guaranteed minimum farm prices by 3 percent above the 1956–57 level, in view of the increase in minimum agricultural wages and the rise in the price index of products consumed by farmers.

Both the price of wheat and that of bread—vital elements in the French cost of living—are controlled by the government. While on the one hand wages are linked to the cost of living, the price of wheat, although itself a component of the cost of living, is in turn based on indexes of living costs, materials' prices, and wages. The price of wheat is a pilot price, directly and indirectly influencing the price pattern of farm products as a whole. And the average national wheat price, as published in the Journal Officiel, is an important element in the determination of farm rentals.

General DeGaulle's program of political and economic stabilization involves stricter government controls over the economy. Suggestive of the problems the General faced in suppressing inflation last July was the refusal of the farm organizations to accept the DeGaulle proposals for limiting food price increases. Instead the farmers insisted that, in accordance with previous governmental promises, the price of wheat be raised by 12 percent. The new government sought to limit the increase for wheat to 5 percent. In its effort to bring the general price level down, the government appealed to producers to cut prices voluntarily by from 2 percent to 5 percent.

In a compromise between wheat farmers and the government in July, the price of wheat was raised by 7 percent; and at the same time the prices of barley and corn were raised 11 percent and 10 percent, respectively. The price of sugar beets, also an important commodity in France, is based on the price of wheat. While, therefore, the price of sugar has gone up with that of wheat, the retail price of bread is independently regulated.

A country gripped by inflation finds it harder to sell goods abroad and easier to buy imports. Hence import controls of one sort or another, or of various sorts at once, are imposed. This has been the case in France.

An illustration of the nature of this form of dirigisme was the drafting last September of new regulations governing imports of capital goods costing more than 1 million francs per unit. Importers were required to supply evidence that the goods to be imported were essential and promised to improve the foreign trade balance. Moreover, importers were obliged to deliver such im-

ports immediately to productive enterprises and not to inventory.

Although France has a shortage of housing that, according to the French National Statistics Institute, will last a century—since the construction of new dwellings is not keeping pace with the population growth and there is a constant migration from country to city—new building is being held down by credit restrictions. These owe their origin to the need to combat inflation, as a result of which residential construction has had to be financed by the central bank itself, an inflationary process.

HOUSING AID

French state aid for housing—reported the Neue Zürcher Zeitung last year—takes the form of building premiums of 600 francs per square meter in the case of ordinary apartments and 1,000 francs in the case of those built under the social homebuilding plan. The premiums serve to lower the cost of building credits granted by the Credit Foncier for 5 years, after which they are converted into long-term loans. The Credit Foncier lacking the necessary funds, the latter are mobilized by means of bills discounted by the banks. Mobilization bills over and above the amounts allocated to the banks are taken up by the central bank. (On September 30, 1957, of 746 billion francs of mobilization bills created in respect of housing credits, 674 billion were in the portfolio of the Bank of France.)

We have already mentioned French resort to indexed bonds, such as the two Pinay loans, as devices to attract inflation-wary investors. In addition, other methods have been applied to the same end. While France is not the only country to have used such novel financial devices during the postwar years, it probably has relied upon them more extensievly than any other. It is not without parenthetical interest in this connection to read that a former New York bank officer, John E. Rovensky, has proposed that the Treasury issue "2 percent tax-free income consols," with interest to be adjusted annually to reflect changes in the BLS cost-of-living index.

How France has employed this idea in its security offerings during recent years may be seen in the following example. The return to the investor, including repayment of principal, being in part based on such criteria as the price of gold on the free market in Paris, prices of specific commodities or services, industrial turnover, industrial production, and the like.

Electricité de France, a government corporation, was the first French issuer of securities carrying a purchasing-power guaranty in terms of the product sold by the issuer. In October 1952 it offered bonds with a par value of 16,000 francs, the annual interest on which was fixed as the equivalent of the average selling price of 100 kilowatt-hours in the preceding year or 720 francs, whichever should be the greater. The bonds were made redeemable between 1958 and 1968 at the greater of either the average price of 2,000 kilowatt-hours of electricity or 16,000 francs. For this purpose the electricity price was determined by dividing the company's total revenue by the number of kilowatt-hours of electricity sold.

The electricité issue was very successful and was followed by similar ones for coal, railways, and gas, as well as other electricity issues. As a measure of their popularity, in April 1955 the yield on securities of public industrial enterprises with a purchasing power clause was 3.72 percent, while the yield on issues of the same enterprises not carrying such a clause was 5.95 percent.

How inflation affected the prices of securities may be seen from the following figures. It will be noted that, while bonds of the traditional kind with straight interest and redemption features declined in market value, those tied to an index of the price of gold coins or of commodities or services appreciated. The figures in the table are based on 1949=100.

	Dec. 31, 1955	Oct. 31, 1957
Rente perpetuelles (consols)	124.2	104.6
Loans of public enterprises	123.7	106.3
Private loans	121.1	105.7
Public index loans	206.7	251.1

Source: Neüe Zurcher Zeitung, Nov. 7, 1957.

Despite the inflation which has plagued France repeatedly and indeed almost constantly since the war, there are still French people who save: "Aunt Suzannes" who from lifetime habit regularly put part of their income in the savings bank or less secure places. The writer has heard of an American lady who was taken into a French home as an overnight guest in 1957. The mattress felt rather lumpy. On investigation, the visitor found that it had been stuffed with paper franc notes, thus exhibiting on the householder's part a surprising confidence in a sick currency.

According to the National Credit Council, 437 billion francs of new savings were made in 1957 in readily mobilizable form—savings accounts, treasury bonds, and time deposits. But the newspaper, Le Monde, called this partly illusory, stating that the increase in time deposits merely represented a transfer from sight deposits. Nonetheless, current savings by thrifty Frenchmen during an era of inflation must be sizable. In 1958, through August, savings deposits increased by 162 billion francs to 2,086 billion.

A Government-imposed ceiling limits the amount an individual in France may have in a savings deposit account to 1 million francs. This ceiling appears to have its origin in the traditional regard of savings banks as having been designed for the person of small or moderate means. It does not seem to make much sense from the standpoint of the authorities perpetually combating inflationary forces. But, on the other hand, savings banking in France seems to be destined in the long run to yield to the comparatively greater attraction of indexed bonds.

Under a 1948 law, owners of balances illegally held abroad were permitted to repatriate them subject to no other penalty than a special levy of 25 percent. The opportunity, however, was not seized by the capitalists in question. Therefore, in an effort to get some of those assets back to France, the Government suspended for an indefinite period the 25 percent penalty on the sole condition that the owners sell their foreign exchange on the official exchange market, or have their balances sent to France in the form of gold to be sold on the Paris gold market.

As another step in helping restore confidence in the franc, the government late in 1957 ordered all French banks to surrender 30 percent of their dollars held abroad as a forced loan on which they would receive 3 percent interest.

Whatever anti-inflation program is under taken in France, the difficulties it will encounter are described thus by ex-Premier and ex-Finance Minister Mendes-France: "All Frenchmen condemn inflation. But they have tolerated it so long that one may wonder whether, in their heart of hearts, they have really disapproved of it, and whether they are not under dangerous illusions as to its effects. Since 1914, the economists, the parties in power, indeed the whole country have been struck by the surprising convenience of inflation, considered as a method of financing. Does it not allow, at least for a time, considerable expenditures to be made, whether military or civilian, current expenditures as well as investments, and all this without incurring the inevitable reaction of the taxpayer? * * * Even if inflation has obvious disadvantages, a large part of the population believes it can escape them: the workers by a rise in wages, business leaders by an increase in their nominal margin of profit, capitalists by a de facto or de jure adjustment of their holdings on a sliding scale."

Harvey Seeds Post No. 29, American Legion, Department of Florida, Miami, Fla., Petitions Congress To Act Favorably on Pending Veterans' Legislation

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. FASCELL. Mr. Speaker, on January 30, 1959, Harvey Seeds Post 29, the American Legion, Department of Florida, Miami, Fla., at a regular meeting, petitioned the Congress to act favorably on certain pending legislation for the benefit of veterans.

In doing so, Harvey Seeds Post 29 is continuing under its present able leadership a fine record of service for veterans. The accomplishments of the members of this outstanding post in community service are equally well known and regarded.

Their respectful petition should be accorded full consideration by the appropriate congressional committees. The resolution is as follows:

RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ACT FAVORABLY UPON PROPOSED LEGISLATION FOR AND ON BEHALF OF VETERANS OF WORLD WAR I, WORLD WAR II, AND THE KOREAN CONFLICT, THEIR WIDOWS AND CHILDREN

Whereas, Harvey Seeds Post 29, the American Legion, Department of Florida, Miami, Fla., is one of the largest posts of the American Legion in the Southern States and has a proud and unbroken record of service to the disabled veterans, widows, and children of veterans of the Armed Forces of the United States; and

Whereas the National American Legion has mandated its officers to secure certain legislation for and on behalf of veterans, their widows, and children, by the 86th Congress, 1st session, such legislation being long overdue; and

Whereas such legislation is incorporated by the National American Legion in the 3-point American Legion pension program of 1959 for increase in certain classes of pensions and disability payments, and relief of restrictions that deny pensions to veterans, their widows, and children in certain classes; and

Whereas it is common knowledge that such legislation is long overdue, since prices, wages, salaries, retirement pay and benefits, have soared in recent years, and the 3-point program is based on the same reasoning that has won public and legislative support for increases in pay to teachers, Congressmen, Government workers, the military, and trade union members; and

Whereas Harvey Seeds Post 29, the American Legion, Department of Florida, has given careful and serious study to individual bills offered in Congress to implement the 3-point program of the American Legion: Now, therefore, be it

Resolved by Harvey Seeds Post 29, the American Legion, Department of Florida, in regular meeting assembled, at Miami, Fla., this January 30, 1959, That the post hereby memorializes the Congress of the United States to act favorably upon the following items of legislation heretofore introduced in the 86th Congress, 1st session, to wit:

1. A bill to provide that veterans age 65 shall be deemed to be totally and permanently disabled for pension purposes, similar to H.R. 2433.

2. A bill to provide that veterans suffering from active pulmonary tuberculosis shall be deemed permanently and totally disabled for pension purposes while hospitalized, similar to H.R. 258 and H.R. 2434.

3. A bill to increase the annual income limitations governing the payment of pensions to veterans of World War I, World War II, or the Korean conflict, and their dependents, similar to H.R. 2436.

4. A bill to provide pensions for widows and children of deceased World War II and Korean conflict veterans on the same basis as is provided for widows and children of deceased World War I veterans, similar to H.R. 257 and H.R. 2435.

5. A bill to provide for increased rates of death compensation, and of disability and death pension, payable under laws administered by the Veterans' Administration to widows and children of veterans of World War I, World War II, or the Korean conflict.

6. A bill to amend section 301 of the World War Veterans Act of 1942, to provide that certain term insurance held by World War I veterans shall be considered as fully paid when the insured reaches the age of 65, similar to H.R. 170; and be it further

Resolved, That a copy of this memorial, duly certified by the officers of this post, be transmitted to the President of the Senate and the Speaker of the House of Representatives of the Congress of the United States, and to Senators and Congressmen representing the State of Florida in the Congress of the United States; and be it further

Resolved, That the members and officers of the post in attendance at the meeting when this resolution be adopted, whose signatures are affixed hereinbelow, do emphasize their personal interest in the favorable action of such proposed legislation.

HENRY J. HALAM,
Commander.

Attest:

JOS. A. FRIEDMAN,
Adjutant.

Members of Harvey Seeds Post 29, American Legion, Miami, Fla., who signed the foregoing resolution on January 31, 1959: George Clark Smith, vice commander; William E. Cox, vice commander; C. J. Santucci, vice commander; Arthur W. Morrow, executive committee; Paul E. Hood, executive committee; John P. Ulirich, executive committee; Axel R. Carlson, executive committee; James T. Ross, trustee; Lewis J. Worrell, trustee; Cameron F. Craig, finance officer; Elmer Wesibrod, chaplain; James C. Akers, executive committee; William R. Simonds, trustee; James Kytle Williams; M. D. Herrington; Ferdinando Gabriele; Louis Galy; Freeman Cagle; George S. Flichman; Kay S. Thurston; Harry B. Peterson; Capt. Walter M. Frank; Chaplain Frank L. Titus; John J. Yazum; John C. Cuthbert; Arthur J. Smith; George C. Barth; Kalman M. Rocker; Bertha T. Cowan; George S. Seigman; V. L. Gilmer; I. F. Gilson; Etan W. Schaub; Joseph A. Bogkowski; Frank L. Smith; C. C. Mead; R. J. Waitte; Elsie M. Gooley; Mike Zorio; Capt. John Pahl; Joseph J. Kincaid; William T. McMorris; Ralph W. McMorris; Paul P. Forand; Edgar K. Tepper; Leo P. Herbert; Reginald A. McHugh; Murray McDonald; W. L. Zimpleman; John A. Peddard; A. J. Parks; E. L. deBroigne; William P. Dix; John Stapleton; Orlando Aschiero; Lamar W. Boye; Woodrow W. Matz; J. M. Kearney; Harry A. Dunham; James Harrington; Arthur G. Keene; Andrew F. Burnell; Joseph A. Tiesi; Joseph Allegra; Arthur D. April; Harry J. Plemonos; Rhotie R. Jackson; Ray Jewett; Stephen A. Russell; Roland A. Saye; John F. Anderson; Albert J. Schmacher; Theodore R. Wilder; Albert W. Kolstner; George Parkhurst; Max Froom; B. J. Deckorg; Garry J. Jansen; John H. Cerda; Harry N. Parker; Joseph F. Catanzaro, Jr.; Marshall E. Penton; C. E. Tiromar; M. R. Pellacani; James J. Harvey; James T. Megas; Egisto Cicci; C. E. Hazlett; Clarence G. Smallwood; Helen P. Purkey; Charles P. Eckhert; Alfred Manning; J. O. Tibbits; Adolph Scheer; Joseph W. Eden; Max Rozen; Wm. A. Scheer; John C. Cuthbert; Jacob Gerson; Frank C. Oher; Fred Karcher; John Broad; Clair De Coma; Albert F. Du Verger; Joseph A. Ryan.

Which Comes First, a Strong Enough Defense or a Balanced Budget?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. LANE. Mr. Speaker, the American people are disturbed by this administration's failure to understand and support the need for leadership in missile development and in space exploration.

They are disappointed in the strategy whereby the administration hopes to become popular in the elections of 1960 by appealing to the material interests of our people, at the expense of national security.

This is a shortsighted and risky policy that completely underestimates the character and the patriotism and the commonsense realism of Americans.

In the crucial debate now underway, the American people will not be satisfied by vague reassurances. Out of this debate they expect a rebirth of bold, imaginative and pioneering leadership, limited only by the cost of survival.

On this urgent need, the people must be heard, and speaking for them is the challenging editorial titled "Surrender on Missiles" that appeared in the February 6 issue of the Boston Herald.

Under unanimous consent, I insert it in the Appendix of the CONGRESSIONAL RECORD:

SURRENDER ON MISSILES

Defense Secretary McElroy the other day announced this country's retirement from the long-range missile race. The United States will not attempt to catch up with the Soviet in this field; even may be consenting to a 3-to-1 superiority by the Soviet.

This announcement should have shaken the country to its foundations. We appear to have surrendered to our enemy clear priority in the decisive weapon of the future.

Now we can have an effective defense without matching the Russians in every other weapon. We could not possibly match them man for man. Our need for submarines is less than theirs. We ought in fact to tailor our whole defense system to our special requirements.

But there is no counter to Soviet missiles other than missiles of our own. Here is a whole new fourth dimension of warfare, which is not ships at sea or armies on land or planes in the air. But more than that, it is a dimension which is crucial. We could have in the years to come command of the air, command of the sea, and command of land areas within our defense positions, and still lose if we lacked adequate missile strength.

We are at present relying on B–47's for 90 percent of our potential for delivery of nuclear bombs. Yet these are obsolete, or soon will be obsolete, against Russian air defenses. Moreover, Secretary McElroy conceded the other day that our bases in Europe are vulnerable to medium-range Soviet missiles. And, finally, we must face the danger that any loss of confidence in this country's powers of deterrence will make our allies disinclined to permit us to remain in these bases.

Even the program for the B–58's to replace the B–47's has been cut down. And the Polaris missile for firing from submarines has had its range cut from 1,500 miles to 800 miles.

This is a dark picture, and it ought not to be made any darker than it is. The defense budget does provide for more B–52's capable of firing the Hound Dog air-to-surface missile to paralyze enemy air defenses. There are to be funds to keep a third of the aircraft of the Strategic Air Command on 15-minute alert at all times.

The administration is not asleep. Within the confines of a $41 billion defense budget it is working wonders.

But what Americans ought to be asking is whether this is enough. By what coincidence does the administration find that an adequate defense fits into a balanced budget?

There is abundant evidence that the American economy can meet considerably increased defense costs. Last year the Rockefeller Studies Group, warning that the balance of power would shift to the Soviets in 2 years, urged an immediate increase of $3 billion a year in the defense budget and similar increases each year for the following 6 years. The Committee for Economic Development has said that there is no factual basis for the notion that we are near some breaking point in defense spending. "We can afford what we have to afford," the CED stated.

We must face it: bigger defense would mean heavier taxes. Missiles are not cheap. But the price of preserving our place in modern weaponry—and with it the effectiveness of our foreign policy—is within our ability to pay.

Housing Bill Is Big, but Sound

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, I believe that the Members will be interested in the views of the Denver Post in support of the housing bill, as expressed in an editorial on Thursday, February 5, 1959:

HOUSING BILL IS BIG, BUT SOUND

When the omnibus housing bill now being rushed through the Senate reaches the President's desk, he will face a difficult decision.

The Senate bill certainly calls for bigger spending on housing than the President wants.

Yet if he vetoes it, he will be turning down a sound bill that represents a compromise among Democrats and Republicans in the Senate.

This would be a severe blow for the moderates on both sides of the aisle, and would probably touch off allout fiscal war between the President and Congress.

The central difference, moneywise, between the President and Congress on housing is in urban renewal provisions.

The program began in 1949, but is only now beginning to gain real momentum (land for Denver's first project, Avondale, is now being acquired).

Now more than 400 cities have waked up to the opportunity urban renewal gives them to rejuvenate wornout urban areas and build up their tax bases. Requests for funds in 1958 totaled nearly $600 million.

But the bottom of the urban renewal pot has nearly been reached. As of December 31, only $23 million of the $1.3 billion allocated in urban renewal's first decade was left uncommitted.

The President's remedy for this was a quickie bill to put up another $100 million to last through June and then $200 million a year thereafter.

He also sought to cut the Federal share of urban renewal costs from two-thirds to one-half in order to make the Federal funds stretch further.

That would mean a 50-percent hike in the cities' share of urban renewal costs.

Liberal Democrats in Congress, such as urban-minded Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, former mayor of Philadelphia, countered with a $600-million-a-year proposal.

CLARK and his allies claimed, with some justification, that the low amount the President wants would only increase the urban renewal backlog (some cities now estimate they will have to wait 5 years for funds) and that the increase in local costs would discourage urban renewal just when enthusiasm was mounting.

The President's bill would certainly hit Denver hard.

Thus the $350 million a year provision in the Senate bill (over a 6-year period) is a fair compromise between the demand for urban renewal funds and the need to hold spending within reason.

The other main excess in the bill, from the President's point of view, is a new authorization of 35,000 public housing units. He recommended none for the coming fiscal year.

Yet some public housing is necessary if urban renewal itself is to go forward.

One of the requirements for an urban renewal project is that all families evicted from the project area must be rehoused in dwellings that are safe, sanitary, and which they can afford.

For many families, only low-cost public housing fits this prescription.

Denver again furnishes an example. Families now living in the Avondale renewal area can be absorbed in Denver's current public housing facilities.

But before another urban renewal project can be undertaken here, more public housing must be developed. Without it, urban renewal here is stymied.

If the omnibus housing bill reaches the President's desk in its present form, he should approve it. Its provisions are essential to the future health of American cities.

Impertinent Guest

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. FORD. Mr. Speaker, with the recent revelation that the U.S. C–130 transport was deliberately shot down over Soviet Armenia near the Turkish border, the visit of Deputy Premier Anastas Mikoyan will have to be reevaluated. Our own State Department, in releasing the transcript of the intercepted radio conversation among Soviet fighter pilots who attacked the unarmed American transport plane last September, indirectly accused Mikoyan of lying about the incident.

In light of these revelations, therefore, I am pleased to include in my remarks two editorials from the Western Michigan Catholic published at Grand Rapids.

Both editorials are by Msgr. Joseph C. Walen. The first, entitled "Why Salaams to Mikoyan?" appeared on January 15, 1959; and the second, "Impertinent Guest" was published on January 22:

[From the Western Michigan Catholic, Jan. 15, 1959]

WHY SALAAMS TO MIKOYAN?

(By Msgr. Joseph C. Walen)

It was refreshing indeed to hear the voice of Richard Cardinal Cushing, of Boston, raised in protest this week over the near-fawning welcome accorded to Anastas Mikoyan on his current tour of this country.

According to Cardinal Cushing, Mikoyan is a "bloody henchman in the murderous crimes committed by Lenin, Stalin and Khrushchev." The outspoken prelate further charged that these crimes include "the massacres of his own free Armenian republic, the Ukrainian massacres of 1932–33 and the Hungarian massacres of 1956."

RAPS PRAISE BY BUSINESS

The Cardinal went further. He castigated "American business leaders and certain American business circles now singing the praises of Soviet Russia, thereby drowning out the cries for help and sympathy of the Hungarian people, upon whom, in effect, the American Nation has turned its back. It has permitted them to be crushed by the Soviet dictatorship and Red army."

The amount of newspaper and radio-television coverage accorded the visit of the Soviet first deputy premier leaves no doubt about the propaganda success of his jaunt to swanky, exclusive clubs in our larger cities.

I believe that the extent to which the news media went to record details of this trip border on the ridiculous. Who cares that he spent $9.29 at a modern supermarket near Washington? Inasmuch as so many of the editors of the metropolitan dailies pride themselves about their ability to smell out press agents' stunts, it is all the more startling to have seen them fall for a phony interest shown by Mikoyan in some of our American institutions. His giving candy to a child in the supermarket mentioned above was hokum at its corniest.

Mikoyan even had the gall to question the historical fact alluded to by President Eisenhower in his state of the Union message last Friday that the Communists regarded agreements as mere scraps of paper.

THOSE RED FEELINGS

In a Hollywood meeting attended by movie bigwigs Monday he is reported to have said that on the contrary there are some people who think that the imperialists keep international agreements only when it suits them. He is further quoted as claiming: "We also have the feeling that you have violated agreements."

I wonder why the Soviets have that feeling. Would it be because the Soviet press reports international events accurately?

SAINTS AND TRAITORS BOTH

At the same meeting he advised the Americans seriously to stop thinking of themselves as saints and the Russians as traitors. It would be better, he said, if we took the attitude that both at times are saintly and both at times perfidious. Who wants to bet that Pravda will carry that remark about the Reds being at time perfidious?

This lionizing of Russia's No. 2 representative by many representatives of big business here has more than one American citizen scratching his head. Yet it might be well to riffle through our newspapers of the thirties and recall that recognition of Russia was urged not so much by the braintrusters and eggheads in the Roosevelt administration (as is commonly believed now) but by big business groups. Their foremost spokesman was Publisher William Randolph Hearst.

In that perspective the action on display these last few days does not come as a huge surprise.

Victor Riesel, the articulate, competent columnist on labor-management problems in this country, wrote Sunday what he claims is an exclusive report on the meeting of Mikoyan and outstanding labor leaders in this country in Washington on January 6.

ROUGHED UP BY UNIONISTS

According to Riesel, the going-over he received from Walter Reuther, Jim Carey, Joseph Beirne, and others was the "roughest 2½ hours Russia's second in command has had since he shot down Hungarian children in Budapest streets."

Among the many questions directed at Mikoyan was one by Jim Carey who asked why there is no capitalist party in Russia after Mikoyan had brazenly asked why there is no labor party in the United States.

Riesel's Sunday column, if we accept its accuracy, was the most fascinating I've read on Mikoyan's trip. It provided a view of the leaders of America's organized labor roughing him up with down-to-earth questions, and unmasking the motives of a representative of a movement which claims to be interested in the welfare of human beings.

Mikoyan's trip, so favorably accepted by many influential Americans, is leading to a meeting for him with President Eisenhower next Saturday.

WHAT GOOD?

On the basis of past performance by the Russian leaders, what good can come of any agreements between Mikoyan and the President? I think the President was grimly accurate in his statements to Congress last Friday.

Egg-throwing Hungarian refugees might not typify an American welcome to representatives of foreign governments. But Mikoyan and his kind have never been concerned about good manners, nor have they ever rewarded good manners either by individuals or by nations. There is no reason to believe he has been changed by his current visit.

Cardinal Cushing's commentary on Mikoyan's good will tour might well be the one which will stand out above all the others when history sifts the facts from the phonyisms.

[From the Western Michigan Catholic, Jan. 22, 1959]

IMPERTINENT GUEST

(By Msgr. Joseph C. Walen)

If you have read only a little bit of history about Red Russia you have arrived at the conclusion that the Soviets recognize only one way—their way.

The trail of self-r'ghteous platitudes left behind by Anastas Mikoyan in his recent jaunt through this country emphasizes this conclusion.

Thanks to the wonders of our communications media Mikoyan's blatant propaganda statements have been transmitted to millions of Americans. He has perverted the freedom of our press to spread the treacherous Communist line which inevitably strangles freedom of every kind.

It should have been no surprise to Americans to find Mikoyan an impertinent guest. He showed no interest in two-way courtesy, though President Eisenhower had requested Americans to be polite to a high-ranking representative of a foreign government.

But Mikoyan in turn used our news channels to dodge pertinent questions about Russia's actions and policies by attributing only laudable motives of peace to the Reds and by simultaneously accusing the Western Powers of warmongering.

The climax of his performance of spouting anti-American blasts was reached by his statements on NBC's "Meet the Press" program Sunday. He flagrantly refused to answer valid questions. He backed down on previous statements that the Russians are not all saints. He hid lamely behind an excuse of "lack of space" when he was needled by the New York Times representative, Harry Schwartz, why Russian newspapers blithely omitted Mikoyan's references in his early speeches here to Russian mistakes.

Furthermore, he would not give on the program even the slightest assurance that Vice President NIXON would be given a chance to present American views to the Russian people through Soviet news media. But if you reflect about the validity of such assurances by Russians, on the basis of past performance, then it would be a waste of confidence to trust any commitments made by Mikoyan, publicly or privately. Thus again—there are only one-way streets for the Russians.

I think that the dreadful contrast between the credibility of Russian and the American news media must be carefully remembered by our citizens. One of the most reprehensible and snide quotes attributed to Mikoyan on his visit was reported from New York. In his appearance there before the big-money members of the Economic Club he boldly claimed that only lies and libel are kept out of Russian newspapers. He further is reported to have accused American newspapers of a lack of understanding of the free press concept. He then asserted: "When 1 millionaire has 10 newspapers and 10 million have none, that is not freedom of the press."

This last quotation is spit-in-the-face behavior by a guest who is given the chance by American newspaper, radio and television owners to present Russia's alleged policies. Mikoyan's gall to make the claim that Russia's present news media speak for all its people was hypocrisy at its rawest.

The owners of American newspapers, including the millionaires, have their faults, but all their defects combined are a speck compared to the ruthless censorship of the Russian Government over all news handling.

In criticizing our press for its coverage of Mikoyan's statements here, we Americans might deplore lack of some on-the-spot censorship by its reporters of the malarkey in some of his talks. Too many of his remarks were an insult to us. I suppose that our dedication to the cause of the freedom of the press leads both news media and their customers here to permit such malarkey to be so widely read and heard. Thus it's all the more difficult to swallow his slurs on the reliability of our news coverage and his totally untenable defense of government-controled news media.

Some representatives of Government and the press here might now plead for "equal time" for Vice President NIXON in Russia. I don't think it would be granted because I don't think that Khrushchev and Mikoyan would be interested in letting the Russians know about America's policies in the world today. Anyway, arrogant Anastas would probably like to remind us again that the Russian newspapers don't have the space to report fully the statements of American officials—as the American papers did to his journey and comments.

The deftful dodging by Mikoyan of facts of the day in his tour is evidence of a nimble intelligence and also of a contemptuous disregard of the amenities of friendship.

The cause of the freedom of discussion, interpretation, and news presentation requires us to print or broadcast accounts of the opinions and actions of officials of our own and of foreign governments. The consequences of service to this principle might lead us to wonder occasionally whether truth will win, particularly in the wake of an experience such as Mikoyan's visit. But history shows truth does prevail and the temptation to suppress even malicious attacks on this Nation's integrity and peaceful intentions must be overcome.

The problem now arises whether our President should ask Americans to be polite as well as dedicated to a free press when a boor comes to visit us.

Proposed Increase in the Federal Tax on Gasoline

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under unanimous consent, I include as an extension of my remarks, a statement by Mr. Robert G. Dunlop, president of the Sun Oil Co., in regard to the proposed increase in the Federal tax on gasoline. Mr. Dunlop's comments are as follows:

There is no justification for any increase in the Federal excise tax on automotive gasoline. The proposed 50 percent increase in this tax would be an unfair and unreasonable levy on American motorists, already staggering under exorbitant highway user taxes.

Federal, State, and local taxes on motor fuel now equal a national average of 9 cents a gallon, or 40 percent of the service station price of regular grade gasoline, exclusive of the tax. No other commodity essential to daily living is anywhere so highly taxed. Now it is proposed to boost the Federal tax another 1½ cents a gallon, making it 4½ cents.

The excuse given for such a shocking proposal is "to make highway related taxes support our vast highway expenditures." This is a misleading statement. Highway users now not only are paying all the Federal highway expenditures but are paying, in addition, hundreds of millions of dollars that are being diverted to nonhighway purposes.

In the 1958 fiscal year highway-related tax collections by the Federal Government totaled $3.6 billion. But only $2.1 billion were earmarked for highway purposes. The remaining $1.5 billion—or 42 percent of the total amount collected—were paid into the Treasury's general fund for other Federal activities that have no relation to highways.

If the Federal highway program requires more revenue than is produced by the earmarked taxes, then Congress should earmark for that purpose taxes already being paid by highway users and not place a greater load on the country's motorists.

The plea is made that if this is done, the new Federal budget cannot be balanced without the imposition of additional taxes in some other form. A balanced budget is imperative. But certainly it cannot be logically argued that motorists, as a group, solely are responsible for paying taxes to keep the Federal budget in balance. Surely, if the budget cannot be balanced by reducing contemplated expenditures, then the obligation of keeping it in balance should fall on all Americans.

I sincerely believe that the present situation urgently calls for a reappraisal immediately by Congress of the scope and of the method of financing of the Federal program set up in the 1956 Highway Act. This action should be taken before any further tax burdens are placed on highway users.

Farm Price Supports in the Existing Pattern of Government

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. O'KONSKI. Mr. Speaker, few, if any, areas in the United States are untouched by subsidies. Subsidies are as old as our Government and long have been used as an acceptable and serviceable adjunct to the free economy. Condemnation or praise of subsidies are academic and unrealistic unless the public purpose of the subsidy is taken into account. The above are general conclusions from an historical review of Government subsidies made by the Committee on Agriculture of the House of Representatives of the United States.

What constitutes a subsidy? A definition is very difficult. Some would think of a Government subsidy as Federal moneys or their equivalent paid out to individuals. But this would exclude legislation under which certain groups in the economy are authorized to directly increase their "take" from the total economy. By such activities, the same purpose and result is achieved as that of a direct subsidy paid out to the same group. One of the first official acts of the Government of the United States was to enact a tariff to protect the growing industries of the infant Nation. Another gave preference in custom duties to goods imported on American ships. Both were designed to improve the competitive position of domestic businessmen and enhance the growth of American industry. In this respect, both were subsidies, although nothing was paid out directly by Government.

Early in the history of the United States, our Government recognized the need for improved transportation. Public lands, direct contributions, and loans were used to encourage construction of canals. Later, similar contributions were made to many railroads. Mail subsidies developed and supported other means of transportation and have been used extensively. The first mail subsidy was reported in 1845. More recently, millions of dollars have been paid out to subsidize the merchant marine. Hearings with reference to postal deficits also suggest considerable subsidy in the form of low postal rates, the benefits of which accrue to certain publishers.

For the reasons suggested above, it is perhaps desirable to avoid the notion of a subsidy in terms of cash paid out and think in terms of a welfare state. The evidence of the welfare state are actions by the Government designed to improve the economic position of specific groups or classes of the population. All actions of the Government, in fact, fall in this category. The promotion of public health, education, and the maintenance of order and tranquility are all costly activities of Government which directly benefit the public. We think of the welfare state as one which is interested in specific activities for specific groups of people, and, sometimes, as in the case of graduated taxation, to the economic detriment of other groups. The attempts of the Government to achieve a leveling off process both in individual incomes and in human welfare benefits some and penalizes others. The activity of the welfare state includes not only cash paid out to individuals, but also the levying of tariffs, the creation of stockpiles for surplus products either by the Defense Department or in the Department of Agriculture, marketing agreements, and the like. Perhaps it is desirable to list some of the specific activities which seem to fall in this category.

At the head of such a list certainly one finds the graduated income tax. Older, however, and more important in its time, was the protective tariff. Activities under the antitrust laws also fall in the welfare category. Of the more recent devices, the following come quickly to mind: Bank deposit insurance, the conservation of natural resources, transportation subsidies, school-lunch programs, Government assistance through charitable organizations, price-supports for farmers, defense stockpiles, allocation of defense contracts to job deficit areas, old-age and survivors pensions, minimum-wage laws, job insurance and separation pay, and labor legislation giving unusual privileges to unions.

It is not the purpose to evaluate these programs. It is only proposed to show their antiquity, on the one hand, and more recently the extent of the activities of the welfare state both in direct subsidies and in other programs with similar objectives.

Virtually every person in the population of the United States would seem to be a receiver of benefits from one or more of these activities. The entire nation, in one way or another, is affected by the various programs, whether for industry, for labor, for the young, for the aged, or for agriculture. It seems inappropriate, under a condition where activities of this nature have gained such wide acceptance as in the United States, that the public, through its legislators, should withdraw from support of any group unless that program had failed in its objective, or an improved program was conceived. Who in the United States has the right to say of another, "You get too much."

The program for support of farm prices was designed to improve individual incomes in agriculture. It was also designed to equalize farm and non-farm incomes and to create agricultural purchasing power, thereby improving the market for goods produced by others. There were no important failures. Until better programs have been proved, farm price supports have justified their position in the welfare state. They should be reexamined and amended to keep them abreast of the changing facts of the world, but they should not be abolished.

The programs for price supports for farm products have, in fact, contributed much more to public welfare than was planned in the original objectives. Through distribution programs, hunger has been largely eliminated in the United States and significant contribution has been made to reduction of hunger in other lands. Growing farm efficiency has made it possible for a declining number of farmers to produce food for an increasing domestic population for less total dollars. This is no idle achievement in a nation where inflation is the general rule. In terms of progress in the solution of basic human wants, it seems quite likely that the farmers of the United States who produce food have made a greater contribution than any other group in the world during the period beginning in the middle 1930's.

Daggers Against Diplomacy

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, the Members of the Congress should read with interest the report about the Central Intelligence Agency by Charles Edmundson, formerly a reporter for the Fortune magazine, and with the Foreign Service.

This article appeared in the February 1959 issue of the Progressive magazine:

THE CENTRAL INTELLIGENCE AGENCY: DAGGERS AGAINST DIPLOMACY

(By Charles Edmundson)

In his recent Saturday Evening Post article, "The Story Behind Quemoy: How We Drifted Close to War," Stewart Alsop tells of the part played by the Central Intelligence Agency in almost starting war with Communist China in 1954 and again in 1958. For the first time a mass-circulation publication revealed that beginning early in 1950 the CIA supported and masterminded "commando-type guerrilla raids on the [Chinese] mainland, which were sometimes mounted in battalion strength."

Alsop does not, of course, tell all of the CIA's activities in heightening tensions in the Far East. But he does describe in detail the role of "Western Enterprises, Inc." (a cover name for the CIA project) in raiding the mainland from Quemoy and the Tachens:

"The Western Enterprisers—ostensibly soldiers of fortune—were responsible for organizing and equipping the Nationalist guerrillas who raided the mainland from the offshore islands. * * * Until early 1954, the islands were pretty much their exclusive playground. By that time they had settled themselves pretty comfortably on the islands."

Although neither the White House nor Congress had yet made up its mind whether the offshore islands belonged to Mao Tse-tung or Chiang Kai-shek, the CIA decided the matter for itself and proceeded with systematic raids against the mainland. The results, direct and indirect, were enough to provoke the brink-of-war crisis of September 1954 and October 1958. The United States and the world were twice taken to the precipice by a secret bureau whose activities are unknown to Congress, the press, and the people until long after the event—if they are ever known.

The raids from Quemoy and the Tachens are not isolated instances of CIA activity. They are representative. As currently operated, the CIA is far more than an intelligence-gathering organization. It is an activist group which steps in boldly to dictate foreign policy in areas not covered by decisions of Congress, the State Department, or the White House. The CIA operates clandestinely in every country in the world, including several where the State Department and the press are forbidden. It executes its projects without concern over the reaction of the public. The incidents it provokes are never acknowledged, yet can be decisive in shaping—or misshaping—public opinion, and foreign policy.

All the machinery of government publicity is used to make CIA-induced incidents serve preconceived domestic ends. The public can thus be propagandized into believing whatever the CIA and its Old Guard allies in the State Department or the military want it to believe.

Not long ago I asked a distinguished career ambassador, "When CIA operatives are at work in the country to which you are accredited don't the incidents which they create shape policy in such a way as to take control largely out of your hands?"

"I couldn't agree with you more," the ambassador replied. He told of CIA activities in his country which had damaged American prestige and influence over a whole continent.

The CIA works under the direction of the National Security Council, the Nation's supreme body in deciding military policy. Chairman of the NSC is the President himself and there are four other members: the Vice President, Secretary of State, Secretary of Defense, and the Director of the Office of Defense Mobilization. The Director of the CIA is not a member, but as its adviser on all intelligence matters he sits in on most important sessions and has a voice in Security Council discussions and decisions.

According to the basic statute, the CIA's functions are limited to gathering and interpreting intelligence. A final catchall clause, however, authorizes the CIA to perform such other functions and duties relating to security intelligence as the National Security Council may direct. This would not appear to authorize the organization of guerrilla raids * * * in battalion strength or the deployment of agents provocateurs in the territory of cold war adversaries. But the CIA has engaged in such activities on a broad scale.

Funds are not lacking for any schemes the CIA may see fit to adopt. In his book, "Central Intelligence and National Security," Harry Howe Ransom, a political scientist at Harvard, quotes estimates of national intelligence expenditures as high as $2 billion a year. "Several hundreds of millions of dollars annually," he writes, may be budgeted directly to the CIA, with the rest going to the Army, Air Force, Navy, State Department, and several other agencies which also gather intelligence. Nobody knows the exact amount the CIA gets. The Bureau of the Budget is forbidden by law to disclose the figure. Congress itself, carefully blindfolded,

passes CIA appropriations as disguised items in the budgets of other bureaus.

The CIA's total personnel, American and foreign, is estimated at about 16,000 persons. The "Little Pentagon" being built for the CIA across the river from Washington—at a total cost of $55 million—will have a capacity of at least 10,000 persons. Small wonder that more thoughtful Senators and Representatives are disturbed to see such a rich and far-flung empire operating in the vital fields of foreign affairs, hidden from the eyes of Congress and the press.

In reality, the press, with correspondents in most foreign capitals, knows much more about CIA operations than does Congress. Many foreign correspondents with whom I have talked would like nothing better than to report how the CIA often distorts international relations. But the editors at home long ago decided to regard the CIA as a sacred cow.

Perhaps the most glaring failure of the press, from the standpoint of public policy, has been its acquiescence in the State Department's repeated and sometimes incendiary statements that all the Americans held prisoner in Communist China are held illegally and in violation of international law. Every well-informed correspondent and editor in Washington knows that many of the prisoners have been U.S. intelligence agents, whom China has as much right to hold as the United States has to imprison Rudolph Ivanovich Abel, the Soviet master spy.

The reading and comparison of scattered items (always buried obscurely on inside pages) in the New York Times is sufficient to show that at least some of the prisoners are CIA agents. Confessions by some agents who have been released and others still held have been printed in the Times, the Washington Post, and other newspapers. At a press conference December 3, 1956, President Eisenhower pointedly refused, contrary to Secretary Dulles' practice, to say that all the Chinese prisoners are illegally held.

But such items go unnoticed, and when Secretary Dulles or Assistant Secretary Walter Robertson make speeches saying that the imprisonment of all the men is illegal, barbarous, and an affront to the dignity of the United States, doubtless 99 percent of the public believes them.

It is understandable that newspaper editors are reluctant to print the full story of U.S. intelligence agents captured in China. But to protect the integrity of public opinion they might at least warn Secretary Dulles that they will not forever remain silent while the State Department belligerently misrepresents facts. They could at least refuse to cooperate in the effort to propagandize and bamboozle the American public to the point where a rational China policy becomes a political impossibility.

President Eisenhower, according to his biographer, Robert J. Donovan, questions the wisdom of driving "the Chinese ever deeper into an unnatural alliance with Russia." But the Dulles brothers have been doing just that. Besides the raids from the offshore islands, Western Enterprises, Inc. for several years helped supply and direct a large remnant of Nationalist Chinese forces against the Communist Chinese from the northern border of Burma.

The Nationalist Chinese were never more than a nuisance to Communist China, but they were a real peril to Burma, which feared that Peiping might retaliate against the Burmese for harboring hostile forces. When Burma's own army was unable to deal with the Nationalist Chinese, Prime Minister U Nu protested to the U.S. Ambassador in Rangoon. After this proved useless he took his case to the United Nations. Feeling mounted so high among Asian and African delegates that something had to be done. Eventually a four-power conference—the United States, Burma, Nationalist China, and Thailand—was held and as a result 7,000 Nationalist Chinese and their dependents were evacuated to Formosa, although some 3,000 of Chiang's veterans still linger in Burma.

In this period the CIA and the Air Force cooperated in running an Air Resupply and Communications Wing. The wing's "mission in a global war," explained the New York Times, "would be to fly into enemy territory and drop supplies to United States or Allied agents operating there." Operations over China were extensive and occasionally a plane was shot down or accidentally crashed. Early in 1953 the plane of Col. John Knox Arnold, commander of the 581st Air Resupply and Communications Wing, was shot down over China, and Colonel Arnold and 13 other Americans were captured. After 2½ years the Chinese released all 14 of them. At a press conference arranged by the U.S. Air Force in Tokyo, Colonel Arnold said that under pressure he had "told the Chinese things they shouldn't know." By this time some members of Congress had become concerned over the trouble-making potential of the Air Resupply and Communications Wing and the operation was suspended.

In mid-August of 1953, the CIA brought off what it apparently regards as its most dramatic coup. This was the overthrow of Prime Minister Mohammed Mossadegh of Iran, accomplished with all the packed drama of a television scenario. The CIA was so proud of this masterpiece that it leaked the details to Richard and Gladys Harkness for a remarkable story published in the Saturday Evening Post November 6, 1954.

The coup was planned in a picturesque hostelry in the Swiss Alps. Allen Dulles flew there on August 10, 1953, to join his wife, ostensibly for a vacation. Soon they were joined by Loy Henderson, U.S. Ambassador to Iran, and by Princess Ashraf, the attractive and strong-minded brunette twin sister of the Shah. By a remarkable coincidence the late Brig. Gen. H. Norman Schwarzkopf, formerly U.S. adviser to the Iranian Gendarmerie, happened to be touring the Middle East, and was in Teheran, the capital of Iran, at the same time.

The Shah sent a military detachment to Prime Minister Mossadegh to inform him that he was dismissed. When Mossadegh refused to resign and took charge of the capital with armored jeeps and tanks, the Shah and his wife fled to Rome.

Others did not give up so easily. Some members of the Iranian Army had remained loyal and the support of others was won with black bags comfortably filled with rials (a total of $19 million was spent). A few days after the flight of the Shah, an innocent-looking troup of jugglers and trapeze artists began a parade toward the heart of Teheran. Their numbers swelled miraculously, and they began to chant "Down with Mossadegh," "Long live the Shah." The chant became an angry shout. The paraders were transformed into an aroused populace. As if by prearrangement, pro-Shah elements of the army joined the demonstration. After a half day of bitter fighting, Mossadegh was overthrown, and the Shah and his bride flew back to the capital.

In the background of all this were, of course, the oilfields on the north shore of the Persian Gulf. It is not irrelevant that Sullivan & Cromwell, the Dulles brothers' former law firm, is the longtime legal counsel of the Anglo-Iranian Oil Co., whose billion-dollar property interest on the Persian Gulf was saved by Mossadegh's overthrow. The international oil cartel, whose American members were then and still are under prosecution by the U.S. Department of Justice, found it easier to negotiate with the Shah than with Mossadegh, whose efforts to deal with American independent oil companies had been frowned upon by the State Department.

Congress seemed well enough pleased by what happened in Iran, but 3 months later it was jolted by reports out of East Germany. On November 17, 1953, the New York Times reported that the East German government had seized scores of persons whom it accused of being agents provocateurs. They had been caught, the East Germans claimed, with plans to blast railroad bridges and stations, burn factories and government buildings, and assassinate officials. In the prisoners' pockets were found, the East Germans said, faked food stamps and counterfeit bank drafts to upset food rationing and bank credit.

Something else piqued Congressional interest. Most of the captured agents were former Nazis, headed by Gustav Gehlen, who had been a major general in the Nazi army, and papers found on the captured agents included a list of West German anti-Nazis for slaying. Apparently the former Nazis were using their spy roles as cover for settling old scores.

An informal committee of Congress, with Senator Mansfield in the lead, demanded to know what was going on. Army intelligence, which was also operating in Germany, hastily gave the CIA full credit for the Gehlen affair, and this view was supported in the trials in East Germany. Four of the Gehlen group were executed, 11 were given life imprisonment, and those who escaped to West Germany were presumably culled from the American payroll. Thereafter intelligence operations in Germany were limited mostly to such ventures as digging a 2,000-foot tunnel into East Berlin to tap Communist telephone and telegraph trunklines—an enterprise discovered in 1956.

Using the CIA, the United States is able to react quickly when an alien power or ideology shows sign of gaining ground in the Western Hemisphere. In May 1954 the CIA found that a secret shipment of 1,900 tons of arms from Czechoslovakia was being unloaded at Puerto Barrios, Guatemala. Although there were no Communists in the cabinet of President Jacobo Arbenz Guzman, his government had been charged with Communist sympathies. Allen Dulles warned the National Security Council that action was urgent. Two Globemasters loaded with arms were flown to Honduras and Nicaragua. Within a week an exiled Guatemalan officer was leading an armed force across the border from Honduras and the Arbenz government was doomed. The coup deposing Arbenz was so easily executed that the State Department apparently forgot to do much subsequently about the conditions which helped give rise to pro-Communist sentiment in Guatemala.

It is not generally known that Radio Free Europe, which appeals for public contributions through the press, radio, and television, is an arm of the CIA and depends on the CIA for most of its funds. When a knowledgeable correspondent like Cyrus Sulzberger of the New York Times refers to Radio Free Europe as a private agency he puts the word "private" in quotation marks. Most of the Free Europe Committee directors are industrialists such as Irving S. Olds, former board chairman of U.S. Steel, and Eugene Holman, head of Standard Oil of New Jersey. One may reasonably question if the ideas of such men are suited to the development of propaganda appealing to repressed populations.

According to Dr. Frederick L. Schuman, Woodrow Wilson professor of government at Williams College, "Radio Free Europe is designed to conduct psychological warfare more vigorously than the Voice of America, with the object of instigating revolution and promoting what Life magazine called 'the necessary distintegration of the Soviet system.'" In 1956 Leslie Bain, Budapest correspondent for the Reporter, blamed Radio Free Europe

for helping raise the Hungarian revolution to a tempo which uselessly sacrificed thousands of Hungarian patriots after their cause had proved hopeless. The broadcasts, he wrote, kept repeating a refrain from Ambassador Lodge's speech in the U.N., "America will not fail you * * * America will not fail you," after it was clear that nobody was going to Hungary's aid.

In the spring of 1958 the Oxford University magazine Isis lifted a corner of the United States-British espionage curtain and revealed part of what was behind it. The authors were Paul Thompson, 22, and William Miller, 24, assistant editors of Isis and former members of a secret branch of the Royal Navy. When the authors were prosecuted for breaching the British Official Secrets Act, the public prosecutor stated in court that parts of their story were true. The Associated Press quoted the Thompson-Miller article:

"All along the frontier between East and West from Iraq to the Baltic and perhaps farther are monitoring stations avidly recording the least squeak from Russian transmitters, ships, tanks, airplanes, troops, and control stations.

"It is believed, perhaps rightly, that this flagrant breach of the Geneva Convention can provide accurate estimates of the size and type of Russian arms and troops and the nature of their tactical methods.

"In order to get this information, the West has been willing to go to extraordinary lengths of deception. British Embassies usually contain monitoring spies * * *.

"An airplane loses its way. Behind the frontier, tape recorders excitedly read the irritated exchanges of Russian pilots, and when the latter sometimes force the airplane to land, an international incident is created and reported in the usual fashion."

Accounts in the American press complement the story of the Oxford students. Hanson Baldwin, of the New York Times, and others have written of flights by the U.S. Air Force across the boundaries of Russia. In the January 1958 issue of Missiles and Rockets, Associate Editor Seabrook Hull gave some details:

"The Strategic Air Command still provides the United States with an overwhelming retaliatory power over the Union of Soviet Socialist Republics, according to Pentagon experts. * * * Numerous and continuing SAC flights over the sovereign territory of the U.S.S.R demonstrate this. * * * Their [SAC] aircraft continue to fly over the Soviet Union with a relative degree of immunity. It is true that modern Russian fighters attack our bombers with major advantage of altitude, speed, and maneuverability. It is also true that they score some hits. But so far no attacks have been made by the Russians with missiles [possibly] because they don't want to tip their hands."

Time more than once has written of U.S. military planes making spy flights over Russia. In its November 3, 1958, issue Time quoted Soviet refugees as saying that high-altitude U.S. photo-reconnaissance planes flying in from the west made a nighttime penetration of Russian airspace in late 1956 or early 1957. Time said on its own authority that the Russians had seen such planes on their radar—proof that they are not asleep at their oscilloscope."

The most fundamental of all civil liberties is the right of the citizen to make up his mind on public issues without having the facts concealed or distorted by his government. The record shows that the CIA, in cooperation with the State Department, systematically contravenes this principle. A few examples of what is happening creep obscurely into some of the better newspapers, but nowhere, save in a few liberal publications, are Americans warned of the potential consequence of the far-flung operations of the secrecy-ridden CIA.

Public opinion can with effort make itself felt in the most public of Government bureaucracies. But bureaucracy operating in the dark, utterly insulated from public or congressional opinion in the delicate field of foreign affairs, is about as far removed from the democratic process as it is possible to conceive. Democracy is vitiated at home. Abroad, CIA activities are used by leaders like Mao Tse-tung to stir up hatred of the United States and generate more support for Communist dictatorship.

For 4 years men like Senators MANSFIELD, MORSE, and KEFAUVER have tried to get Congress to set up a committee to keep check on the CIA just as the Joint Committee on Atomic Energy keeps Congress reassured in that vital field. Congressional participation in the supervision of the CIA has been recommended by the Hoover Committee on Government Reorganization, by a special Hoover Commission task force headed by Gen. Mark Clark, and by the Senate Rules Committee. But a bill to achieve this has not been passed by either House. Four such bills died in commitee in the past session.

Other bills are being prepared for the current session of Congress, and the temper of the new Congress is likely to prove more favorable. But the needed legislation will not be passed unless the public and the press demand action. Too many men high in Government gloat over the cops-and-robbers exploits of the younger of the Brothers Dulles.

Where and When Will It End?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I include a current article by C. Wilson Harder, writer of a weekly column of national distribution geared to the interests of small business. It is important reading for an understanding of the myriad problems confronting the small businessman:

For quite some time, the Nation's independent businessmen, voting through the National Federation of Independent Business, have urged unions be made subject to Nation's antitrust laws. So far, Congress has not seen fit to do this.

This stand by the Nation's small businessmen is not based on an antilabor, or labor-baiting attitude. Rather, the question goes much deeper. It is possible that unless some curb under law is placed on labor leadership that the welfare of the Republic will be impaired.

There is something corrosive about unlimited power to an individual. In olden times there was seldom a king who did not abuse his power. But the modern labor leader is not only unfettered in his use of power, he also has the problem of pushing for more and more to put on a good show for the membership. This abuse of so far uncontrolled power, plus the drive to seek justification by getting more and more for the membership, seemingly has no end.

Perhaps one of the best concrete examples of this fact is found out in California. In the food industry, this State is recognized as the birthplace of the supermarket, and thus, is also perhaps the place of origination of the grocery clerk's union. Over the years the union has pushed wages up to a point where any grocery clerk not making $125 per week is unusual. In addition, there are numerous paid holidays, and on some, if the store stays open to accommodate the public, double, and even triple time must be paid.

But now the clerk's union has dreamed up a new demand. It is now being sought to get the employer to finance a fund to pay for psychiatric treatment for clerks who "crack up" under the high pressure of their jobs.

Nothing is said about owners who might "go nuts" trying to keep up with this merry-go-round. It seems doubtful anyone ever contracted neuroses from stacking cans of peas on a shelf.

Thus, this demand by the union bosses would seem absurd on the fact of it, if it were not a part of a very sly strategy in applied psychology. If union leaders can get over to their members the idea that they are being driven into all kinds of neuroses for the enrichment of the boss, more ill feeling is created for the employer; greater dependence on the union is built up.

It is doubtful that any grocery clerk has ever considered that he has a psychosis brought on by weighing out the sugar, or stacking up the coffee cans. But it is a safe bet that in due time, the union will sell him on the idea that his job, and his employer, is "driving him nuts." After that is accomplished, who knows what will be the next objective of union leadership? Perhaps the next thing will be to seek a Mother's Day bonus for every clerk who had a mother, on the grounds that the employers owe a debt to the mothers who made it possible for the boss to hire them as clerks.

New Help for Small Business

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. RIEHLMAN. Mr. Speaker, as a former member of our Small Business Committee, I am particularly interested in the activities and progress of the Small Business Administration which, as you know, has been made a permanent agency by the Congress.

The 85th Congress legislated a Small Business Investment Act as a means of providing more adequate long-term financing for small businesses throughout the land. The job of getting the Investment Act into gear is the responsibility of the Administrator of the Small Business Administration, Wendell B. Barnes. He has tackled this work with alacrity and now has the Small Business Administration Investment Division about ready to prove its value to the national economy.

Paul Wooton, the veteran Washington and congressional correspondent, recently interviewed Administrator Barnes on this subject for the publication, Dun's Review and Modern Industry. His article is most enlightening and well done, and I believe Members of this body will be interested in reading it. I ask unanimous consent for its insertion in the Appendix of the RECORD. It reads as follows:

NEW HELP FOR SMALL BUSINESS—SBA CHIEF BARNES GIVES SOME POINTERS ON THE NEW LAW AIMED AT EASING THE LITTLE FELLOW'S FINANCING PROBLEMS

(By Paul Wooton)

The brandnew Small Business Investment Act will do more to stabilize and strengthen the overall economy than any peacetime legislation since the passage of the Federal Deposit Insurance Act.

So says Wendell B. Barnes, head of the Small Business Administration, which will administer the law passed by Congress last August to provide financing facilities for small businesses.

EVERYBODY BENEFITS

Barnes' optimism is based on the fact that this new concept of corporate financing can be applied to a large percentage of the country's 4.3 million business establishments. He feels that his enthusiasm is shared by most of the financial community.

Lack of capital which has retarded the growth of thousands of small businesses now can be overcome, Barnes believes, by the establishment of private investment companies which will lend needed funds for sound financing, expansion, and new product development. The loans can run from 5 to 20 years. State and local development companies also may obtain loans for site acquisition and plant construction for small concerns.

While a major long-term effect of the act will be the establishment of new companies, Barnes points out that the immediate benefits will come from providing going concerns with funds for modernization and expansion.

TAX RELIEF SPURS GROWTH

However, tax benefits provided for in the act already are resulting in the creation of new companies. Corporations with no more than 10 stockholders now have the option of being taxed as if they were partnerships. An original investor in a small business may deduct stock losses within certain limitations. A taxpayer also has the option of paying the estate tax over a period up to 10 years if the estate consists principally of small business holdings. A small business is allowed a 3-year carryback on new operating losses, and it may write off 20 percent of the cost of depreciable, tangible personal property in the year of acquisition. The writeoff, however, is limited to $10,000. The minimum accumulated earnings credit is increased from $60,000 to $100,000.

Administrator Barnes points out that licensed small business investment companies will be privately owned and privately operated. He sums up the main features of the Investment Act as follows:

HOW IT WORKS

Licensed companies will make loans and purchase debentures issued by small business concerns. The debentures are to be convertible into stock.

Small business investment companies will be licensed only after the need for small business financing in the area has been established.

Licensed companies must have a minimum of $300,000 paid-in capital and surplus, but the Small Business Administration can purchase a maximum of $150,000 of subordinated debentures. In addition, SBA can lend such companies up to 50 percent of their capital and surplus. For the purposes of the act, these subordinated debentures can be treated as capital.

Licensed companies are exempt from the Securities and Exchange Commission's requirements of 300-percent asset coverage against borrowings and are eligible for certain discretionary SEC exemptions.

SBA will charter investment companies if State officials cannot grant such companies powers to operate under the act.

Private funds must be employed in the program to the maximum possible extent. Federal funds to the extent of $250 million are authorized for loans to licensed companies and to State and local development companies. Of this sum, $50 million has been appropriated.

Funds also are available for use of schools and State agencies in research on the problems of small business.

An SBA division is in operation helping small concerns obtain Government contracts.

REGULATIONS AREN'T SO TOUGH

There have been some complaints that the regulations implementing the act are too technical and complex. Barnes admits the regulations are not simple, but they follow the requirements of the act.

Although they are set up to make loans to small concerns which have been unable to obtain long-term loans, the small business investment companies are not going to grant loans without reasonable assurance of repayment. They will look for concerns with prospects for growth.

Barnes points out that loans extended to implement promising product ideas can foster business growth and advance the economy as a whole.

MAJOR HEADACHE: INVESTIGATION

A problem that will be common to all the investment companies is the high cost of investigating small concerns. Some think 10 applicants will have to be examined for each 1 accepted. The investment companies will be looking for concerns whose net income can be brought up to the $150,000 or $200,000 level before they are turned over for public financing. However, the small business investment companies will have to compete with other concerns making venture capital investments. The SBIC loans are in no way subsidies.

Ten or more persons (fewer if permitted by State laws) may join in setting up a small business investment company. The SBA will purchase $150,000 of the company's subordinated debentures to help it get organized. They will be junior to other obligations of the company.

For the capital advanced to the small business, the investment company takes debentures which are convertible into the stock of the small business. It may also make secured loans of 5 years or more.

Banks and other investors may acquire the stock of the small business investment company. Bank holdings of such shares may not exceed 1 percent of the bank's capital and surplus. Efforts will be made by some companies to confine stock ownership to the community in which the enterprise will operate.

OTHER PROVISIONS

The percentage of borrowings of an investment company to its paid-in capital and surplus may not exceed a ratio of 4 to 1 without SBA approval. SBA will charge 5 percent interest on subordinated debentures purchased from the SBIC. The 5 percent rate also will apply on loans from SBA to SBIC. An SBIC may obtain stock of small business concerns only through the conversion of debentures.

SBA is precluded from buying more than $150,000 of subordinated debentures in any one small business investment company where several are owned by the same group. Financing extended to any one small business concern by an SBIC may not exceed 20 percent of the investment company's capital and surplus without special permission.

Existing State chartered investment and State development companies may convert to an SBIC with the approval of SBA.

SBA may make loans to State development companies, but the total loans outstanding may not exceed the total amount put up by other sponsors. Provision is made, in addition, for loans for specific small concerns.

What Can You Do About High Taxes?—One Answer Is: Demand Less

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following editorial appeared on February 5 in the Sidney Record-Enterprise in my district.

While the editorial deals with the problems of taxation and balanced budgets at our State level, nevertheless the same, and reasonable, approach applies equally to our own problems in the Federal Government.

It is time for more and more of our people to answer the question in the title of this fine article: "What Can You Do About High Taxes?—One Answer Is: Demand Less."

If these problems are ever solved, it will be by the people themselves:

WHAT CAN YOU DO ABOUT HIGH TAXES?—ONE ANSWER IS: DEMAND LESS

According to what we read in the daily newspapers the Republicans are divided in their reaction to Rockefeller realism. The Democrats, naturally, will make all the political capital they can out of the unpopular situation created when a hand reaches out for a larger portion of the pay envelope.

The average person is not particularly interested in the political implications of the situation; he knows that what we are being asked to do is pay for commitments already made. The specific figure is that 81 percent of the increase in our State budget is either mandated by law or obligatory. The commitments were made by a Republican legislature under a Democratic Governor.

New York State is a high-tax and a high-cost State; the result is that we have too many manufacturers and businesses ready to move out and too few ready to move in. Our government has not been conducted efficiently—that is a statement of business fact, not political innuendo.

Governor Rockefeller made the statement on Monday that "the interest that must be paid on bonds makes the cost of capital construction projects more than 50 percent higher to the taxpayer." He is trying to establish sound fiscal policies and that means raising the necessary added revenue to meet our expenditures.

Under the heading of economy Governor Rockefeller has refused to fill 9,000 requested jobs that he considers nonessential. He seems to be withstanding pressure extremely well, but there are forms of pressure that cost us too much money, and are beyond his control unless the public demands action.

To be specific there are the costs involved in building schools—the costs that come from pressure exerted from the time the architect draws up a new set of plans—no such things as standardized plans available. The architect, because of pressure from his professional group, will get a percentage fee that will net him around $50,000 to $60,000 on most schools being built in our State today.

The common laborer and the craftsman also have been able to bring pressure to bear so that their rate of pay on school buildings is inordinately high, and bolstered by such devices as traveling time and such gimmicks. When State money is included in a local project you must accept the formula under which State contracts are written.

Governor Rockefeller stated on Monday that "State aid to local communities exceeds a billion dollars, which is about half of the total budget." On January 29, a speaker addressing the municipal law section of the New York State Bar Association said that 61 cents of every State revenue dollar goes to localities in the form of State aid. That means that the true cost of local government in New York State is camouflaged by our beneficent State government.

When you hear that a village or town pays a certain percentage, the State contributes so much and the Federal Government pays the rest you are being asked to believe that the added money comes from somebody else. It comes from you—the only difference is that when your dollar goes to Albany or Washington and comes back as State or Federal aid it has somehow shrunk in the process.

Governor Rockefeller is asking us to pay for what we, on a local level, keep demanding; we will have to demand less if we want to cut down the high cost of living or doing business in New York State.

A Realistic Approach to Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. SMITH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert an editorial from the Pasadena Independent of January 22 which is worthy of note:

A REALISTIC APPROACH TO VETERANS' PENSIONS

In his budget message President Eisenhower called for tightening requirements for veterans' pensions "according to effective tests of need, both as to income and as to net worth."

In other words, a veteran who doesn't need a pension shouldn't get one.

Mr. Eisenhower asked Veterans Administrator Sumner Whittier to propose legislation to do the job. If the bill is introduced it will run into a heavy flak of opposition from those veterans groups which seek greater, not less, benefits for men who donned uniform, whether or not they were wounded or even went overseas.

A new organization, the Veterans of World War I, seeks $100 a month pension at age 60 for all World War I veterans, no matter how short their war service or how high their current income.

If they should get their way, the Government would have to do as well by World War II veterans and Korean war veterans. It is estimated that by 1965, this across-the-board pension would go to 4.8 million men, more than a fifth of the Nation's 23 million veterans.

At present more than 1.3 million veterans and surviving relatives draw more than $1.1 billion in annual pensions. Much of it is justified. But many get help not for service disabilities but for injuries and illnesses incurred long after service. Many get pensions just for the disabilities resulting from old age, despite the fact that they have ample savings accounts and reasonable annual incomes from other sources.

To cite one example, a 78-year-old Californian who served for 7 months during World War I entirely within the United States has drawn $78.75 a month tax free for 90 months. He and his wife have other income of $4,701 a year plus total worth of $58,238.

The President wants to limit pension payments to the difference between the amount needed to live decently and a veteran's other income.

For instance, if $3,000 a year was set as the amount necessary for an elderly couple, then the veteran who now gets the maximum nonmedical pension of $945 a year and no other income would be given a sizable income boost.

But the veteran who also gets social security payments of $1,200 a year and has $1,000 a year outside income would take a cut. And the veteran who has outside income above $3,000 would get nothing at all.

One could argue that such a plan stifles initiative. To some extent it does, but most men reaching pension age have already established their incomes.

One could also argue, as Kipling did, that "Tommy" is forgotten except in wartime. But since 6.6 cents of every Federal tax dollar in the new budget goes to veterans' programs, this argument doesn't hold much water.

The 23 million living American veterans and their families are such a sizable portion of the total population that any across-the-board pension plan would just about mean that half the country was drawing forced largess for the other half.

A $100 a month flat pension is unreasonable and unrealistic at a time of growing national debt and a need for heavy defense expenditures. Old Soldier Eisenhower's plan is both realistic and fair.

Business in Politics

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. DAGUE. Mr. Speaker, the activities of organized labor and their participation in each election campaign underscores the importance of businessmen protecting their interests through similar activity.

The debacle now unfolding in the State of Michigan where under the policies advocated by certain leaders of organized labor we see a great State literally going broke must give us pause. The inflationary impact of each new round of wages and the demand for more and more hand-outs from Government sends the inflationary spiral and threatens the security of all of us, and especially the very recipients of these so-called benefits.

The leading daily newspaper in my home county, the Daily Local News of West Chester, Pa., has editorialized on the subject of greater activity on the part of businessmen in the field of politics and I am privileged to include the splendid article as a part of these remarks:

BUSINESS IN POLITICS

There's politics in business to be sure, but the ideal situation in these days finds business in politics, not only on a local basis but State and national.

Yesterday's edition of this newspaper carried a picture showing a delegation of West Chester citizens, many of them businessmen, boarding a bus for Philadelphia where they took part in the launching of the political participation program of the U.S. Chamber of Commerce. Purpose is to encourage and aid retailers and others to take a more active part in politics.

That is as it should be in a day when business finds itself very much a part of politics whether or not it wants it that way. Since it is on the paying end, it makes sense that it should also be active on the policy-making end.

Businessmen must make their voices heard or accept the consequences. That is the challenge that comes from the board chairman of the U.S. Chamber of Commerce who himself is a top executive of a large department store. He puts it this way: "Government decisions * * * have a tremendous impact on the retailer's right to manage. He must make his voice heard—or the decisions may be made without any consideration of his views." Moreover, the retailer is in a unique position to furnish leadership in national and community affairs because "no other person is closer to the people."

Advice of this nature, coming from business leaders and organizations, is being heard to an ever-increasing extent—as it should be. And, naturally, it isn't directed at retailers alone, important as their participation in political work is. The entire business community is at the mercy of political actions of one kind or another. The policies adopted and implemented into law in Washington, at the State capitals, and at all other centers of government will determine what kind of country we are going to have.

Any citizen who thinks himself above political affairs lives in a dream-world. Any citizen who shirks his political duty is asking for trouble. In the long run, the quality of government is more important to business than the quantity of its sales.

It is well that our local chamber of commerce is awake to the importance of active participation, and that its committee, headed by Robert L. Beling, saw fit to make a trip to Philadelphia to see what the situation is at present and what the future may be.

In this way our local chamber along with others will not be caught napping when legislation affecting businessmen is proposed.

Countering Labor Costs

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. BETTS. Mr. Speaker, in connection with the recent reports concerning increased unemployment, it might be well for all parties concerned to give careful consideration to the penetrating discussion in the following editorial which appeared in the Washington Star of February 10, 1959:

COUNTERING LABOR COSTS

The Federal Reserve Board has directed official attention toward one deeply disquieting aspect of the current economic recovery. It is that unemployment figures have not improved in concert with other indexes reflecting the business revival, or in the same degree that they improved during initial recovery from the recessions of 1948–50 and 1953–55. The FRB comment was contained in a staff study submitted to the Senate-House Economic Committee and came just prior to release of the Government's January jobless statistics—showing unemployment of

4.7 million, compared with 4.1 million in December.

There are some lessons to be learned from this relatively gloomy picture on employment. Continuing increases in labor costs through union-negotiated contracts for higher wage rates and steadily expanding fringe benefits prompted industry to do two things. One was to invest heavily, prior to the recession, in plant modernization and introduction of automation, with the result that productivity has increased in recent months without need for comparable rehiring of workers. The FRB points out, for example, that auto output last December was only 4 percent below December 1956, but that it was accomplished with 20 percent fewer production workers. Similarly, the Board suggests, such labor cost obligations as social security, vacation payments, tenure rights, and so on, have caused industry to be increasingly cautious about adding to its work force until long-term need is amply demonstrated.

If these are valid explanations for much of the slowness in reemployment organized labor itself should take a hard look at its pattern of ever-increasing demands and their impact on the overall job picture.

Anger, Sorrow, and Disgust Displayed in Hospital Morgue

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. FENTON. Mr. Speaker, the terrible loss of life in the ever-increasing highway accidents is causing consternation among our citizens in all sections of the country. The heartaches which result from these accidents are in most instances beyond description.

A very fine article appeared in the January 26 issue of the Shamokin News-Dispatch following a head-on crash which resulted in the death of four persons. This article, written by Staff Writer Harry Deitz, gives a heart-rending account which inspired the headline, "Anger, Sorrow, and Disgust Displayed in Hospital Morgue." I ask unanimous consent to extend my remarks in the RECORD and include this article which might in someway contribute to serious reflection in our efforts to eliminate this unwarrantable loss of human life on the Nation's highways.

ANGER, SORROW, AND DISGUST DISPLAYED IN HOSPITAL MORGUE

(By Harry Deitz)

A veteran police officer turned away in disgust; a young nurse, her white uniform stained with blood, grimaced and a doctor looked stoically at the three bodies lying in the small morgue.

No one had to say what each was thinking—that another accident involving a teenage driver had taken its toll; that a short time before there was life in each of the three young bodies.

The doctor turned to make notes. "It's a darn shame," he mumbled, "that the State can't do something to stop tragedies like this."

In the far corner of the room, a relative looked at the contorted face of a lifeless young girl. He shook his head affirmatively, identifying her as his niece. She was 18 years old.

Outside, a young husband walked down the hallway toward the closed door. His hand trembled as a police officer led him into the room. He took a long look at the bodies on two of the three stretchers. There was silence, followed by an outburst before the husband was led away for sedation.

Upstairs, a green light flashed on the switchboard and the operator plugged in one of the cords. "I'm afraid I have bad news for you" her voice trailed off to a choked whisper.

She turned back to three police officers standing near a desk. "You never get used to this," she said. "Every time it gets a little tougher." She fought back an outburst of emotion then turned to plug in another cord—"Sunbury Community Hospital."

The three victims in the morgue were identified. There were two young mothers and a teen-age girl. All three met death in the prime of life.

In an upstairs room, a team of white dressed nurses and doctors gathered around a bed in which a 15-year-old youth struggled to hold onto his life. A nurse entered the room carrying two pints of blood. The doctor quickly performed a tracheotomy. Two other nurses attempted to staunch the flow of blood from deep gashes. But the youth took a deep breath and then there was silence. The team of medical technicians watched for the next breath that never came.

On the first floor level, a mother and her daughter paced the hallway. The mother looked toward a screened off room. The daughter said a prayer in low but audible tones "please God don't let my brother die." Inside the room another team of medical staff members was doing all that was humanly possible to spare the life of a 19-year-old boy.

A police officer, who has seen many tragedies like this, talked to the county coroner. Other officers were busy assembling notes. A news reporter stood in the background analyzing the one moment of carelessness that was responsible.

Only 3 hours earlier, there were five people enjoying life at its best. Two young mothers enroute to a happy home. Three teenagers were enjoying a ride. But the moment of carelessness turned the scene into morbid sorrow.

On the crest of a hill, one car went over the dividing line. There was a scream as rubber tires skidded over the highway. A loud crash followed and fate had stepped into the picture. Another car came over the hill and its driver stared at the wrecked sedans. "Oh my God," he uttered. Soon the area was a beehive of activity, flashing red lights, screaming sirens of ambulances, and the voice of police directing traffic.

Seven teenagers were among the spectators. Their reaction was typical of those who rarely see tragedy or disaster. A young girl turned up the collar of her jacket and shuddered as she inspected the bloodstained seats, the twisted metal, and the remains of what once had been two modern cars. Her boy friend and two other companions observed the gruesome picture.

"Boy, that sure is an accident," the one youth said as the group passed a photographer enroute to their car. "It sort of scares you."

No sooner had the group entered the sedan when the starter turned the motor over. There was a loud roar as the car zoomed away at high speed and out of sight.

An older spectator shook his head and said: "Maybe I'm old-fashioned, but if I had anything to say about it, the age limit on licenses would be increased to 21. It's always the innocent ones that pay for the mistakes of these wild kids."

Peacetime Draft

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. MEYER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Enosburg Falls (Vt.) Standard, Dec. 11, 1958]

FIVE QUESTIONS ABOUT PEACETIME CONSCRIPTION

1. Is the present law fair and equitable?

As the present law now operates, "more than one-half of all young men will never see any military service," writes John Graham in "The Universal Military Obligation" (1958), published by the Fund for the Republic. Graham noted that in early 1957, 2.3 million or 46 percent of the draft pool of about 3 million men were classified as physically or mentally unfit by the artificial standards of the Armed Forces. (Sturdy athletes have been deferred for minor physical defects.) An additional 1.4 million men were deferred by Executive order because they are fathers. Other deferments are granted to students, certain workers, conscientious objectors, and others.

The deferment policy often discriminates against the economically disadvantaged. Those who can afford higher education can be deferred often until they pass the age when they are likely to be taken. John Graham notes, "Husbands who can afford to have children young see no military service while those who cannot are drafted."

Prof. John K. Galbraith, of Harvard, has asserted that the draft survives principally as a device by which we use compulsion to get young men to serve at less than the market rate of pay. We shift the cost of military service from the well-to-do taxpayer, who benefits by lower taxes, to the impecunious young draftee."

2. How does conscription affect young men?

When a draft board takes boys to serve at low pay for the convenience of other citizens, forces them to serve against their will for 2 years plus reserve duty, it is a serious matter for the persons involved. For most of them it means postponing or interrupting college or marriage plans or their first job. The very fact that they must be compelled to serve in a society in which others may work at jobs of their own choice makes it an interruption rather than a job.

August B. Hollingshead in a study entitled "Adjustment to Military Life" in the American Journal of Sociology, March 6, 1946, said:

"The perfectly trained soldier is one who has had his civilian initiative reduced to zero. In the process the self becomes identified with the institution and dependent upon it for direction and stimulation. The ideally adjusted soldier would be a military dependent who looked to the institution for all his personal, social, and emotional satisfaction. * * * For these reasons the recruit must be remade; as any old sergeant knows, 'a recruit is not worth a damn until he has been broken.' "

3. How does the draft affect the Nation?

Thirteen years ago Halford Hoskins wrote on "Universal Military Training and American Foreign Policy" in the Annals of the American Academy of Political and Social Science. Today his words have a prophetic ring, with military men in the highest councils of our Government, with the mili-

tary receiving by far the largest proportion of the Federal budget (over $47 billion this year) and often being given more than they request by a compliant Congress, and with many businesses and universities working on military contracts.

"The results of 1 year's training will not greatly affect the body politic and even after 5 or 10 years no striking change in public outlook may be apparent. Nevertheless, in the course of a generation the effects will have become cumulative even if they have grown imperceptibly, * * * and military considerations may be expected to enter more and more into party politics, governmental policy, and economic and social life."

Conscription encourages reliance on military men and methods. In a remarkable article on "The Generals and the Cold War" in the New York Times, November 8, 1958, C. L. Sulzberger notes a global trend toward placing military men in positions of national leadership. "War, of course, makes generals, and generals make war. But it is probably also true that cold war makes generals into politicians. Where does such philosophy lead? Ultimately toward dangerous adventure or into stagnation."

4. Does conscription help education?

John Graham has pointed out that "uncertainties about the draft make it impossible for young men to plan ahead, and, as a result, discourage them from getting the advance training in the sciences or professions that the country is needing increasingly."

Those who enter ROTC as an alternative to the draft in order to stay in college or postpone induction must later serve on active duty. "Like all other forms of military service, the Reserve officers' active duty period represents a burdensome interruption in his professional training, one so burdensome that the intended professional education may never be resumed," wrote Walter Millis in "Individual Freedom and the Common Defense."

Compulsory ROTC is a form of conscription within the college community, and thus represents time taken away from subjects that are of real educational value. "Many institutions devote 20 percent of their curriculum to the military sciences. On the average, it is somewhat above 16 percent," wrote Benjamin Fine in 1953, and there is little reason to believe the situation has improved since then.

One of the gravest dangers of ROTC and compulsory military training in general is the influence they have on the minds of those trained and hence on the Nation's foreign and domestic policies. In military training, as if to justify it in the first place, suspicion of enemies and the role of physical and military forces are magnified. Except among the rare few who react against such ideas there is a tendency to discount the role of political, economic and other processes of change unless they are backed by superior military might.

5. Do all political leaders and military men believe conscription is essential?

Those concerned with military strength, who are also opposed to conscription today argue that it is inefficient; it cannot accomplish the end for which it was adopted. They speak of a mobile, technically trained and highly professional force.

"Every young man who has served in our Armed Forces knows the incredible waste of our present system of forced but short-term service. He knows the money that could be saved, the new efficiency that could result from a volunteer system * * * we need more and more today a type of military personnel—experienced and professional—which our present draft system does not give us," said Adlai Stevenson on October 18, 1956.

The Defense Adivsory Committee on Professional and Technical Compensation headed by Ralph J. Cordiner, president of General Electric, in its May 1957 report supported this conclusion. Cordiner said after talking to hundreds of enlisted men, "I found antagonism and bitterness over the draft. They were checking off the days until they got out. We must devote 25 percent of our military effort to training men who don't stay." The accident rate is so high as a result of inexperienced men manning intricate weapons or equipment that the Armed Forces estimate that close to $5 billion worth of equipment is not now operable.

In one attempt to remedy the problem Congress last year passed legislation increasing military pay. A general or admiral received an increase of $424 a month; a colonel, $148 a month; and a major, $58 a month. A private first class earning less than $100 a month previously, during his first 2 years of service would get only $3 a month increase. Congress and the Pentagon have thus far pursued a policy of granting large increases to officers who aren't drafted and keeping the pay of enlisted men so low it is necessary to draft them.

On November 19, Neil H. McElroy, Secretary of Defense, ordered a 70,000 cut in the Armed Forces by June 30, 1959. Even then the United States will have 2,525,000 men under arms. The draft call for January is 9,000, or 2,000 fewer than in recent months.

Great Britain has decided to discontinue conscription after 1960—but as a part of an increasing reliance upon nuclear weapons.

[From the Enosburg Falls (Vt.) Standard, Dec. 18, 1958]

PEACETIME DRAFT IN 1959

Congressman-elect WILLIAM MEYER will join the growing group in Congress who will work for a return to voluntary service and an end to peacetime conscription. In his campaign he told Vermonters that the draft today is uneconomic, undemocratic and poor military policy. With Congress coming up and in the light of MEYER'S election and a definite public change of attitude, a closer look at this question is in order.

TIME TO TAKE A NEW LOOK

The law presently in effect was extended 4 years in 1955 by a voice vote in the Senate and a vote of 394 to 4 in the House. Since this overwhelming vote was taken a number of changes have occurred. The use of military methods in an ideological struggle has been increasingly questioned. An era characterized by the rise of Senator JOSEPH MCCARTHY has passed. More and more the catastrophic nature of nuclear war is recognized. Presidential candidate Adlai Stevenson in 1956 campaigned for an end to the draft "in the foreseeable future."

An article by Fletcher Knebel "The Fight To Kill the Draft" in Look magazine, May 27, 1958, presented the case for ending conscription and added, "A curious fact about the draft is that Americans have accepted it so placidly in recent years. Once we hated the draft with a passion."

Certainly the American people have been conditioned to accept it as a defense measure along with the terrible weapons to mass destruction. For years we have been told that the only language the Communists will understand is force. Thus, conscription and nuclear weapons symbolize our posture of strength and our unwillingness to meet world problems on a much different level of negotiation, reconciliation, worldwide disarmament, and the development of world law.

Today, however, as Knebel points out "doubts about it [the draft] have arisen" in the Pentagon and the challenge to compulsory service will grow in volume.

A majority of those present and voting at the Fifth World Order Conference, called by the National Council of Churches in Cleveland, Ohio, voted on November 21 against continuation of the draft.

[From the Enosburg Falls (Vt.) Standard, Jan. 8, 1959]

WHAT ARE THE ALTERNATIVES TO THE PEACETIME DRAFT

Proponents of a huge Military Establishment argue that weakness invites aggression, and that world peace can only be assured by emphasis on military strength. They also argue that the Nation must be prepared to fight a limited nuclear war, with the unlikely expectation that the war will remain "limited" in the heat of atomic battle.

As Americans we cherish liberty and freedom and want the rest of the world to share it and enjoy it. We have a positive duty to defend and to nourish the ideals that have made our people and Nation great. But our greatness does not rest on military regimentation or strength.

There is no simple or easy answer, nor any course that does not involve risk. But this much seems certain: communism in a revolutionary world can only be met by better ideas; by a sacrificial program of sharing our experience and resources and ideals and lives with the under-privileged two-thirds of the human race. People cannot be weaned away from communism in the Orient, the Middle East, Latin America and Africa by bayonets—only by brotherhood and better ideas, and the demonstration that democracy has a better answer for their needs than totalitarianism.

The fundamental problem of security must be met through the development of the United Nations, the use of its moral and political authority for the resolving of disputes, and by far-reaching steps toward universal disarmament. The eyes and prayers of many of the world's people are focused now on the diplomats meeting at Geneva who are attempting to work out an agreement to end nuclear weapons tests.

Instead of conscripting young men into involuntary military service, the Government should be encouraging young men and women to train for constructive service to mankind. We need a comprehensive Federal scholarship program whose recipients would form a trained manpower reserve. They would serve overseas or at home as teachers or technicians in lieu of military service. We need leadership and programs to stimulate and capture the imagination of young people and offer them a constructive alternative to sterile, tedious and disruptive military duty.

The United States has an opportunity to exert real world leadership with regard to conscription. Discontinuation of the draft here could be followed by American efforts for the international abolition of conscription. In the midst of a prolonged cold war, it is hard for either side to convince the other that it really wants peace without some clear-cut affirmative acts for peace. Ending the peacetime draft could ease international tensions, promote political settlements and disarmament agreements, and release men and resources to help concentrate on the real needs of the world's people.

The Soviet's Conduct—Vicious, Barbaric, and Warlike

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HOSMER. Mr. Speaker, on Sunday, February 8, the editorial writer of the Long Beach Independent-Press-Tele-

gram performed a distinct public service in listing many of the acts of uncivilized conduct committed by the Soviets in recent years.

It well serves as a reminder to those amongst us who may be deluded by Communist "peace" propaganda and the daily doses of hypocrisy served up by Soviet delegates to such affairs in Geneva as the nuclear-test-ban talks and surprise-attack talks.

The editorial specifically makes the point of speciousness as regard to certain arguments that alleged "weakening of our defense posture" has anything to do with the murder of 17 U.S. airmen September 2, 1958, by the U.S.S.R.

The following is the text of the editorial written by Mr. Harry Karns:

THEY'VE DONE IT FOR YEARS

Why the sudden sense of shock and indignation?

The tape recording of the voices of Russian jet pilots who shot down an unarmed U.S. transport plane merely details something that has been going on for years.

The history of Soviet-American relations over the past decade contains a long, sad series of vicious, barbaric, and warlike actions against our airplanes, our civilians, and our soldiers.

These incidents, ranging from abduction to murder, strangely punctuate the stream of Soviet declarations of friendship and peace.

Senators SYMINGTON and JACKSON seem to think that the attack on the transport is the outgrowth of recent "weakening of our defense posture."

That view is illogical, since the defense posture has become steadily stronger through the years, and in view of the fact that such incidents have been happening over a long period of time.

The attack on the transport is the outgrowth of a longstanding policy of uncivilized conduct.

Space doesn't permit the listing of all the acts of Soviet barbarism. But here are a few of the highlights:

Soviet fighter planes shot down a U.S. Navy Privateer with 10 persons aboard in the Baltic on April 8, 1950.

Soviet planes shot down a U.S. weather plane over the sea of Japan, November 6, 1951.

A Soviet fighter forced a U.S. C–47 down, and the crewmembers were held in Hungary, tried, and ransomed for $123,605.

Soviet planes attacked and shot down a B–29 with a crew of eight over Hokkaido, Japan, October 7, 1952.

Soviet MIG's shot down an F–84 in Germany in March 1953.

Soviet planes attacked a B–50 over international waters off Kamchatka on March 15, 1953.

Soviet fighters downed an RB–50 with a crew of 17 over international waters of the Sea of Japan on July 29, 1953.

Soviet MIG's shot down a Navy P2V, killing 1 of 10 crewmembers.

Soviet MIG's shot down a U.S. B–29 November 7, 1954.

Soviet planes shot down a U.S. Navy patrol plane over the Bering Sea on June 23, 1955.

East German Communists imprisoned nine U.S. Army men whose helicopter had made a forced landing in satellite territory in June 1958.

Soviet fighter planes forced down a U.S. plane in June 1958.

Soviet jet fighters shot down a C–130 U.S. transport September 2, 1958.

The record shows that Soviet attacks on U.S. property and personnel are routine.

And now Mr. Khrushchev would like Mr. Eisenhower to come to Moscow for a friendly chat.

The American Association for the Advancement of Science, the Association of American Colleges, the Council for Financial Aid to Education, and the National Planning Association Have Called for Increased Private Support of Education

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, at various times in recent years many leading nationwide organizations have called for increased private giving to education. Among these highly respected and substantial groups are the American Association for the Advancement of Science, the Association of American Colleges; the Council for Financial Aid to Education, and the National Planning Association.

Recently, I introduced a bill, H.R. 2440, to amend the Internal Revenue Code of 1954 to provide funds for educational purposes by providing increased incentives for private giving through the allowance of a tax credit for charitable contributions to institutions of higher education.

Most corporations and individuals conspicuously fail to contribute to education the sums permitted under the Internal Revenue Code. In fact, it is the failure of the present tax laws to realize the large sums necessary for education which the Congress intended when it wrote these acts which led to the development of H.R. 2440 and other measures similar to it which are designed to correct the present situation.

Dr. Paul E. Klopsteg, distinguished president of the American Association for the Advancement of Science, wrote me on January 28, 1959, that my bill, H.R. 2440, "could become one of the most important pieces of legislation in the interest of preserving the integrity and independence of our colleges and universities that has ever been passed." Clearly, if our colleges and universities are not adequately assisted in obtaining the funds without which their continued existence will be impossible, then the integrity and independence of these institutions will be ended. Both increased Federal aid and private giving is of absolute importance if our colleges and universities are to serve our growing needs as our country expands.

H.R. 2440 would allow a taxpayer a credit against income tax for charitable contributions made to institutions of higher education. In the case of an individual taxpayer, the limit on this credit would be the same as the present limit on the deduction for charitable contributions. H.R. 2440 would not give him a tax benefit with respect to more contributions than he may now include for deduction purposes alone; he may elect to treat a charitable contribution—if it is to an educational institution—as a credit rather than as a deduction, but the total of credit plus deduction is no greater than the present allowable total of deductions.

In the case of a corporate taxpayer, the limit on this credit would be increased from 5 percent to 10 percent of taxable income—where the percentage-of-taxable-income method of computing the limit is used—and this credit would be in addition to the deduction presently allowed for charitable contributions generally; a corporation may elect to treat charitable contributions to educational institutions as credits rather than as deductions—up to 10 percent—without cutting into the amount of such contributions—along with other types of charitable contributions—which may be allowed as deductions. Of course, the same contribution cannot be counted as a credit and a deduction.

Under H.R. 2440 the taxpayer would be allowed a 2-year carryover on the credit just as he is presently allowed a 2-year carryover for deduction purposes. The Secretary of the Treasury would be directed to prescribe regulations governing the time and manner of making the election to treat a contribution as a credit rather than a deduction and imposing conditions to insure the effective correlation of the new credit section with the existing deduction provisions.

I include here a letter I have received from Dr. Paul E. Klopsteg, president of the American Association for the Advancement of Science, and the text of my bill, H.R. 2440:

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE,
Glenview, Ill., February 3, 1959.

Hon. FRANK THOMPSON Jr.,
House of Representatives,
Washington, D.C.

DEAR MR. THOMPSON: Thank you very much for your letter of January 30.

* * * * *

As you may know, I have been either directly active in or associated with higher education throughout my career. Having been on the staff of a large State university and a large private university, and on the board of trustees of a small liberal arts college, I am familiar with the problems, so many of which could be solved with more money that the institution can truly call its own.

I have literally lived with the question of how the flow of undesignated funds from many donors could be stimulated, over a period of more than 5 years. For more years than that, I had been aware of the inevitable pressure that would come upon the colleges and universities as a result of the rapid increase in the number of young people of college age, and that pressure is now upon them. To avoid operating deficits, they must either limit their enrollments, or obtain more operating funds.

Some private institutions are already limiting enrollments, which is bound to throw increasing loads on the State and municipally supported institutions, largely to their detriment. What is needed is clearly the additional "own" money to prevent deficits as enrollments increase. The source must be one of two possible ones: either Government, or private. As you know better than I, the pressure on Government for more and more subsidy for higher education is increasing each year, and understandably so. Private individuals have reached a ceiling in their charitable giving, as expressed in percent of adjusted gross income of taxpayers. As

shown in the study sponsored by AAAS, this percentage has remained close to 4.2 for a number of years, this being the average for those itemizing their gifts. The question is how to break through the ceiling. I believe it can be done, and I believe H.R. 2440 can be the instrument for doing so.

When I published the general plan for equalizing cost of giving in Science, I had requests for 1,800 reprints, out of an original circulation of about 45,000 copies. It indicated exceptional interest in the problem and possible solutions. Great interest was also expressed by many college and university presidents with whom I spoke about it, and the usual comment was, "This is exactly what is needed. You must keep on pushing it. Of course one individual isn't in position to push such a matter very far or very fast. It was not until AAAS, an organization without vested interest in the results, but of course interested in better education and research in colleges and universities, took enough interest to have the study made that things began to move off dead center. And H.R. 2440 expresses succinctly how the job needs to be done.

As I see it, either we have no concern for the future, since "Uncle Sugar" is always available to help, or we do something to make this help unnecessary. If we have strong convictions, from experience, that much of the strength of an institution comes from self-reliance, something must be done to spark and foster self-reliance in the administration of the institutions. Up to now I haven't seen a better method than that proposed in H.R. 2440, nor has anyone within my knowledge come up with anything better. When someone tells me that it isn't the answer to the problem, that it won't work, that the Congress won't pass it, I have one reply: "Then you have tossed yourself a challenge to improve on it, because a way must be found to channel more private funds into the institutions."

I believe that most of the pros and cons are covered in my article in Science for November 16, 1956. If you would like to use any part of it in the CONGRESSIONAL RECORD at a time you consider to be appropriate, I am sure that there will be every cooperation from AAAS to facilitate this.

During the next few months I shall be making a number of public addresses in which I shall discuss the subject broadly, and of course will refer to H.R. 2440 in the terms I used in my letter of January 28, quoted in yours of the 30th.

All other bills which I have seen, intended to aid higher education or research, seem to me to skate around the edges of the problem, and don't get at the heart of it. Yours does get to the root of the problem, and provides means for a solution which will automatically remain a solution with increasing enrollments; for it potentially breaks through the barrier (4.2 percent of adjusted gross income) and, provided taxpayers are properly informed, will substantially increase the percentage of increasing incomes.

You refer to the desirability of cosponsorship, which seems to me most important. Were I in Washington before March, I would be glad to help further in finding other Members who might also introduce the bill. I hope there are tried methods by which this can come about.

You may count on whatever help I can give, both personally and through organizations such as AAAS.

Sincerely yours.

PAUL E. KLOPSTEG,
President.

A bill to amend the Internal Revenue Code of 1954 to provide funds for educational purposes by providing increased incentives for private giving through the allowance of a tax credit for charitable contributions to institutions of higher education

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) part IV of subchapter A of chapter 1 of the Internal Revenue Code of 1954 (relating to credits against tax) is amended by adding at the end thereof the following new section:

"SEC. 39. Credit for charitable contributions to institutions of higher education.

"(a) ALLOWANCE OF CREDIT.—At the election of the taxpayer there shall be allowed as a credit against the tax imposed by this chapter the amount determined under this section.

"(b) INDIVIDUALS.—In the case of a taxpayer other than a corporation, the amount allowable as a credit under this section shall be whichever of the following is the lesser:

"(1) the amount determined by multiplying—

"(A) the amount of charitable contributions to institutions of higher education, by

"(B) the maximum rate of tax imposed for the taxable year by section 1(a), or

"(2) (A) in the case of any individual who has elected to take the standard deduction provided by section 141 or to pay the optional tax imposed by section 3, 5 percent of the taxpayer's adjusted gross income, computed without regard to any net operating loss carryback to the taxable year under section 172, or

"(B) in the case of any other such taxpayer, 15 percent of his adjusted gross income, computed without regard to any net operating loss carryback to the taxable year under section 172.

"(c) CORPORATIONS.—

"(1) GENERAL RULE.—In the case of a corporation, the amount allowable as a credit under this section shall be whichever of the following is the lesser:

"(A) the amount determined by multiplying—

"(i) the amount of charitable contributions to institutions of higher education, by

"(ii) the percentage which equals the sum of the normal tax rate and the surtax rate prescribed by section 11 for the taxable year, or

"(B) 10 percent of the taxpayer's taxable income, computed without regard to—

"(i) section 170,

"(ii) part VIII of subchapter B (except section 248),

"(iii) any net operating loss carryback to the taxable year under section 172, and

"(iv) section 922 (special deduction for Western Hemisphere trade corporations).

"(2) CORPORATIONS ON ACCRUAL BASIS.—In the case of a corporation reporting its taxable income on the accrual basis, if—

"(A) the board of directors authorizes a charitable contribution to an institution of higher education during any taxable year, and

"(B) payment of such contribution is made after the close of such taxable year and on or before the fifteenth day of the third month following the close of such taxable year,

then the taxpayer may elect to treat such contribution as paid during such taxable year.

"(3) CARRYOVER OF CORPORATE CONTRIBUTIONS.—Any contribution made by a corporation in the taxable year which, but for the limitation of paragraph (1)(B), would be taken into account in computing the credit under this section, shall (at the election of the taxpayer made for the taxable year) be taken into account in computing the credit under this section in each of the two succeeding taxable years, but only to the extent of the lesser of the two following amounts:

"(A) the excess of the amount of charitable contributions to institutions of higher education which may be taken into account in computing the credit under this section under the limitation in paragraph (1)(B) over the amount of the charitable contributions to institutions of higher education made in such year; and

"(B) in the case of the first succeeding taxable year, the amount of such excess contribution, and in the case of the second succeeding taxable year, the portion of such excess contribution not taken into account in the first succeeding taxable year.

"(d) INSTITUTION OF HIGHER EDUCATION DEFINED.—For purposes of this section, the term 'institution of higher education' has the meaning given to such term by section 103 of the National Defense Education Act of 1958.

"(e) SPECIAL RULES.—

"(1) AMOUNTS TAKEN INTO ACCOUNT.—The determination of whether or not a charitable contribution to an institution of higher education may be taken into account under this section, and the amount thereof, shall be made under section 170; except that in the case of an individual any such determination shall be made without regard to any election to take the standard deduction provided by section 141, or to pay the optional tax provided by section 3.

"(2) CORRELATION WITH SECTION 170.—No amount taken into account under this section shall be allowable as a deduction under section 170. Any amount taken into account under this section shall be taken into account in computing the limitations provided in section 170(b)(1) (but not those provided in section 170(b)(2)). For purposes of provisions of law relating to amounts allowable as a deduction under section 170, any amount taken into account for purposes of this section shall be treated as an amount allowable under section 170; and any reference in any provision of law to a specific provision of section 170 shall, where appropriate, be treated as including a reference to the corresponding provision of section 39. An amount shall be treated as taken into account for purposes of this section only to the extent that, but for such amount, the amount allowable as a credit under this section for any taxable year would be decreased.

"(3) CREDIT NOT TO RESULT IN REFUNDS.—The credit allowed by this section shall not exceed the tax imposed by this chapter, reduced by the sum of the credits allowed by this part (other than this section and section 31).

"(4) ELECTIONS.—Any election provided by this section may be made only at such time, in such manner, and subject to such conditions designed to insure the effective correlation of this section with section 170, as the Secretary or his delegate shall by regulations prescribe."

(b) The table of sections for part IV of subchapter A of chapter 1 of such Code is amended by adding at the end thereof the following new item:

"SEC. 39. Credit for charitable contributions to institutions of higher education."

SEC. 2. (a) The second sentence of section 170(a)(1) of the Internal Revenue Code of 1954 (relating to charitable, etc., contribu-

tions and gifts) is amended to read as follows: "A charitable contribution shall be allowable as a deduction (or taken into account in computing the credit under section 39) only if verified under regulations prescribed by the Secretary or his delegate."

(b) Section 170(c) of such Code is amended by striking out "For purposes of this section" and inserting in lieu thereof "For purposes of this section and section 39".

SEC. 3. The amendments made by this Act shall apply only with respect to charitable contributions made (within the meaning of section 170 of the Internal Revenue Code of 1954) during taxable years ending after the date of the enactment of this Act.

The Moral Issue: Not Segregation Versus Integration, but the Constitution Versus Usurpers

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include an article by Hamilton A. Long entitled "The Moral Issue: Not Segregation Versus Integration, But the Constitution Versus Usurpers," and a review of Mr. Long's book, "Usurpers—Foes of Free Man," which appeared in the American Bar Association Journal:

THE MORAL ISSUE: NOT SEGREGATION VERSUS INTEGRATION, BUT THE CONSTITUTION VERSUS USURPERS

My 1957 brochure "Usurpers—Foes of Free Man" deals with the basic constitutional crisis started in 1937 by the Supreme Court (supporting usurpation by President and Congress commencing in 1933) by flouting the Constitution's true meaning regarding Federal power limits. That is, what its framers and adopters intended to be the meaning, as initially defined by the Court in keeping with that controlling intent. This applies to amendments also. The brochure does not discuss post-1937 cases.

The Supreme Court's decision is not the law of the land, even though in a case the decision may soundly define the meaning of particular words of the Constitution. It is the Constitution which remains the supreme law of the land (article VI), while the Court's decision and orders control only the parties to the case. The Court has no power to make general rules binding upon the people and governments of the States, nor to amend the Constitution.

The Supreme Court's decisions and orders in conflict with the Constitution do not even exist in the eyes of the Constitution; they are null and void, and they must be treated accordingly by all who are loyal to the Constitution, to the Republic (which depends for existence on a stable Constitution) and to the people's unalienable rights. The same is true regarding anti-Constitution acts, orders, and pronouncements of other officials, notably Federal judges on lower courts and the President and his subordinates, as well as acts of Congress.

The great moral issue today, therefore, is not segregation versus integration in the schools; it is, instead, the issue of the sovereign people and their Constitution versus defaulting public trustees as oath-breaking usurpers. In other words, shall the people and their State governments defend their constitutional rights, or bow down before an anti-Constitution elite enforcing rule-by-man? Shall we have limited government and rule-by-law under the Constitution, or usurpers supreme with unlimited power? Shall the Republic endure, or shall we allow its destruction by the weapon customarily used to this end: usurpation. (Washington's Farewell Address.)

In the famous Dred Scott case in 1956, the Supreme Court declared that sympathy for the slaves could not justify the Court's saying the Constitution meant something different from what it was originally intended to mean by the framers and adopters. Likewise today, the prohibition against the Federal Government's having power to control education, schools (so as to be able to decree and enforce integration) under the Constitution, as amended, as defined initially by the Supreme Court in this respect, must be upheld. All morality requires this; the moral leaders (such as the clergy) and idealists in general, above all others, must support this conclusion. Otherwise they are guilty of debasing the morality and ideals they profess to uphold through subscribing in effect to the antimoral precept that the end justifies the means, which spells intellectual and moral bankruptcy. If change be needed, as the people see it, they can make it, by amendment.

As to Federal usurpation of power concerning the schools of a State, its government (particularly its legislature, with controlling power) must therefore take a firm stand as follows (correcting past errors accordingly): (1) Declare all decisions and orders, judicial and executive, in conflict with the original meaning of the Constitution, as initially defined by the Supreme Court, to be null and void and that they must and will be treated accordingly. (2) Stop all evasive actions and programs, designed to get around Federal court decisions, because unnecessary and such evasion implies the decisions have constitutional validity—not so. (3) Reject suggestions which would imply that the usurpers have been correct—for instance, to have a new amendment give the States what they already possess under the Constitution: Exclusive power over education, schools. (4) Proclaim, and pass binding laws accordingly, that the State and all subordinate governments and all citizens must and will respect the Constitutions of the United States and of the State—all officials being sworn to uphold them, not decisions of usurper judges in conflict with the constitutions; all in keeping with the foregoing considerations. (5) Require by law that all officials, from the Governor down, act accordingly: (a) To oppose any troops used by Federal usurpers, make full use of the State militia (over which only the Governor, not the President, has control in peacetime, lacking a national emergency duly declared in keeping with laws of Congress), as contemplated by the framers and adopters. (The Federalist, Nos. 28 by Hamilton and 46 by Madison, for instance); (b) to oppose usurpers' force by way of a number of deputy U.S. marshals, make use of the State police and, in each county, a sheriff's posse (posse comitatus) composed of specially deputized citizens in any needed quantity with suitable arms. All in defense of the Constitutions of both Nation and State, of the rights of the people and the State thereunder and, in effect, in defense of the rights of all of the American people and all of the States.

"USURPERS—FOES OF FREE MAN"—BY HAMILTON A. LONG—BOOK REVIEW

(By M. T. Phelps)

Washington said in his farewell address: "If in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil any partial or transient benefit which the use itself can at any time yield."

Jefferson wrote in 1823:

"There is no danger I apprehend so much as the consolidation of our Government by the noiseless, and therefore unalarming, instrumentality of the Supreme Court."

These classical texts may be said to form the takeoff points of this brochure by Mr. Hamilton Long, a member of the bar of the State of New York. This profound constitutional study is not only intriguing and thought provoking, but is supported by documented evidence which makes the conclusions of the author irrefutable. The brochure is extremely timely, in that it points out the evils of the day which are transforming the Federal Government into a government of men instead of a government of laws; into a centralized government of unlimited powers instead of a decentralized government with definite limited powers which the provisions of the Federal Constitution clearly indicated the framers intended it to be, and which the members of State conventions ratifying it and the people whom they represented understood it to be. Mr. Long has presented a challenge to every American citizen who believes in a republican form of government under the Constitution and who desires to preserve our American way of life: Man-over-State.

He shows beyond all reasonable doubt that the framers of the Federal Constitution intended the central government to be vested with limited powers—a concept never before adopted by any other people in the history of civilization as their governmental philosophy. His main thesis as to their intent is as follows: The fundamental principles upon which this philosophy was conceived was that man was endowed with "unalienable rights," God-given rights at birth and "that man creates government as his tools in order to secure these rights"; that all governments derive their just powers from the consent of the governed, the people; that to preserve these rights the powers of government must be circumscribed with definite limitations and that public officials must always be subservient to the will of the people; that the creature should never become the master of the creator. These convictions were deeply seated in the minds of the framers of the Federal Constitution as the result of their comprehensive knowledge of the history of governments in the past and of their own experiences with the tyranny of British rule under the colonial regime in America and oppressive measures adopted by legislatures in some of the States after 1776 during the existence of the confederation of States.

From this breadth of knowledge and wealth of experience they were thoroughly convinced, he says, that the safety and liberties of the people under the Government they were forming could only be preserved by providing in the organic law itself for adequate curbs and safeguards against the abuse of power by those entrusted with its administration; that jealousy rather than confidence must be the polar star in forming this new Government; that there must be both a limitation of its duties and a limitation of power to be exercised in performance of those duties.

These questions, the author asserts, were thoroughly explored at that time and it was the fear of the people that the Constitution as originally adopted did not fully protect them from an unwarranted restraint of their individual liberties by the Federal Government.

The coordinate branches of the Federal Government were designed to serve as checks and balances against each other and the rights reserved to the States and to the people were to serve as a safeguard against the encroachment of the central government upon individual liberties of the citizens of the various States. It was not enough, in the opinion of the people as expressed by their representatives thereafter, to create checks and balances between the coordinate branches of the Federal Government but if the goal uppermost in their minds, i.e., to keep the government, created by them, decentralized in the future it must be realized, if at all, by expressly reserving to the States and to the people all powers of sovereignty not expressly or by necessary implication granted to the central government under the provisions of the organic law. The first 10 amendments to the Constitution adopted soon after its ratification were designed to achieve that result.

The author declares, in substance, that so long as the Supreme Court of the United States adhered to the cardinal rules of interpretation of the Constitution and of statutory enactments a proper balance was maintained between the executive, legislative, and judicial branches of the Federal Government and between the States and the central government, thus safeguarding the individual liberties of the citizens of the respective States of the Union. But when the Court no longer looks to the intent and purposes of the framers and adopters of the Constitution to determine its meaning, as it ceased to do in 1937, it aided usurpation of the powers reserved to the States as a check against centralization of power in the Federal Government which constituted the principal mechanism of the Constitution upon which the framers of that document relied to preserve to the people a definite limitation upon the powers of the Central Government.

One certainly does not have to be either a statesman, a lawyer, a judge, or an intellectual to observe and to realize that by the decisions of the Supreme Court since 1937 the powers of the Federal Government have been declared to be broadened to encompass fields of activity previously disclaimed and repudiated by the courts and by all the leading statesmen and students of government for 150 years and consequently have left only a skeleton of the rights reserved to the people and to the States. Mr. Long, in his brochure, has made this clear to the American people. This is positive evidence to all of us of the processes of national decay and the end of individual liberties in the United States.

The author in his review of the constitutional cases of the Court prior to 1937, upon which the majority of the Court relied as supporting the policy of what he terms "reverse interpretation," leads him to the opposite conclusion reached by the Court. In no instance, he declares, prior to 1937, did the Court expressly, deliberately, and voluntarily reverse a long line of consistent decisions involving the meaning of the Constitution as intended by the framers and adopters of that document. He states that in a few cases in which a prior decision was overruled, the Court was in effect choosing, of necessity, between what had come to be conflicting lines of decisions. In so doing it adopted one line of cases and overruled the other because of the need of clarification. This action of the Court, he asserts, gave no support to its 1937 "reverse interpretation" policy.

The author claims that the single proceeding entitled "The Legal Tender Cases" (*Knox* v. *Lee* and *Parker* v. *Davis*, 79 U.S. (12 Wallace) 457 (1871) decided together overruling *Hepburn* v. *Griswold*, 75 U.S. (8 Wallace) 603), decided in 1870, really constituted the only case which lends any support whatever to the reverse interpretation policy of the Court commenced in 1937. He points out that Mr. Justice Strong, who wrote the opinion for the majority of the Legal Tender cases, explained at length that the Hepburn case was decided by a less number of judges than the law provided; that it was a 5-to-3 decision (due to a vacancy) and that the Court had not been accustomed to hearing a constitutional question in the absence of the full Court if it could be avoided. Mr. Justice Strong further stated that almost immediately after the Hepburn decision was handed down, the question of reconsidering it was discussed.

A reading of the opinion in the Legal Tender cases should convince the reader that the Court felt reluctant to overrule the Hepburn case, as Mr. Long contends. It is also significant to note that in overruling the Hepburn case not a single member of the Court receded from his position in that case. The 5-to-4 opinion in the Legal Tender cases was made possible by the resignation of one of the justices who held with the majority in the Hepburn case while his replacement and the newly appointed ninth member of the Court joined with the minority in the Hepburn case, thus constituting the majority in the Legal Tender cases. Mr. Long reminds his readers that Charles Evans Hughes, in his book entitled "The Supreme Court of the United States," published in 1928 before his reappointment to that Court as Chief Justice, criticized the Legal Tender cases overruling the Hepburn case the previous year, saying that it was destructive of the confidence of the people in the Court.

Mr. Long says the Court's present policy of reinterpreting the Constitution according to the will or whim of its members, in defiance of the consistent decisions of the Court for a century and a half based upon the intent of those who framed and ratified it, has already made a hollow shell of that document, to be changed again and again at will by the momentary majority of the members of the Court; that this policy has not only sanctioned usurpation of the reserved powers of the people and the States by the other two branches of the Federal Government, but the Court itself has become the prime usurper of those powers which he says has resulted in unconstitutional centralization of massive power in Washington in violation of the rights of the States, and of the people, reserved to them under the 10th amendment, and has opened wide the gates to socialism-communism, which he asserts is impossible under a decentralized government.

The unforgiveable sin which Mr. Long ascribes to the Court is that by its policy of "reverse interpretation" it has assumed the function and is attempting to exercise the power to amend the Constitution of the United States, a function expressly reserved to the people under its provisions. It is Mr. Long's position that an opinion of the Supreme Court interpreting a provision of the Constitution is integrated into and becomes a part of the Constitution itself and that any different interpretation thereafter placed upon it must, to be valid, be by amendment in the manner provided in the Constitution. He contends its binding effect upon the Court is therefore based upon considerations more deeply rooted than upon the common law rule of stare decisis—which is not applicable in constitutional law. In other words, his position is, in effect, when the Court has once interpreted a provision of the Constitution, based upon full exploration of the intent of the framers, it has exhausted its jurisdiction and power, under our constitutional system, to consider it further except to enforce it as interpreted, leaving any change to the amendatory process of article V.

The Court prior to 1937 never expressly enunciated this as a principle of law but its history as gathered from its decisions according to Mr. Long's research might well be interpreted to harmonize with his views, in which the writer of this review concurs after examining the authorities cited by him.

Consultation in the Agency-Client Relationship

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. BARING. Mr. Speaker, under unanimous consent, I include in the CONGRESSIONAL RECORD an address delivered at the Western Regional Conference of the American Public Welfare Association, on October 13, 1958, in Phoenix, Ariz., by Dr. Jacobus tenBroek, captioned "Consultation in the Agency-Client Relationship."

In addition to serving as head of the speech department of the University of California, located at Berkeley, Dr. tenBroek has for a number of years been the president of the National Federation of the Blind. I believe that his address is one of the most outstanding presentations I have ever read on the subject of agency-client relationship and the blind's right of consultation in the administration of programs which directly affect their welfare and their opportunities. This right of self-expression through organizations of the blind is enunciated in my bill, H.R. 14, which is now known throughout the country as the Kennedy-Baring bill. It would protect the right of the blind to self-expression through organizations of the blind. For convenient reference, I have taken the liberty of quoting it below. Thirty-eight Members have already introduced similar bills since January 7, 1959.

H.R. 14

A bill to protect the right of the blind to self-expression through organizations of the blind

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in the formulation, administration, and execution of programs for the aid and rehabilitation of the blind, the Secretary of Health, Education, and Welfare shall to the fullest extent practicable consult and advise with authorized representatives of organizations of the blind; and shall, in developing and recommending policies and procedures to State agencies, take such steps as may be appropriate to encourage such agencies to consult with authorized representatives of organizations of the blind in the formulation, administration, and execution of my State program for the aid and rehabilitation of the blind to which Federal funds are contributed.

SEC. 2. No officer or employee of any Federal, State, or other agency concerned with the administration of any program for the aid or rehabilitation of the blind to which Federal funds have been contributed shall exert the influence of his office or position against the right of the blind to join organizations of the blind. The Secretary of Health, Education, and Welfare shall adopt such regulations and shall condition Federal grants to State or other programs for the blind on such terms as will prevent the

exertion of any such influence against self-expression of the blind through organizations of the blind.

Consultation in the Agency—Client Relationship

(An address delivered at the Western Regional Conference of the American Public Welfare Association, October 13, 1958, Phoenix, Ariz., by Jacobus tenBroek)

Perhaps no single subject in the large and expanding province of social welfare has received more attention or stirred more controversy in recent years than the perpetually vexed question of the proper relationship between the agency worker and the recipient of services. This is, of course, a healthy and constructive concern; for no aspect of welfare is more fundamental or far reaching. The client-worker relationship is both procedural and substantive in character, both immediately practical and theoretically profound. It has to do alike with human rights and professional responsibilities, with psychological conceptions and legal formulations, with rigorous scientific method and elusive moral valuation.

The continuous ferment among social workers on this issue undoubtedly reflects parallel cleavages and conflicts in other fields of social science, pure or applied—fields such as psychology and psychotherapy, sociology and sociometry, group dynamics, general semantics, human relations, public administration, political theory, and educational philosophy. These inter- and intra-disciplinary disputes have, of course, a variety of contents and discontents; but if there is a common thread which runs through all of them it is the classic antinomy of liberty and authority—the ancient problem of reconciling the rights and needs of the individual with the demands of public order, social security, and the general welfare.

Everyone who works in the welfare field—or in any of the social sciences, for that matter—is careful to make the standard obeisance to the dignity and rights of the client, and generally to affirm the libertarian values of the democratic creed. But it will not be news to members of this audience that there have been, and there are, more than a few currents of thought and action in social casework which operate to exaggerate the weakness and dependency of clients while exalting the power and the glory of the professional practitioner of the social worker's art. To name just a few: There is a tendency, not only to take responsibility for the "whole" client, but to take whole responsibility for him. There is the tendency to become "aggressive"—and to brag about it—in tracking down potential clients and administering services, however, unwelcome they may be. There is a tendency to regard all those subject to depriving circumstances as innately inferior if not incompetent. There is the tendency to perpetuate custodial and protective practices for groups of clients demonstrably capable of rehabilitation and release.

This list of negative and authoritarian procedures might be extended a good deal farther; but it is perhaps sufficient to underline the obvious point that the homage paid to democracy by some workers and administrators may be little more than a formal ritual betrayed by contrary assumptions and practices of a distinctly antidemocratic nature.

It is not, however, my purpose to rehearse or rehash any of the familiar theoretical disputes which have a bearing upon the relationship between welfare agencies and their clients. The field of social work is, after all, preeminently one of action—and it is with the fruits of theory in practical execution that we are all primarily concerned.
